## 3.272 ALL\_JSON\_DATAGUIDES

ALL\_JSON\_DATAGUIDES provides information on the JavaScript Object Notation (JSON) columns accessible to the current user that have data guide enabled.

### Related Views

- DBA\_JSON\_DATAGUIDES provides information on all JavaScript Object Notation (JSON) columns in the database that have data guide enabled.
- USER\_JSON\_DATAGUIDES provides information on the JavaScript Object Notation (JSON) columns owned by the current user that have data guide enabled. This view does not display the OWNER column.

| Column      | Datatype       | NULL     | Description                                         |
|-------------|----------------|----------|-----------------------------------------------------|
| OWNER       | VARCHAR2 (128) | NOT NULL | Owner of the table containing the JSON column       |
| TABLE_NAME  | VARCHAR2 (128) | NOT NULL | Name of the table containing the JSON column        |
| COLUMN_NAME | VARCHAR2 (128) | NOT NULL | Name of the JSON column that has data guide enabled |
| DATAGUIDE   | CLOB           |          | The data guide of the JSON column in flat format    |

## 3.273 ALL\_JSON\_DOMAIN\_SCHEMA\_COLUMNS

ALL\_JSON\_DOMAIN\_SCHEMA\_COLUMNS describes JSON schema constraints on columns of data use case domains accessible to the current user.

### Related Views

- DBA\_JSON\_DOMAIN\_SCHEMA\_COLUMNS describes JSON schema constraints on columns of all data use case domains in the database.
- USER\_JSON\_DOMAIN\_SCHEMA\_COLUMNS describes JSON schema constraints on columns of data use case domains owned by the current user. This view does not display the OWNER column.

| Column      | Datatype       | NULL     | Description                                                                                            |
|-------------|----------------|----------|--------------------------------------------------------------------------------------------------------|
| OWNER       | VARCHAR2 (128) | NOT NULL | Owner of the data use case domain containing the column on which the JSON schema constraint is defined |
| DOMAIN_NAME | VARCHAR2 (128) | NOT NULL | Name of the data use case domain containing the column on which the JSON schema constraint is defined  |

| Column          | Datatype       | NULL     | Description                                                                                                   |
|-----------------|----------------|----------|---------------------------------------------------------------------------------------------------------------|
| COLUMN_NAME     | VARCHAR2 (128) | NOT NULL | Name of the data use case domain column on which the JSON schema constraint is defined                        |
| CONSTRAINT_NAME | VARCHAR2 (128) | NOT NULL | Name of the JSON schema constraint                                                                            |
| JSON_SCHEMA     | JSON           |          | JSON schema constraint definition                                                                             |
| CAST_MODE       | BOOLEAN        |          | Indicates whether the JSON schema validator is operating in cast mode ( <b>TRUE</b> ) or not ( <b>FALSE</b> ) |

## 3.274 ALL\_JSON\_DUALITY\_VIEW\_LINKS

`ALL_JSON_DUALITY_VIEW_LINKS` describes the links associated with the JSON-relational duality views accessible to the current user.

### Related Views

- `DBA_JSON_DUALITY_VIEW_LINKS` describes the links associated with all JSON-relational duality views in the database.
- `USER_JSON_DUALITY_VIEW_LINKS` describes the links associated with the JSON-relational duality views owned by the current user. This view does not display the `VIEW_OWNER` column.

| Column             | Datatype       | NULL | Description                                                  |
|--------------------|----------------|------|--------------------------------------------------------------|
| VIEW_OWNER         | VARCHAR2 (128) |      | Owner of the duality view                                    |
| VIEW_NAME          | VARCHAR2 (128) |      | Name of the duality view                                     |
| PARENT_TABLE_OWNER | VARCHAR2 (128) |      | Owner of the parent table in the link                        |
| PARENT_TABLE_NAME  | VARCHAR2 (128) |      | Name of the parent table in the link                         |
| CHILD_TABLE_OWNER  | VARCHAR2 (128) |      | Owner of the child table in the link                         |
| CHILD_TABLE_NAME   | VARCHAR2 (128) |      | Name of the child table in the link                          |
| FROM_COLUMN        | VARCHAR2 (128) |      | Name of the column on the <code>FROM</code> side of the link |
| TO_COLUMN          | VARCHAR2 (128) |      | Name of the column on the <code>TO</code> side of the link   |

| Column    | Datatype       | NULL | Description                                                                                                                                                                                                   |
|-----------|----------------|------|---------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|
| JOIN_TYPE | VARCHAR2 (16)  |      | Join type for the link: <ul style="list-style-type: none"><li>• NESTED - Primary key to foreign key</li><li>• OUTER - Foreign key to primary key</li><li>• INNER - This value is currently not used</li></ul> |
| KEY_NAME  | VARCHAR2 (128) |      | Name of the JSON key associated with the link                                                                                                                                                                 |

## 3.275 ALL\_JSON\_DUALITY\_VIEW\_TAB\_COLS

ALL\_JSON\_DUALITY\_VIEW\_TAB\_COLS describes the table columns associated with the JSON-relational duality views accessible to the current user.

### Related Views

- [DBA\\_JSON\\_DUALITY\\_VIEW\\_TAB\\_COLS](#) describes the table columns associated with all JSON-relational duality views in the database.
- [USER\\_JSON\\_DUALITY\\_VIEW\\_TAB\\_COLS](#) describes the table columns associated with the JSON-relational duality views owned by the current user. This view does not display the `VIEW_OWNER` column.

| Column       | Datatype       | NULL | Description                                                                                                 |
|--------------|----------------|------|-------------------------------------------------------------------------------------------------------------|
| VIEW_OWNER   | VARCHAR2 (128) |      | Owner of the duality view                                                                                   |
| VIEW_NAME    | VARCHAR2 (128) |      | Name of the duality view                                                                                    |
| TABLE_OWNER  | VARCHAR2 (128) |      | Owner of the table                                                                                          |
| TABLE_NAME   | VARCHAR2 (128) |      | Name of the table                                                                                           |
| ROOT_TABLE   | BOOLEAN        |      | Indicates whether the table is the root (topmost) table ( <code>TRUE</code> ) or not ( <code>FALSE</code> ) |
| TABLE_NUMBER | NUMBER         |      | Number value that identifies this table in the duality view                                                 |
| COLUMN_NAME  | VARCHAR2 (128) |      | Name of the column                                                                                          |
| DATA_TYPE    | VARCHAR2 (128) |      | Data type of the column                                                                                     |
| LENGTH       | NUMBER         |      | For character data types, the maximum length of the column (in characters)                                  |

| Column          | Datatype        | NULL | Description                                                                                                                           |
|-----------------|-----------------|------|---------------------------------------------------------------------------------------------------------------------------------------|
| JSON_KEY_NAME   | NVARCHAR2 (128) |      | JSON key name corresponding to the column                                                                                             |
| ALLOW_INSERT    | BOOLEAN         |      | Indicates whether rows can be inserted into the table using the duality view (TRUE) or not (FALSE)                                    |
| ALLOW_UPDATE    | BOOLEAN         |      | Indicates whether the column can be updated using the duality view (TRUE) or not (FALSE)                                              |
| ALLOW_DELETE    | BOOLEAN         |      | Indicates whether rows can be deleted from the table using the duality view (TRUE) or not (FALSE)                                     |
| READ_ONLY       | BOOLEAN         |      | Indicates whether changes to the column are prohibited (TRUE) or not (FALSE)                                                          |
| IS_FLEX_COL     | BOOLEAN         |      | Indicates whether the column is a flex column (TRUE) or not (FALSE)                                                                   |
| IS_GENERATED    | BOOLEAN         |      | Indicates whether the value associated with JSON_KEY_NAME is a generated (TRUE) or not (FALSE)                                        |
| IS_HIDDEN       | BOOLEAN         |      | Indicates whether JSON_KEY_NAME is hidden in the document (TRUE) or not (FALSE)                                                       |
| PRIMARY_KEY_POS | NUMBER          |      | If the column is part of a primary key, its position in the primary key specification; otherwise, null                                |
| ETAG_POS        | NUMBER          |      | If the column is part of an ETAG, its position in the ETAG specification; otherwise, null                                             |
| ORDER_BY_POS    | NUMBER          |      | If the column is part of the ORDER BY clause of the JSON_ARRAYAGG function, then its position in the ORDER BY clause; otherwise, null |

| <code>WHERE_CLAUSE</code>        | <code>NVARCHAR2 (128)</code> |      | SQL expression in the <code>WHERE</code> clause of the duality view query that accesses the table<br>If the query does not contain a <code>WHERE</code> clause, then null.                                                                                                                                                                                                                    |
| <code>ALLOW_INSERT</code>        | <code>BOOLEAN</code>         |      | Indicates whether rows can be inserted into the table using the duality view ( <code>TRUE</code> ) or not ( <code>FALSE</code> )                                                                                                                                                                                                                                                              |
| <code>ALLOW_UPDATE</code>        | <code>BOOLEAN</code>         |      | Indicates whether the column can be updated using the duality view ( <code>TRUE</code> ) or not ( <code>FALSE</code> )                                                                                                                                                                                                                                                                        |
| <code>ALLOW_DELETE</code>        | <code>BOOLEAN</code>         |      | Indicates whether rows can be deleted from the table using the duality view ( <code>TRUE</code> ) or not ( <code>FALSE</code> )                                                                                                                                                                                                                                                               |
| <code>READ_ONLY</code>           | <code>BOOLEAN</code>         |      | Indicates whether the table is read-only in the duality view, that is, no rows can be modified, inserted, or deleted ( <code>TRUE</code> ) or not ( <code>FALSE</code> )                                                                                                                                                                                                                      |
| <code>HAS_FLEX_COL</code>        | <code>BOOLEAN</code>         |      | Indicates whether the table contains a flex column ( <code>TRUE</code> ) or not ( <code>FALSE</code> )                                                                                                                                                                                                                                                                                        |
| <code>ROOT_TABLE</code>          | <code>BOOLEAN</code>         |      | Indicates whether the table is the root (topmost) table ( <code>TRUE</code> ) or not ( <code>FALSE</code> )                                                                                                                                                                                                                                                                                   |
| <code>TABLE_NUMBER</code>        | <code>NUMBER</code>          |      | Number value that identifies this table in the duality view                                                                                                                                                                                                                                                                                                                                   |
| <code>PARENT_TABLE_NUMBER</code> | <code>NUMBER</code>          |      | Number value that points to the parent table in the hierarchy                                                                                                                                                                                                                                                                                                                                 |
| <code>RELATIONSHIP</code>        | <code>VARCHAR2 (10)</code>   |      | Relationship between the table (that is, the child table) and the parent table: <ul style="list-style-type: none"><li>• <code>NESTED</code> - The child table is nested as a JSON array under the parent table</li><li>• <code>REFERENCED</code> - The child table is the target of an outer join</li><li>• <code>SINGLETON</code> - The child table is the target of an inner join</li></ul> |

## 3.277 ALL\_JSON\_DUALITY\_VIEWS

ALL\_JSON\_DUALITY\_VIEWS describes the JSON-relational duality views accessible to the current user.

### Related Views

- DBA\_JSON\_DUALITY\_VIEWS describes all JSON-relational duality views in the database.
- USER\_JSON\_DUALITY\_VIEWS describes the JSON-relational duality views owned by the current user. This view does not display the VIEW\_OWNER column.

| Column                           | Datatype       | NULL | Description                                                                                                                                                                              |
|----------------------------------|----------------|------|------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|
| VIEW_OWNER                       | VARCHAR2 (128) |      | Owner of the duality view                                                                                                                                                                |

## 3.278 ALL\_JSON\_INDEXES

ALL\_JSON\_INDEXES describes indexes on JSON data that are accessible to the current user.

**Related Views**

- DBA\_JSON\_INDEXES describes all indexes on JSON data in the database.
- USER\_JSON\_INDEXES describes indexes on JSON data that are owned by the current user. This view does not display the INDEX\_OWNER column.

| Column           | Datatype        | NULL     | Description                                                                 |
|------------------|-----------------|----------|-----------------------------------------------------------------------------|
| INDEX_OWNER      | VARCHAR2 (128)  | NOT NULL | Owner of the index                                                          |
| INDEX_NAME       | VARCHAR2 (128)  | NOT NULL | Name of the index                                                           |
| TABLE_OWNER      | VARCHAR2 (128)  | NOT NULL | Owner of the table on which the index is defined                            |
| TABLE_NAME       | VARCHAR2 (128)  | NOT NULL | Name of the table on which the index is defined                             |
| COLUMN_NAME      | VARCHAR2 (128)  | NOT NULL | Name of the JSON column on which the index is defined                       |
| COLUMN_DATATYPE  | VARCHAR2 (13)   |          | Data type of the JSON column on which the index is defined                  |
| SEARCH_INDEX     | BOOLEAN         |          | Indicates whether the index is a search index (TRUE) or not (FALSE)         |
| FUNCTIONAL_INDEX | BOOLEAN         |          | Indicates whether the index is a function-based index (TRUE) or not (FALSE) |
| COMPOSITE_INDEX  | BOOLEAN         |          | Indicates whether the index is a composite index (TRUE) or not (FALSE)      |
| BITMAP_INDEX     | BOOLEAN         |          | Indicates whether the index is a bitmap index (TRUE) or not (FALSE)         |
| MULTIVALUE_INDEX | BOOLEAN         |          | Indicates whether the index is a multivalue index (TRUE) or not (FALSE)     |
| INDEX_EXPRESSION | VARCHAR2 (4000) |          | SQL text of the index expression                                            |

## 3.279 ALL\_JSON\_SCHEMA\_COLUMNS

ALL\_JSON\_SCHEMA\_COLUMNS describes JSON schema constraints on columns in tables accessible to the current user.

**Related Views**

- DBA\_JSON\_SCHEMA\_COLUMNS describes JSON schema constraints on columns in all tables in the database.
- USER\_JSON\_SCHEMA\_COLUMNS describes JSON schema constraints on columns in tables owned by the current user. This view does not display the OWNER column.

| Column          | Datatype       | NULL     | Description                                                                                 |
|-----------------|----------------|----------|---------------------------------------------------------------------------------------------|
| OWNER           | VARCHAR2 (128) | NOT NULL | Owner of the table containing the column on which the JSON schema constraint is defined     |
| TABLE_NAME      | VARCHAR2 (128) | NOT NULL | Name of the table containing the column on which the JSON schema constraint is defined      |
| COLUMN_NAME     | VARCHAR2 (128) | NOT NULL | Name of the column on which the JSON schema constraint is defined                           |
| CONSTRAINT_NAME | VARCHAR2 (128) | NOT NULL | Name of the JSON schema constraint                                                          |
| JSON_SCHEMA     | JSON           |          | JSON schema constraint definition                                                           |
| CAST_MODE       | BOOLEAN        |          | Indicates whether the JSON schema validator is operating in cast mode (TRUE) or not (FALSE) |

## 3.281 ALL\_LOB\_PARTITIONS

ALL\_LOB\_PARTITIONS displays the LOB partitions in the tables accessible to the current user.

### Related Views

- DBA\_LOB\_PARTITIONS displays all LOB partitions in the database.
- USER\_LOB\_PARTITIONS displays the LOB partitions owned by the current user. This view does not display the TABLE\_OWNER column.

## 3.282 ALL\_LOB\_SUBPARTITIONS

ALL\_LOB\_SUBPARTITIONS displays partition-level attributes of the LOB data subpartitions accessible to the current user.

#### Related Views

- DBA\_LOB\_SUBPARTITIONS displays partition-level attributes of all LOB data subpartitions in the database.
- USER\_LOB\_SUBPARTITIONS displays the LOB subpartitions owned by the current user. This view does not display the TABLE\_OWNER column.

## 3.283 ALL\_LOB\_TEMPLATES

ALL\_LOB\_TEMPLATES describes the LOB subpartition templates accessible to the current user.

#### Related Views

- DBA\_LOB\_TEMPLATES describes all LOB subpartition templates in the database.
- USER\_LOB\_TEMPLATES describes the LOB subpartition templates owned by the current user. This view does not display the USER\_NAME column.

| Column       | Datatype        | NULL     | Description            |
|--------------|-----------------|----------|------------------------|
| USER_NAME    | VARCHAR2 (128)  | NOT NULL | Owner of the table     |
| TABLE_NAME   | VARCHAR2 (128)  | NOT NULL | Name of the table      |
| LOB_COL_NAME | VARCHAR2 (4000) |          | Name of the LOB column |

| Column            | Datatype       | NULL     | Description                         |
|-------------------|----------------|----------|-------------------------------------|
| SUBPARTITION_NAME | VARCHAR2 (132) | NOT NULL | Name of the subpartition            |
| LOB_SEGMENT_NAME  | VARCHAR2 (132) | NOT NULL | Name of the LOB segment             |
| TABLESPACE_NAME   | VARCHAR2 (30)  |          | Tablespace name of the subpartition |

## 3.284 ALL\_LOBS

**ALL\_LOBS** displays the large objects (LOBs) contained in tables accessible to the current user. LOBs include binary large objects (BLOBs) and character large objects (CLOBs). Binary files (BFILES) are stored outside the database, so they are not displayed by this view or the related views.

### Related Views

- **DBA\_LOBS** describes all LOBs in the database.
- **USER\_LOBS** describes the LOBs owned by the current user. This view does not display the **OWNER** column.

| Column          | Datatype        | NULL | Description                                                              |
|-----------------|-----------------|------|--------------------------------------------------------------------------|
| OWNER           | VARCHAR2 (128)  |      | Owner of the object containing the LOB                                   |
| TABLE_NAME      | VARCHAR2 (128)  |      | Name of the object containing the LOB                                    |
| COLUMN_NAME     | VARCHAR2 (4000) |      | Name of the LOB column or attribute                                      |
| SEGMENT_NAME    | VARCHAR2 (128)  |      | Name of the LOB segment                                                  |
| TABLESPACE_NAME | VARCHAR2 (30)   |      | Name of the tablespace containing the LOB segment                        |
| INDEX_NAME      | VARCHAR2 (128)  |      | Name of the LOB index                                                    |
| CHUNK           | NUMBER          |      | Size (in bytes) of the LOB chunk as a unit of allocation or manipulation |
| PCTVERSION      | NUMBER          |      | Maximum percentage of the LOB space used for versioning                  |
| RETENTION       | NUMBER          |      | Maximum time duration for versioning of the LOB space                    |
| FREEPOOLS       | NUMBER          |      | Number of freepools for this LOB segment                                 |

| Column        | Datatype      | NULL | Description                                                                                                                                                                                                                                                                                                                                                                                                                                                                          |

## 3.287 ALL\_MEASURE\_FOLDER\_CONTENTS

ALL\_MEASURE\_FOLDER\_CONTENTS describes the contents of the OLAP measure folders accessible to the current user.

### Related Views

- DBA\_MEASURE\_FOLDER\_CONTENTS describes the contents of all OLAP measure folders in the database.
- USER\_MEASURE\_FOLDER\_CONTENTS describes the contents of the OLAP measure folders owned by the current user. This view does not display the OWNER column.

| Column              | Datatype       | NULL     | Description                                   |
|---------------------|----------------|----------|-----------------------------------------------|
| OWNER               | VARCHAR2 (128) | NOT NULL | Owner of the measure folder                   |
| MEASURE_FOLDER_NAME | VARCHAR2 (128) | NOT NULL | Name of a measure folder                      |
| CUBE_OWNER          | VARCHAR2 (128) | NOT NULL | Owner of the cube                             |
| CUBE_NAME           | VARCHAR2 (128) | NOT NULL | Name of a cube included in the measure folder |
| MEASURE_NAME        | VARCHAR2 (128) | NOT NULL | Name of a measure in the cube                 |
| ORDER_NUM           | NUMBER         | NOT NULL | Order number of the measure in the folder     |

## 3.288 ALL\_MEASURE\_FOLDER\_SUBFOLDERS

ALL\_MEASURE\_FOLDER\_SUBFOLDERS describes the OLAP measure folders contained within the OLAP measure folders accessible to the user.

### Related Views

- DBA\_MEASURE\_FOLDER\_SUBFOLDERS describes the OLAP measure folders contained within the database OLAP measure folders.
- USER\_MEASURE\_FOLDER\_SUBFOLDERS describes the OLAP measure folders contained within the OLAP measure folders owned by the current user. This view does not display the OWNER column.

| Column                  | Datatype       | NULL     | Description                                                |
|-------------------------|----------------|----------|------------------------------------------------------------|
| OWNER                   | VARCHAR2 (128) | NOT NULL | Owner of the OLAP measure folder that contains a subfolder |
| MEASURE_FOLDER_NAME     | VARCHAR2 (128) | NOT NULL | Name of the OLAP measure folder that contains a subfolder  |
| MEASURE_SUBFOLDER_OWNER | VARCHAR2 (128) | NOT NULL | Owner of the OLAP measure folder subfolder                 |
| MEASURE_SUBFOLDER_NAME  | VARCHAR2 (128) | NOT NULL | Name of the owning OLAP measure folder subfolder           |

## 3.289 ALL\_MEASURE\_FOLDERS

ALL\_MEASURE\_FOLDERS describes the OLAP measure folders accessible to the current user.

**Related Views**

- DBA\_MEASURE\_FOLDERS describes all OLAP measure folders in the database.
- USER\_MEASURE\_FOLDERS describes the OLAP measure folders owned by the current user. This view does not display the OWNER column.

| Column              | Datatype        | NULL     | Description                                               |
|---------------------|-----------------|----------|-----------------------------------------------------------|
| OWNER               | VARCHAR2 (128)  | NOT NULL | Owner of the measure folder                               |
| MEASURE_FOLDER_NAME | VARCHAR2 (128)  | NOT NULL | Name of a measure folder                                  |
| MEASURE_FOLDER_ID   | NUMBER          | NOT NULL | ID of a measure folder                                    |
| DESCRIPTION         | NVARCHAR2 (300) |          | Description of the measure folder in the session language |

**See Also:**

## 3.290 ALL\_METADATA\_PROPERTIES

ALL\_METADATA\_PROPERTIES describes OLAP metadata properties in the database that are accessible to the current user.

### Related Views

- DBA\_METADATA\_PROPERTIES describes OLAP metadata properties in the database.
- USER\_METADATA\_PROPERTIES describes OLAP metadata properties in the current user's schema. This view does not display the OWNER column.

| Column           | Datatype       | NULL | Description                                       |
|------------------|----------------|------|---------------------------------------------------|
| OWNER            | VARCHAR2 (128) |      | Owner of the OLAP metadata property               |
| OWNING_OBJECT_ID | NUMBER         |      | Dictionary ID of the OLAP metadata property owner |
| OWNING_TYPE      | VARCHAR2 (23)  |      | Owning type of the OLAP metadata property         |
| PROPERTY_ID      | NUMBER         |      | Dictionary Id of the OLAP metadata property       |
| PROPERTY_KEY     | VARCHAR2 (128) |      | Key of the OLAP metadata property                 |
| PROPERTY_VALUE   | CLOB           |      | Value of the OLAP metadata property               |
| PROPERTY_ORDER   | NUMBER         |      | Order number of the OLAP metadata property        |

## 3.291 ALL\_METHOD\_PARAMS

ALL\_METHOD\_PARAMS describes the method parameters of the object types accessible to the current user.

### Related Views

- DBA\_METHOD\_PARAMS describes the method parameters of all object types in the database.
- USER\_METHOD\_PARAMS describes the method parameters of the object types owned by the current user. This view does not display the OWNER column.

| Column      | Datatype       | NULL     | Description                                                                                                                           |
|-------------|----------------|----------|---------------------------------------------------------------------------------------------------------------------------------------|
| OWNER       | VARCHAR2 (128) | NOT NULL | Owner of the type                                                                                                                     |
| TYPE_NAME   | VARCHAR2 (128) | NOT NULL | Name of the type                                                                                                                      |
| METHOD_NAME | VARCHAR2 (128) | NOT NULL | Name of the method                                                                                                                    |
| METHOD_NO   | NUMBER         | NOT NULL | For an overloaded method, a number distinguishing this method from others of the same. Do not confuse this number with the object ID. |
| PARAM_NAME  | VARCHAR2 (128) | NOT NULL | Name of the parameter                                                                                                                 |

| Column             | Datatype       | NULL     | Description                                                                                                                                                                            |
|--------------------|----------------|----------|----------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|
| PARAM_NO           | NUMBER         | NOT NULL | Parameter number (position)                                                                                                                                                            |
| PARAM_MODE         | VARCHAR2 (6)   |          | Mode of the parameter (IN, OUT, IN OUT)                                                                                                                                                |
| PARAM_TYPE_MOD     | VARCHAR2 (7)   |          | Whether this parameter is a REF to another object                                                                                                                                      |
| PARAM_TYPE_OWNER   | VARCHAR2 (128) |          | Owner of the type of the parameter                                                                                                                                                     |
| PARAM_TYPE_NAME    | VARCHAR2 (128) |          | Name of the type of the parameter                                                                                                                                                      |
| CHARACTER_SET_NAME | VARCHAR2 (44)  |          | Whether the character set or the method is fixed-length character set (CHAR_CS) or fixed-length national character set (NCHAR_CS), or a particular character set specified by the user |

## 3.293 ALL\_MINING\_ALGORITHMS

ALL\_MINING\_ALGORITHMS describes the settings for a current user.

| Column             | Datatype        | NULL | Description                                                                                                                                                                                                                                                                                                                                |
|--------------------|-----------------|------|--------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|
| ALGORITHM_NAME     | VARCHAR2 (128)  |      | Algorithm used by the model.                                                                                                                                                                                                                                                                                                               |
| MINING_FUNCTION    | VARCHAR2 (30)   |      | Function of the machine learning model. The machine learning function is specified when the model is built: <ul style="list-style-type: none"><li>• CLASSIFICATION</li><li>• REGRESSION</li><li>• CLUSTERING</li><li>• FEATURE_EXTRACTION</li><li>• ASSOCIATION_RULES</li><li>• ATTRIBUTE_IMPORTANCE</li><li>• ANOMALY_DETECTION</li></ul> |
| ALGORITHM_TYPE     | VARCHAR2 (20)   |      | Algorithm type of the model                                                                                                                                                                                                                                                                                                                |
| ALGORITHM_METADATA | CLOB            |      | Metadata of the algorithm                                                                                                                                                                                                                                                                                                                  |
| DESCRIPTION        | VARCHAR2 (4000) |      | Description of the algorithm                                                                                                                                                                                                                                                                                                               |

## 3.294 ALL\_MINING\_MODEL\_ATTRIBUTES

ALL\_MINING\_MODEL\_ATTRIBUTES describes the attributes of the machine learning models accessible to the current user.

Only the attributes in the model signature are included in this view. The attributes in the model signature correspond to the columns in the training data that were used to build the model.

Machine learning models are schema objects created by Oracle Machine Learning for SQL.

### Related Views

- DBA\_MINING\_MODEL\_ATTRIBUTES describes the attributes of all machine learning models in the database.
- USER\_MINING\_MODEL\_ATTRIBUTES describes the attributes of the machine learning models owned by the current user. This view does not display the OWNER column.

| Column     | Datatype       | NULL     | Description                         |
|------------|----------------|----------|-------------------------------------|
| OWNER      | VARCHAR2 (128) | NOT NULL | Owner of the machine learning model |
| MODEL_NAME | VARCHAR2 (128) | NOT NULL | Name of the machine learning model  |

| Column         | Datatype       | NULL     | Description                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                               |

| ATTRIBUTE_NAME | VARCHAR2 (128) | NOT NULL | <p>Name of the attribute</p> <p>The target attribute name for ONNX models (mining model with ALGORITHM set to ONNX) is always ORA\$ONNXTARGET.</p>                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                        |
| ATTRIBUTE_TYPE | VARCHAR2 (11)  |          | <p>Logical type of the attribute. The type is identified during the model build or apply process:</p> <ul style="list-style-type: none"> <li>NUMERICAL: Numeric data</li> <li>CATEGORICAL: Character data</li> <li>TEXT: Unstructured text data</li> <li>PARTITION: The input signature column is used for the partitioning key</li> <li>MIXED: The input signature column takes on more than one attribute type. This is due to user-defined embedded transformations that allow an input column to be transformed into multiple independent mining attributes, including mining attributes of different types.</li> <li>VECTOR: Attribute of type vectors (typically, target attribute of embedding models).</li> </ul> |
| DATA_TYPE      | VARCHAR2 (106) |          | Data type of the attribute                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                |
| DATA_LENGTH    | NUMBER         |          | Length of the data type                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                   |
| DATA_PRECISION | NUMBER         |          | Precision of a fixed point number. Precision, which is the total number of significant decimal digits, is represented as <i>p</i> in the data type NUMBER ( <i>p</i> , <i>s</i> ).                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                        |
| DATA_SCALE     | NUMBER         |          | Scale of a fixed point number. Scale, which is the number of digits from the decimal to the least significant digit, is represented as <i>s</i> in the data type NUMBER ( <i>p</i> , <i>s</i> ).                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                          |
| USAGE_TYPE     | VARCHAR2 (8)   |          | Indicates whether the attribute was used to construct the model (ACTIVE) or not (INACTIVE). Some attributes may be eliminated by transformations or algorithmic processing. The *_MINING_MODEL_ATTRIBUTES view only lists the attributes used by the model, therefore the value of this column is always ACTIVE.                                                                                                                                                                                                                                                                                                                                                                                                          |
| TARGET         | VARCHAR2 (3)   |          | Indicates whether the attribute is the target of a predictive model (YES) or not (NO). The target describes the result that is produced when the model is applied.                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                        |

| Column         | Datatype        | NULL | Description                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                   |
|----------------|-----------------|------|-------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|
| ATTRIBUTE_SPEC | VARCHAR2 (4000) |      | <p>One or more keywords that identify special treatment for the attribute during model build. Values are:</p> <ul style="list-style-type: none"><li>• <b>FORCE_IN:</b> (GLM only) When feature selection is enabled, forces the inclusion of the attribute in the model build. Feature selection is disabled by default. If the model is not using GLM with feature selection enabled, this value is ignored.</li><li>• <b>NOPREP:</b> When ADP is on, prevents automatic transformation of the attribute. If ADP is OFF, this value is ignored.</li><li>• <b>TEXT:</b> Causes the attribute to be treated as unstructured text data. The TEXT value supports three subsettings: POLICY_NAME, MAX_FEATURES, TOKEN_TYPE, and MIN_DOCUMENTS. Subsettings are specified as name:value pairs within parentheses. For example: (POLICY_NAME:mypolicy) (MAX_FEATURES:2000) (TOKEN_TYPE:THEME). See <i>Oracle Machine Learning for SQL API Guide</i> for details.</li><li>• <b>NULL:</b> The ATTRIBUTE_SPEC for this attribute is NULL.</li></ul> <p>ATTRIBUTE_SPEC is a parameter to the PL/SQL procedure DBMS_DATA_MINING_TRANSFORM.SET_TRANSFORM. See <i>Oracle Database PL/SQL Packages and Types Reference</i> for details.</p> |
| VECTOR_INFO    | VARCHAR2 (56)   |      | <p>Indicates the number of vectors and their data type in an ONNX model</p> <p>Format: VECTOR(<i>dimension</i>,<i>element_type</i>)</p> <p>Example: VECTOR(768,float32)</p>                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                   |

## 3.295 ALL\_MINING\_MODEL\_PARTITIONS

ALL\_MINING\_MODEL\_PARTITIONS describes all the model partitions accessible to the user.

### Related Views

- DBA\_MINING\_MODEL\_PARTITIONS describes all the model partitions accessible to the system.
- USER\_MINING\_MODEL\_PARTITIONS describes the user's own model partitions. This view does not display the OWNER column.

| Column         | Datatype       | NULL     | Description                                                                                                                                                                         |
|----------------|----------------|----------|-------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|
| OWNER          | VARCHAR2 (128) | NOT NULL | Name of the model owner                                                                                                                                                             |
| MODEL_NAME     | VARCHAR2 (128) | NOT NULL | Name of the model                                                                                                                                                                   |
| PARTITION_NAME | VARCHAR2 (128) | —        | Name of the model partition                                                                                                                                                         |
| POSITION       | NUMBER         | —        | Column position number for partitioning column. Column position represents the position of the column in a multi-column partitioning key, or 1 for a unary column partitioning key. |
| COLUMN_NAME    | VARCHAR2 (128) | NOT NULL | Name of the column used for partitioning                                                                                                                                            |

| Column       | Datatype        | NULL | Description                            |
|--------------|-----------------|------|----------------------------------------|
| COLUMN_VALUE | VARCHAR2 (4000) | –    | Value of the column for this partition |

## 3.296 ALL\_MINING\_MODEL\_SETTINGS

ALL\_MINING\_MODEL\_SETTINGS describes the settings of the machine learning models accessible to the current user.

Machine learning models are schema objects created by Oracle Machine Learning for SQL.

### Related Views

- DBA\_MINING\_MODEL\_SETTINGS describes the settings of all machine learning models in the database.
- USER\_MINING\_MODEL\_SETTINGS describes the settings of the machine learning models owned by the current user. This view does not display the OWNER column.

| Column        | Datatype        | NULL     | Description                                                                                          |
|---------------|-----------------|----------|------------------------------------------------------------------------------------------------------|
| OWNER         | VARCHAR2 (128)  | NOT NULL | Owner of the machine learning model                                                                  |
| MODEL_NAME    | VARCHAR2 (128)  | NOT NULL | Name of the machine learning model                                                                   |
| SETTING_NAME  | VARCHAR2 (30)   | NOT NULL | Name of the setting                                                                                  |
| SETTING_VALUE | VARCHAR2 (4000) | –        | Value of the setting                                                                                 |
| SETTING_TYPE  | VARCHAR2 (7)    | –        | Indicates whether the default value (DEFAULT) or a user-specified value (INPUT) is used by the model |

## 3.298 ALL\_MINING\_MODEL\_XFORMS

ALL\_MINING\_MODEL\_XFORMS describes the user-specified transformations embedded in all models accessible to the user.

### Related Views

- DBA\_MINING\_MODEL\_XFORMS describes the user-specified transformations embedded in all models accessible in the system.
- USER\_MINING\_MODEL\_XFORMS describes the user-specified transformations embedded with the user's own models. This view does not display the OWNER column.

| Column            | Datatype        | NULL     | Description                                                                                                   |
|-------------------|-----------------|----------|---------------------------------------------------------------------------------------------------------------|
| OWNER             | VARCHAR2 (128)  | NOT NULL | Name of the model owner                                                                                       |
| MODEL_NAME        | VARCHAR2 (128)  | NOT NULL | Name of the model                                                                                             |
| ATTRIBUTE_NAME    | VARCHAR2 (128)  |          | Name of the attribute used in the transformation                                                              |
| ATTRIBUTE_SUBNAME | VARCHAR2 (4000) |          | Subname of the attribute used in the transformation                                                           |
| ATTRIBUTE_SPEC    | VARCHAR2 (4000) |          | Attribute specification provided to model training                                                            |
| EXPRESSION        | CLOB            |          | Transformation expression provided to model training                                                          |
| REVERSE           | VARCHAR2 (3)    |          | Indicates whether the specified transformation is a reverse transformation (YES) or a forward expression (NO) |

## 3.299 ALL\_MINING\_MODELS

ALL\_MINING\_MODELS describes the machine learning models accessible to the current user.

Mining models are schema objects created by Oracle Machine Learning for SQL.

### Related Views

- DBA\_MINING\_MODELS describes all machine learning models in the database.
- USER\_MINING\_MODELS describes the machine learning models owned by the current user. This view does not display the OWNER column.

| Column | Datatype       | NULL     | Description                         |
|--------|----------------|----------|-------------------------------------|
| OWNER  | VARCHAR2 (128) | NOT NULL | Owner of the machine learning model |

| Column       | Datatype        | NULL | Description                                                                                                                                                                                                                                                                               |
|--------------|-----------------|------|-------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|
| BUILD_SOURCE | CLOB            |      | Input data source (provided by the user at build time) on which to build the model<br><br>This column is populated for models created in Oracle Database 23ai or later. For older version models that were imported into Oracle Database 23ai or later, the value of this column is null. |
| COMMENTS     | VARCHAR2 (4000) |      | Comment applied to the model with a SQL COMMENT statement                                                                                                                                                                                                                                 |

## 3.300 ALL\_MLE\_ENV\_IMPORTS

ALL\_MLE\_ENV\_IMPORTS describes import name to module mappings in the Oracle Database Multilingual Engine (MLE) environments accessible to the current user.

### Related Views

- DBA\_MLE\_ENV\_IMPORTS describes import name to module mappings in all MLE environments in the database.
- USER\_MLE\_ENV\_IMPORTS describes import name to module mappings in the MLE environments owned by the current user. This view does not display the ENV\_OWNER column.

| Column       | Datatype        | NULL     | Description                                                                                                                                                                                         |
|--------------|-----------------|----------|-----------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|
| ENV_OWNER    | VARCHAR2 (128)  | NOT NULL | Owner of the MLE environment                                                                                                                                                                        |
| ENV_NAME     | VARCHAR2 (128)  | NOT NULL | Name of the MLE environment                                                                                                                                                                         |
| ENV_ID       | NUMBER          | NOT NULL | Object number of the MLE environment                                                                                                                                                                |
| IMPORT_NAME  | VARCHAR2 (2048) | NOT NULL | Import name, as specified in the MLE environment's IMPORTS clause<br><br>It is possible for a single MLE environment to have multiple import names. The import name is a case-sensitive identifier. |
| MODULE_OWNER | VARCHAR2 (128)  |          | Owner of the MLE module                                                                                                                                                                             |
| MODULE_NAME  | VARCHAR2 (128)  | NOT NULL | Name of the MLE module                                                                                                                                                                              |

## 3.304 ALL\_MVIEW\_AGGREGATES

ALL\_MVIEW\_AGGREGATES describes the grouping functions (aggregate operations) that appear in the SELECT list of materialized aggregate views accessible to the current user.

### Related Views

- DBA\_MVIEW\_AGGREGATES describes all such grouping functions defined for all materialized views in the database.
- USER\_MVIEW\_AGGREGATES describes all such grouping functions defined for all materialized views owned by the current user.

### Note:

All three views exclude materialized views that reference remote tables or that include references to a nonstatic value such as SYSDATE or USER. These views also exclude materialized views that were created as "snapshots" before Oracle8i and that were never altered to enable query rewrite.

| Column             | Datatype       | NULL     | Description                                                                                                                                      |
|--------------------|----------------|----------|--------------------------------------------------------------------------------------------------------------------------------------------------|
| OWNER              | VARCHAR2 (128) | NOT NULL | Owner of the materialized view                                                                                                                   |
| MVIEW_NAME         | VARCHAR2 (128) | NOT NULL | Name of the materialized view                                                                                                                    |
| POSITION_IN_SELECT | NUMBER         | NOT NULL | Ordinal position of this aggregation within the SELECT list. For the position of nonaggregate elements of the select list, see "ALL_MVIEW_KEYS". |
| CONTAINER_COLUMN   | VARCHAR2 (128) | NOT NULL | Name of this column in the container table                                                                                                       |
| AGG_FUNCTION       | VARCHAR2 (8)   |          | Aggregation function                                                                                                                             |
| DISTINCTFLAG       | VARCHAR2 (1)   |          | Indicates whether this aggregation is distinct (Y) or not (N)                                                                                    |
| MEASURE            | LONG           |          | SQL text of the measure, excluding the aggregation function. Equal to * for COUNT (*).                                                           |

## 3.305 ALL\_MVIEW\_ANALYSIS

ALL\_MVIEW\_ANALYSIS describes the materialized views accessible to the current user. It provides additional information for analysis by applications. Minimal information is displayed for

materialized views that do not support query rewrite (such as materialized views with remote master tables or nondeterministic functions).

### Related Views

- `DBA_MVIEW_ANALYSIS` describes all such materialized views in the database.
- `USER_MVIEW_ANALYSIS` describes all such materialized views owned by the current user.

#### Note:

All of the information in these views is also displayed in `ALL_MVIEWS` and its related views. Oracle recommends that you refer to `ALL_MVIEWS` for this information instead of these views.

| Column            | Datatype       | NULL     | Description                                                                                                                                                                                                                                                                                                                                                                                                                                                       |
|-------------------|----------------|----------|-------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|
| OWNER             | VARCHAR2 (128) | NOT NULL | Owner of the materialized view                                                                                                                                                                                                                                                                                                                                                                                                                                    |
| MVIEW_NAME        | VARCHAR2 (128) | NOT NULL | Name of the materialized view                                                                                                                                                                                                                                                                                                                                                                                                                                     |
| MVIEW_TABLE_OWNER | VARCHAR2 (128) | NOT NULL | Owner of the container table (see next column)                                                                                                                                                                                                                                                                                                                                                                                                                    |
| CONTAINER_NAME    | VARCHAR2 (128) |          | Name of the internal container in which the materialized view data is held. Normally this is the same as <code>MVIEW_NAME</code> . For materialized views created before Oracle8i, Oracle Database attaches the 6-byte prefix <code>SNAP\$_</code> . If <code>MVIEW_NAME</code> has more than 19 bytes, then Oracle Database truncates the name to 19 bytes and adds a 4-byte sequence number as a suffix to produce a nonambiguous <code>CONTAINER_NAME</code> . |
| LAST_REFRESH_SCN  | NUMBER         |          | System change number (SCN) of the last refresh operation                                                                                                                                                                                                                                                                                                                                                                                                          |
| LAST_REFRESH_DATE | DATE           |          | <code>SYSDATE</code> of the last refresh                                                                                                                                                                                                                                                                                                                                                                                                                          |
| REFRESH_METHOD    | VARCHAR2 (8)   |          | Default refresh method: <ul style="list-style-type: none"> <li>• FORCE</li> <li>• FAST</li> <li>• COMPLETE</li> <li>• NEVER</li> </ul>                                                                                                                                                                                                                                                                                                                            |
| SUMMARY           | VARCHAR2 (1)   |          | Indicates whether this materialized view includes a <code>GROUP BY</code> clause or aggregation (Y) or not (N)                                                                                                                                                                                                                                                                                                                                                    |
| FULLREFRESHTIM    | NUMBER         |          | Approximate refresh time, in seconds, for full refresh                                                                                                                                                                                                                                                                                                                                                                                                            |
| INCREFRESHTIM     | NUMBER         |          | Approximate refresh time, in seconds, for fast refresh                                                                                                                                                                                                                                                                                                                                                                                                            |
| CONTAINS_VIEWS    | VARCHAR2 (1)   |          | Indicates whether this materialized view contains a view in its definition (Y) or not (N)                                                                                                                                                                                                                                                                                                                                                                         |
| UNUSABLE          | VARCHAR2 (1)   |          | Indicates whether this materialized view is <code>UNUSABLE</code> (inconsistent data) (Y) or not (N). A materialized view can be <code>UNUSABLE</code> if a system failure occurs during a full refresh.                                                                                                                                                                                                                                                          |
| RESTRICTED_SYNTAX | VARCHAR2 (1)   |          | Indicates whether this materialized view had a restriction in its defining query that limits the use of query rewrite (Y) or not (N). More complete information is provided by the <code>REWRITE_CAPABILITY</code> column of the <code>*_MVIEWS</code> view.                                                                                                                                                                                                      |

| Column          | Datatype     | NULL     | Description                                                                                                                                                                                         |
|-----------------|--------------|----------|-----------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|
| INC_REFRESHABLE | VARCHAR2 (1) |          | Indicates whether this materialized view can be fast refreshed (Y) or not (N)                                                                                                                       |
| KNOWN_STALE     | VARCHAR2 (1) |          | Indicates whether the data contained in the materialized view is known to be inconsistent with the master table data because that has been updated since the last successful refresh (Y) or not (N) |
| INVALID         | VARCHAR2 (1) |          | Indicates whether this materialized view is in an invalid state (inconsistent metadata) (Y) or not (N)                                                                                              |
| REWRITE_ENABLED | VARCHAR2 (1) |          | Indicates whether this materialized view is currently enabled for query rewrite (Y) or not (N)                                                                                                      |
| QUERY_LEN       | NUMBER       |          | Length (in bytes) of the query field                                                                                                                                                                |
| QUERY           | LONG         |          | SELECT expression of the materialized view definition                                                                                                                                               |
| REVISION        | NUMBER       | NOT NULL | Reserved for internal use                                                                                                                                                                           |

## 3.306 ALL\_MVIEW\_COMMENTS

ALL\_MVIEW\_COMMENTS displays comments on the materialized views accessible to the current user.

### Related Views

- DBA\_MVIEW\_COMMENTS displays comments on the materialized views in the database.
- USER\_MVIEW\_COMMENTS displays comments on the materialized views owned by the current user. This view does not display the OWNER column.

| Column     | Datatype        | NULL     | Description                      |
|------------|-----------------|----------|----------------------------------|
| OWNER      | VARCHAR2 (128)  | NOT NULL | Owner of the materialized view   |
| MVIEW_NAME | VARCHAR2 (128)  | NOT NULL | Name of the materialized view    |
| COMMENTS   | VARCHAR2 (4000) |          | Comment on the materialized view |

## 3.307 ALL\_MVIEW\_DETAIL\_LOGICAL\_PARTITION

ALL\_MVIEW\_DETAIL\_LOGICAL\_PARTITION displays freshness information, with respect to logical partition change tracking (LPCT) detail partitions, for the materialized views accessible to the current user.

### Related Views

- DBA\_MVIEW\_DETAIL\_LOGICAL\_PARTITION displays freshness information, with respect to LPCT detail partitions, for all materialized views in the database.
- USER\_MVIEW\_DETAIL\_LOGICAL\_PARTITION displays freshness information, with respect to LPCT detail partitions, for the materialized views owned by the current user.

| Column                           | Datatype       | NULL     | Description                                                                                                                                                           |
|----------------------------------|----------------|----------|-----------------------------------------------------------------------------------------------------------------------------------------------------------------------|
| OWNER                            | VARCHAR2 (128) | NOT NULL | Owner of the materialized view                                                                                                                                        |
| MVIEW_NAME                       | VARCHAR2 (128) | NOT NULL | Name of the materialized view                                                                                                                                         |
| DETAILOBJ_OWNER                  | VARCHAR2 (128) | NOT NULL | Owner of the detail object                                                                                                                                            |

## 3.309 ALL\_MVIEW\_DETAIL\_RELATIONS

ALL\_MVIEW\_DETAIL\_RELATIONS describes the named detail relations that are either specified in the FROM list of the subquery that defines a materialized view accessible to the current user, or that are indirectly referenced through views in that FROM list. Inline views in the materialized view definition are not represented in this view or the related views.

### Related Views

- DBA\_MVIEW\_DETAIL\_RELATIONS describes all such detail relations defined for all materialized views in the database.
- USER\_MVIEW\_DETAIL\_RELATIONS describes such detail relations defined for all materialized views owned by the current user.

**Note:**

All three views exclude materialized views that reference remote tables or that includes references to a nonstatic value such as `SYSDATE` or `USER`. These views also exclude materialized views that were created as *snapshots* before Oracle8i and that were never altered to enable query rewrite.

| Column                   | Datatype       | NULL     | Description                                                                                                                                                 |
|--------------------------|----------------|----------|-------------------------------------------------------------------------------------------------------------------------------------------------------------|
| OWNER                    | VARCHAR2 (128) | NOT NULL | Owner of the materialized view                                                                                                                              |
| MVIEW_NAME               | VARCHAR2 (128) | NOT NULL | Name of the materialized view                                                                                                                               |
| DETAILOBJ_OWNER          | VARCHAR2 (128) | NOT NULL | Detail object owner                                                                                                                                         |
| DETAILOBJ_NAME           | VARCHAR2 (128) | NOT NULL | Detail object name (that is, the name of a table or view)                                                                                                   |
| DETAILOBJ_TYPE           | VARCHAR2 (9)   |          | Detail object type: <ul style="list-style-type: none"> <li>• TABLE</li> <li>• VIEW</li> <li>• SNAPSHOT</li> <li>• CONTAINER</li> <li>• UNDEFINED</li> </ul> |
| DETAILOBJ_ALIAS          | VARCHAR2 (128) |          | Implicit or explicit alias for detail relation                                                                                                              |
| DETAILOBJ_PCT            | VARCHAR2 (1)   |          | Indicates whether the detail object PCT is supported (Y) or not (N)                                                                                         |
| NUM_FRESH_PCT_PARTITIONS | NUMBER         |          | Number of fresh PCT partitions                                                                                                                              |
| NUM_STALE_PCT_PARTITIONS | NUMBER         |          | Number of stale PCT partitions                                                                                                                              |

## 3.310 ALL\_MVIEW\_DETAIL\_SUBPARTITION

`ALL_MVIEW_DETAIL_SUBPARTITION` displays freshness information, with respect to partition change tracking (PCT) detail subpartitions, for the materialized views accessible to the current user.

### Related Views

- `DBA_MVIEW_DETAIL_SUBPARTITION` displays freshness information, with respect to PCT detail subpartitions, for all materialized views in the database.
- `USER_MVIEW_DETAIL_SUBPARTITION` displays freshness information, with respect to PCT detail subpartitions, for the materialized views owned by the current user.

| Column                       | Datatype       | NULL     | Description                                                        |
|------------------------------|----------------|----------|--------------------------------------------------------------------|
| OWNER                        | VARCHAR2 (128) | NOT NULL | Owner of the materialized view                                     |
| MVIEW_NAME                   | VARCHAR2 (128) | NOT NULL | Name of the materialized view                                      |
| DETAILOBJ_OWNER              | VARCHAR2 (128) | NOT NULL | Owner of the detail object                                         |
| DETAILOBJ_NAME               | VARCHAR2 (128) | NOT NULL | Name of the detail object                                          |
| DETAIL_PARTITION_NAME        | VARCHAR2 (128) |          | Name of the detail object partition                                |
| DETAIL_SUBPARTITION_NAME     | VARCHAR2 (128) |          | Name of the detail object subpartition                             |
| DETAIL_SUBPARTITION_POSITION | NUMBER         |          | Position of the detail object subpartition                         |
| FRESHNESS                    | CHAR (5)       |          | Freshness state of the detail object subpartition (FRESH or STALE) |

## 3.311 ALL\_MVIEW\_JOINS

ALL\_MVIEW\_JOINS describes joins between two columns in the WHERE clause of the subquery that defines a materialized view accessible to the current user.

### Related Views

- DBA\_MVIEW\_JOINS describes all such joins for all materialized views in the database.
- USER\_MVIEW\_JOINS describes such joins for all materialized views owned by the current user.

 **Note:**

All three views exclude materialized views that reference remote tables or that includes references to a nonstatic value such as SYSDATE or USER. These views also exclude materialized views that were created as "snapshots" before Oracle8i and that were never altered to enable query rewrite.

| Column              | Datatype       | NULL     | Description                                              |
|---------------------|----------------|----------|----------------------------------------------------------|
| OWNER               | VARCHAR2 (128) | NOT NULL | Owner of the materialized view                           |
| MVIEW_NAME          | VARCHAR2 (128) | NOT NULL | Materialized view name                                   |
| DETAILOBJ1_OWNER    | VARCHAR2 (128) | NOT NULL | Owner of the first object in the join <sup>1</sup>       |
| DETAILOBJ1_RELATION | VARCHAR2 (128) | NOT NULL | Name of the first object in the join <sup>1</sup>        |
| DETAILOBJ1_COLUMN   | VARCHAR2 (128) | NOT NULL | Join column of the first object in the join <sup>1</sup> |
| OPERATOR            | CHAR (1)       |          | Join operator <sup>1</sup>                               |

| Column              | Datatype       | NULL     | Description                                                                                                                |
|---------------------|----------------|----------|----------------------------------------------------------------------------------------------------------------------------|
| OPERATOR_TYPE       | VARCHAR2 (1)   |          | Indicates whether the join is an inner join (I) or the DETAILOBJ1 table is the left side of an outer join (L) <sup>1</sup> |
| DETAILOBJ2_OWNER    | VARCHAR2 (128) | NOT NULL | Owner of the second object in the join <sup>1</sup>                                                                        |
| DETAILOBJ2_RELATION | VARCHAR2 (128) | NOT NULL | Name of the second object in the join <sup>1</sup>                                                                         |
| DETAILOBJ2_COLUMN   | VARCHAR2 (128) | NOT NULL | Join column of the second object in the join <sup>1</sup>                                                                  |

<sup>1</sup> These rows relate only to materialized join views and materialized aggregate views. They describe the two detail objects of a materialized view join.

## 3.312 ALL\_MVIEW\_KEYS

ALL\_MVIEW\_KEYS describes the columns or expressions in the SELECT list upon which materialized views accessible to the current user are based.

#### Related Views

- DBA\_MVIEW\_KEYS describes such columns and expressions for all materialized views in the database.
- USER\_MVIEW\_KEYS describes such columns and expressions for all materialized views owned by the current user.

#### Note:

All three views exclude materialized views that reference remote tables or that includes references to a nonstatic value such as SYSDATE or USER. These views also exclude materialized views that were created as *snapshots* before Oracle8i and that were never altered to enable query rewrite.

| Column             | Datatype       | NULL     | Description                                                   |
|--------------------|----------------|----------|---------------------------------------------------------------|
| OWNER              | VARCHAR2 (128) | NOT NULL | Owner of the materialized view                                |
| MVIEW_NAME         | VARCHAR2 (128) | NOT NULL | Materialized view name                                        |
| POSITION_IN_SELECT | NUMBER         | NOT NULL | Ordinal position of this key within the SELECT list           |
| CONTAINER_COLUMN   | VARCHAR2 (128) | NOT NULL | Name of the column in the container table                     |
| DETAILOBJ_OWNER    | VARCHAR2 (128) | NOT NULL | Detail object owner                                           |
| DETAILOBJ_NAME     | VARCHAR2 (128) | NOT NULL | Detail object name (for example, the name of a table or view) |
| DETAILOBJ_ALIAS    | VARCHAR2 (128) |          | Implicit or explicit alias for detail relation                |

| Column           | Datatype       | NULL     | Description                                                                               |
|------------------|----------------|----------|-------------------------------------------------------------------------------------------|
| DETAILOBJ_TYPE   | VARCHAR2 (5)   |          | Detail object type: <ul style="list-style-type: none"> <li>TABLE</li> <li>VIEW</li> </ul> |
| DETAILOBJ_COLUMN | VARCHAR2 (128) | NOT NULL | Name of the detail relation column                                                        |

## 3.313 ALL\_MVIEW\_LOGS

ALL\_MVIEW\_LOGS describes all materialized view logs accessible to the current user.

#### Related Views

- DBA\_MVIEW\_LOGS describes all materialized view logs in the database.
- USER\_MVIEW\_LOGS describes all materialized view logs owned by the current user.

| Column             | Datatype       | NULL | Description                                                                                                                                      |
|--------------------|----------------|------|--------------------------------------------------------------------------------------------------------------------------------------------------|
| LOG_OWNER          | VARCHAR2 (128) |      | Owner of the materialized view log                                                                                                               |
| MASTER             | VARCHAR2 (128) |      | Name of the master table or master materialized view whose changes are logged                                                                    |
| LOG_TABLE          | VARCHAR2 (128) |      | Name of the table where the changes to the master table or master materialized view are logged                                                   |
| LOG_TRIGGER        | VARCHAR2 (128) |      | Obsolete with Oracle8i and later. Set to NULL. Formerly, this parameter was an after-row trigger on the master which inserted rows into the log. |
| ROWIDS             | VARCHAR2 (3)   |      | Indicates whether rowid information is recorded (YES) or not (NO)                                                                                |
| PRIMARY_KEY        | VARCHAR2 (3)   |      | Indicates whether primary key information is recorded (YES) or not (NO)                                                                          |
| OBJECT_ID          | VARCHAR2 (3)   |      | Indicates whether object identifier information in an object table is recorded (YES) or not (NO)                                                 |
| FILTER_COLUMNS     | VARCHAR2 (3)   |      | Indicates whether filter column information is recorded (YES) or not (NO)                                                                        |
| SEQUENCE           | VARCHAR2 (3)   |      | Indicates whether the sequence value, which provides additional ordering information, is recorded (YES) or not (NO)                              |
| INCLUDE_NEW_VALUES | VARCHAR2 (3)   |      | Indicates whether both old and new values are recorded (YES) or old values are recorded but new values are not recorded (NO)                     |
| PURGE_ASYNCHRONOUS | VARCHAR2 (3)   |      | Indicates whether the materialized view log is purged asynchronously (YES) or not (NO)                                                           |

| Column            | Datatype       | NULL | Description                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                       |
|-------------------|----------------|------|-------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|
| PURGE_DEFERRED    | VARCHAR2 (3)   |      | Indicates whether the materialized view log is purged in a deferred manner (YES) or not (NO)                                                                                                                                                                                                                                                                                                                                                                                                                      |
| PURGE_START       | DATE           |      | For deferred purge, the purge start date                                                                                                                                                                                                                                                                                                                                                                                                                                                                          |
| PURGE_INTERVAL    | VARCHAR2 (200) |      | For deferred purge, the purge interval                                                                                                                                                                                                                                                                                                                                                                                                                                                                            |
| LAST_PURGE_DATE   | DATE           |      | Date of the last purge                                                                                                                                                                                                                                                                                                                                                                                                                                                                                            |
| LAST_PURGE_STATUS | NUMBER         |      | Status of the last purge (error code or 0 for success)                                                                                                                                                                                                                                                                                                                                                                                                                                                            |
| NUM_ROWS_PURGED   | NUMBER         |      | Number of rows purged in the last purge                                                                                                                                                                                                                                                                                                                                                                                                                                                                           |
| COMMIT_SCN_BASED  | VARCHAR2 (3)   |      | Indicates whether the materialized view log is commit SCN-based (YES) or not (NO)                                                                                                                                                                                                                                                                                                                                                                                                                                 |
| STAGING_LOG       | VARCHAR2 (3)   |      | Indicates whether the materialized view log is a staging log for synchronous refresh (YES) or not (NO)                                                                                                                                                                                                                                                                                                                                                                                                            |
| AUTO              | VARCHAR2 (6)   |      | Indicates whether the materialized view log is an automatic materialized view log. Possible values: <ul style="list-style-type: none"> <li>• YES - It is an automatic materialized view log</li> <li>• NO - It is a user-created materialized view log</li> <li>• HYBRID - It is a hybrid materialized view log. It was initially a user-created materialized view log and was subsequently altered automatically to include one or more additional columns to support an automatic materialized view.</li> </ul> |

## 3.314 ALL\_MVIEW\_REFRESH\_TIMES

ALL\_MVIEW\_REFRESH\_TIMES describes refresh times of the materialized views accessible to the current user.

#### Related Views

- DBA\_MVIEW\_REFRESH\_TIMES describes refresh times of all materialized views in the database.
- USER\_MVIEW\_REFRESH\_TIMES describes refresh times of the materialized views owned by the current user.

| Column       | Datatype       | NULL     | Description                    |
|--------------|----------------|----------|--------------------------------|
| OWNER        | VARCHAR2 (128) | NOT NULL | Owner of the materialized view |
| NAME         | VARCHAR2 (128) | NOT NULL | Name of the materialized view  |
| MASTER_OWNER | VARCHAR2 (128) |          | Owner of the master table      |
| MASTER       | VARCHAR2 (128) |          | Name of the master table       |

| Column       | Datatype | NULL | Description                                                               |
|--------------|----------|------|---------------------------------------------------------------------------|
| LAST_REFRESH | DATE     |      | <code>SYSDATE</code> from the master site at the time of the last refresh |

## 3.315 ALL\_MVIEWS

`ALL_MVIEWS` describes all materialized views accessible to the current user.

### Related Views

- `DBA_MVIEWS` describes all materialized views in the database.
- `USER_MVIEWS` describes all materialized views owned by the current user.

| Column              | Datatype       | NULL     | Description                                                                                                                                                                                                                                                                                                                                                                                                                                                   |
|---------------------|----------------|----------|---------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|
| OWNER               | VARCHAR2 (128) | NOT NULL | Schema in which the materialized view was created                                                                                                                                                                                                                                                                                                                                                                                                             |
| MVIEW_NAME          | VARCHAR2 (128) | NOT NULL | Name of the materialized view                                                                                                                                                                                                                                                                                                                                                                                                                                 |
| CONTAINER_NAME      | VARCHAR2 (128) | NOT NULL | Name of the container in which the materialized view's data is held. Normally this is the same as <code>MVIEW_NAME</code> . For materialized views created before Oracle8i, Oracle Database attaches the 6-byte prefix <code>SNAP\$_</code> . If <code>MVIEW_NAME</code> has more than 19 bytes, then Oracle Database truncates the name to 19 bytes and may add a 4-byte sequence number as a suffix to produce a nonambiguous <code>CONTAINER_NAME</code> . |
| QUERY               | LONG           |          | Query that defines the materialized view                                                                                                                                                                                                                                                                                                                                                                                                                      |
| QUERY_LEN           | NUMBER (38)    |          | Length (in bytes) of the defining query                                                                                                                                                                                                                                                                                                                                                                                                                       |
| UPDATABLE           | VARCHAR2 (1)   |          | Indicates whether the materialized view is updatable (Y) or not (N)                                                                                                                                                                                                                                                                                                                                                                                           |
| UPDATE_LOG          | VARCHAR2 (128) |          | For updatable materialized views, the filename of the update log                                                                                                                                                                                                                                                                                                                                                                                              |
| MASTER_ROLLBACK_SEG | VARCHAR2 (128) |          | Rollback segment for the master site or the master materialized view site                                                                                                                                                                                                                                                                                                                                                                                     |
| MASTER_LINK         | VARCHAR2 (128) |          | Database link for the master site or the master materialized view site                                                                                                                                                                                                                                                                                                                                                                                        |
| REWRITE_ENABLED     | VARCHAR2 (1)   |          | Indicates whether rewrite is enabled (Y) or not (N)                                                                                                                                                                                                                                                                                                                                                                                                           |

| Column             | Datatype      | NULL | Description                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                             |
|--------------------|---------------|------|-----------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|
| REWRITE_CAPABILITY | VARCHAR2 (9)  |      | <p>Indicates whether the materialized view is eligible for rewrite, and if so, what rules must be followed:</p> <ul style="list-style-type: none"> <li>NONE - Materialized view cannot be used for rewrite, because rewrite is disallowed or prevented</li> <li>TEXTMATCH - Defining query of the materialized view contained restrictions on the use of query rewrite</li> <li>GENERAL - Defining query of the materialized view contained no restrictions on the use of query rewrite, so Oracle Database can apply any rewrite rule that is supported</li> </ul>                     |
| REFRESH_MODE       | VARCHAR2 (6)  |      | <p>Refresh mode of the materialized view:</p> <ul style="list-style-type: none"> <li>DEMAND - Oracle Database refreshes this materialized view whenever an appropriate refresh procedure is called</li> <li>COMMIT - Oracle Database refreshes this materialized view when a transaction on one of the materialized view's masters commits</li> <li>NEVER - Oracle Database never refreshes this materialized view</li> </ul>                                                                                                                                                           |
| REFRESH_METHOD     | VARCHAR2 (8)  |      | <p>Default method used to refresh the materialized view (can be overridden through the API):</p> <ul style="list-style-type: none"> <li>COMPLETE - Materialized view is completely refreshed from the masters</li> <li>FORCE - Oracle Database performs a fast refresh if possible, otherwise a complete refresh</li> <li>FAST - Oracle Database performs an incremental refresh applying changes that correspond to changes in the masters since the last refresh</li> <li>NEVER - User specified that Oracle Database should not refresh this materialized view</li> </ul>            |
| BUILD_MODE         | VARCHAR2 (9)  |      | <p>Indicates how the materialized view was populated during creation:</p> <ul style="list-style-type: none"> <li>IMMEDIATE - Populated from the masters during creation</li> <li>DEFERRED - Not populated during creation. Must be explicitly populated later by the user.</li> <li>PREBUILT - Populated with an existing table during creation. The relationship of the contents of this prebuilt table to the materialized view's masters is unknown to Oracle Database.</li> </ul>                                                                                                   |
| FAST_REFRESHABLE   | VARCHAR2 (18) |      | <p>Indicates whether the materialized view is eligible for incremental (fast) refresh. Oracle Database calculates this value statically, based on the materialized view definition query:</p> <ul style="list-style-type: none"> <li>NO - Materialized view is not fast refreshable, and hence is complex</li> <li>DML - Fast refresh is supported only for DML operations</li> <li>DIRLOAD_DML - Fast refresh is supported for both direct loads and DML operations</li> <li>DIRLOAD_LIMITEDDML - Fast refresh is supported for direct loads and a subset of DML operations</li> </ul> |

| Column                 | Datatype      | NULL | Description                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                        |

| LAST_REFRESH_TYPE      | VARCHAR2 (8)  |      | Method used for the most recent refresh: <ul style="list-style-type: none"> <li>• COMPLETE - Most recent refresh was complete</li> <li>• FAST - Most recent refresh was fast (incremental)</li> <li>• NA - Materialized view has not yet been refreshed (for example, if it was created DEFERRED)</li> </ul>                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                       |
| LAST_REFRESH_DATE      | DATE          |      | Date on which the materialized view was most recently refreshed (blank if not yet populated)                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                       |
| LAST_REFRESH_END_TIME  | DATE          |      | End time of the most recent refresh on the materialized view (blank if not yet populated)                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                          |
| STALENESS              | VARCHAR2 (19) |      | Relationship between the contents of the materialized view and the contents of the materialized view's masters: <ul style="list-style-type: none"> <li>• FRESH - Materialized view is a read-consistent view of the current state of its masters</li> <li>• IMPORT - Materialized view is imported from another database (the value of the UNKNOWN_IMPORT column is Y). Therefore, it is unknown whether the materialized view is in a read-consistent view of its masters from any point in time. The STALENESS of this view will turn to FRESH on a complete refresh.</li> <li>• NEEDS_COMPILE - Some object upon which the materialized view depends has changed. An ALTER MATERIALIZED VIEW...COMPILE statement is required to validate this materialized view and compute the staleness of the contents.</li> <li>• STALE - Materialized view is out of date because one or more of its masters has changed. If the materialized view was FRESH before it became STALE, then it is a read-consistent view of a former state of its masters.</li> <li>• UNDEFINED - Materialized view has remote masters. The concept of staleness is not defined for such materialized views.</li> <li>• UNKNOWN - Oracle Database does not know whether the materialized view is in a read-consistent view of its masters from any point in time (this is the case for materialized views created on prebuilt tables)</li> <li>• UNUSABLE - Materialized view is not a read-consistent view of its masters from any point in time</li> </ul> |
| AFTER_FAST_REFRESH     | VARCHAR2 (19) |      | Specifies the staleness value that will occur if a fast refresh is applied to this materialized view. Its values are the same as for the STALENESS column, plus the value NA, which is used when fast refresh is not applicable to this materialized view.                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                         |
| UNKNOWN_PREBUILT       | VARCHAR2 (1)  |      | Indicates whether the materialized view is prebuilt (Y) or not (N)                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                 |

An ALTER MATERIALIZED VIEW...COMPILE statement is required to validate this materialized view.</li> <li>ERROR - Materialized view has been validated with one or more errors</li> </ul> |
| USE_NO_INDEX           | VARCHAR2 (1)   |      | Indicates whether the materialized view was created using the USING NO INDEX clause (Y) or the materialized view was created with the default index (N). The USING NO INDEX clause suppresses the creation of the default index.                                                                                                                                                                                                                                                                                                                     |
| STALE_SINCE            | DATE           |      | Time from when the materialized view became stale                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                    |
| NUM_PCT_TABLES         | NUMBER         |      | Number of PCT detail tables                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                          |
| NUM_FRESH_PCT_REGIONS  | NUMBER         |      | Number of fresh PCT partition regions                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                |
| NUM_STALE_PCT_REGIONS  | NUMBER         |      | Number of stale PCT partition regions                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                |
| SEGMENT_CREATED        | VARCHAR2 (3)   |      | Indicates whether the materialized view was created using the SEGMENT CREATION DEFERRED clause. The value is YES if the segment for the materialized view is created and NO if it is not.                                                                                                                                                                                                                                                                                                                                                            |
| EVALUATION_EDITION     | VARCHAR2 (128) |      | Name of the edition in which editioned objects referenced in an expression column are resolved                                                                                                                                                                                                                                                                                                                                                                                                                                                       |
| UNUSABLE_BEFORE        | VARCHAR2 (128) |      | Name of the oldest edition in which the stored results of the materialized view's subquery may be used for query rewrite. In editions before the specified edition, the stored results of the materialized view's data are considered unusable. This value is NULL if no such edition is specified.                                                                                                                                                                                                                                                  |
| UNUSABLE_BEGINNING     | VARCHAR2 (128) |      | Name of the oldest edition in which the stored results of the materialized view's subquery may <i>not</i> be used for query rewrite. The data is unusable for query rewrite in the specified edition and in any descendants of this edition. This value is NULL if no such edition is specified.                                                                                                                                                                                                                                                     |
| DEFAULT_COLLATION      | VARCHAR2 (100) |      | Default collation for the materialized view                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                          |
| ON_QUERY_COMPUTATION   | VARCHAR2 (1)   |      | Indicates whether the materialized view is a real-time materialized view (Y) or not (N)                                                                                                                                                                                                                                                                                                                                                                                                                                                              |
| AUTO                   | VARCHAR2 (3)   |      | Indicates whether the materialized view is an automatic materialized view (YES) or not (NO)                                                                                                                                                                                                                                                                                                                                                                                                                                                          |

| Column                     | Datatype    | NULL | Description                                                                              |
|----------------------------|-------------|------|------------------------------------------------------------------------------------------|
| CONCURRENT_REFRESH_ENABLED | VARCHAR2(1) |      | Indicates whether concurrent refresh is enabled for the materialized view (Y) or not (N) |

## 3.316 ALL\_NESTED\_TABLE\_COLS

ALL\_NESTED\_TABLE\_COLS describes the columns of the nested tables accessible to the current user. To gather statistics for this view, use the DBMS\_STATS package.

#### Related Views

- DBA\_NESTED\_TABLE\_COLS describes the columns of all nested tables in the database.
- USER\_NESTED\_TABLE\_COLS describes the columns of the nested tables owned by the current user. This view does not display the OWNER column.

| Column          | Datatype       | NULL     | Description                                                                                                                                        |
|-----------------|----------------|----------|----------------------------------------------------------------------------------------------------------------------------------------------------|
| OWNER           | VARCHAR2(128)  | NOT NULL | Owner of the nested table                                                                                                                          |
| TABLE_NAME      | VARCHAR2(128)  | NOT NULL | Name of the nested table                                                                                                                           |
| COLUMN_NAME     | VARCHAR2(128)  | NOT NULL | Column name                                                                                                                                        |
| DATA_TYPE       | VARCHAR2(128)  |          | Data type of the column                                                                                                                            |
| DATA_TYPE_MOD   | VARCHAR2(3)    |          | Data type modifier of the column                                                                                                                   |
| DATA_TYPE_OWNER | VARCHAR2(128)  |          | Owner of the data type of the column                                                                                                               |
| DATA_LENGTH     | NUMBER         | NOT NULL | Length of the column (in bytes)                                                                                                                    |
| DATA_PRECISION  | NUMBER         |          | Decimal precision for NUMBER data type; binary precision for FLOAT data type; NULL for all other data types                                        |
| DATA_SCALE      | NUMBER         |          | Digits to the right of the decimal point in a number                                                                                               |
| NULLABLE        | VARCHAR2(1)    |          | Indicates whether a column allows NULLs. The value is N if there is a NOT NULL constraint on the column or if the column is part of a PRIMARY KEY. |
| COLUMN_ID       | NUMBER         |          | Sequence number of the column as created                                                                                                           |
| DEFAULT_LENGTH  | NUMBER         |          | Length of the default value for the column                                                                                                         |
| DATA_DEFAULT    | LONG           |          | Default value for the column                                                                                                                       |
| DATA_DEFAULT_VC | VARCHAR2(4000) |          | Default value for the column<br>This column may truncate the default value.                                                                        |

| Column               | Datatype     | NULL | Description                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                           |

| DENSITY              | NUMBER       |      | If a histogram is available on COLUMN_NAME, then this column displays the selectivity of a value that spans fewer than 2 endpoints in the histogram. It does not represent the selectivity of values that span 2 or more endpoints.<br>If a histogram is not available on COLUMN_NAME, then the value of this column is 1/NUM_DISTINCT.<br>This column remains for backward compatibility with Oracle7. This information is now in the {TAB PART}_COL_STATISTICS views.                                               |
| NUM_NULLS            | NUMBER       |      | Number of NULLs in the column                                                                                                                                                                                                                                                                                                                                                                                                                                                                                         |
| NUM_BUCKETS          | NUMBER       |      | Number of buckets in the histogram for the column<br><b>Note:</b> The number of buckets in a histogram is specified in the SIZE parameter of the SQL ANALYZE statement. However, Oracle Database does not create a histogram with more buckets than the number of rows in the sample. Also, if the sample contains any values that are very repetitious, Oracle Database creates the specified number of buckets, but the value indicated by this column may be smaller because of an internal compression algorithm. |
| LAST_ANALYZED        | DATE         |      | Date on which this column was most recently analyzed                                                                                                                                                                                                                                                                                                                                                                                                                                                                  |
| SAMPLE_SIZE          | NUMBER       |      | Sample size used in analyzing this column                                                                                                                                                                                                                                                                                                                                                                                                                                                                             |
| CHARACTER_SET_NAME   | VARCHAR2(44) |      | Name of the character set: <ul style="list-style-type: none"> <li>CHAR_CS</li> <li>NCHAR_CS</li> </ul>                                                                                                                                                                                                                                                                                                                                                                                                                |
| CHAR_COL_DECL_LENGTH | NUMBER       |      | Declaration length of the character type column                                                                                                                                                                                                                                                                                                                                                                                                                                                                       |
| GLOBAL_STATS         | VARCHAR2(3)  |      | GLOBAL_STATS will be YES if statistics are gathered or incrementally maintained, otherwise it will be NO                                                                                                                                                                                                                                                                                                                                                                                                              |
| USER_STATS           | VARCHAR2(3)  |      | Indicates whether statistics were entered directly by the user (YES) or not (NO)                                                                                                                                                                                                                                                                                                                                                                                                                                      |
| AVG_COL_LEN          | NUMBER       |      | Average length of the column (in bytes)                                                                                                                                                                                                                                                                                                                                                                                                                                                                               |

| Column             | Datatype        | NULL     | Description                                                                                                                                                                                                                                                    |
|--------------------|-----------------|----------|----------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|
| CHAR_LENGTH        | NUMBER          |          | Displays the length of the column in characters. This value only applies to the following data types: <ul style="list-style-type: none"> <li>CHAR</li> <li>VARCHAR2</li> <li>NCHAR</li> <li>NVARCHAR2</li> </ul>                                               |
| CHAR_USED          | VARCHAR2 (1)    |          | Indicates that the column uses BYTE length semantics (B) or CHAR length semantics (C), or whether the data type is not any of the following (NULL): <ul style="list-style-type: none"> <li>CHAR</li> <li>VARCHAR2</li> <li>NCHAR</li> <li>NVARCHAR2</li> </ul> |
| V80_FMT_IMAGE      | VARCHAR2 (3)    |          | Indicates whether the column data is in release 8.0 image format (YES) or not (NO)                                                                                                                                                                             |
| DATA_UPGRADED      | VARCHAR2 (3)    |          | Indicates whether the column data has been upgraded to the latest type version format (YES) or not (NO)                                                                                                                                                        |
| HIDDEN_COLUMN      | VARCHAR2 (3)    |          | Indicates whether the column is a hidden column (YES) or not (NO)                                                                                                                                                                                              |
| VIRTUAL_COLUMN     | VARCHAR2 (3)    |          | Indicates whether the column is a virtual column (YES) or not (NO)                                                                                                                                                                                             |
| SEGMENT_COLUMN_ID  | NUMBER          |          | Sequence number of the column in the segment                                                                                                                                                                                                                   |
| INTERNAL_COLUMN_ID | NUMBER          | NOT NULL | Internal sequence number of the column                                                                                                                                                                                                                         |
| HISTOGRAM          | VARCHAR2 (15)   |          | Indicates existence/type of histogram: <ul style="list-style-type: none"> <li>NONE</li> <li>FREQUENCY</li> <li>HEIGHT BALANCED</li> </ul>                                                                                                                      |
| QUALIFIED_COL_NAME | VARCHAR2 (4000) |          | Qualified column name                                                                                                                                                                                                                                          |

## 3.317 ALL\_NESTED\_TABLES

ALL\_NESTED\_TABLES describes the nested tables in tables accessible to the current user.

### Related Views

- DBA\_NESTED\_TABLES describes all nested tables in the database.
- USER\_NESTED\_TABLES describes nested tables owned by the current user. This view does not display the OWNER column.

| Column                | Datatype        | NULL | Description                                                                 |
|-----------------------|-----------------|------|-----------------------------------------------------------------------------|
| OWNER                 | VARCHAR2 (128)  |      | Owner of the nested table                                                   |
| TABLE_NAME            | VARCHAR2 (128)  |      | Name of the nested table                                                    |
| TABLE_TYPE_OWNER      | VARCHAR2 (128)  |      | Owner of the type of which the nested table was created                     |
| TABLE_TYPE_NAME       | VARCHAR2 (128)  |      | Name of the type of the nested table                                        |
| PARENT_TABLE_NAME     | VARCHAR2 (128)  |      | Name of the parent table containing the nested table                        |
| PARENT_TABLE_COLUMN   | VARCHAR2 (4000) |      | Column name of the parent table that corresponds to the nested table        |
| STORAGE_SPEC          | VARCHAR2 (30)   |      | Indicates whether storage for the nested table is USER_SPECIFIED or DEFAULT |
| RETURN_TYPE           | VARCHAR2 (20)   |      | Return type of the varray column (LOCATOR) or (VALUE)                       |
| ELEMENT_SUBSTITUTABLE | VARCHAR2 (25)   |      | Indicates whether the nested table element is substitutable (Y) or not (N)  |

## 3.318 ALL\_OBJ\_COLATTRS

ALL\_OBJ\_COLATTRS describes object columns and attributes contained in the tables accessible to the current user.

### Related Views

- DBA\_OBJ\_COLATTRS describes object columns and attributes contained in all tables in the database.
- USER\_OBJ\_COLATTRS describes object columns and attributes contained in the tables owned by the current user. This view does not display the OWNER column.

| Column        | Datatype        | NULL | Description                                                  |
|---------------|-----------------|------|--------------------------------------------------------------|
| OWNER         | VARCHAR2 (128)  |      | Owner of the table                                           |
| TABLE_NAME    | VARCHAR2 (128)  |      | Name of the table containing the object column or attribute  |
| COLUMN_NAME   | VARCHAR2 (4000) |      | Fully qualified name of the object column or attribute       |
| SUBSTITUTABLE | VARCHAR2 (15)   |      | Indicates whether the column is substitutable (Y) or not (N) |

## 3.319 ALL\_OBJECT\_TABLES

ALL\_OBJECT\_TABLES describes the object tables accessible to the current user.

**Related Views**

- DBA\_OBJECT\_TABLES describes all object tables in the database.
- USER\_OBJECT\_TABLES describes the object tables owned by the current user. This view does not display the OWNER column.

| Column          | Datatype       | NULL     | Description                                                                                                                                                                         |
|-----------------|----------------|----------|-------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|
| OWNER           | VARCHAR2 (128) | NOT NULL | Owner of the table                                                                                                                                                                  |
| TABLE_NAME      | VARCHAR2 (128) | NOT NULL | Name of the table                                                                                                                                                                   |
| TABLESPACE_NAME | VARCHAR2 (30)  |          | Name of the tablespace containing the table; NULL for partitioned, temporary, and index-organized tables                                                                            |
| CLUSTER_NAME    | VARCHAR2 (128) |          | Name of the cluster, if any, to which the table belongs                                                                                                                             |
| IOT_NAME        | VARCHAR2 (128) |          | Name of the index-organized table, if any, to which the overflow or mapping table entry belongs. If the IOT_TYPE column is not NULL, then this column contains the base table name. |
| STATUS          | VARCHAR2 (8)   |          | If a previous DROP TABLE operation failed, indicates whether the table is unusable (UNUSABLE) or valid (VALID)                                                                      |
| PCT_FREE        | NUMBER         |          | Minimum percentage of free space in a block; NULL for partitioned tables                                                                                                            |
| PCT_USED        | NUMBER         |          | Minimum percentage of used space in a block; NULL for partitioned tables                                                                                                            |
| INI_TRANS       | NUMBER         |          | Initial number of transactions; NULL for partitioned tables                                                                                                                         |
| MAX_TRANS       | NUMBER         |          | Maximum number of transactions; NULL for partitioned tables                                                                                                                         |
| INITIAL_EXTENT  | NUMBER         |          | Size of the initial extent (in bytes); NULL for partitioned tables                                                                                                                  |
| NEXT_EXTENT     | NUMBER         |          | Size of secondary extents (in bytes); NULL for partitioned tables                                                                                                                   |
| MIN_EXTENTS     | NUMBER         |          | Minimum number of extents allowed in the segment; NULL for partitioned tables                                                                                                       |
| MAX_EXTENTS     | NUMBER         |          | Maximum number of extents allowed in the segment; NULL for partitioned tables                                                                                                       |
| PCT_INCREASE    | NUMBER         |          | Percentage increase in extent size; NULL for partitioned tables                                                                                                                     |

| Column                    | Datatype       | NULL | Description                                                                                                                                                        |
|---------------------------|----------------|------|--------------------------------------------------------------------------------------------------------------------------------------------------------------------|
| FREELISTS                 | NUMBER         |      | Number of process freelists allocated to the segment; NULL for partitioned tables                                                                                  |
| FREELIST_GROUPS           | NUMBER         |      | Number of freelist groups allocated to the segment; NULL for partitioned tables                                                                                    |
| LOGGING                   | VARCHAR2 (3)   |      | Indicates whether or not changes to the table are logged: <ul style="list-style-type: none"> <li>• YES</li> <li>• NO</li> </ul>                                    |
| BACKED_UP                 | VARCHAR2 (1)   |      | Indicates whether the table has been backed up since the last modification (Y) or not (N)                                                                          |
| NUM_ROWS                  | NUMBER         |      | Number of rows in the table                                                                                                                                        |
| BLOCKS                    | NUMBER         |      | Number of used blocks in the table                                                                                                                                 |
| EMPTY_BLOCKS              | NUMBER         |      | Number of empty (never used) blocks in the table                                                                                                                   |
| AVG_SPACE                 | NUMBER         |      | Average available free space in the table                                                                                                                          |
| CHAIN_CNT                 | NUMBER         |      | Number of chained rows in the table                                                                                                                                |
| AVG_ROW_LEN               | NUMBER         |      | Average row length, including row overhead                                                                                                                         |
| AVG_SPACE_FREELIST_BLOCKS | NUMBER         |      | Average free space of all blocks on a freelist                                                                                                                     |
| NUM_FREELIST_BLOCKS       | NUMBER         |      | Number of blocks on the freelist                                                                                                                                   |
| DEGREE                    | VARCHAR2 (10)  |      | Number of parallel execution processes per instance for scanning the table, or DEFAULT                                                                             |
| INSTANCES                 | VARCHAR2 (10)  |      | Number of instances across which the table is to be scanned, or DEFAULT                                                                                            |
| CACHE                     | VARCHAR2 (5)   |      | Indicates whether the table is to be cached in the buffer cache (Y) or not (N)                                                                                     |
| TABLE_LOCK                | VARCHAR2 (8)   |      | Indicates whether table locking is enabled (ENABLED) or disabled (DISABLED)                                                                                        |
| SAMPLE_SIZE               | NUMBER         |      | Sample size used in analyzing this table                                                                                                                           |
| LAST_ANALYZED             | DATE           |      | Date on which this table was most recently analyzed                                                                                                                |
| PARTITIONED               | VARCHAR2 (3)   |      | Indicates whether the table is partitioned (YES) or not (NO)                                                                                                       |
| IOT_TYPE                  | VARCHAR2 (12)  |      | If the table is an index-organized table, then IOT_TYPE is IOT, IOT_OVERFLOW, or IOT_MAPPING. If the table is not an index-organized table, then IOT_TYPE is NULL. |
| OBJECT_ID_TYPE            | VARCHAR2 (16)  |      | Indicates whether the object ID (OID) is USER-DEFINED or SYSTEM GENERATED                                                                                          |
| TABLE_TYPE_OWNER          | VARCHAR2 (128) |      | Owner of the type of the table                                                                                                                                     |
| TABLE_TYPE                | VARCHAR2 (128) |      | Type of the table                                                                                                                                                  |
| TEMPORARY                 | VARCHAR2 (1)   |      | Indicates whether this is a temporary table (Y) or not (N)                                                                                                         |
| SECONDARY                 | VARCHAR2 (1)   |      | Indicates whether the object table is a secondary object created by the ODCIIndexCreate method of the Oracle Data Cartridge (Y) or not (N)                         |
| NESTED                    | VARCHAR2 (3)   |      | Indicates whether the table is a nested table (YES) or not (NO)                                                                                                    |

| Column           | Datatype       | NULL | Description                                                                                                                                                                                                                                           |
|------------------|----------------|------|-------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|
| BUFFER_POOL      | VARCHAR2 (7)   |      | Buffer pool to be used for table blocks: <ul style="list-style-type: none"> <li>• DEFAULT</li> <li>• KEEP</li> <li>• RECYCLE</li> <li>• NULL</li> </ul>                                                                                               |
| FLASH_CACHE      | VARCHAR2 (7)   |      | Database Smart Flash Cache hint to be used for table blocks: <ul style="list-style-type: none"> <li>• DEFAULT</li> <li>• KEEP</li> <li>• NONE</li> </ul> Solaris and Oracle Linux functionality only.                                                 |
| CELL_FLASH_CACHE | VARCHAR2 (7)   |      | Cell flash cache hint to be used for table blocks: <ul style="list-style-type: none"> <li>• DEFAULT</li> <li>• KEEP</li> <li>• NONE</li> </ul> <b>See Also:</b> Oracle Exadata Storage Server Software documentation for more information             |
| ROW_MOVEMENT     | VARCHAR2 (8)   |      | Indicates whether partitioned row movement is enabled (ENABLED) or disabled (DISABLED)                                                                                                                                                                |
| GLOBAL_STATS     | VARCHAR2 (3)   |      | GLOBAL_STATS will be YES if statistics are gathered or incrementally maintained, otherwise it will be NO                                                                                                                                              |
| USER_STATS       | VARCHAR2 (3)   |      | Indicates whether statistics were entered directly by the user (YES) or not (NO)                                                                                                                                                                      |
| DURATION         | VARCHAR2 (15)  |      | Indicates the duration of a temporary table: <ul style="list-style-type: none"> <li>• SYS\$SESSION - Rows are preserved for the duration of the session</li> <li>• SYS\$TRANSACTION - Rows are deleted after COMMIT</li> </ul> Null - Permanent table |
| SKIP_CORRUPT     | VARCHAR2 (8)   |      | Indicates whether Oracle Database ignores blocks marked corrupt during table and index scans (ENABLED) or raises an error (DISABLED). To enable this feature, run the DBMS_REPAIR.SKIP_CORRUPT_BLOCKS procedure.                                      |
| MONITORING       | VARCHAR2 (3)   |      | Indicates whether the table has the MONITORING attribute set (YES) or not (NO)                                                                                                                                                                        |
| CLUSTER_OWNER    | VARCHAR2 (128) |      | Owner of the cluster, if any, to which the table belongs                                                                                                                                                                                              |
| DEPENDENCIES     | VARCHAR2 (8)   |      | Indicates whether row-level dependency tracking is enabled (ENABLED) or disabled (DISABLED)                                                                                                                                                           |
| COMPRESSION      | VARCHAR2 (8)   |      | Indicates whether table compression is enabled (ENABLED) or not (DISABLED); NULL for partitioned tables                                                                                                                                               |

| Column              | Datatype      | NULL | Description                                                                                                                                                                                                                                                                                                                                                                                                                                                                               |
|---------------------|---------------|------|-------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|
| COMPRESS_FOR        | VARCHAR2 (30) |      | <p>Default compression for what kind of operations:</p> <ul style="list-style-type: none"> <li>• BASIC</li> <li>• ADVANCED</li> <li>• QUERY LOW</li> <li>• QUERY HIGH</li> <li>• ARCHIVE LOW</li> <li>• ARCHIVE HIGH</li> <li>• NULL</li> </ul> <p>The QUERY LOW, QUERY HIGH, ARCHIVE LOW, and ARCHIVE HIGH values are associated with Hybrid Columnar Compression, a feature of the Enterprise Edition of Oracle Database. See <i>Oracle Database Concepts</i> for more information.</p> |
| DROPPED             | VARCHAR2 (3)  |      | <p>Indicates whether the table has been dropped and is in the recycle bin (YES) or not (NO); NULL for partitioned tables</p> <p>This view does not return the names of tables that have been dropped.</p>                                                                                                                                                                                                                                                                                 |
| SEGMENT_CREATED     | VARCHAR2 (3)  |      | Indicates whether the table segment has been created (YES) or not (NO)                                                                                                                                                                                                                                                                                                                                                                                                                    |
| INMEMORY            | VARCHAR2 (8)  |      | Indicates whether the In-Memory Column Store (IM column store) is enabled (ENABLED) or disabled (DISABLED) for this segment                                                                                                                                                                                                                                                                                                                                                               |
| INMEMORY_PRIORITY   | VARCHAR2 (8)  |      | <p>Indicates the priority for In-Memory Column Store (IM column store) population. Possible values:</p> <ul style="list-style-type: none"> <li>• LOW</li> <li>• MEDIUM</li> <li>• HIGH</li> <li>• CRITICAL</li> <li>• NONE</li> <li>• NULL</li> </ul> <p>This column has a value based on where the segments lie for a table. For example, if the table is partitioned and is enabled for the IM column store, the value is NULL for ALL_TABLES but non-NULL for ALL_TAB_PARTITIONS.</p>  |
| INMEMORY_DISTRIBUTE | VARCHAR2 (15) |      | <p>Indicates how the IM column store is distributed in an Oracle Real Application Clusters (Oracle RAC) environment:</p> <ul style="list-style-type: none"> <li>• AUTO</li> <li>• BY ROWID RANGE</li> <li>• BY PARTITION</li> <li>• BY SUBPARTITION</li> </ul>                                                                                                                                                                                                                            |

| Column                  | Datatype      | NULL | Description                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                  |
|-------------------------|---------------|------|------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|
| INMEMORY_COMPRESSION    | VARCHAR2 (17) |      | <p>Indicates the compression level for the IM column store:</p> <ul style="list-style-type: none"> <li>• NO MEMCOMPRESS</li> <li>• FOR DML</li> <li>• FOR QUERY [ LOW   HIGH ]</li> <li>• FOR CAPACITY [ LOW   HIGH ]</li> <li>• AUTO</li> <li>• NULL</li> </ul> <p>This column has a value based on where the segments lie for a table. For example, if the table is partitioned and is enabled for the IM column store, the value is NULL for ALL_TABLES but non-NULL for ALL_TAB_PARTITIONS.</p>                                                                                                                                                                                                                                                                          |
| INMEMORY_DUPLICATE      | VARCHAR2 (13) |      | <p>Indicates the duplicate setting for the IM column store in an Oracle RAC environment:</p> <ul style="list-style-type: none"> <li>• NO DUPLICATE</li> <li>• DUPLICATE</li> <li>• DUPLICATE ALL</li> </ul>                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                  |
| EXTERNAL                | VARCHAR2 (3)  |      | <p>Indicates whether the table is an external table (YES) or not (NO).</p>                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                   |
| CELLMEMORY <sup>1</sup> | VARCHAR2 (24) |      | <p>The value for columnar compression in the storage cell flash cache. Possible values:</p> <ul style="list-style-type: none"> <li>• ENABLED: Oracle Exadata Storage will decide automatically whether to cache in columnar form</li> <li>• DISABLED: Oracle Exadata Storage is prevented from caching in columnar form</li> <li>• NO CACHECOMPRESS: Oracle Exadata Storage will cache in HCC format (no recompression)</li> <li>• FOR QUERY: Oracle Exadata Storage will recompress and cache in INMEMORY query high format</li> <li>• FOR CAPACITY: Oracle Exadata Storage will recompress and cache in INMEMORY capacity low format</li> </ul>                                                                                                                            |
| HYBRID                  | VARCHAR2 (3)  |      | <p>Indicates whether the table is a hybrid partitioned table (YES) or not (NO). A hybrid partitioned table can contain a mixture of partitions stored in segments and partitions stored externally.</p>                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                      |
| INMEMORY_SERVICE        | VARCHAR2 (12) |      | <p>Indicates how the IM column store is populated on various instances. The possible values are:</p> <ul style="list-style-type: none"> <li>• DEFAULT: Data is populated on all instances specified with the PARALLEL_INSTANCE_GROUP initialization parameter. If that parameter is not set, then the data is populated on all instances. This is the default.</li> <li>• NONE: Data is not populated on any instance.</li> <li>• ALL: Data is populated on all instances, regardless of the value of the PARALLEL_INSTANCE_GROUP initialization parameter.</li> <li>• USER_DEFINED: Data is populated only on the instances on which the user-specified service is active. The service name corresponding to this is stored in the INMEMORY_SERVICE_NAME column.</li> </ul> |

| Column                | Datatype        | NULL | Description                                                                                                                                                                                                                 |
|-----------------------|-----------------|------|-----------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|
| INMEMORY_SERVICE_NAME | VARCHAR2 (1000) |      | Indicates the service name for the service on which the IM column store should be populated. This column has a value only when the corresponding INMEMORY_SERVICE is USER_DEFINED. In all other cases, this column is null. |
| MEMOPTIMIZE_READ      | VARCHAR2 (8)    |      | Indicates whether the table is enabled for Fast Key Based Access (ENABLED) or not (DISABLED)                                                                                                                                |
| MEMOPTIMIZE_WRITE     | VARCHAR2 (8)    |      | For internal use only                                                                                                                                                                                                       |
| HAS_SENSITIVE_COLUMN  | VARCHAR2 (3)    |      | Indicates whether the table has one or more sensitive columns (YES) or not (NO)                                                                                                                                             |
| LOGICAL_REPLICATION   | VARCHAR2 (8)    |      | Indicates whether the table is enabled for logical replication (ENABLED) or not (DISABLED). This setting is ignored if database-wide column data supplemental logging is enabled.                                           |
| STAGING               | VARCHAR2 (3)    |      | Indicates whether the table is a staging table (YES) or not (NO)                                                                                                                                                            |
| HAS_RESERVABLE_COLUMN | VARCHAR2 (3)    |      | Indicates whether the table has one or more reservable columns (YES) or not (NO)                                                                                                                                            |

<sup>1</sup> This column is intended for use with Oracle Exadata.

## 3.320 ALL\_OBJECTS

ALL\_OBJECTS describes all objects accessible to the current user.

#### Related Views

- DBA\_OBJECTS describes all objects in the database.
- USER\_OBJECTS describes all objects owned by the current user. This view does not display the OWNER column.

| Column         | Datatype       | NULL     | Description                                    |
|----------------|----------------|----------|------------------------------------------------|
| OWNER          | VARCHAR2 (128) | NOT NULL | Owner of the object                            |
| OBJECT_NAME    | VARCHAR2 (128) | NOT NULL | Name of the object                             |
| SUBOBJECT_NAME | VARCHAR2 (128) |          | Name of the subobject (for example, partition) |
| OBJECT_ID      | NUMBER         | NOT NULL | Dictionary object number of the object         |

| Column            | Datatype       | NULL     | Description                                                                                                                                                                                                                                                                                                                                                                                                         |
|-------------------|----------------|----------|---------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|
| DATA_OBJECT_ID    | NUMBER         |          | Dictionary object number of the segment that contains the object.<br><b>Note:</b> OBJECT_ID and DATA_OBJECT_ID display data dictionary metadata. Do not confuse these numbers with the unique 16-byte object identifier ( <i>object ID</i> ) that Oracle Database assigns to row objects in object tables in the system.                                                                                            |
| OBJECT_TYPE       | VARCHAR2 (23)  |          | Type of the object (such as TABLE, INDEX)                                                                                                                                                                                                                                                                                                                                                                           |
| CREATED           | DATE           | NOT NULL | Timestamp for the creation of the object                                                                                                                                                                                                                                                                                                                                                                            |
| LAST_DDL_TIME     | DATE           | NOT NULL | Timestamp for the last modification of the object and dependent objects resulting from a DDL statement (including grants and revokes)                                                                                                                                                                                                                                                                               |
| TIMESTAMP         | VARCHAR2 (19)  |          | Timestamp for the specification of the object (character data)                                                                                                                                                                                                                                                                                                                                                      |
| STATUS            | VARCHAR2 (7)   |          | Status of the object: <ul style="list-style-type: none"> <li>VALID</li> <li>INVALID</li> <li>N/A</li> </ul>                                                                                                                                                                                                                                                                                                         |
| TEMPORARY         | VARCHAR2 (1)   |          | Indicates whether the object is temporary (the current session can see only data that it placed in this object itself) (Y) or not (N)                                                                                                                                                                                                                                                                               |
| GENERATED         | VARCHAR2 (1)   |          | Indicates whether the name of this object was system-generated (Y) or not (N)                                                                                                                                                                                                                                                                                                                                       |
| SECONDARY         | VARCHAR2 (1)   |          | Indicates whether this is a secondary object created by the ODCIIndexCreate method of the Oracle Data Cartridge (Y) or not (N)                                                                                                                                                                                                                                                                                      |
| NAMESPACE         | NUMBER         | NOT NULL | Namespace for the object                                                                                                                                                                                                                                                                                                                                                                                            |
| EDITION_NAME      | VARCHAR2 (128) |          | Name of the edition in which the object is actual                                                                                                                                                                                                                                                                                                                                                                   |
| SHARING           | VARCHAR2 (18)  |          | Values: <ul style="list-style-type: none"> <li>DATA LINK - If the object is data-linked or a data link to an object in the root</li> <li>METADATA LINK - If the object is metadata-linked or a metadata link to an object in the root</li> <li>EXTENDED DATA LINK - If the object is extended-data-linked or an extended data link to an object in the root</li> <li>NONE - If none of the above applies</li> </ul> |
| EDITIONABLE       | VARCHAR2 (1)   |          | Values: <ul style="list-style-type: none"> <li>Y - For objects marked EDITIONABLE</li> <li>N - For objects marked NONEDITIONABLE</li> <li>NULL - For objects whose type is not editionable in the database</li> </ul>                                                                                                                                                                                               |
| ORACLE_MAINTAINED | VARCHAR2 (1)   |          | Denotes whether the object was created, and is maintained, by Oracle-supplied scripts (such as catalog.sql or catproc.sql). An object for which this column has the value Y must not be changed in any way except by running an Oracle-supplied script.                                                                                                                                                             |
| APPLICATION       | VARCHAR2 (1)   |          | Indicates whether the object is an Application common object (Y) or not (N)                                                                                                                                                                                                                                                                                                                                         |

| Column                 | Datatype      | NULL | Description                                                                    |
|------------------------|---------------|------|--------------------------------------------------------------------------------|
| DEFAULT_COLLATION      | VARCHAR2(100) |      | Default collation for the object                                               |
| DUPLICATED             | VARCHAR2(1)   |      | Indicates whether this object is duplicated on this shard (Y) or not (N)       |
| SHARDED                | VARCHAR2(1)   |      | Indicates whether this object is sharded (Y) or not (N)                        |
| IMPORTED_OBJECT        | VARCHAR2(1)   |      | Indicates whether this object is imported (Y) or not (N)                       |
| SYNCHRONOUS_DUPLICATED | VARCHAR2(1)   |      | Indicates whether this object is a synchronous duplicated table (Y) or not (N) |
| CREATED_APPID          | NUMBER        |      | ID of the Application that created the object                                  |
| CREATED_VSNID          | NUMBER        |      | ID of the Application Version that created the object                          |
| MODIFIED_APPID         | NUMBER        |      | ID of the Application that last modified the object                            |
| MODIFIED_VSNID         | NUMBER        |      | ID of the Application Version that last modified the object                    |

## 3.321 ALL\_OBJECTS\_AE

ALL\_OBJECTS\_AE describes the objects (across all editions) accessible to the current user. Dropped objects appear in this view with OBJECT\_TYPE = NON-EXISTENT.

#### Related Views

- DBA\_OBJECTS\_AE describes all objects (across all editions) in the database.
- USER\_OBJECTS\_AE describes the objects (across all editions) owned by the current user. This view does not display the OWNER column.

| Column         | Datatype      | NULL     | Description                                                                                                                           |
|----------------|---------------|----------|---------------------------------------------------------------------------------------------------------------------------------------|
| OWNER          | VARCHAR2(128) | NOT NULL | Owner of the object                                                                                                                   |
| OBJECT_NAME    | VARCHAR2(128) | NOT NULL | Name of the object                                                                                                                    |
| SUBOBJECT_NAME | VARCHAR2(128) |          | Name of the subobject (for example, partition)                                                                                        |
| OBJECT_ID      | NUMBER        | NOT NULL | Dictionary object number of the object                                                                                                |
| DATA_OBJECT_ID | NUMBER        |          | Dictionary object number of the segment which contains the object                                                                     |
| OBJECT_TYPE    | VARCHAR2(23)  |          | Type of the object                                                                                                                    |
| CREATED        | DATE          | NOT NULL | Timestamp for the creation of the object                                                                                              |
| LAST_DDL_TIME  | DATE          | NOT NULL | Timestamp for the last modification of the object and dependent objects resulting from a DDL statement (including grants and revokes) |

| Column                 | Datatype       | NULL     | Description                                                                                                                                                                                                                                                                                                                                                                                                                 |
|------------------------|----------------|----------|-----------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|
| TIMESTAMP              | VARCHAR2 (19)  |          | Timestamp for the specification of the object (character data)                                                                                                                                                                                                                                                                                                                                                              |

| TEMPORARY              | VARCHAR2 (1)   |          | Indicates whether the object is temporary (the current session can see only data that it placed in this object itself) (Y) or not (N)                                                                                                                                                                                                                                                                                       |
| GENERATED              | VARCHAR2 (1)   |          | Indicates whether the name of this object was system-generated (Y) or not (N)                                                                                                                                                                                                                                                                                                                                               |
| SECONDARY              | VARCHAR2 (1)   |          | Indicates whether this is a secondary object created by the <code>ODCIIndexCreate</code> method of the Oracle Data Cartridge (Y) or not (N)                                                                                                                                                                                                                                                                                 |
| NAMESPACE              | NUMBER         | NOT NULL | Namespace for the object                                                                                                                                                                                                                                                                                                                                                                                                    |
| EDITION_NAME           | VARCHAR2 (128) |          | Name of the edition in which the object is actual                                                                                                                                                                                                                                                                                                                                                                           |
| SHARING                | VARCHAR2 (18)  |          | Values: <ul style="list-style-type: none"> <li>• DATA LINK - If the object is data-linked or a data link to an object in the root</li> <li>• METADATA LINK - If the object is metadata-linked or a metadata link to an object in the root</li> <li>• EXTENDED DATA LINK - If the object is extended-data-linked or an extended data link to an object in the root</li> <li>• NONE - If none of the above applies</li> </ul> |
| EDITIONABLE            | VARCHAR2 (1)   |          | Values: <ul style="list-style-type: none"> <li>• Y - For objects marked EDITIONABLE</li> <li>• N - For objects marked NONEDITIONABLE</li> <li>• NULL - For objects whose type is not editionable in the database</li> </ul>                                                                                                                                                                                                 |
| ORACLE_MAINTAINED      | VARCHAR2 (1)   |          | Denotes whether the object was created, and is maintained, by Oracle-supplied scripts (such as <code>catalog.sql</code> or <code>catproc.sql</code> ). An object for which this column has the value Y must not be changed in any way except by running an Oracle-supplied script.                                                                                                                                          |
| APPLICATION            | VARCHAR2 (1)   |          | Indicates whether the object is an Application common object (Y) or not (N)                                                                                                                                                                                                                                                                                                                                                 |
| DEFAULT_COLLATION      | VARCHAR2 (100) |          | Default collation for the object                                                                                                                                                                                                                                                                                                                                                                                            |
| DUPLICATED             | VARCHAR2 (1)   |          | Indicates whether this object is duplicated on this shard (Y) or not (N)                                                                                                                                                                                                                                                                                                                                                    |
| SHARDED                | VARCHAR2 (1)   |          | Indicates whether this object is sharded (Y) or not (N)                                                                                                                                                                                                                                                                                                                                                                     |
| IMPORTED_OBJECT        | VARCHAR2 (1)   |          | Indicates whether this object is imported (Y) or not (N)                                                                                                                                                                                                                                                                                                                                                                    |
| SYNCHRONOUS_DUPLICATED | VARCHAR2 (1)   |          | Indicates whether this object is a synchronous duplicated table (Y) or not (N)                                                                                                                                                                                                                                                                                                                                              |
| CREATED_APPID          | NUMBER         |          | ID of the Application that created the object                                                                                                                                                                                                                                                                                                                                                                               |
| CREATED_VSNID          | NUMBER         |          | ID of the Application Version that created the object                                                                                                                                                                                                                                                                                                                                                                       |
| MODIFIED_APPID         | NUMBER         |          | ID of the Application that last modified the object                                                                                                                                                                                                                                                                                                                                                                         |

| Column         | Datatype | NULL | Description                                                 |
|----------------|----------|------|-------------------------------------------------------------|
| MODIFIED_VSNID | NUMBER   |      | ID of the Application Version that last modified the object |

## 3.322 ALL\_OPANCILLARY

ALL\_OPANCILLARY describes operators whose bindings are ancillary to other (primary) operators.

**Related Views**

- DBA\_OPANCILLARY describes such information about all operators in the database.
- USER\_OPANCILLARY describes such information about operators owned by the current user.

| Column        | Datatype       | NULL     | Description                              |
|---------------|----------------|----------|------------------------------------------|
| OWNER         | VARCHAR2 (128) | NOT NULL | Owner of the ancillary operator          |
| OPERATOR_NAME | VARCHAR2 (128) | NOT NULL | Name of the ancillary operator           |
| BINDING#      | NUMBER         | NOT NULL | Binding number of the ancillary operator |
| PRIMOP_OWNER  | VARCHAR2 (128) | NOT NULL | Owner of the primary operator            |
| PRIMOP_NAME   | VARCHAR2 (128) | NOT NULL | Name of the primary operator             |
| PRIMOP_BIND#  | NUMBER         | NOT NULL | Binding number of the primary operator   |

**See Also:**

- ["USER\\_OPANCILLARY"](#)

## 3.323 ALL\_OPARGUMENTS

ALL\_OPARGUMENTS describes arguments for each operator binding accessible to the current user.

**Related Views**

- DBA\_OPARGUMENTS describes arguments of all operator bindings in the database.
- USER\_OPARGUMENTS describes arguments of all operator bindings owned by the current user.

| Column        | Datatype       | NULL     | Description                                      |
|---------------|----------------|----------|--------------------------------------------------|
| OWNER         | VARCHAR2 (128) | NOT NULL | Owner of the operator argument                   |
| OPERATOR_NAME | VARCHAR2 (128) | NOT NULL | Name of the operator argument                    |
| BINDING#      | NUMBER         | NOT NULL | Binding number of the operator argument          |
| POSITION      | NUMBER         | NOT NULL | Position of the operator argument (1, 2, 3, ...) |
| ARGUMENT_TYPE | VARCHAR2 (61)  |          | Datatype of the operator argument                |

**See Also:**

- "USER\_OPARGUMENTS"

## 3.324 ALL\_OPBINDINGS

ALL\_OPBINDINGS describes the binding functions and methods on the operators accessible to the current user.

**Related Views**

- DBA\_OPBINDINGS describes the binding functions and methods on all operators in the database.
- USER\_OPBINDINGS describes the binding functions and methods on the operators owned by the current user.

| Column                     | Datatype       | NULL     | Description                                                                                                                                                                                                                                                                                                                                                        |
|----------------------------|----------------|----------|--------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|
| OWNER                      | VARCHAR2 (128) | NOT NULL | Owner of the operator                                                                                                                                                                                                                                                                                                                                              |
| OPERATOR_NAME              | VARCHAR2 (128) | NOT NULL | Name of the operator                                                                                                                                                                                                                                                                                                                                               |
| BINDING#                   | NUMBER         | NOT NULL | Binding number of the operator                                                                                                                                                                                                                                                                                                                                     |
| FUNCTION_NAME              | VARCHAR2 (92)  |          | Name of the binding function or method as specified by the user                                                                                                                                                                                                                                                                                                    |
| RETURN_SCHEMA              | VARCHAR2 (128) |          | Name of the schema of the return type if the return type of the binding is an object type                                                                                                                                                                                                                                                                          |
| RETURN_TYPE                | VARCHAR2 (128) |          | Name of the return type                                                                                                                                                                                                                                                                                                                                            |
| IMPLEMENTATION_TYPE_SCHEMA | VARCHAR2 (128) |          | If the operator was created WITH INDEX CONTEXT or SCAN CONTEXT, then this column displays the schema of the implementation type used by the functional implementation of the operator as a scan context (null if the operator was created without this syntax).<br><b>See Also:</b> the CREATE OPERATOR statement in <i>Oracle Database SQL Language Reference</i> |

| Column              | Datatype       | NULL | Description                                                                                                                                                                                                                                                                                                                                                      |
|---------------------|----------------|------|------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|
| IMPLEMENTATION_TYPE | VARCHAR2 (128) |      | If the operator was created WITH INDEX CONTEXT or SCAN CONTEXT, then this column displays the name of the implementation type used by the functional implementation of the operator as a scan context (null if the operator was created without this syntax).<br><b>See Also:</b> the CREATE OPERATOR statement in <i>Oracle Database SQL Language Reference</i> |
| PROPERTY            | VARCHAR2 (43)  |      | Property of the operator binding: <ul style="list-style-type: none"><li>• WITH INDEX CONTEXT</li><li>• COMPUTE ANCILLARY DATA</li><li>• ANCILLARY TO</li><li>• WITH COLUMN CONTEXT</li><li>• WITH INDEX, COLUMN CONTEXT</li><li>• COMPUTE ANCILLARY DATA, WITH COLUMN CONTEXT</li></ul>                                                                          |

## 3.325 ALL\_OPERATOR\_COMMENTS

ALL\_OPERATOR\_COMMENTS displays comments for the user-defined operators accessible to the current user.

**Related Views**

- DBA\_OPERATOR\_COMMENTS displays comments for all user-defined operators in the database.
- USER\_OPERATOR\_COMMENTS displays comments for the user-defined operators owned by the current user.

| Column        | Datatype        | NULL     | Description                           |
|---------------|-----------------|----------|---------------------------------------|
| OWNER         | VARCHAR2 (128)  | NOT NULL | Owner of the user-defined operator    |
| OPERATOR_NAME | VARCHAR2 (128)  | NOT NULL | Name of the user-defined operator     |
| COMMENTS      | VARCHAR2 (4000) |          | Comment for the user-defined operator |

## 3.326 ALL\_OPERATORS

ALL\_OPERATORS describes the operators accessible to the current user.

### Related Views

- DBA\_OPERATORS describes all operators in the database.
- USER\_OPERATORS describes the operators owned by the current user.

| Column          | Datatype       | NULL     | Description                                     |
|-----------------|----------------|----------|-------------------------------------------------|
| OWNER           | VARCHAR2 (128) | NOT NULL | Owner of the operator                           |
| OPERATOR_NAME   | VARCHAR2 (128) | NOT NULL | Name of the operator                            |
| NUMBER_OF_BINDS | NUMBER         | NOT NULL | Number of bindings associated with the operator |

## Static Data Dictionary Views: ALL\_PART\_COL\_STATISTICS to DATABASE\_PROPERTIES

This chapter contains the static data dictionary views `ALL_PART_COL_STATISTICS` through `DATABASE_PROPERTIES`.

### 4.1 ALL\_PART\_COL\_STATISTICS

`ALL_PART_COL_STATISTICS` displays column statistics and histogram information for the table partitions accessible to the current user.

#### Related Views

- `DBA_PART_COL_STATISTICS` displays column statistics and histogram information for all table partitions in the database.
- `USER_PART_COL_STATISTICS` displays column statistics and histogram information for the table partitions owned by the current user. This view does not display the `OWNER` column.

| Column         | Datatype        | NULL     | Description                                                                                                                                                                                                                                                                                                                                                                           |
|----------------|-----------------|----------|---------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|
| OWNER          | VARCHAR2 (128)  | NOT NULL | Owner of the partitioned table                                                                                                                                                                                                                                                                                                                                                        |
| TABLE_NAME     | VARCHAR2 (128)  | NOT NULL | Name of the table                                                                                                                                                                                                                                                                                                                                                                     |
| PARTITION_NAME | VARCHAR2 (128)  |          | Name of the table partition                                                                                                                                                                                                                                                                                                                                                           |
| COLUMN_NAME    | VARCHAR2 (4000) |          | Name of the column                                                                                                                                                                                                                                                                                                                                                                    |
| NUM_DISTINCT   | NUMBER          |          | Number of distinct values in the column                                                                                                                                                                                                                                                                                                                                               |
| LOW_VALUE      | RAW (1000)      |          | Low value in the column                                                                                                                                                                                                                                                                                                                                                               |
| HIGH_VALUE     | RAW (1000)      |          | High value in the column                                                                                                                                                                                                                                                                                                                                                              |
| DENSITY        | NUMBER          |          | If a histogram is available on <code>COLUMN_NAME</code> , then this column displays the selectivity of a value that spans fewer than 2 endpoints in the histogram. It does not represent the selectivity of values that span 2 or more endpoints.<br><br>If a histogram is not available on <code>COLUMN_NAME</code> , then the value of this column is <code>1/NUM_DISTINCT</code> . |
| NUM_NULLS      | NUMBER          |          | Number of NULLs in the column                                                                                                                                                                                                                                                                                                                                                         |
| NUM_BUCKETS    | NUMBER          |          | Number of buckets in histogram for the column                                                                                                                                                                                                                                                                                                                                         |
| SAMPLE_SIZE    | NUMBER          |          | Sample size used in analyzing the column                                                                                                                                                                                                                                                                                                                                              |
| LAST_ANALYZED  | DATE            |          | Date on which the column was most recently analyzed                                                                                                                                                                                                                                                                                                                                   |
| GLOBAL_STATS   | VARCHAR2 (3)    |          | <code>GLOBAL_STATS</code> will be <code>YES</code> if statistics have been gathered or <code>NO</code> if statistics have been aggregated from subpartitions or have not been gathered                                                                                                                                                                                                |

| Column      | Datatype      | NULL | Description                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                              |

## 4.2 ALL\_PART\_HISTOGRAMS

ALL\_PART\_HISTOGRAMS displays the histogram data (endpoints per histogram) for the histograms on the table partitions accessible to the current user.

### Related Views

- DBA\_PART\_HISTOGRAMS displays the histogram data for the histograms on all table partitions in the database.

- `USER_PART_HISTOGRAMS` displays the histogram data for the histograms on the table partitions owned by the current user. This view does not display the `OWNER` column.

**Note:**

These views are populated only if you collect statistics on the index using the `DBMS_STATS` package.

| Column                                 | Datatype                     | NULL | Description                                                                                              |
|----------------------------------------|------------------------------|------|----------------------------------------------------------------------------------------------------------|
| <code>OWNER</code>                     | <code>VARCHAR2 (128)</code>  |      | Owner of the table                                                                                       |
| <code>TABLE_NAME</code>                | <code>VARCHAR2 (128)</code>  |      | Name of the table                                                                                        |
| <code>PARTITION_NAME</code>            | <code>VARCHAR2 (128)</code>  |      | Name of the table partition                                                                              |
| <code>COLUMN_NAME</code>               | <code>VARCHAR2 (4000)</code> |      | Name of the column                                                                                       |
| <code>BUCKET_NUMBER</code>             | <code>NUMBER</code>          |      | Bucket number of the histogram                                                                           |
| <code>ENDPOINT_VALUE</code>            | <code>NUMBER</code>          |      | Normalized endpoint values for the bucket                                                                |
| <code>ENDPOINT_ACTUAL_VALUE</code>     | <code>VARCHAR2 (4000)</code> |      | Actual (not normalized) string value of the endpoint for the bucket                                      |
| <code>ENDPOINT_ACTUAL_VALUE_RAW</code> | <code>RAW (1000)</code>      |      | Endpoint actual value in raw format                                                                      |
| <code>ENDPOINT_REPEAT_COUNT</code>     | <code>NUMBER</code>          |      | Frequency of the endpoint (applies only to hybrid histograms, and is set to 0 for other histogram types) |

## 4.3 ALL\_PART\_INDEXES

`ALL_PART_INDEXES` displays the object-level partitioning information for the partitioned indexes accessible to the current user.

**Related Views**

- `DBA_PART_INDEXES` displays the object-level partitioning information for all partitioned indexes in the database.
- `USER_PART_INDEXES` displays the object-level partitioning information for the partitioned indexes owned by the current user. This view does not display the `OWNER` column.

| Column             | Datatype                    | NULL                  | Description                    |
|--------------------|-----------------------------|-----------------------|--------------------------------|
| <code>OWNER</code> | <code>VARCHAR2 (128)</code> | <code>NOT NULL</code> | Owner of the partitioned index |

| Column                    | Datatype       | NULL     | Description                                                                                                                                                                                                                                                                  |

| PARTITION_COUNT           | NUMBER         | NOT NULL | Number of partitions in the index                                                                                                                                                                                                                                            |
| DEF_SUBPARTITION_COUNT    | NUMBER         |          | For a composite-partitioned index, the default number of subpartitions, if specified                                                                                                                                                                                         |
| PARTITIONING_KEY_COUNT    | NUMBER         | NOT NULL | Number of columns in the partitioning key                                                                                                                                                                                                                                    |
| SUBPARTITIONING_KEY_COUNT | NUMBER         |          | For a composite-partitioned index, the number of columns in the subpartitioning key                                                                                                                                                                                          |
| LOCALITY                  | VARCHAR2 (6)   |          | Indicates whether the partitioned index is local (LOCAL) or global (GLOBAL)                                                                                                                                                                                                  |
| ALIGNMENT                 | VARCHAR2 (12)  |          | Indicates whether the partitioned index is prefixed (PREFIXED) or non-prefixed (NON_PREFIXED)                                                                                                                                                                                |
| DEF_TABLESPACE_NAME       | VARCHAR2 (30)  |          | For a local index, the default tablespace to be used when adding or splitting a table partition                                                                                                                                                                              |
| DEF_PCT_FREE              | NUMBER         | NOT NULL | For a local index, the default PCTFREE value to be used when adding a table partition                                                                                                                                                                                        |
| DEF_INI_TRANS             | NUMBER         | NOT NULL | For a local index, the default INITRANS value to be used when adding a table partition                                                                                                                                                                                       |
| DEF_MAX_TRANS             | NUMBER         | NOT NULL | For a local index, the default MAXTRANS value to be used when adding a table partition                                                                                                                                                                                       |
| DEF_INITIAL_EXTENT        | VARCHAR2 (40)  |          | For a local index, the default INITIAL value (in Oracle blocks) to be used when adding a table partition, or DEFAULT if no INITIAL value was specified                                                                                                                       |
| DEF_NEXT_EXTENT           | VARCHAR2 (40)  |          | For a local index, the default NEXT value (in Oracle blocks) to be used when adding a table partition, or DEFAULT if no NEXT value was specified                                                                                                                             |
| DEF_MIN_EXTENTS           | VARCHAR2 (40)  |          | For a local index, the default MINEXTENTS value to be used when adding a table partition, or DEFAULT if no MINEXTENTS value was specified                                                                                                                                    |
| DEF_MAX_EXTENTS           | VARCHAR2 (40)  |          | For a local index, the default MAXEXTENTS value to be used when adding a table partition, or DEFAULT if no MAXEXTENTS value was specified                                                                                                                                    |

| Column                | Datatype        | NULL     | Description                                                                                                                                                                                                                                                                     |
|-----------------------|-----------------|----------|---------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|
| DEF_MAX_SIZE          | VARCHAR2 (40)   |          | For a local index, the default MAXSIZE value to be used when adding a table partition, or DEFAULT if no MAXSIZE value was specified                                                                                                                                             |
| DEF_PCT_INCREASE      | VARCHAR2 (40)   |          | For a local index, the default PCTINCREASE value to be used when adding a table partition, or DEFAULT if no PCTINCREASE value was specified                                                                                                                                     |
| DEF_FREELISTS         | NUMBER          | NOT NULL | For a local index, the default FREELISTS value to be used when adding a table partition                                                                                                                                                                                         |
| DEF_FREELIST_GROUPS   | NUMBER          | NOT NULL | For a local index, the default FREELIST GROUPS value to be used when adding a table partition                                                                                                                                                                                   |
| DEF_LOGGING           | VARCHAR2 (7)    |          | For a local index, the default LOGGING attribute to be used when adding a table partition: <ul style="list-style-type: none"> <li>NONE - Not specified</li> </ul> <b>See Also:</b> the *_INDEXES view <ul style="list-style-type: none"> <li>YES</li> <li>NO</li> </ul>         |
| DEF_BUFFER_POOL       | VARCHAR2 (7)    |          | For a local index, the default buffer pool to be used when adding a table partition: <ul style="list-style-type: none"> <li>DEFAULT</li> <li>KEEP</li> <li>RECYCLE</li> <li>NULL</li> </ul>                                                                                     |
| DEF_FLASH_CACHE       | VARCHAR2 (7)    |          | For a local index, the default Database Smart Flash Cache hint to be used when adding a table partition: <ul style="list-style-type: none"> <li>DEFAULT</li> <li>KEEP</li> <li>NONE</li> </ul> Solaris and Oracle Linux functionality only.                                     |
| DEF_CELL_FLASH_CACHE  | VARCHAR2 (7)    |          | For a local index, the default cell flash cache hint to be used when adding a table partition: <ul style="list-style-type: none"> <li>DEFAULT</li> <li>KEEP</li> <li>NONE</li> </ul> <b>See Also:</b> Oracle Exadata Storage Server Software documentation for more information |
| DEF_PARAMETERS        | VARCHAR2 (1000) |          | Default parameter string for domain indexes                                                                                                                                                                                                                                     |
| INTERVAL              | VARCHAR2 (1000) |          | String of the interval value                                                                                                                                                                                                                                                    |
| AUTOLIST              | VARCHAR2 (3)    |          | Indicates whether a local index is partitioned by auto list partitioning (YES) or not (NO)                                                                                                                                                                                      |
| INTERVAL_SUBPARTITION | VARCHAR2 (1000) |          | String of the subpartition interval value                                                                                                                                                                                                                                       |
| AUTOLIST_SUBPARTITION | VARCHAR2 (3)    |          | Indicates whether a local index is subpartitioned by auto list partitioning (YES) or not (NO)                                                                                                                                                                                   |

## 4.4 ALL\_PART\_KEY\_COLUMNS

ALL\_PART\_KEY\_COLUMNS describes the partitioning key columns for the partitioned objects accessible to the current user.

**Related Views**

- DBA\_PART\_KEY\_COLUMNS describes the partitioning key columns for all partitioned objects in the database.
- USER\_PART\_KEY\_COLUMNS describes the partitioning key columns for the partitioned objects owned by the current user. This view does not display the OWNER column.

| Column             | Datatype        | NULL | Description                                                                               |
|--------------------|-----------------|------|-------------------------------------------------------------------------------------------|
| OWNER              | VARCHAR2 (128)  |      | Owner of the partitioned table or index                                                   |
| NAME               | VARCHAR2 (128)  |      | Name of the partitioned table or index                                                    |
| OBJECT_TYPE        | CHAR (5)        |      | Object type: <ul style="list-style-type: none"><li>• TABLE</li><li>• INDEX</li></ul>      |
| COLUMN_NAME        | VARCHAR2 (4000) |      | Name of the column                                                                        |
| COLUMN_POSITION    | NUMBER          |      | Position of the column within the partitioning key                                        |
| COLLATED_COLUMN_ID | NUMBER          |      | Internal sequence number of the column for which this column provides linguistic ordering |

## 4.5 ALL\_PART\_LOBS

ALL\_PART\_LOBS displays table-level information about the partitioned LOBs accessible to the current user, including default attributes for LOB data partitions.

**Related Views**

- DBA\_PART\_LOBS displays table-level information about all partitioned LOBs in the database.
- USER\_PART\_LOBS displays table-level information about the partitioned LOBs owned by the current user. This view does not display the TABLE\_OWNER column.

| Column              | Datatype        | NULL     | Description                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                               |
|---------------------|-----------------|----------|---------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|
| TABLE_OWNER         | VARCHAR2 (128)  | NOT NULL | Owner of the partitioned table containing the LOBs                                                                                                                                                                                                                                                                                                                                                                                                                                                                        |

## 4.6 ALL\_PART\_TABLES

`ALL_PART_TABLES` displays the object-level partitioning information for the partitioned tables accessible to the current user.

### Related Views

- `DBA_PART_TABLES` displays the object-level partitioning information for all partitioned tables in the database.
- `USER_PART_TABLES` displays the object-level partitioning information for the partitioned tables owned by the current user. This view does not display the `OWNER` column.

| Column                    | Datatype       | NULL | Description                                                                                                                                                                                                                                                                      |

| DEF_INMEMORY_COMPRESSION    | VARCHAR2 (17)   |      | Default compression level for the IM column store: <ul style="list-style-type: none"> <li>• NO MEMCOMPRESS</li> <li>• FOR DML</li> <li>• FOR QUERY [ LOW   HIGH ]</li> <li>• FOR CAPACITY [ LOW   HIGH ]</li> <li>• AUTO</li> <li>• NULL</li> </ul>                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                 |
| DEF_INMEMORY_DUPLICATE      | VARCHAR2 (13)   |      | Indicates the default duplicate setting for the IM column store in an Oracle RAC environment: <ul style="list-style-type: none"> <li>• NO DUPLICATE</li> <li>• DUPLICATE</li> <li>• DUPLICATE ALL</li> </ul>                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                        |
| DEF_READ_ONLY               | VARCHAR2 (3)    |      | Indicates the default setting for new partitions: <ul style="list-style-type: none"> <li>• YES: The default setting for new partitions is read-only.</li> <li>• NO: The default setting for new partitions is read/write.</li> </ul>                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                |
| DEF_CELLMEMORY <sup>2</sup> | VARCHAR2 (24)   |      | Shows the default value for the <code>CELLMEMORY</code> attribute that new partitions in the parent table will inherit unless the behavior is overridden explicitly                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                 |
| DEF_INMEMORY_SERVICE        | VARCHAR2 (12)   |      | Indicates how the IM column store is populated on various instances by default for partitions of the table. The possible values are: <ul style="list-style-type: none"> <li>• <b>DEFAULT:</b> Data is populated on all instances specified with the <code>PARALLEL_INSTANCE_GROUP</code> initialization parameter. If that parameter is not set, then the data is populated on all instances. This is the default.</li> <li>• <b>NONE:</b> Data is not populated on any instance.</li> <li>• <b>ALL:</b> Data is populated on all instances, regardless of the value of the <code>PARALLEL_INSTANCE_GROUP</code> initialization parameter.</li> <li>• <b>USER_DEFINED:</b> Data is populated only on the instances on which the user-specified service is active. The service name corresponding to this is stored in the <code>DEF_INMEMORY_SERVICE_NAME</code> column.</li> </ul> |
| DEF_INMEMORY_SERVICE_NAME   | VARCHAR2 (1000) |      | Specifies the service name for the service on which the IM column store should be populated by default for partitions of the table. This column has a value only when the corresponding <code>DEF_INMEMORY_SERVICE</code> is <code>USER_DEFINED</code> . In all other cases, this column is null.                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                   |
| AUTO                        | VARCHAR2 (3)    |      | Indicates whether the table was automatically partitioned (YES) or not (NO)                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                         |

<sup>1</sup> Hybrid Columnar Compression is a feature of the Enterprise Edition of Oracle Database that is dependent on the underlying storage system. See *Oracle Database Concepts* for more information.

<sup>2</sup> This column is intended for use with Oracle Exadata

## 4.7 ALL\_PARTIAL\_DROP\_TABS

**ALL\_PARTIAL\_DROP\_TABS** describes tables accessible to the current user that have partially completed **DROP COLUMN** operations. Such operations might have been interrupted by the user or by a system crash.

**Related Views**

- **DBA\_PARTIAL\_DROP\_TABS** describes all tables in the database that have partially completed **DROP COLUMN** operations.
- **USER\_PARTIAL\_DROP\_TABS** describes tables in the schema of the current user that have partially completed **DROP COLUMN** operations. This view does not display the **OWNER** column.

| Column     | Datatype       | NULL     | Description         |
|------------|----------------|----------|---------------------|
| OWNER      | VARCHAR2 (128) | NOT NULL | Owner of the object |
| TABLE_NAME | VARCHAR2 (128) | NOT NULL | Name of the table   |

**See Also:**

- "DBA\_PARTIAL\_DROP\_TABS"
- "USER\_PARTIAL\_DROP\_TABS"

## 4.8 ALL\_PENDING\_CONV\_TABLES

**ALL\_PENDING\_CONV\_TABLES** describes the pending conversion tables (tables which are not upgraded to the latest type version) accessible to the current user.

**Related Views**

- **DBA\_PENDING\_CONV\_TABLES** describes all pending conversion tables in the database.
- **USER\_PENDING\_CONV\_TABLES** describes the pending conversion tables owned by the current user. This view does not display the **OWNER** column.

| Column     | Datatype       | NULL     | Description        |
|------------|----------------|----------|--------------------|
| OWNER      | VARCHAR2 (128) | NOT NULL | Owner of the table |
| TABLE_NAME | VARCHAR2 (128) | NOT NULL | Name of the table  |

 **See Also:**

- ["DBA\\_PENDING\\_CONV\\_TABLES"](#)
- ["USER\\_PENDING\\_CONV\\_TABLES"](#)

## 4.9 ALL\_PG\_EDGE\_RELATIONSHIPS

ALL\_PG\_EDGE\_RELATIONSHIPS describes edge relationships in the property graphs accessible to the current user.

This view displays one row for each key column used for an edge relationship. For example, an edge table defined as follows will result in two rows in this view:

```
EDGE TABLES(et1 SOURCE KEY(cx, cy) REFERENCES vt1(fk1, fk2) ...)
```

### Related Views

- DBA\_PG\_EDGE\_RELATIONSHIPS describes edge relationships in all property graphs in the database.
- USER\_PG\_EDGE\_RELATIONSHIPS describes edge relationships in the property graphs owned by the current user. This view does not display the OWNER column.

| Column          | Datatype       | NULL     | Description                                                                                                      |
|-----------------|----------------|----------|------------------------------------------------------------------------------------------------------------------|
| OWNER           | VARCHAR2 (128) | NOT NULL | Owner of the property graph                                                                                      |
| GRAPH_NAME      | VARCHAR2 (128) | NOT NULL | Name of the property graph                                                                                       |
| EDGE_TAB_NAME   | VARCHAR2 (128) | NOT NULL | Name of the edge table                                                                                           |
| VERTEX_TAB_NAME | VARCHAR2 (128) | NOT NULL | Name of the vertex table                                                                                         |
| EDGE_END        | VARCHAR2 (11)  |          | Indicates whether the vertex table is a source vertex table (SOURCE) or a destination vertex table (DESTINATION) |
| EDGE_COL_NAME   | VARCHAR2 (128) | NOT NULL | Name of the foreign column in the edge table                                                                     |
| VERTEX_COL_NAME | VARCHAR2 (128) | NOT NULL | Name of the referenced column in the vertex table                                                                |

 **Note:**

This view is available starting with Oracle Database 23ai.

## 4.10 ALL\_PG\_ELEMENT\_LABELS

ALL\_PG\_ELEMENT\_LABELS describes labels for the element tables in the property graphs accessible to the current user.

### Related Views

- DBA\_PG\_ELEMENT\_LABELS describes labels for the element tables in all property graphs in the database.
- USER\_PG\_ELEMENT\_LABELS describes labels for the element tables in the property graphs owned by the current user. This view does not display the OWNER column.

| Column       | Datatype       | NULL     | Description                 |
|--------------|----------------|----------|-----------------------------|
| OWNER        | VARCHAR2 (128) | NOT NULL | Owner of the property graph |
| GRAPH_NAME   | VARCHAR2 (128) | NOT NULL | Name of the property graph  |
| ELEMENT_NAME | VARCHAR2 (128) | NOT NULL | Name of the element table   |
| LABEL_NAME   | VARCHAR2 (128) | NOT NULL | Name of the label           |

### Note:

This view is available starting with Oracle Database 23ai.

## 4.11 ALL\_PG\_ELEMENTS

ALL\_PG\_ELEMENTS describes element tables in the property graphs accessible to the current user.

### Related Views

- DBA\_PG\_ELEMENTS describes element tables in all property graphs in the database.
- USER\_PG\_ELEMENTS describes element tables in the property graphs owned by the current user. This view does not display the OWNER column.

| Column       | Datatype       | NULL     | Description                 |
|--------------|----------------|----------|-----------------------------|
| OWNER        | VARCHAR2 (128) | NOT NULL | Owner of the property graph |
| GRAPH_NAME   | VARCHAR2 (128) | NOT NULL | Name of the property graph  |
| ELEMENT_NAME | VARCHAR2 (128) | NOT NULL | Name of the element table   |

| Column       | Datatype       | NULL     | Description                                                 |
|--------------|----------------|----------|-------------------------------------------------------------|
| ELEMENT_KIND | VARCHAR2 (6)   |          | Kind of element table (VERTEX or EDGE)                      |
| OBJECT_OWNER | VARCHAR2 (128) | NOT NULL | Schema in which the object storing the elements was created |
| OBJECT_NAME  | VARCHAR2 (128) | NOT NULL | Name of the object storing the elements                     |

**Note:**

This view is available starting with Oracle Database 23ai.

**See Also:**

- ["USER\\_PG\\_ELEMENTS"](#)

## 4.12 ALL\_PG\_KEYS

ALL\_PG\_KEYS describes key columns in the property graphs accessible to the current user.

### Related Views

- DBA\_PG\_KEYS describes key columns in all property graphs in the database.
- USER\_PG\_KEYS describes key columns in the property graphs owned by the current user. This view does not display the OWNER column.

| Column       | Datatype       | NULL     | Description                               |
|--------------|----------------|----------|-------------------------------------------|
| OWNER        | VARCHAR2 (128) | NOT NULL | Owner of the property graph               |
| GRAPH_NAME   | VARCHAR2 (128) | NOT NULL | Name of the property graph                |
| ELEMENT_NAME | VARCHAR2 (128) | NOT NULL | Name of the element table                 |
| COLUMN_NAME  | VARCHAR2 (128) | NOT NULL | Name of the column used to define the key |

**Note:**

This view is available starting with Oracle Database 23ai.

**See Also:**

## 4.13 ALL\_PG\_LABEL\_PROPERTIES

ALL\_PG\_LABEL\_PROPERTIES describes properties in the property graphs accessible to the current user.

### Related Views

- DBA\_PG\_LABEL\_PROPERTIES describes properties in all property graphs in the database.
- USER\_PG\_LABEL\_PROPERTIES describes properties in the property graphs owned by the current user. This view does not display the OWNER column.

| Column             | Datatype       | NULL     | Description                                                                                                 |
|--------------------|----------------|----------|-------------------------------------------------------------------------------------------------------------|
| OWNER              | VARCHAR2 (128) | NOT NULL | Owner of the property graph                                                                                 |
| GRAPH_NAME         | VARCHAR2 (128) | NOT NULL | Name of the property graph                                                                                  |
| LABEL_NAME         | VARCHAR2 (128) | NOT NULL | Name of the label                                                                                           |
| PROPERTY_NAME      | VARCHAR2 (128) | NOT NULL | Name of the property                                                                                        |
| DATA_TYPE          | VARCHAR2 (106) |          | Data type of the property                                                                                   |
| DATA_LENGTH        | NUMBER         | NOT NULL | Length of the data type (in bytes)                                                                          |
| DATA_PRECISION     | NUMBER         |          | Decimal precision for NUMBER data type; binary precision for FLOAT data type; null for all other data types |
| DATA_SCALE         | NUMBER         |          | Digits to the right of the decimal point in a number; null for all other data types                         |
| DATA_CHAR_LENGTH   | NUMBER         |          | Maximum length of the property (in characters)                                                              |
| CHARACTER_SET_NAME | VARCHAR2 (44)  |          | Name of the character set: <ul style="list-style-type: none"> <li>• CHAR_CS</li> <li>• NCHAR_CS</li> </ul>  |
| COLLATION          | VARCHAR2 (100) |          | Collation for the column. Only applies to columns with character data types.                                |
| PROPERTY_ORDER     | NUMBER         | NOT NULL | Declaration order of the property in the label                                                              |

## 4.14 ALL\_PG\_LABELS

ALL\_PG\_LABELS describes labels in the property graphs accessible to the current user.

**Related Views**

- DBA\_PG\_LABELS describes labels in all property graphs in the database.
- USER\_PG\_LABELS describes labels in the property graphs owned by the current user. This view does not display the OWNER column.

| Column     | Datatype       | NULL     | Description                 |
|------------|----------------|----------|-----------------------------|
| OWNER      | VARCHAR2 (128) | NOT NULL | Owner of the property graph |
| GRAPH_NAME | VARCHAR2 (128) | NOT NULL | Name of the property graph  |
| LABEL_NAME | VARCHAR2 (128) | NOT NULL | Name of the label           |

**Note:**

This view is available starting with Oracle Database 23ai.

## 4.15 ALL\_PG\_PROP\_DEFINITIONS

ALL\_PG\_PROP\_DEFINITIONS describes columns and expressions exposed as properties in the property graphs accessible to the current user.

**Related Views**

- DBA\_PG\_PROP\_DEFINITIONS describes columns and expressions exposed as properties in all property graphs in the database.
- USER\_PG\_PROP\_DEFINITIONS describes columns and expressions exposed as properties in the property graphs owned by the current user. This view does not display the OWNER column.

| Column        | Datatype       | NULL     | Description                        |
|---------------|----------------|----------|------------------------------------|
| OWNER         | VARCHAR2 (128) | NOT NULL | Owner of the property graph        |
| GRAPH_NAME    | VARCHAR2 (128) | NOT NULL | Name of the property graph         |
| ELEMENT_NAME  | VARCHAR2 (128) | NOT NULL | Name of the element table          |
| PROPERTY_NAME | VARCHAR2 (128) | NOT NULL | Name of the property               |
| COLUMN_NAME   | VARCHAR2 (128) |          | Column exposed by the property     |
| COLUMN_EXPR   | LONG           |          | Expression exposed by the property |

**Note:**

This view is available starting with Oracle Database 23ai.

## 4.16 ALL\_PLSQL\_COLL\_TYPES

ALL\_PLSQL\_COLL\_TYPES describes named PL/SQL collection types accessible to the user.

### Related Views

- DBA\_PLSQL\_COLL\_TYPES describes all named PL/SQL collection types in the database. This view does not display the CHAR\_USED column.
- USER\_PLSQL\_COLL\_TYPES describes the user's own named PL/SQL collection types. This view does not display the OWNER or CHAR\_USED columns.

| Column            | Datatype       | NULL | Description                                                                     |
|-------------------|----------------|------|---------------------------------------------------------------------------------|
| OWNER             | VARCHAR2 (128) |      | Owner of the type                                                               |
| TYPE_NAME         | VARCHAR2 (128) |      | Name of the type                                                                |
| PACKAGE_NAME      | VARCHAR2 (128) |      | Name of the package containing the collection                                   |
| COLL_TYPE         | VARCHAR2 (128) |      | Collection type                                                                 |
| UPPER_BOUND       | NUMBER         |      | The upper bound of a varray or length constraint of an index by VARCHAR2 table  |
| ELEM_TYPE_OWNER   | VARCHAR2 (128) |      | Owner of the type of the element                                                |
| ELEM_TYPE_NAME    | VARCHAR2 (136) |      | Name of the type of the element                                                 |
| ELEM_TYPE_PACKAGE | VARCHAR2 (128) |      | Name of the package containing the element                                      |
| LENGTH            | NUMBER         |      | Length of the CHAR element or maximum length of the VARCHAR or VARCHAR2 element |

| Column             | Datatype      | NULL | Description                                                                                                                        |
|--------------------|---------------|------|------------------------------------------------------------------------------------------------------------------------------------|
| PRECISION          | NUMBER        |      | Decimal precision of the <code>NUMBER</code> or <code>DECIMAL</code> element or binary precision of the <code>FLOAT</code> element |
| SCALE              | NUMBER        |      | Scale of the <code>NUMBER</code> or <code>DECIMAL</code> element                                                                   |
| CHARACTER_SET_NAME | VARCHAR2 (44) |      | Character set name of the element                                                                                                  |
| ELEM_STORAGE       | VARCHAR2 (7)  |      | Storage optimization specification for <code>VARRAY</code> of numeric elements                                                     |
| NULLS_STORED       | VARCHAR2 (3)  |      | Indicates whether null information is stored with each <code>VARRAY</code> element ( <code>YES</code> ) or not ( <code>NO</code> ) |
| CHAR_USED          | VARCHAR2 (1)  |      | <code>C</code> if the width was specified in characters, <code>B</code> if in bytes                                                |
| INDEX_BY           | VARCHAR2 (14) |      | Index by <code>BINARY_INTEGER</code> or <code>VARCHAR2</code>                                                                      |
| ELEM_TYPE_MOD      | VARCHAR2 (7)  |      | Type modifier of the element                                                                                                       |

## 4.18 ALL\_PLSQL\_TYPE\_ATTRS

ALL\_PLSQL\_TYPE\_ATTRS describes the attributes of PL/SQL types accessible to the user.

#### Related Views

- DBA\_PLSQL\_TYPE\_ATTRS describes the attributes of all PL/SQL types in the database.
- USER\_PLSQL\_TYPE\_ATTRS describes the attributes of the user's own PL/SQL types. This view does not display the OWNER or CHAR\_USED columns.

| Column            | Datatype       | NULL | Description                                       |
|-------------------|----------------|------|---------------------------------------------------|
| OWNER             | VARCHAR2 (128) |      | Owner of the type                                 |
| TYPE_NAME         | VARCHAR2 (136) |      | Name of the type                                  |
| PACKAGE_NAME      | VARCHAR2 (128) |      | Name of the package containing the type           |
| ATTR_NAME         | VARCHAR2 (128) |      | Name of the attribute                             |
| ATTR_TYPE_MOD     | VARCHAR2 (7)   |      | Type modifier of the attribute                    |
| ATTR_TYPE_OWNER   | VARCHAR2 (128) |      | Owner of the type of the attribute                |
| ATTR_TYPE_NAME    | VARCHAR2 (136) |      | Name of the type of the attribute                 |
| ATTR_TYPE_PACKAGE | VARCHAR2 (128) |      | Name of the package containing the attribute type |

| Column             | Datatype      | NULL | Description                                                                                                                                                      |
|--------------------|---------------|------|------------------------------------------------------------------------------------------------------------------------------------------------------------------|
| LENGTH             | NUMBER        |      | Length of the <code>CHAR</code> attribute or maximum length of the <code>VARCHAR</code> or <code>VARCHAR2</code> attribute                                       |
| PRECISION          | NUMBER        |      | Decimal precision of the <code>NUMBER</code> or <code>DECIMAL</code> attribute or binary precision of the <code>FLOAT</code> attribute                           |
| SCALE              | NUMBER        |      | Scale of the <code>NUMBER</code> or <code>DECIMAL</code> attribute                                                                                               |
| CHARACTER_SET_NAME | VARCHAR2 (44) |      | Character set name of the attribute                                                                                                                              |
| ATTR_NO            | NUMBER        |      | Syntactical order number or position of the attribute as specified in the type specification or <code>CREATE TYPE</code> statement (not to be used as ID number) |
| CHAR_USED          | VARCHAR2 (1)  |      | C if the width was specified in characters, B if in bytes                                                                                                        |

## 4.19 ALL\_PLSQL\_TYPES

`ALL_PLSQL_TYPES` describes the PL/SQL types accessible to the user.

#### Related Views

- `DBA_PLSQL_TYPES` describes all the PL/SQL types in the database.
- `USER_PLSQL_TYPES` describes the user's own PL/SQL types. This view does not display the `OWNER` column.

| Column         | Datatype       | NULL     | Description                                                                      |
|----------------|----------------|----------|----------------------------------------------------------------------------------|
| OWNER          | VARCHAR2 (128) | NOT NULL | Owner of the type                                                                |
| TYPE_NAME      | VARCHAR2 (136) |          | Name of the type                                                                 |
| PACKAGE_NAME   | VARCHAR2 (128) | NOT NULL | Name of the package containing the type                                          |
| TYPE_OID       | RAW (16)       | NOT NULL | Object identifier (OID) of the type                                              |
| TYPECODE       | VARCHAR2 (58)  |          | Typecode of the type                                                             |
| ATTRIBUTES     | NUMBER         |          | Number of attributes in the type                                                 |
| CONTAINS_PLSQL | VARCHAR2 (3)   |          | Indicates whether the type contains PL/SQL-specific data types (YES) or not (NO) |

## 4.20 ALL\_POLICIES

**ALL\_POLICIES** describes all Oracle Virtual Private Database (VPD) security policies for objects accessible to the current user. A security policy is a list of security requirements and rules that regulate row level access to those database objects.

### Related Views

- **DBA\_POLICIES** describes all Oracle Virtual Private Database (VPD) security policies in the database.
- **USER\_POLICIES** describes all Oracle Virtual Private Database (VPD) security policies associated with objects owned by the current user. This view does not display the **OBJECT\_OWNER** or **EDITION\_NAME** columns.

| Column         | Datatype       | NULL | Description                                                                                                                                                                          |
|----------------|----------------|------|--------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|
| OBJECT_OWNER   | VARCHAR2 (128) |      | Owner of the synonym, table, or view                                                                                                                                                 |
| OBJECT_NAME    | VARCHAR2 (128) |      | Name of the synonym, table, or view                                                                                                                                                  |
| POLICY_GROUP   | VARCHAR2 (128) |      | Name of the policy group                                                                                                                                                             |
| POLICY_NAME    | VARCHAR2 (128) |      | Name of the policy                                                                                                                                                                   |
| PF_OWNER       | VARCHAR2 (128) |      | Owner of the policy function                                                                                                                                                         |
| PACKAGE        | VARCHAR2 (128) |      | Name of the package containing the policy function                                                                                                                                   |
| FUNCTION       | VARCHAR2 (128) |      | Name of the policy function                                                                                                                                                          |
| SEL            | VARCHAR2 (3)   |      | Indicates whether the policy is applied to queries on the object (YES) or not (NO)                                                                                                   |
| INS            | VARCHAR2 (3)   |      | Indicates whether the policy is applied to INSERT statements on the object (YES) or not (NO)                                                                                         |
| UPD            | VARCHAR2 (3)   |      | Indicates whether the policy is applied to UPDATE statements on the object (YES) or not (NO)                                                                                         |
| DEL            | VARCHAR2 (3)   |      | Indicates whether the policy is applied to DELETE statements on the object (YES) or not (NO)                                                                                         |
| IDX            | VARCHAR2 (3)   |      | Indicates whether the policy is enforced for index maintenance on the object (YES) or not (NO)                                                                                       |
| CHK_OPTION     | VARCHAR2 (3)   |      | Indicates whether the check option is enforced for the policy (YES) or not (NO)                                                                                                      |
| ENABLE         | VARCHAR2 (3)   |      | Indicates whether the policy is enabled (YES) or disabled (NO)                                                                                                                       |
| STATIC_POLICY  | VARCHAR2 (3)   |      | Indicates whether the policy is static (YES) or not (NO). This column is obsolete because information about static policies is shown in the <b>POLICY_TYPE</b> column.               |
| POLICY_TYPE    | VARCHAR2 (24)  |      | Policy type: <ul style="list-style-type: none"> <li>• STATIC</li> <li>• SHARED_STATIC</li> <li>• CONTEXT_SENSITIVE</li> <li>• SHARED_CONTEXT_SENSITIVE</li> <li>• DYNAMIC</li> </ul> |
| LONG_PREDICATE | VARCHAR2 (3)   |      | Indicates whether the policy function can return a maximum of 32 KB of predicate (YES) or not (NO). If NO, the default maximum predicate size is 4000 bytes.                         |

| Column       | Datatype       | NULL | Description                                                                                                      |
|--------------|----------------|------|------------------------------------------------------------------------------------------------------------------|
| COMMON       | VARCHAR2 (3)   |      | Indicates whether the policy is applied and enforced in all application PDBs (YES) or only in the local PDB (NO) |
| INHERITED    | VARCHAR2 (3)   |      | Indicates whether the policy is inherited from the root (YES) or not (NO)                                        |
| EDITION_NAME | VARCHAR2 (128) |      | Name of the edition of the synonym or view<br>For tables, the value of this column is null.                      |

## 4.21 ALL\_POLICY\_ATTRIBUTES

ALL\_POLICY\_ATTRIBUTES lists the attribute associations {Namespaces, Attributes} of context-sensitive and shared context-sensitive Oracle Virtual Private Database (VPD) policies for objects accessible to the current user.

#### Related Views

- DBA\_POLICY\_ATTRIBUTES lists the attribute associations {Namespaces, Attributes} of all context-sensitive and shared context-sensitive Oracle Virtual Private Database (VPD) policies in the database.
- USER\_POLICY\_ATTRIBUTES lists the attribute associations {Namespaces, Attributes} of all context-sensitive and shared-context sensitive Oracle Virtual Private Database (VPD) policies for synonyms, tables, or views owned by the user.

| Column       | Datatype       | NULL | Description                                                                                                                |
|--------------|----------------|------|----------------------------------------------------------------------------------------------------------------------------|
| OBJECT_OWNER | VARCHAR2 (128) |      | Owner of the synonym, table, or view                                                                                       |
| OBJECT_NAME  | VARCHAR2 (128) |      | Name of the synonym, table, or view                                                                                        |
| POLICY_GROUP | VARCHAR2 (128) |      | Name of the policy group                                                                                                   |
| POLICY_NAME  | VARCHAR2 (128) |      | Name of the policy                                                                                                         |
| NAMESPACE    | VARCHAR2 (128) |      | Name of the local application context                                                                                      |
| ATTRIBUTE    | VARCHAR2 (128) |      | Name of the attribute                                                                                                      |
| COMMON       | VARCHAR2 (3)   |      | Indicates whether the policy attribute is applied and enforced in all application PDBs (YES) or only in the local PDB (NO) |
| INHERITED    | VARCHAR2 (3)   |      | Indicates whether the policy attribute is inherited from the root (YES) or not (NO)                                        |

## 4.22 ALL\_POLICY\_CONTEXTS

`ALL_POLICY_CONTEXTS` describes the driving contexts defined for the synonyms, tables, and views accessible to the current user.

**Related Views**

- `DBA_POLICY_CONTEXTS` describes all driving contexts in the database.
- `USER_POLICY_CONTEXTS` describes the driving contexts defined for the synonyms, tables, and views owned by the current user. This view does not display the `OBJECT_OWNER` column.

| Column                    | Datatype                    | NULL     | Description                                                                                                              |
|---------------------------|-----------------------------|----------|--------------------------------------------------------------------------------------------------------------------------|
| <code>OBJECT_OWNER</code> | <code>VARCHAR2 (128)</code> | NOT NULL | Owner of the synonym, table, or view                                                                                     |
| <code>OBJECT_NAME</code>  | <code>VARCHAR2 (128)</code> | NOT NULL | Name of the synonym, table, or view                                                                                      |
| <code>NAMESPACE</code>    | <code>VARCHAR2 (128)</code> | NOT NULL | Namespace of the driving context                                                                                         |
| <code>ATTRIBUTE</code>    | <code>VARCHAR2 (128)</code> | NOT NULL | Attribute of the driving context                                                                                         |
| <code>COMMON</code>       | <code>VARCHAR2 (3)</code>   |          | Indicates whether the policy context is applied and enforced in all application PDBs (YES) or only in the local PDB (NO) |
| <code>INHERITED</code>    | <code>VARCHAR2 (3)</code>   |          | Indicates whether the policy context is inherited from the root (YES) or not (NO)                                        |

**See Also:**

- ["USER\\_POLICY\\_CONTEXTS"](#)

## 4.23 ALL\_POLICY\_GROUPS

`ALL_POLICY_GROUPS` describes the policy groups defined for the synonyms, tables, and views accessible to the current user.

**Related Views**

- `DBA_POLICY_GROUPS` describes all policy groups in the database.
- `USER_POLICY_GROUPS` describes the policy groups defined for the synonyms, tables, and views owned by the current user. This view does not display the `OBJECT_OWNER` column.

| Column       | Datatype       | NULL | Description                                                                                                            |
|--------------|----------------|------|------------------------------------------------------------------------------------------------------------------------|
| OBJECT_OWNER | VARCHAR2 (128) |      | Owner of the synonym, table, or view                                                                                   |
| OBJECT_NAME  | VARCHAR2 (128) |      | Name of the synonym, table, or view                                                                                    |
| POLICY_GROUP | VARCHAR2 (128) |      | Name of the policy group                                                                                               |
| COMMON       | VARCHAR2 (3)   |      | Indicates whether the policy group is applied and enforced in all application PDBs (YES) or only in the local PDB (NO) |
| INHERITED    | VARCHAR2 (3)   |      | Indicates whether the policy group is inherited from the root (YES) or not (NO)                                        |

## 4.24 ALL\_PROCEEDURES

**ALL\_PROCEEDURES** lists all functions and procedures that are accessible to the current user, along with associated properties. For example, **ALL\_PROCEEDURES** indicates whether or not a function is pipelined, parallel enabled or an aggregate function. If a function is pipelined or an aggregate function, the associated implementation type (if any) is also identified.

#### Related Views

- **DBA\_PROCEEDURES** lists all functions and procedures available in the database, along with associated properties.
- **USER\_PROCEEDURES** lists all functions and procedures owned by the current user, along with associated properties. It does not contain the **OWNER** column.

| Column         | Datatype       | NULL | Description                                                                     |
|----------------|----------------|------|---------------------------------------------------------------------------------|
| OWNER          | VARCHAR2 (128) |      | Owner of the procedure                                                          |
| OBJECT_NAME    | VARCHAR2 (128) |      | Name of the object: top-level function, procedure, or package name              |
| PROCEDURE_NAME | VARCHAR2 (128) |      | Name of the procedure                                                           |
| OBJECT_ID      | NUMBER         |      | Object number of the object                                                     |
| SUBPROGRAM_ID  | NUMBER         |      | Unique subprogram identifier                                                    |
| OVERLOAD       | VARCHAR2 (40)  |      | Overload unique identifier                                                      |
| OBJECT_TYPE    | VARCHAR2 (13)  |      | The typename of the object                                                      |
| AGGREGATE      | VARCHAR2 (3)   |      | Indicates whether the procedure is an aggregate function (YES) or not (NO)      |
| PIPELINED      | VARCHAR2 (3)   |      | Indicates whether the procedure is a pipelined table function (YES) or not (NO) |
| IMPLTYPEOWNER  | VARCHAR2 (128) |      | Owner of the implementation type, if any                                        |
| IMPLTYPENAME   | VARCHAR2 (128) |      | Name of the implementation type, if any                                         |

| Column                     | Datatype        | NULL | Description                                                                                                                                                                                                                                                                                                                                                                       |
|----------------------------|-----------------|------|-----------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|
| PARALLEL                   | VARCHAR2 (3)    |      | Indicates whether the procedure or function is parallel-enabled (YES) or not (NO)                                                                                                                                                                                                                                                                                                 |
| INTERFACE                  | VARCHAR2 (3)    |      | YES, if the procedure/function is a table function implemented using the ODCI interface; otherwise NO                                                                                                                                                                                                                                                                             |
| DETERMINISTIC              | VARCHAR2 (3)    |      | YES, if the procedure/function is declared to be deterministic; otherwise NO                                                                                                                                                                                                                                                                                                      |
| AUTHID                     | VARCHAR2 (12)   |      | Indicates whether the procedure/function is declared to execute as <code>DEFINER</code> or <code>CURRENT_USER</code> (invoker)                                                                                                                                                                                                                                                    |
| RESULT_CACHE               | VARCHAR2 (3)    |      | Indicates whether the function is result-cached (YES) or not (NO)                                                                                                                                                                                                                                                                                                                 |
| ORIGIN_CON_ID              | VARCHAR2 (256)  |      | The ID of the container where the data originates. Possible values include: <ul style="list-style-type: none"> <li>0: This value is used for rows in non-CDBs. This value is not used for CDBs.</li> <li><i>n</i>: This value is used for rows containing data that originate in the container with container ID <i>n</i> (<i>n</i> = 1 if the row originates in root)</li> </ul> |
| POLYMORPHIC                | VARCHAR2 (5)    |      | The type of polymorphic table function: <ul style="list-style-type: none"> <li>ROW</li> <li>TABLE</li> <li>LEAF</li> <li>NULL</li> </ul>                                                                                                                                                                                                                                          |
| SQL_MACRO                  | VARCHAR2 (6)    |      | Indicates whether the procedure is a SQL macro. Possible values: <ul style="list-style-type: none"> <li>SCALAR: The procedure is a SQL macro for a scalar expression</li> <li>TABLE: The procedure is a SQL macro for a table expression</li> <li>NULL: The procedure is not a SQL macro</li> </ul>                                                                               |
| BLOCKCHAIN                 | VARCHAR2 (3)    |      | For internal use only                                                                                                                                                                                                                                                                                                                                                             |
| BLOCKCHAIN_MANDATORY_VOTES | VARCHAR2 (4000) |      | For internal use only                                                                                                                                                                                                                                                                                                                                                             |

| NEGATIVE_RULE_SET_OWNER     | VARCHAR2 (128)  |          | Owner of the propagation negative rule set                                                                                                                                                                                                                 |
| NEGATIVE_RULE_SET_NAME      | VARCHAR2 (128)  |          | Name of the propagation negative rule set                                                                                                                                                                                                                  |
| QUEUE_TO_QUEUE              | VARCHAR2 (5)    |          | Indicates whether the propagation is a queue-to-queue propagation ( <b>TRUE</b> ) or not ( <b>FALSE</b> ). A queue-to-queue propagation always has its own exclusive propagation job to propagate messages from the source queue to the destination queue. |
| STATUS                      | VARCHAR2 (8)    |          | Status of the propagation: <ul style="list-style-type: none"> <li>• DISABLED</li> <li>• ENABLED</li> <li>• ABORTED</li> </ul>                                                                                                                              |
| ERROR_MESSAGE               | VARCHAR2 (4000) |          | Error message last encountered by propagation                                                                                                                                                                                                              |
| ERROR_DATE                  | DATE            |          | Time that propagation last encountered an error                                                                                                                                                                                                            |
| ORIGINAL_PROPAGATION_NAME   | VARCHAR2 (128)  |          | Original propagation from which the propagation is cloned                                                                                                                                                                                                  |
| ORIGINAL_SOURCE_QUEUE_OWNER | VARCHAR2 (128)  |          | Source queue owner of the original propagation                                                                                                                                                                                                             |
| ORIGINAL_SOURCE_QUEUE_NAME  | VARCHAR2 (128)  |          | Source queue name of the original propagation                                                                                                                                                                                                              |
| ACKED_SCN                   | NUMBER          |          | Acknowledged SCN of the subscribers of captured messages in the destination queue for the propagation                                                                                                                                                      |
| AUTO_MERGE_THRESHOLD        | NUMBER          |          | Merge threshold value for merging the propagation back to the original source queue                                                                                                                                                                        |

## 4.27 ALL\_QUEUE\_EVENT\_STREAMS

ALL\_QUEUE\_EVENT\_STREAMS describes the Transactional Event Queue (TxEventQ) event streams accessible to the current user.

### Related Views

- [DBA\\_QUEUE\\_EVENT\\_STREAMS](#) describes all TxEventQ event streams in the database.
- [USER\\_QUEUE\\_EVENT\\_STREAMS](#) describes the TxEventQ event streams owned by the current user.

| Column   | Datatype       | NULL     | Description        |
|----------|----------------|----------|--------------------|
| OWNER    | VARCHAR2 (128) | NOT NULL | Owner of the queue |
| NAME     | VARCHAR2 (128) | NOT NULL | Name of the queue  |
| QUEUE_ID | NUMBER         | NOT NULL | Queue ID           |

| Column                | Datatype      | NULL     | Description                                                                                                           |
|-----------------------|---------------|----------|-----------------------------------------------------------------------------------------------------------------------|
| BASE_QUEUE_ID         | NUMBER        |          | If the queue is an exception queue, then this column displays the base queue ID                                       |
| EVENT_STREAM_ID       | NUMBER        | NOT NULL | Event stream ID                                                                                                       |
| DELAY_EVENT_STREAM_ID | NUMBER        |          | Delay event stream ID                                                                                                 |
| ENQUEUE_INSTANCE      | NUMBER        | NOT NULL | Event stream enqueue instance ID                                                                                      |
| EVENT_STREAM_TYPE     | VARCHAR2 (10) |          | Type of event stream. Possible values: <ul style="list-style-type: none"> <li>VOLATILE</li> <li>PERSISTENT</li> </ul> |

## 4.28 ALL\_QUEUE\_SCHEDULES

`ALL_QUEUE_SCHEDULES` describes the propagation schedules whose source queues are accessible to the current user.

#### Related Views

- `DBA_QUEUE_SCHEDULES` describes all propagation schedules in the database.
- `USER_QUEUE_SCHEDULES` describes the propagation schedules whose source queues are owned by the current user. This view does not display the `SCHEMA` column.

| Column             | Datatype                     | NULL | Description                                                                 |
|--------------------|------------------------------|------|-----------------------------------------------------------------------------|
| SCHEMA             | VARCHAR2 (128)               |      | Source queue owner                                                          |
| QNAME              | VARCHAR2 (128)               |      | Source queue name                                                           |
| DESTINATION        | VARCHAR2 (395)               |      | Destination name, currently limited to be a <code>DBLINK</code> name        |
| START_DATE         | TIMESTAMP (6) WITH TIME ZONE |      | Date at which to start propagation                                          |
| START_TIME         | VARCHAR2 (8)                 |      | Time of day at which to start propagation (in <code>HH:MI:SS</code> format) |
| PROPAGATION_WINDOW | NUMBER                       |      | Duration for the propagation window (in seconds)                            |
| NEXT_TIME          | VARCHAR2 (4000)              |      | Function to compute the start of the next propagation window                |
| LATENCY            | NUMBER                       |      | Maximum wait time to propagate a message during the propagation window      |

| Column                | Datatype                     | NULL | Description                                                                                                                                         |
|-----------------------|------------------------------|------|-----------------------------------------------------------------------------------------------------------------------------------------------------|
| SCHEDULE_DISABLED     | VARCHAR2 (1)                 |      | Indicates whether the schedule is disabled (Y) or enabled (N). If disabled, then the schedule will not be executed.                                 |
| PROCESS_NAME          | VARCHAR2 (4)                 |      | Name of the process executing the schedule; NULL if not currently executing                                                                         |
| SESSION_ID            | VARCHAR2 (82)                |      | Session ID and session serial number of the job executing this schedule (SID, SERIAL#); NULL if not currently executing                             |
| INSTANCE              | NUMBER                       |      | Cluster database instance number executing the schedule                                                                                             |
| LAST_RUN_DATE         | TIMESTAMP (6) WITH TIME ZONE |      | Date of the last successful execution                                                                                                               |
| LAST_RUN_TIME         | VARCHAR2 (8)                 |      | Time of day of the last successful execution (in HH:MI:SS format)                                                                                   |
| CURRENT_START_DATE    | TIMESTAMP (6) WITH TIME ZONE |      | Date at which the current window of this schedule was started                                                                                       |
| CURRENT_START_TIME    | VARCHAR2 (8)                 |      | Time of day at which the current window of this schedule was started (in HH:MI:SS format)                                                           |
| NEXT_RUN_DATE         | TIMESTAMP (6) WITH TIME ZONE |      | Date at which the next window of this schedule will be started                                                                                      |
| NEXT_RUN_TIME         | VARCHAR2 (8)                 |      | Time of day at which the next window of this schedule will be started (in HH:MI:SS format)                                                          |
| TOTAL_TIME            | NUMBER                       |      | Total time spent by the system in executing this schedule (in seconds)                                                                              |
| TOTAL_NUMBER          | NUMBER                       |      | Total number of messages propagated in this schedule                                                                                                |
| TOTAL_BYTES           | NUMBER                       |      | Total number of bytes propagated in this schedule                                                                                                   |
| MAX_NUMBER            | NUMBER                       |      | Maximum number of messages propagated in a propagation window                                                                                       |
| MAX_BYTES             | NUMBER                       |      | Maximum number of bytes propagated in a propagation window                                                                                          |
| AVG_NUMBER            | NUMBER                       |      | Average number of messages propagated in a propagation window                                                                                       |
| AVG_SIZE              | NUMBER                       |      | Average size of a propagated message (in bytes)                                                                                                     |
| AVG_TIME              | NUMBER                       |      | Average time to propagate a message (in seconds)                                                                                                    |
| FAILURES              | NUMBER                       |      | Number of consecutive times schedule execution has failed, if any. After 16 consecutive failures, a propagation job becomes disabled automatically. |
| LAST_ERROR_DATE       | DATE                         |      | Date of the last unsuccessful execution                                                                                                             |
| LAST_ERROR_TIME       | VARCHAR2 (8)                 |      | Time of day of the last unsuccessful execution (in HH:MI:SS format)                                                                                 |
| LAST_ERROR_MSG        | VARCHAR2 (4000)              |      | Error number and error message text of the last unsuccessful execution                                                                              |
| MESSAGE_DELIVERY_MODE | VARCHAR2 (10)                |      | Message delivery mode: <ul style="list-style-type: none"> <li>PERSISTENT</li> <li>BUFFERED</li> </ul>                                               |
| ELAPSED_DEQUEUE_TIME  | NUMBER                       |      | Elapsed dequeue time (in hundredths of a second)                                                                                                    |

| Column              | Datatype       | NULL | Description                                                                                                                                                      |
|---------------------|----------------|------|------------------------------------------------------------------------------------------------------------------------------------------------------------------|
| ELAPSED_PICKLE_TIME | NUMBER         |      | Elapsed pickle time (time taken to linearize a logical change record (LCR) into a stream of bytes that can be sent over the network) (in hundredths of a second) |
| JOB_NAME            | VARCHAR2 (128) |      | Name of the Scheduler job                                                                                                                                        |

## 4.29 ALL\_QUEUE\_SUBSCRIBERS

ALL\_QUEUE\_SUBSCRIBERS displays the list of subscribers that the current user has privilege to dequeue from.

#### Related Views

- DBA\_QUEUE\_SUBSCRIBERS displays the list of subscribers on all queues in the database.
- USER\_QUEUE\_SUBSCRIBERS displays the list of subscribers on queues that are under the current user's schema. This view does not display the OWNER column.

| Column                   | Datatype        | NULL     | Description                                                                                                                                                    |
|--------------------------|-----------------|----------|----------------------------------------------------------------------------------------------------------------------------------------------------------------|
| OWNER                    | VARCHAR2 (128)  | NOT NULL | Owner of the queue                                                                                                                                             |
| QUEUE_NAME               | VARCHAR2 (128)  | NOT NULL | Name of the queue                                                                                                                                              |
| QUEUE_TABLE              | VARCHAR2 (128)  | NOT NULL | Name of the queue table on which the queue is defined                                                                                                          |
| CONSUMER_NAME            | VARCHAR2 (512)  |          | Name of the subscriber                                                                                                                                         |
| ADDRESS                  | VARCHAR2 (1024) |          | Address of the subscriber                                                                                                                                      |
| PROTOCOL                 | NUMBER          |          | Protocol of the subscriber                                                                                                                                     |
| TRANSFORMATION           | VARCHAR2 (61)   |          | Transformation for the subscriber                                                                                                                              |
| RULE                     | CLOB            |          | Rule condition for the subscriber                                                                                                                              |
| DELIVERY_MODE            | VARCHAR2 (22)   |          | Message delivery mode for the subscriber: <ul style="list-style-type: none"> <li>• PERSISTENT</li> <li>• BUFFERED</li> <li>• PERSISTENT_OR_BUFFERED</li> </ul> |
| IF_NONDURABLE_SUBSCRIBER | VARCHAR2 (3)    |          | Indicates whether the subscriber is a non-durable subscriber (YES) or not (NO)                                                                                 |
| QUEUE_TO_QUEUE           | VARCHAR2 (5)    |          | Indicates whether the subscriber is a queue-to-queue subscriber (TRUE) or not (FALSE)                                                                          |
| SUBSCRIBER_ID            | NUMBER          |          | ID of the subscriber                                                                                                                                           |
| POS_BITMAP               | NUMBER          |          | Position of the subscriber in the bitmap                                                                                                                       |

| TYPE               | VARCHAR2 (9)   |      | Type of user data: <ul style="list-style-type: none"> <li>• RAW - Raw type</li> <li>• OBJECT - User-defined object type</li> <li>• VARIANT - Variant type (for internal use only)</li> </ul>                                                                                                                                                                                                                                                                      |
| OBJECT_TYPE        | VARCHAR2 (257) |      | Object type of the payload when TYPE is OBJECT                                                                                                                                                                                                                                                                                                                                                                                                                    |
| SORT_ORDER         | VARCHAR2 (22)  |      | User-specified sort order                                                                                                                                                                                                                                                                                                                                                                                                                                         |
| RECIPIENTS         | VARCHAR2 (8)   |      | SINGLE or MULTIPLE recipients                                                                                                                                                                                                                                                                                                                                                                                                                                     |
| MESSAGE_GROUPING   | VARCHAR2 (13)  |      | NONE or TRANSACTIONAL                                                                                                                                                                                                                                                                                                                                                                                                                                             |
| REPLICATION_MODE   | VARCHAR2 (22)  |      | Indicates whether the queue tables are enabled for replication through Oracle GoldenGate. If the queue tables are replicated, these values appear in the column: <ul style="list-style-type: none"> <li>• REPLICATED_SOURCE: This value is displayed for a source queue table.</li> <li>• REPLICATED_DESTINATION: This value is displayed for a destination queue table.</li> </ul> If replication is not enabled on the queue tables, then this column is empty. |
| COMPATIBLE         | VARCHAR2 (6)   |      | Lowest release level which the queue table is compatible with (for example, 8.0.3)                                                                                                                                                                                                                                                                                                                                                                                |
| PRIMARY_INSTANCE   | NUMBER         |      | Indicates the instance number of the instance which is the primary owner of the queue table. A value of 0 indicates that there is no primary owner.                                                                                                                                                                                                                                                                                                               |
| SECONDARY_INSTANCE | NUMBER         |      | Indicates the instance number of the instance which is the secondary owner of the queue table. This instance becomes the owner of the queue table if the primary owner goes down. A value of 0 indicates that there is no secondary owner.                                                                                                                                                                                                                        |
| OWNER_INSTANCE     | NUMBER         |      | Instance number of the instance which currently owns the queue table                                                                                                                                                                                                                                                                                                                                                                                              |

| Column       | Datatype      | NULL | Description                                                   |
|--------------|---------------|------|---------------------------------------------------------------|
| USER_COMMENT | VARCHAR2 (50) |      | Comment supplied by the user                                  |
| SECURE       | VARCHAR2 (3)  |      | Indicates whether the queue table is secure (YES) or not (NO) |

## 4.31 ALL\_QUEUES

**ALL\_QUEUES** describes all queues on which the current user has enqueue or dequeue privileges. If the user has any Advanced Queuing system privileges, like **MANAGE ANY QUEUE**, **ENQUEUE ANY QUEUE** or **DEQUEUE ANY QUEUE**, then this view describes all queues in the database.

#### Related Views

- **DBA\_QUEUES** describes all queues in the database.
- **USER\_QUEUES** describes the operational characteristics of every queue owned by the current user. This view does not display the **OWNER** column.

| Column          | Datatype       | NULL     | Description                                                                                                                                                     |
|-----------------|----------------|----------|-----------------------------------------------------------------------------------------------------------------------------------------------------------------|
| OWNER           | VARCHAR2 (128) | NOT NULL | Owner of the queue                                                                                                                                              |
| NAME            | VARCHAR2 (128) | NOT NULL | Name of the queue                                                                                                                                               |
| QUEUE_TABLE     | VARCHAR2 (128) | NOT NULL | Name of the table the queue data resides in                                                                                                                     |
| QID             | NUMBER         | NOT NULL | Object number of the queue                                                                                                                                      |
| QUEUE_TYPE      | VARCHAR2 (20)  |          | Type of the queue. Possible values: <ul style="list-style-type: none"> <li>• EXCEPTION_QUEUE</li> <li>• NON_PERSISTENT_QUEUE</li> <li>• NORMAL_QUEUE</li> </ul> |
| MAX_RETRIES     | NUMBER         |          | Maximum number of retries allowed when dequeuing from the queue                                                                                                 |
| RETRY_DELAY     | NUMBER         |          | Time interval between retries                                                                                                                                   |
| ENQUEUE_ENABLED | VARCHAR2 (7)   |          | Indicates whether the queue is enabled for enqueue (YES) or not (NO)                                                                                            |
| DEQUEUE_ENABLED | VARCHAR2 (7)   |          | Indicates whether the queue is enabled for dequeue (YES) or not (NO)                                                                                            |
| RETENTION       | VARCHAR2 (40)  |          | Time interval (in seconds) processed messages are retained in the queue, or <b>FOREVER</b>                                                                      |
| USER_COMMENT    | VARCHAR2 (50)  |          | User specified comment                                                                                                                                          |

| Column         | Datatype       | NULL | Description                                                                                                                                                      |
|----------------|----------------|------|------------------------------------------------------------------------------------------------------------------------------------------------------------------|
| NETWORK_NAME   | VARCHAR2 (512) |      | Network name                                                                                                                                                     |
| SHARDED        | VARCHAR2 (5)   |      | TRUE if queue is sharded, FALSE otherwise                                                                                                                        |
| QUEUE_CATEGORY | VARCHAR2 (25)  |      | Queue category. Possible values: <ul style="list-style-type: none"> <li>• Classic Queue</li> <li>• Sharded Queue</li> <li>• Transactional Event Queue</li> </ul> |
| RECIPIENTS     | VARCHAR2 (8)   |      | SINGLE or MULTIPLE recipients                                                                                                                                    |

## 4.32 ALL\_REFRESH

ALL\_REFRESH describes all the refresh groups accessible to the current user.

#### Related Views

- DBA\_REFRESH describes all refresh groups in the database.
- USER\_REFRESH describes all refresh groups owned by the current user.

| Column               | Datatype       | NULL     | Description                                                                                        |
|----------------------|----------------|----------|----------------------------------------------------------------------------------------------------|
| ROWNER               | VARCHAR2 (128) | NOT NULL | Owner of the refresh group                                                                         |
| RNAME                | VARCHAR2 (128) | NOT NULL | Name of the refresh group                                                                          |
| REFGROUP             | NUMBER         |          | Internal identifier of the refresh group                                                           |
| IMPLICIT_DESTROY     | VARCHAR2 (1)   |          | Indicates whether the refresh group is destroyed when its last item is subtracted (Y) or not (N)   |
| PUSH_DEFERRED_RPC    | VARCHAR2 (1)   |          | Indicates whether changes are pushed from the snapshot to the master before refresh (Y) or not (N) |
| REFRESH_AFTER_ERRORS | VARCHAR2 (1)   |          | Indicates whether to proceed with refresh despite errors when pushing deferred RPCs (Y) or not (N) |
| ROLLBACK_SEG         | VARCHAR2 (128) |          | Name of the rollback segment to use while refreshing                                               |
| JOB                  | NUMBER         |          | Identifier of the job used to refresh the group automatically                                      |
| NEXT_DATE            | DATE           |          | Date that this job will next be refreshed automatically, if not broken                             |
| INTERVAL             | VARCHAR2 (200) |          | A date function used to compute the next NEXT_DATE                                                 |
| BROKEN               | VARCHAR2 (1)   |          | Indicates whether the job is broken and will never be run (Y) or not (N)                           |

| Column       | Datatype       | NULL | Description                                                                                                                 |
|--------------|----------------|------|-----------------------------------------------------------------------------------------------------------------------------|
| PURGE_OPTION | NUMBER (38)    |      | Method for purging the transaction queue after each push (1 indicates quick purge option; 2 indicates precise purge option) |
| PARALLELISM  | NUMBER (38)    |      | Level of parallelism for transaction propagation                                                                            |
| HEAP_SIZE    | NUMBER (38)    |      | Size of the heap                                                                                                            |
| JOB_NAME     | VARCHAR2 (128) |      | The name of the job used to automatically refresh the group                                                                 |

## 4.33 ALL\_REFRESH\_CHILDREN

ALL\_REFRESH\_CHILDREN describes all the objects in refresh groups that are accessible to the current user.

#### Related Views

- DBA\_REFRESH\_CHILDREN describes the objects in all refresh groups in the database.
- USER\_REFRESH\_CHILDREN describes the objects in all refresh groups owned by the current user.

| Column               | Datatype       | NULL     | Description                                                                                        |
|----------------------|----------------|----------|----------------------------------------------------------------------------------------------------|
| OWNER                | VARCHAR2 (128) | NOT NULL | Owner of the object in the refresh group                                                           |
| NAME                 | VARCHAR2 (128) | NOT NULL | Name of the object in the refresh group                                                            |
| TYPE                 | VARCHAR2 (128) |          | Type of the object in the refresh group                                                            |
| ROWNER               | VARCHAR2 (128) | NOT NULL | Owner of the refresh group                                                                         |
| RNAME                | VARCHAR2 (128) | NOT NULL | Name of the refresh group                                                                          |
| REFGROUP             | NUMBER         |          | Internal identifier of the refresh group                                                           |
| IMPLICIT_DESTROY     | VARCHAR2 (1)   |          | Indicates whether the refresh group is destroyed when its last item is subtracted (Y) or not (N)   |
| PUSH_DEFERRED_RPC    | VARCHAR2 (1)   |          | Indicates whether changes are pushed from the snapshot to the master before refresh (Y) or not (N) |
| REFRESH_AFTER_ERRORS | VARCHAR2 (1)   |          | Indicates whether to proceed with refresh despite errors when pushing deferred RPCs (Y) or not (N) |
| ROLLBACK_SEG         | VARCHAR2 (128) |          | Name of the rollback segment to use while refreshing                                               |
| JOB                  | NUMBER         |          | Identifier of the job used to refresh the group automatically                                      |
| NEXT_DATE            | DATE           |          | Date that this job will next be refreshed automatically, if not broken                             |
| INTERVAL             | VARCHAR2 (200) |          | A date function used to compute the next NEXT_DATE                                                 |

| Column       | Datatype       | NULL | Description                                                                                                                |
|--------------|----------------|------|----------------------------------------------------------------------------------------------------------------------------|
| BROKEN       | VARCHAR2 (1)   |      | Indicates whether the job is broken and will never be run (Y) or not (N)                                                   |
| PURGE_OPTION | NUMBER (38)    |      | Method for purging the transaction queue after each push. 1 indicates quick purge option; 2 indicates precise purge option |
| PARALLELISM  | NUMBER (38)    |      | Level of parallelism for transaction propagation                                                                           |
| HEAP_SIZE    | NUMBER (38)    |      | Size of the heap                                                                                                           |
| JOB_NAME     | VARCHAR2 (128) |      | The name of the job used to automatically refresh the group                                                                |

## 4.34 ALL\_REFRESH\_DEPENDENCIES

ALL\_REFRESH\_DEPENDENCIES displays the names of the dependent detail or container tables of all the materialized views in the current schema.

| Column              | Datatype       | NULL     | Description                                                                           |
|---------------------|----------------|----------|---------------------------------------------------------------------------------------|
| OWNER               | VARCHAR2 (128) | NOT NULL | Owner of the table                                                                    |
| TABLE_NAME          | VARCHAR2 (128) | NOT NULL | Table name, unique within this schema                                                 |
| PARENT_OBJECT_TYPE  | CHAR (17)      |          | MATERIALIZED VIEW                                                                     |
| OLDEST_REFRESH_SCN  | NUMBER         |          | Minimum SCN of any summary or materialized view that has TABLE_NAME as a detail table |
| OLDEST_REFRESH_DATE | DATE           |          | SYSDATE when last refreshed                                                           |

## 4.35 ALL\_REFS

ALL\_REFS describes the REF columns and REF attributes in object type columns accessible to the current user.

**Related Views**

- DBA\_REFS describes all REF columns and REF attributes in the database.
- USER\_REFS describes the REF columns and REF attributes in object type columns owned by the current user. This view does not display the OWNER column.

| Column     | Datatype       | NULL     | Description        |
|------------|----------------|----------|--------------------|
| OWNER      | VARCHAR2 (128) | NOT NULL | Owner of the table |
| TABLE_NAME | VARCHAR2 (128) | NOT NULL | Name of the table  |

| Column            | Datatype        | NULL | Description                                                                                                                                            |
|-------------------|-----------------|------|--------------------------------------------------------------------------------------------------------------------------------------------------------|
| COLUMN_NAME       | VARCHAR2 (4000) |      | Name of the REF column or attribute. If it is not a top-level attribute, the value of COLUMN_NAME should be a path name starting with the column name. |
| WITH_ROWID        | VARCHAR2 (3)    |      | Indicates whether the REF value is stored with ROWID (YES) or not (NO)                                                                                 |
| IS_SCOPED         | VARCHAR2 (3)    |      | Indicates whether the REF column is scoped (YES) or not (NO)                                                                                           |
| SCOPE_TABLE_OWNER | VARCHAR2 (128)  |      | Owner of the scope table, if it exists and is accessible by the user                                                                                   |
| SCOPE_TABLE_NAME  | VARCHAR2 (128)  |      | Name of the scope table, if it exists and is accessible by the user                                                                                    |
| OBJECT_ID_TYPE    | VARCHAR2 (33)   |      | Indicates whether the object ID (OID) is USER-DEFINED or SYSTEM GENERATED                                                                              |

## 4.36 ALL\_REGISTERED\_MVIEWS

ALL\_REGISTERED\_MVIEWS describes all registered materialized views (registered at a master site or a master materialized view site) accessible to the current user.

A materialized view created with the BUILD DEFERRED option of the CREATE MATERIALIZED VIEW statement is only registered with ALL\_REGISTERED\_MVIEWS if that materialized view has been completely refreshed at least once.

#### Related Views

- DBA\_REGISTERED\_MVIEWS describes all registered materialized views in the database.
- USER\_REGISTERED\_MVIEWS describes all registered materialized views owned by the current user.

| Column      | Datatype       | NULL     | Description                                                                                                                             |
|-------------|----------------|----------|-----------------------------------------------------------------------------------------------------------------------------------------|
| OWNER       | VARCHAR2 (128) | NOT NULL | Owner of the materialized view                                                                                                          |
| NAME        | VARCHAR2 (128) | NOT NULL | Name of the materialized view                                                                                                           |
| MVIEW_SITE  | VARCHAR2 (128) | NOT NULL | Global name of the materialized view site                                                                                               |
| CAN_USE_LOG | VARCHAR2 (3)   |          | Indicates whether the materialized view can use a materialized view log (YES) or the materialized view is too complex to use a log (NO) |
| UPDATABLE   | VARCHAR2 (3)   |          | Indicates whether the materialized view is updatable (YES) or not and the materialized view is read only (NO)                           |

| Column         | Datatype      | NULL | Description                                                                                                                                |
|----------------|---------------|------|--------------------------------------------------------------------------------------------------------------------------------------------|
| REFRESH_METHOD | VARCHAR2 (11) |      | Indicates whether the materialized view uses primary key (PRIMARY KEY), rowids (ROWID), or object identifiers (OBJECT ID) for fast refresh |
| MVIEW_ID       | NUMBER (38)   |      | Identifier for the materialized view used by the masters for fast refresh                                                                  |
| VERSION        | VARCHAR2 (26) |      | Oracle version of the materialized view<br><b>Note:</b> Oracle Database materialized views show ORACLE 8 MATERIALIZED VIEW.                |
| QUERY_TXT      | LONG          |      | Query that defines the materialized view                                                                                                   |

## 4.37 ALL\_REGISTRY\_BANNERS

ALL\_REGISTRY\_BANNERS displays the valid components loaded into the database.

| Column      | Datatype      | NULL | Description                                |
|-------------|---------------|------|--------------------------------------------|
| BANNER      | VARCHAR2 (80) |      | Component display banner                   |
| BANNER_FULL | VARCHAR2 (80) |      | Component display banner with full version |

## 4.38 ALL\_REPL\_DBNAME\_MAPPING

ALL\_REPL\_DBNAME\_MAPPING provides details about the database name mapping in replication for the current user.

**Related View**

DBA\_REPL\_DBNAME\_MAPPING provides details about the database name mapping in replication.

| Column                | Datatype       | NULL | Description                                                                                                        |
|-----------------------|----------------|------|--------------------------------------------------------------------------------------------------------------------|
| SOURCE_ROOT_NAME      | VARCHAR2 (128) |      | The fully qualified global name of the root in a multitenant container database (CDB) where the changes originated |
| SOURCE_DATABASE_NAME  | VARCHAR2 (128) |      | The fully qualified global name of the pluggable database (PDB) where the changes originated                       |
| SOURCE_CONTAINER_NAME | VARCHAR2 (128) |      | The container name of the database where the changes originated                                                    |

## 4.50 ALL\_SAGA\_PENDING

ALL\_SAGA\_PENDING describes the pending sagas accessible to the current user.

This view displays sagas that were initiated in the current PDB.

### Related Views

- DBA\_SAGA\_PENDING describes all pending sagas in the database.
- USER\_SAGA\_PENDING describes the pending sagas owned by the current user.

| Column                        | Datatype       | NULL     | Description                                                                                        |
|-------------------------------|----------------|----------|----------------------------------------------------------------------------------------------------|
| SAGA_ID                       | RAW (16)       | NOT NULL | Saga ID                                                                                            |
| PARTICIPANT                   | VARCHAR2 (128) |          | Name of the saga participant                                                                       |
| TXN_ID                        | VARCHAR2 (16)  |          | ID of the reservable column transaction in the saga                                                |
| SCHEMA                        | VARCHAR2 (128) | NOT NULL | Schema of the reservable column table involved in the transaction                                  |
| RESERVABLE_TABLE              | VARCHAR2 (128) | NOT NULL | Name of the reservable column table involved in the transaction                                    |
| RESERVABLE_JOURNAL_STATU<br>S | VARCHAR2 (12)  |          | Status of the transaction in the reservable journal table                                          |
| STATEMENT_TYPE                | VARCHAR2 (16)  |          | SQL statement type (for example, UPDATE or MERGE)                                                  |
| OPERATION_TYPE                | VARCHAR2 (16)  | NOT NULL | Type of saga operation (for example, commit, rollback, or timeout)                                 |
| PRIMARYKEY_INFO               | CLOB           | NOT NULL | Primary key and its value in the row whose reservable column value was updated in this transaction |
| RESERVABLE_COL_INFO           | CLOB           | NOT NULL | Reservable column value update information in this transaction                                     |

## 4.51 ALL\_SAGAS

ALL\_SAGAS describes the active sagas accessible to the current user.

This view displays sagas that were either initiated in the current PDB or joined by participants in the current PDB.

### Related Views

- `DBA_SAGAS` describes all active sagas in the database.
- `USER_SAGAS` describes the active sagas owned by the current user. This view does not display the `OWNER` column.

| Column           | Datatype                     | NULL     | Description                                                                                                               |
|------------------|------------------------------|----------|---------------------------------------------------------------------------------------------------------------------------|

## 4.52 ALL\_SCHEDULER\_CHAIN\_RULES

ALL\_SCHEDULER\_CHAIN\_RULES displays information about the rules for the chains accessible to the current user (that is, those chains that the user has ALTER or EXECUTE privileges for).

### Related Views

- DBA\_SCHEDULER\_CHAIN\_RULES displays information about the rules for all chains in the database.
- USER\_SCHEDULER\_CHAIN\_RULES displays information about the rules for the chains owned by the current user. This view does not display the OWNER column.

| Column     | Datatype        | NULL     | Description                                       |
|------------|-----------------|----------|---------------------------------------------------|
| OWNER      | VARCHAR2 (128)  | NOT NULL | Owner of the Scheduler chain that the rule is in  |
| CHAIN_NAME | VARCHAR2 (128)  | NOT NULL | Name of the Scheduler chain that the rule is in   |
| RULE_OWNER | VARCHAR2 (128)  | NOT NULL | Owner of the rule                                 |
| RULE_NAME  | VARCHAR2 (128)  |          | Name of the rule                                  |
| CONDITION  | VARCHAR2 (4000) |          | Boolean condition triggering the rule             |
| ACTION     | VARCHAR2 (4000) |          | Action to be performed when the rule is triggered |
| COMMENTS   | VARCHAR2 (4000) |          | User-specified comments about the rule            |

## 4.53 ALL\_SCHEDULER\_CHAIN\_STEPS

ALL\_SCHEDULER\_CHAIN\_STEPS displays information about the defined steps of the chains accessible to the current user (that is, those chains that the user has ALTER or EXECUTE privileges for).

### Related Views

- DBA\_SCHEDULER\_CHAIN\_STEPS displays information about the defined steps of all chains in the database.
- USER\_SCHEDULER\_CHAIN\_STEPS displays information about the defined steps of the chains owned by the current user. This view does not display the OWNER column.

| Column        | Datatype       | NULL     | Description                                    |
|---------------|----------------|----------|------------------------------------------------|
| OWNER         | VARCHAR2 (128) | NOT NULL | Owner of the Scheduler chain the step is in    |
| CHAIN_NAME    | VARCHAR2 (128) | NOT NULL | Name of the Scheduler chain the step is in     |
| STEP_NAME     | VARCHAR2 (128) | NOT NULL | Name of the chain step                         |
| PROGRAM_OWNER | VARCHAR2 (392) |          | Owner of the program that runs during the step |

| Column               | Datatype                          | NULL | Description                                                                                                                                         |
|----------------------|-----------------------------------|------|-----------------------------------------------------------------------------------------------------------------------------------------------------|
| PROGRAM_NAME         | VARCHAR2 (392)                    |      | Name of the program that runs during the step                                                                                                       |
| EVENT_SCHEDULE_OWNER | VARCHAR2 (392)                    |      | Owner of the event schedule that this step waits for                                                                                                |
| EVENT_SCHEDULE_NAME  | VARCHAR2 (392)                    |      | Name of the event schedule that this step waits for                                                                                                 |
| EVENT_QUEUE_OWNER    | VARCHAR2 (128)                    |      | Owner of the source queue into which the event will be raised                                                                                       |
| EVENT_QUEUE_NAME     | VARCHAR2 (128)                    |      | Name of the source queue into which the event will be raised                                                                                        |
| EVENT_QUEUE_AGENT    | VARCHAR2 (523)                    |      | Name of the AQ agent used by the user on the event source queue (for a secure queue)                                                                |
| EVENT_CONDITION      | VARCHAR2 (4000)                   |      | Boolean expression used as the subscription rule for an event on the source queue                                                                   |
| CREDENTIAL_OWNER     | VARCHAR2 (128)                    |      | Owner of the credential to be used for an external step job                                                                                         |
| CREDENTIAL_NAME      | VARCHAR2 (128)                    |      | Name of the credential to be used for an external step job                                                                                          |
| DESTINATION          | VARCHAR2 (261)                    |      | Destination host on which a remote step job will run                                                                                                |
| SKIP                 | VARCHAR2 (5)                      |      | Indicates whether the step should be skipped (TRUE) or not (FALSE)                                                                                  |
| PAUSE                | VARCHAR2 (5)                      |      | Indicates whether the step should be paused after running (TRUE) or not (FALSE)                                                                     |
| PAUSE_BEFORE         | VARCHAR2 (5)                      |      | Indicates whether the step should be paused before running (TRUE) or not (FALSE)                                                                    |
| RESTART_ON_RECOVERY  | VARCHAR2 (5)                      |      | Indicates whether the step should be restarted on database recovery (TRUE) or not (FALSE)                                                           |
| RESTART_ON_FAILURE   | VARCHAR2 (5)                      |      | Indicates whether the step should be restarted on application failure (TRUE) or not (FALSE)                                                         |
| STEP_TYPE            | VARCHAR2 (21)                     |      | Type of the step: <ul style="list-style-type: none"> <li>• EVENT_SCHEDULE</li> <li>• INLINE_EVENT</li> <li>• SUBCHAIN</li> <li>• PROGRAM</li> </ul> |
| TIMEOUT              | INTERVAL DAY (3)<br>TO SECOND (0) |      | Timeout for waiting on an event schedule                                                                                                            |

## 4.59 ALL\_SCHEDULER\_FILE\_WATCHERS

ALL\_SCHEDULER\_FILE\_WATCHERS displays information about the Scheduler file watch requests accessible to the current user.

### Related Views

- DBA\_SCHEDULER\_FILE\_WATCHERS displays information about all Scheduler file watch requests in the database.
- USER\_SCHEDULER\_FILE\_WATCHERS displays information about the Scheduler file watch requests owned by the current user. This view does not display the OWNER column.

| Column            | Datatype        | NULL     | Description                                                                     |
|-------------------|-----------------|----------|---------------------------------------------------------------------------------|
| OWNER             | VARCHAR2 (128)  | NOT NULL | Owner of the file watch request                                                 |
| FILE_WATCHER_NAME | VARCHAR2 (128)  | NOT NULL | Name of the file watch request                                                  |
| ENABLED           | VARCHAR2 (5)    |          | Indicates whether this file watch request is enabled (TRUE) or disabled (FALSE) |
| DESTINATION_OWNER | VARCHAR2 (261)  |          | Owner of the named destination object                                           |
| DESTINATION       | VARCHAR2 (261)  |          | Name of the destination object                                                  |
| DIRECTORY_PATH    | VARCHAR2 (4000) | NOT NULL | Name of the directory path where the file will arrive                           |

| Column                | Datatype                          | NULL     | Description                                                             |
|-----------------------|-----------------------------------|----------|-------------------------------------------------------------------------|
| FILE_NAME             | VARCHAR2 (512)                    | NOT NULL | Name or pattern specifying the files that need to be monitored          |
| CREDENTIAL_OWNER      | VARCHAR2 (128)                    |          | Owner of the credential that should be used to authorize the file watch |
| CREDENTIAL_NAME       | VARCHAR2 (128)                    |          | Name of the credential that should be used to authorize the file watch  |
| MIN_FILE_SIZE         | NUMBER                            | NOT NULL | Minimum size of the file being monitored                                |
| STEADY_STATE_DURATION | INTERVAL DAY (3)<br>TO SECOND (0) |          | Time to wait before concluding that the file has stopped growing        |
| LAST_MODIFIED_TIME    | TIMESTAMP (6) WITH<br>TIME ZONE   |          | Time at which this file watcher was last modified                       |
| COMMENTS              | VARCHAR2 (4000)                   |          | Comments on the file watch request                                      |

## 4.60 ALL\_SCHEDULER\_GLOBAL\_ATTRIBUTE

ALL\_SCHEDULER\_GLOBAL\_ATTRIBUTE displays the values of all scheduler attributes (for example, DEFAULT\_TIMEZONE and CURRENT\_OPEN\_WINDOW).

### Related View

DBA\_SCHEDULER\_GLOBAL\_ATTRIBUTE displays the values of all scheduler attributes in the database.

| Column         | Datatype       | NULL     | Description                      |
|----------------|----------------|----------|----------------------------------|
| ATTRIBUTE_NAME | VARCHAR2 (128) | NOT NULL | Name of the Scheduler attribute  |
| VALUE          | VARCHAR2 (128) |          | Value of the Scheduler attribute |

 **See Also:**

- ["DBA\\_SCHEDULER\\_GLOBAL\\_ATTRIBUTE"](#)

## 4.61 ALL\_SCHEDULER\_GROUP\_MEMBERS

ALL\_SCHEDULER\_GROUP\_MEMBERS displays information about the members of the Scheduler object groups accessible to the current user.

### Related Views

- DBA\_SCHEDULER\_GROUP\_MEMBERS displays information about the members of all Scheduler object groups in the database.
- USER\_SCHEDULER\_GROUP\_MEMBERS displays information about the members of the Scheduler object groups owned by the current user. This view does not display the OWNER column.

| Column      | Datatype       | NULL     | Description                      |
|-------------|----------------|----------|----------------------------------|
| OWNER       | VARCHAR2 (128) | NOT NULL | Owner of the group               |
| GROUP_NAME  | VARCHAR2 (128) | NOT NULL | Name of the group                |
| MEMBER_NAME | VARCHAR2 (523) |          | Name of the member of this group |

## 4.68 ALL\_SCHEDULER\_JOB\_LOG

ALL\_SCHEDULER\_JOB\_LOG displays log information for the Scheduler jobs accessible to the current user.

**Related Views**

- DBA\_SCHEDULER\_JOB\_LOG displays log information for all Scheduler jobs in the database.
- USER\_SCHEDULER\_JOB\_LOG displays log information for the Scheduler jobs owned by the current user.

| Column      | Datatype                        | NULL     | Description                                         |
|-------------|---------------------------------|----------|-----------------------------------------------------|
| LOG_ID      | NUMBER                          | NOT NULL | Unique identifier that identifies a row             |
| LOG_DATE    | TIMESTAMP (6) WITH<br>TIME ZONE |          | Date of the log entry                               |
| OWNER       | VARCHAR2 (128)                  |          | Owner of the Scheduler job                          |
| JOB_NAME    | VARCHAR2 (261)                  |          | Name of the Scheduler job                           |
| JOB_SUBNAME | VARCHAR2 (261)                  |          | Subname of the Scheduler job (for a chain step job) |
| JOB_CLASS   | VARCHAR2 (128)                  |          | Class that the job belonged to at the time of entry |
| OPERATION   | VARCHAR2 (30)                   |          | Operation corresponding to the log entry            |

| Column            | Datatype       | NULL | Description                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                         |
|-------------------|----------------|------|-----------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|
| STATUS            | VARCHAR2 (30)  |      | <p>Status of the operation, if applicable. Possible values for this column are dependent on the value in the OPERATION column. In most cases, STATUS will be NULL. Only for job run operations will it have a value. STATUS will be NULL when OPERATION is one of the following:</p> <ul style="list-style-type: none"> <li>CREATE - Job was created</li> <li>UPDATE - One or more job attributes have been modified</li> <li>ENABLE - Job has been enabled</li> <li>DISABLE - Job has been disabled</li> <li>COMPLETED - For repeating jobs only, job has reached its end date or maximum number of runs</li> <li>BROKEN - Job has reached its maximum number of failures</li> </ul> <p>STATUS can be SUCCEEDED (job run completed successfully), FAILED (job run failed), or STOPPED (job run was stopped) when OPERATION is one of the following:</p> <ul style="list-style-type: none"> <li>RUN - Regular job run</li> <li>RETRY_RUN - Job is being retried because the previous run resulted in an error and RESTARTABLE is set to TRUE</li> <li>RECOVERY_RUN - Job is being rerun because the database went down, or the job worker process crashed and RESTARTABLE is set to TRUE</li> </ul> |
| USER_NAME         | VARCHAR2 (128) |      | Name of the user who performed the operation, if applicable                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                         |
| CLIENT_ID         | VARCHAR2 (64)  |      | Client identifier of the user who performed the operation, if applicable                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                            |

- USER\_SCHEDULER\_JOB\_RUN\_DETAILS displays log run details for the Scheduler jobs owned by the current user.

| Column            | Datatype                     | NULL     | Description                                                                         |
|-------------------|------------------------------|----------|-------------------------------------------------------------------------------------|
| LOG_ID            | NUMBER                       | NOT NULL | Unique identifier of the log entry (foreign key of the *_SCHEDULER_JOB_LOG views)   |
| LOG_DATE          | TIMESTAMP(6) WITH TIME ZONE  |          | Date of the log entry                                                               |
| OWNER             | VARCHAR2(128)                |          | Owner of the Scheduler job                                                          |
| JOB_NAME          | VARCHAR2(261)                |          | Name of the Scheduler job                                                           |
| JOB_SUBNAME       | VARCHAR2(261)                |          | Subname of the Scheduler job (for a chain step job)                                 |
| STATUS            | VARCHAR2(30)                 |          | Status of the job run                                                               |
| ERROR#            | NUMBER                       |          | Error number in the case of an error                                                |
| REQ_START_DATE    | TIMESTAMP(6) WITH TIME ZONE  |          | Requested start date of the job run                                                 |
| ACTUAL_START_DATE | TIMESTAMP(6) WITH TIME ZONE  |          | Actual date on which the job was run                                                |
| RUN_DURATION      | INTERVAL DAY(3) TO SECOND(0) |          | Duration of the job run                                                             |
| INSTANCE_ID       | NUMBER                       |          | Identifier of the instance on which the job was run                                 |
| SESSION_ID        | VARCHAR2(128)                |          | Session identifier of the job run                                                   |
| SLAVE_PID         | VARCHAR2(30)                 |          | Process identifier of the worker on which the job was run                           |
| CPU_USED          | INTERVAL DAY(3) TO SECOND(2) |          | Amount of CPU used for the job run                                                  |
| CREDENTIAL_OWNER  | VARCHAR2(261)                |          | Owner of the credential used for this remote job run                                |
| CREDENTIAL_NAME   | VARCHAR2(261)                |          | Name of the credential used for this remote job run                                 |
| DESTINATION_OWNER | VARCHAR2(261)                |          | Owner of the destination object used in this remote job run; NULL if no object used |
| DESTINATION       | VARCHAR2(261)                |          | Destination for a remote job operation                                              |
| ADDITIONAL_INFO   | VARCHAR2(4000)               |          | Additional information on the job run, if applicable                                |
| ERRORS            | VARCHAR2(4000)               |          | Error messages generated by this job run                                            |
| OUTPUT            | VARCHAR2(4000)               |          | Output messages generated by this job run                                           |
| BINARY_ERRORS     | BLOB                         |          | Error messages generated by this job run in a binary format                         |
| BINARY_OUTPUT     | BLOB                         |          | Binary output messages generated by this job run                                    |

## 4.70 ALL\_SCHEDULER\_JOBS

ALL\_SCHEDULER\_JOBS displays information about the Scheduler jobs accessible to the current user.

**Related Views**

- DBA\_SCHEDULER\_JOBS displays information about all Scheduler jobs in the database.
- USER\_SCHEDULER\_JOBS displays information about the Scheduler jobs owned by the current user. This view does not display the OWNER column.

| Column              | Datatype        | NULL | Description                                                                                                                                                                                                                          |
|---------------------|-----------------|------|--------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|
| OWNER               | VARCHAR2 (128)  |      | Owner of the Scheduler job                                                                                                                                                                                                           |
| JOB_NAME            | VARCHAR2 (128)  |      | Name of the Scheduler job                                                                                                                                                                                                            |
| JOB_SUBNAME         | VARCHAR2 (128)  |      | Subname of the Scheduler job (for a job running a chain step)                                                                                                                                                                        |
| JOB_STYLE           | VARCHAR2 (17)   |      | Job style: <ul style="list-style-type: none"> <li>• REGULAR</li> <li>• LIGHTWEIGHT</li> <li>• IN_MEMORY_RUNTIME</li> <li>• IN_MEMORY_FULL</li> </ul>                                                                                 |
| JOB_CREATOR         | VARCHAR2 (128)  |      | Original creator of the job                                                                                                                                                                                                          |
| CLIENT_ID           | VARCHAR2 (65)   |      | Client identifier of the user creating the job                                                                                                                                                                                       |
| GLOBAL_UID          | VARCHAR2 (33)   |      | Global user identifier of the user creating the job                                                                                                                                                                                  |
| PROGRAM_OWNER       | VARCHAR2 (4000) |      | Owner of the program associated with the job                                                                                                                                                                                         |
| PROGRAM_NAME        | VARCHAR2 (4000) |      | Name of the program associated with the job                                                                                                                                                                                          |
| JOB_TYPE            | VARCHAR2 (16)   |      | Inline job action type: <ul style="list-style-type: none"> <li>• PLSQL_BLOCK</li> <li>• STORED_PROCEDURE</li> <li>• EXECUTABLE</li> <li>• CHAIN</li> <li>• SQL_SCRIPT</li> <li>• BACKUP_SCRIPT</li> <li>• EXTERNAL_SCRIPT</li> </ul> |
| JOB_ACTION          | VARCHAR2 (4000) |      | Inline job action                                                                                                                                                                                                                    |
| NUMBER_OF_ARGUMENTS | NUMBER          |      | Inline number of job arguments                                                                                                                                                                                                       |
| SCHEDULE_OWNER      | VARCHAR2 (4000) |      | Owner of the schedule that the job uses (can be a window or a window group)                                                                                                                                                          |
| SCHEDULE_NAME       | VARCHAR2 (4000) |      | Name of the schedule that the job uses (can be a window or a window group)                                                                                                                                                           |

| Column              | Datatype                     | NULL | Description                                                                                                                                                                                                                                                                                                                                                                                                                                                                                  |
|---------------------|------------------------------|------|----------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|
| SCHEDULE_TYPE       | VARCHAR2 (12)                |      | Type of the schedule that the job uses: <ul style="list-style-type: none"> <li>• IMMEDIATE - Start date and repeat interval are NULL</li> <li>• ONCE - Repeat interval is NULL</li> <li>• PLSQL - PL/SQL expression used as schedule</li> <li>• CALENDAR - Oracle calendaring expression used as schedule</li> <li>• EVENT - Event schedule</li> <li>• NAMED - Named schedule</li> <li>• WINDOW - Window used as schedule</li> <li>• WINDOW_GROUP - Window group used as schedule</li> </ul> |
| START_DATE          | TIMESTAMP (6) WITH TIME ZONE |      | Original scheduled start date of the job (for an inline schedule)                                                                                                                                                                                                                                                                                                                                                                                                                            |
| REPEAT_INTERVAL     | VARCHAR2 (4000)              |      | Inline schedule PL/SQL expression or calendar string                                                                                                                                                                                                                                                                                                                                                                                                                                         |
| EVENT_QUEUE_OWNER   | VARCHAR2 (128)               |      | Owner of the source queue into which the event will be raised                                                                                                                                                                                                                                                                                                                                                                                                                                |
| EVENT_QUEUE_NAME    | VARCHAR2 (128)               |      | Name of the source queue into which the event will be raised                                                                                                                                                                                                                                                                                                                                                                                                                                 |
| EVENT_QUEUE_AGENT   | VARCHAR2 (523)               |      | Name of the AQ agent used by the user on the event source queue (if it is a secure queue)                                                                                                                                                                                                                                                                                                                                                                                                    |
| EVENT_CONDITION     | VARCHAR2 (4000)              |      | Boolean expression used as the subscription rule for the event on the source queue                                                                                                                                                                                                                                                                                                                                                                                                           |
| EVENT_RULE          | VARCHAR2 (261)               |      | Name of the rule used by the coordinator to trigger the event-based job                                                                                                                                                                                                                                                                                                                                                                                                                      |
| FILE_WATCHER_OWNER  | VARCHAR2 (261)               |      | Owner of the file watcher on which this job is based                                                                                                                                                                                                                                                                                                                                                                                                                                         |
| FILE_WATCHER_NAME   | VARCHAR2 (261)               |      | Name of the file watcher on which this job is based                                                                                                                                                                                                                                                                                                                                                                                                                                          |
| END_DATE            | TIMESTAMP (6) WITH TIME ZONE |      | Date after which the job will no longer run (for an inline schedule)                                                                                                                                                                                                                                                                                                                                                                                                                         |

## 4.76 ALL\_SCHEDULER\_RESOURCES

`ALL_SCHEDULER_RESOURCES` displays all scheduler resource objects in the database that are accessible to the current user.

**Related Views**

- `DBA_SCHEDULER_RESOURCES` displays all scheduler resource objects in the database.
- `USER_SCHEDULER_RESOURCES` displays all scheduler resource objects in the database from the schema of the current user. This view does not display the `OWNER` column.

| Column        | Datatype       | NULL     | Description                  |
|---------------|----------------|----------|------------------------------|
| OWNER         | VARCHAR2 (128) | NOT NULL | Owner of the resource object |
| RESOURCE_NAME | VARCHAR2 (128) | NOT NULL | Name of the resource object  |

| Column             | Datatype       | NULL | Description                                                     |
|--------------------|----------------|------|-----------------------------------------------------------------|
| STATUS             | VARCHAR2 (19)  |      | Resource status for resource object.                            |
| RESOURCE_UNITS     | NUMBER         |      | Maximum number of available units for the resource object       |
| UNITS_USED         | NUMBER         |      | Current number of resource units in use for the resource object |
| JOBS_RUNNING_COUNT | NUMBER         |      | Current number of running jobs using the resource object        |
| COMMENTS           | VARCHAR2 (256) |      | Comments for the resource object                                |

## 4.77 ALL\_SCHEDULER\_RSC\_CONSTRAINTS

ALL\_SCHEDULER\_RSC\_CONSTRAINTS lists all Oracle Scheduler resource constraint members accessible to the current user.

### Related Views

- DBA\_SCHEDULER\_RSC\_CONSTRAINTS lists all Oracle Scheduler resource constraint members in the database.
- USER\_SCHEDULER\_RSC\_CONSTRAINTS lists all Oracle Scheduler resource constraint members owned by the current user.

| Column         | Datatype       | NULL     | Description                                                             |
|----------------|----------------|----------|-------------------------------------------------------------------------|
| OBJECT_OWNER   | VARCHAR2 (128) | NOT NULL | Owner of the resource object the member is in                           |
| OBJECT_NAME    | VARCHAR2 (128) | NOT NULL | Name of the resource object the member is in                            |
| RESOURCE_OWNER | VARCHAR2 (128) | NOT NULL | Owner of the resource constraint resource member                        |
| RESOURCE_NAME  | VARCHAR2 (128) | NOT NULL | Name of the resource constraint resource member                         |
| UNITS_USED     | NUMBER         |          | Number of units used of the resource by this constraint resource member |

## 4.78 ALL\_SCHEDULER\_RUNNING\_CHAINS

ALL\_SCHEDULER\_RUNNING\_CHAINS displays information about the chain steps of the running chains accessible to the current user (that is, those chains that the user has ALTER privileges for). In the case of nested chains, this view also enables you to traverse the hierarchy of the chain with a SQL statement that contains a CONNECT BY clause linking up the JOB\_SUBNAME and STEP\_JOB\_SUBNAME columns.

### Related Views

- DBA\_SCHEDULER\_RUNNING\_CHAINS displays information about the chain steps of all running chains in the database.
- USER\_SCHEDULER\_RUNNING\_CHAINS displays information about the chain steps of the running chains owned by the current user. This view does not display the OWNER column.

| Column       | Datatype                       | NULL     | Description                                                                                                                                                                                                                                                        |
|--------------|--------------------------------|----------|--------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|
| OWNER        | VARCHAR2 (128)                 | NOT NULL | Owner of the job which is running the chain                                                                                                                                                                                                                        |
| JOB_NAME     | VARCHAR2 (128)                 | NOT NULL | Name of the job which is running the chain                                                                                                                                                                                                                         |
| JOB_SUBNAME  | VARCHAR2 (128)                 |          | Subname of the job which is running the chain (for a nested chain), else NULL                                                                                                                                                                                      |
| CHAIN_OWNER  | VARCHAR2 (128)                 | NOT NULL | Owner of the chain being run                                                                                                                                                                                                                                       |
| CHAIN_NAME   | VARCHAR2 (128)                 | NOT NULL | Name of the chain being run                                                                                                                                                                                                                                        |
| STEP_NAME    | VARCHAR2 (128)                 | NOT NULL | Name of the step of the running chain                                                                                                                                                                                                                              |
| STATE        | VARCHAR2 (15)                  |          | State of the running chain step: <ul style="list-style-type: none"> <li>• NOT_STARTED</li> <li>• RUNNING</li> <li>• SUCCEEDED</li> <li>• STOPPED</li> <li>• FAILED</li> <li>• SCHEDULED</li> <li>• RETRY SCHEDULED</li> <li>• PAUSED</li> <li>• STALLED</li> </ul> |
| ERROR_CODE   | NUMBER                         |          | Error code with which the step completed (if it has completed)                                                                                                                                                                                                     |
| COMPLETED    | VARCHAR2 (5)                   |          | Indicates whether the running chain step has completed (TRUE) or not (FALSE)                                                                                                                                                                                       |
| START_DATE   | TIMESTAMP (6) WITH TIME ZONE   |          | Date when the running chain step started (if it has started)                                                                                                                                                                                                       |
| END_DATE     | TIMESTAMP (6) WITH TIME ZONE   |          | Date when the running chain step stopped (if it has stopped)                                                                                                                                                                                                       |
| DURATION     | INTERVAL DAY (9) TO SECOND (6) |          | Amount of time it took the chain step to complete (if it has completed)                                                                                                                                                                                            |

## 4.85 ALL\_SCHEDULER\_WINGROUP\_MEMBERS

ALL\_SCHEDULER\_WINGROUP\_MEMBERS displays the members of the Scheduler window groups accessible to the current user.

### Related View

DBA\_SCHEDULER\_WINGROUP\_MEMBERS displays the members of all Scheduler window groups in the database.

| Column            | Datatype       | NULL     | Description              |
|-------------------|----------------|----------|--------------------------|
| WINDOW_GROUP_NAME | VARCHAR2 (128) | NOT NULL | Name of the window group |

| Column      | Datatype       | NULL     | Description                                   |
|-------------|----------------|----------|-----------------------------------------------|
| WINDOW_NAME | VARCHAR2 (128) | NOT NULL | Name of the window member of the window group |

## 4.86 ALL\_SEC\_RELEVANT\_COLS

ALL\_SEC\_RELEVANT\_COLS describes the security relevant columns of the security policies for the tables and views accessible to the current user.

### Related Views

- DBA\_SEC\_RELEVANT\_COLS describes the security relevant columns of all security policies in the database.
- USER\_SEC\_RELEVANT\_COLS describes the security relevant columns of the security policies for the tables and views owned by the current user. This view does not display the OBJECT\_OWNER column.

| Column         | Datatype       | NULL | Description                                                                                                                               |
|----------------|----------------|------|-------------------------------------------------------------------------------------------------------------------------------------------|
| OBJECT_OWNER   | VARCHAR2 (128) |      | Owner of the table or view                                                                                                                |
| OBJECT_NAME    | VARCHAR2 (128) |      | Name of the table or view                                                                                                                 |
| POLICY_GROUP   | VARCHAR2 (128) |      | Name of the policy group                                                                                                                  |
| POLICY_NAME    | VARCHAR2 (128) |      | Name of the policy                                                                                                                        |
| SEC_REL_COLUMN | VARCHAR2 (128) |      | Name of the security relevant column                                                                                                      |
| COLUMN_OPTION  | VARCHAR2 (8)   |      | Option of the security relevant column: <ul style="list-style-type: none"><li>• NONE</li><li>• ALL_ROWS</li></ul>                         |
| COMMON         | VARCHAR2 (3)   |      | Indicates whether the policy security relevant column is applied and enforced in all application PDBs (YES) or only in the local PDB (NO) |
| INHERITED      | VARCHAR2 (3)   |      | Indicates whether the policy security relevant column is inherited from the root (YES) or not (NO)                                        |

## 4.87 ALL\_SECONDARY\_OBJECTS

ALL\_SECONDARY\_OBJECTS provides information about secondary objects associated with domain indexes accessible to the user.

This view is only relevant for domain indexes. And currently, the secondary objects can only be tables.

### Related Views

- DBA\_SECONDARY\_OBJECTS provides information about all secondary objects that are associated with domain indexes in the database.
- USER\_SECONDARY\_OBJECTS provides information about secondary objects associated with domain indexes owned by the current user.

| Column                 | Datatype       | NULL     | Description                                               |
|------------------------|----------------|----------|-----------------------------------------------------------|
| INDEX_OWNER            | VARCHAR2 (128) | NOT NULL | Owner of the domain index                                 |
| INDEX_NAME             | VARCHAR2 (128) | NOT NULL | Name of the domain index                                  |
| SECONDARY_OBJECT_OWNER | VARCHAR2 (128) | NOT NULL | Owner of the secondary object created by the domain index |
| SECONDARY_OBJECT_NAME  | VARCHAR2 (128) | NOT NULL | Name of the secondary object created by the domain index  |
| SECONDARY_OBJDATA_TYPE | VARCHAR2 (20)  |          | Type of the secondary object created by the domain index  |

## 4.88 ALL\_SEQUENCES

ALL\_SEQUENCES describes all sequences accessible to the current user.

### Related Views

- DBA\_SEQUENCES describes all sequences in the database.
- USER\_SEQUENCES describes all sequences owned by the current user. This view does not display the SEQUENCE\_OWNER column.

| Column         | Datatype       | NULL     | Description                   |
|----------------|----------------|----------|-------------------------------|
| SEQUENCE_OWNER | VARCHAR2 (128) | NOT NULL | Owner of the sequence         |
| SEQUENCE_NAME  | VARCHAR2 (128) | NOT NULL | Sequence name                 |
| MIN_VALUE      | NUMBER         |          | Minimum value of the sequence |
| MAX_VALUE      | NUMBER         |          | Maximum value of the sequence |

| Column       | Datatype     | NULL     | Description                                                                                                                                                                                                                                                                                              |
|--------------|--------------|----------|----------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|
| INCREMENT_BY | NUMBER       | NOT NULL | Value by which sequence is incremented                                                                                                                                                                                                                                                                   |
| CYCLE_FLAG   | VARCHAR2 (1) |          | Indicates whether the sequence wraps around on reaching the limit (Y) or not (N)                                                                                                                                                                                                                         |
| ORDER_FLAG   | VARCHAR2 (1) |          | Indicates whether sequence numbers are generated in order (Y) or not (N)                                                                                                                                                                                                                                 |
| CACHE_SIZE   | NUMBER       | NOT NULL | Number of sequence numbers to cache                                                                                                                                                                                                                                                                      |
| LAST_NUMBER  | NUMBER       | NOT NULL | Last sequence number written to disk. If a sequence uses caching, the number written to disk is the last number placed in the sequence cache. This number is likely to be greater than the last sequence number that was used.<br><br>For session sequences, the value in this column should be ignored. |
| SCALE_FLAG   | VARCHAR2 (1) |          | Indicates whether this is a scalable sequence (Y) or not (N)                                                                                                                                                                                                                                             |
| EXTEND_FLAG  | VARCHAR2 (1) |          | Indicates whether this scalable sequence's generated values extend beyond MAX_VALUE or MIN_VALUE (Y) or not (N)                                                                                                                                                                                          |
| SHARDED_FLAG | VARCHAR2 (1) |          | Indicates whether this is a sharded sequence (Y) or not (N)                                                                                                                                                                                                                                              |
| SESSION_FLAG | VARCHAR2 (1) |          | Indicates whether sequence values are session private (Y) or not (N)                                                                                                                                                                                                                                     |
| KEEP_VALUE   | VARCHAR2 (1) |          | Indicates whether sequence values are kept during replay after a failure (Y) or not (N)                                                                                                                                                                                                                  |

#### Related View

DBA\_SERVICES displays all services in the database. The view excludes rows marked for deletion.

| Column       | Datatype       | NULL | Description                                 |
|--------------|----------------|------|---------------------------------------------|
| SERVICE_ID   | NUMBER         |      | Unique ID for the service                   |
| NAME         | VARCHAR2 (64)  |      | Name describing the workload                |
| NAME_HASH    | NUMBER         |      | Hash of the short name for the service      |
| NETWORK_NAME | VARCHAR2 (512) |      | Network name used to connect to the service |

| Column              | Datatype       | NULL | Description                                                                                                                                                                                                                                                                                          |
|---------------------|----------------|------|------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|
| CREATION_DATE       | DATE           |      | Date the service was created                                                                                                                                                                                                                                                                         |
| CREATION_DATE_HASH  | NUMBER         |      | Hash of the creation date                                                                                                                                                                                                                                                                            |
| FAILOVER_METHOD     | VARCHAR2 (64)  |      | TAF only for compatibility - BASIC or NONE                                                                                                                                                                                                                                                           |
| FAILOVER_TYPE       | VARCHAR2 (64)  |      | For Application Continuity for Java, TRANSACTION. For TAF, SESSION or SELECT.                                                                                                                                                                                                                        |
| FAILOVER_RETRIES    | NUMBER(10)     |      | For Application Continuity and TAF, when reconnecting after a failure, number of attempts to re-connect per incident                                                                                                                                                                                 |
| FAILOVER_DELAY      | NUMBER(10)     |      | For Application Continuity and TAF, when reconnecting after a failure, delay between each connection retry (in seconds)                                                                                                                                                                              |
| MIN_CARDINALITY     | NUMBER         |      | Reserved for internal use                                                                                                                                                                                                                                                                            |
| MAX_CARDINALITY     | NUMBER         |      | Reserved for internal use                                                                                                                                                                                                                                                                            |
| GOAL                | VARCHAR2 (12)  |      | Runtime Load Balancing Goal being used to create run-time load balancing and connection load balancing advice: <ul style="list-style-type: none"> <li>NONE</li> <li>SERVICE_TIME - Connections are balanced by response time</li> <li>THROUGHPUT - Connections are balanced by throughput</li> </ul> |
| DTP                 | VARCHAR2 (1)   |      | DTP (distributed transaction processing) enforces all sessions for a service at one instance. This is a requirement for XA before 11g, and is a requirement if resuming and suspending the same XA branch.                                                                                           |
| ENABLED             | VARCHAR2 (3)   |      | Reserved for internal use                                                                                                                                                                                                                                                                            |
| AQ_HA_NOTIFICATIONS | VARCHAR2 (3)   |      | To enable FAN for OCI connections, set AQ HA Notifications to True. For Oracle Database 12c, FAN uses ONS (Oracle Notification Service)                                                                                                                                                              |
| CLB_GOAL            | VARCHAR2 (5)   |      | Connection load balancing goal. When using run-time load balancing, GOAL=SERVICE_TIME or THROUGHPUT, set to SHORT. For a session count per service only, use LONG.                                                                                                                                   |
| EDITION             | VARCHAR2 (128) |      | A non-NULL value specifies the initial session edition for subsequent database connections that use the service and do not specify an edition. A NULL value has no effect.                                                                                                                           |

| Column                    | Datatype       | NULL | Description                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                  |
|---------------------------|----------------|------|------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|
| COMMIT_OUTCOME            | VARCHAR2 (3)   |      | <p>For Transaction Guard and Database Native Transaction Guard, indicates whether the database service associated with the user session has the COMMIT_OUTCOME service attribute enabled (YES) or not (NO). This attribute applies on a per session basis and is set at connect time.</p> <p>When the value of this column is YES, the commit status is managed for all supported transaction types and the outcome of a COMMIT transaction is preserved after the COMMIT has executed. Refer to the COMMIT_OUTCOME_FASTPATH column to view the preferred method for preserving the commit outcome.</p> <p><b>See Also:</b> <i>Oracle Database Development Guide</i> for information about preserving the commit outcome</p> |
| RETENTION_TIMEOUT         | NUMBER         |      | <p>For Transaction Guard and Database Native Transaction Guard, when COMMIT_OUTCOME = YES, this value indicates the amount of time (in seconds) that the commit outcome is retained in the database.</p>                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                     |
| REPLAY_INITIATION_TIMEOUT | NUMBER         |      | <p>For Application Continuity, indicates a time period (in seconds) after which the request will not be replayed. The time period starts at the first request submission. The default value is 300 seconds, which is 5 minutes.</p>                                                                                                                                                                                                                                                                                                                                                                                                                                                                                          |
| SESSION_STATE_CONSISTENCY | VARCHAR2 (128) |      | <p>Describes how non-transactional is changed during a request. This parameter is considered only if failover_type is set to TRANSACTION for Application Continuity. Examples of session state are NLS settings, optimizer preferences, event settings, PL/SQL global variables, temporary tables, advanced queues, LOBs and result cache. If non-transactional values change after the request starts, the default value of DYNAMIC should be set. Almost all applications should use DYNAMIC mode. If you are unsure, use DYNAMIC mode.</p>                                                                                                                                                                                |
| GLOBAL_SERVICE            | VARCHAR2 (3)   |      | <p>Indicates whether the service is global. A global service is managed by Global Data Services (GDS) and can be provided by multiple databases that contain replicated data. Possible values:</p> <ul style="list-style-type: none"> <li>• YES: Indicates the service is global</li> <li>• NO: Indicates the service is not global</li> </ul> <p>This attribute is set when using GDS. It cannot be set by a user.</p>                                                                                                                                                                                                                                                                                                      |
| PDB                       | VARCHAR2 (128) |      | <p>Name of a PDB associated with a given service. Will contain NULL for a non-CDB or if the service is not associated with a PDB (that is, connecting to a CDB using this service will cause a user to connect to the root.)</p> <p>When managing services for a PDB, use SRVCTL for Oracle RAC and Oracle RAC One Node databases, or connect to that PDB if it is a single instance (not RAC). The PDB attribute shows which PDB has the service. It cannot be set or modified explicitly.</p>                                                                                                                                                                                                                              |

| Column                  | Datatype       | NULL | Description                                                                                                                                                                                                                                                                           |
|-------------------------|----------------|------|---------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|
| SQL_TRANSLATION_PROFILE | VARCHAR2 (261) |      | A non-NULL value specifies the initial SQL translation profile for subsequent database connections that use the service and do not specify a SQL translation profile. A NULL value has no effect.                                                                                     |
| MAX_LAG_TIME            | VARCHAR2 (128) |      | The maximum replication lag (in seconds) that is acceptable for a data replica to be used for providing the database service. Can only be specified for global services using the Global Data Services (GDS) interfaces. It is not supported to change this value at local databases. |
| GSM_FLAGS               | NUMBER         |      | Flags specific to Global Data Services (GDS). Can only be specified for global services using the GDS interfaces. It is not supported to change these values at local databases.                                                                                                      |
| PQ_SVC                  | VARCHAR2 (64)  |      | Name of the associated parallel query rim service                                                                                                                                                                                                                                     |
| STOP_OPTION             | VARCHAR2 (13)  |      | Stop option for sessions of this service for planned maintenance                                                                                                                                                                                                                      |
| FAILOVER_RESTORE        | VARCHAR2 (6)   |      | Indicates whether sessions recover their commonly used session state (like NLS, schema) when they are failed over with TAF                                                                                                                                                            |
| DRAIN_TIMEOUT           | NUMBER         |      | Number of seconds to wait for sessions to be drained                                                                                                                                                                                                                                  |
| TABLE_FAMILY_ID         | NUMBER         |      | Sharded table family ID associated with the service                                                                                                                                                                                                                                   |
| PLACEMENT_POLICY        | NUMBER         |      | Placement policy for the service. Possible values: <ul style="list-style-type: none"> <li>0: PDB-NONE</li> <li>1: PDB-SINGLETON</li> <li>2: PDB-UNIFORM</li> </ul> <b>Note:</b> Values other than 0 are applicable only in the ATP-Dedicated Cloud in an Oracle RAC environment.      |
| RESET_STATE             | VARCHAR2 (6)   |      | Reset state for the service. Possible values: <ul style="list-style-type: none"> <li>LEVEL1</li> <li>NONE</li> </ul>                                                                                                                                                                  |
| PLACEMENT_TEMPLATE      | VARCHAR2 (64)  |      | Reserved for future use                                                                                                                                                                                                                                                               |

| Column                  | Datatype        | NULL | Description                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                        |
|-------------------------|-----------------|------|----------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|
| COMMIT_OUTCOME_FASTPATH | VARCHAR2 (3)    |      | <p>For Transaction Guard and Database Native Transaction Guard, when <code>COMMIT_OUTCOME = YES</code>, the value of this column indicates the preferred method for preserving the commit outcome. Possible values:</p> <ul style="list-style-type: none"> <li>YES - Database Native Transaction Guard is used. Each transaction is assigned a unique transaction identifier (DB XID) in the database. The DB XID and status of the corresponding transaction are maintained persistently in a transaction table. Note that if <code>COMMIT_OUTCOME = YES</code>, then the value of <code>COMMIT_OUTCOME_FASTPATH</code> defaults to YES.</li> <li>NO - Transaction Guard is used. A logical transaction ID (LTXID) is set for each user session at login and at each successful commit. LTXIDs are used only when the commit is not in the same round-trip to the database as the start of the transaction. Moreover, some transaction types, such as commit on success transactions, DDL transactions, and PL/SQL transactions, will continue to use LTXIDs in the same round-trip. When Transaction Guard is used, the outcome of a <code>COMMIT</code> transaction is known. If there is an outage, the application can use <code>DBMS_APP_CONT.GET_LTXID_OUTCOME</code> to return a reliable status for the last in-flight work.</li> </ul> <p><b>See Also:</b> <i>Oracle Real Application Clusters Administration and Deployment Guide</i> for information about logical transaction IDs</p> |
| TRUE_CACHE_SERVICE      | VARCHAR2 (64)   |      | True Cache service associated with this database service                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                           |

| Column                   | Datatype        | NULL     | Description                                                                                                                                                                                                                                                                 |
|--------------------------|-----------------|----------|-----------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|
| SQLSET_NAME              | VARCHAR2 (128)  | NOT NULL | Name of SQL tuning set for the statement                                                                                                                                                                                                                                    |
| SQLSET_OWNER             | VARCHAR2 (128)  |          | User name of SQL tuning set owner                                                                                                                                                                                                                                           |
| SQLSET_ID                | NUMBER          | NOT NULL | ID of SQL tuning set for the statement                                                                                                                                                                                                                                      |
| CON_DBID                 | NUMBER          | NOT NULL | The database ID of the PDB                                                                                                                                                                                                                                                  |
| SQL_ID                   | VARCHAR2 (13)   | NOT NULL | SQL identifier of the parent cursor in the library cache                                                                                                                                                                                                                    |
| FORCE_MATCHING_SIGNATURE | NUMBER          | NOT NULL | The signature used when the <code>CURSOR_SHARING</code> parameter is set to <code>FORCE</code>                                                                                                                                                                              |
| PLAN_HASH_VALUE          | NUMBER          | NOT NULL | Numerical representation of the SQL plan for the cursor. Comparing one <code>PLAN_HASH_VALUE</code> to another easily identifies whether or not two plans are the same (rather than comparing the two plans line-by-line).                                                  |
| SQL_SEQ                  | NUMBER          | NOT NULL | SQL sequence                                                                                                                                                                                                                                                                |
| STATEMENT_ID             | VARCHAR2 (128)  |          | Statement ID                                                                                                                                                                                                                                                                |
| PLAN_ID                  | NUMBER          |          | Plan ID                                                                                                                                                                                                                                                                     |
| TIMESTAMP                | DATE            |          | Date and time timestamp                                                                                                                                                                                                                                                     |
| REMARKS                  | VARCHAR2 (4000) |          | Remarks                                                                                                                                                                                                                                                                     |
| OPERATION                | VARCHAR2 (128)  |          | Name of the internal operation performed in this step (for example, <code>TABLE ACCESS</code> )                                                                                                                                                                             |
| OPTIONS                  | VARCHAR2 (255)  |          | A variation on the operation described in the <code>OPERATION</code> column (for example, <code>FULL</code> )                                                                                                                                                               |
| OBJECT_NODE              | VARCHAR2 (128)  |          | Name of the database link used to reference the object (a table name or view name). For local queries that use parallel execution, this column describes the order in which output from operations is consumed.                                                             |
| OBJECT_OWNER             | VARCHAR2 (128)  |          | Name of the user who owns the schema containing the table or index                                                                                                                                                                                                          |
| OBJECT_NAME              | VARCHAR2 (128)  |          | Name of the table or index                                                                                                                                                                                                                                                  |
| OBJECT_ALIAS             | VARCHAR2 (261)  |          | Alias for the object                                                                                                                                                                                                                                                        |
| OBJECT_INSTANCE          | NUMBER (38)     |          | Instance number for the object                                                                                                                                                                                                                                              |
| OBJECT_TYPE              | VARCHAR2 (128)  |          | Type of the object                                                                                                                                                                                                                                                          |
| OPTIMIZER                | VARCHAR2 (255)  |          | Current mode of the optimizer for the first row in the plan (statement line), for example, <code>CHOOSE</code> . When the operation is a database access (for example, <code>TABLE ACCESS</code> ), this column indicates whether or not the object is analyzed.            |
| SEARCH_COLUMNS           | NUMBER          |          | Number of index columns with start and stop keys (that is, the number of columns with matching predicates)                                                                                                                                                                  |
| ID                       | NUMBER (38)     | NOT NULL | A number assigned to each step in the execution plan                                                                                                                                                                                                                        |
| PARENT_ID                | NUMBER (38)     |          | ID of the next execution step that operates on the output of the current step                                                                                                                                                                                               |
| DEPTH                    | NUMBER (38)     |          | Depth (or level) of the operation in the tree. It is not necessary to issue a <code>CONNECT BY</code> statement to get the level information, which is generally used to indent the rows from the <code>PLAN_TABLE</code> table. The root operation (statement) is level 0. |

| Column            | Datatype        | NULL | Description                                                                                                                                                                           |
|-------------------|-----------------|------|---------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|
| POSITION          | NUMBER (38)     |      | Order of processing for all operations that have the same PARENT_ID.                                                                                                                  |
| COST              | NUMBER (38)     |      | Cost of the operation as estimated by the optimizer's cost-based approach. For statements that use the rule-based approach, this column is NULL.                                      |
| CARDINALITY       | NUMBER (38)     |      | Estimate, made by the cost-based optimizer, of the number of rows produced by the operation                                                                                           |
| BYTES             | NUMBER (38)     |      | Estimate, made by the cost-based optimizer, of the number of bytes produced by the operation                                                                                          |
| OTHER_TAG         | VARCHAR2 (255)  |      | Describes the contents of the OTHER column. For information about values, see <i>Oracle Database SQL Tuning Guide</i> .                                                               |
| PARTITION_START   | VARCHAR2 (255)  |      | Start partition of a range of accessed partitions                                                                                                                                     |
| PARTITION_STOP    | VARCHAR2 (255)  |      | Stop partition of a range of accessed partitions                                                                                                                                      |
| PARTITION_ID      | NUMBER (38)     |      | Step that computes the pair of values of the PARTITION_START and PARTITION_STOP columns                                                                                               |
| OTHER             | LONG            |      | Other information specific to the execution step that users may find useful. For information about values, see <i>Oracle Database SQL Tuning Guide</i> .                              |
| DISTRIBUTION      | VARCHAR2 (128)  |      | Stores the method used to distribute rows from producer query servers to consumer query servers                                                                                       |
| CPU_COST          | NUMBER (38)     |      | CPU cost of the operation as estimated by the optimizer's cost-based approach. For statements that use the rule-based approach, this column is NULL.                                  |
| IO_COST           | NUMBER (38)     |      | I/O cost of the operation as estimated by the optimizer's cost-based approach. For statements that use the rule-based approach, this column is NULL.                                  |
| TEMP_SPACE        | NUMBER (38)     |      | Temporary space usage of the operation (sort or hash join) as estimated by the optimizer's cost-based approach. For statements that use the rule-based approach, this column is NULL. |
| ACCESS_PREDICATES | VARCHAR2 (4000) |      | Predicates used to locate rows in an access structure. For example, start or stop predicates for an index range scan.                                                                 |
| FILTER_PREDICATES | VARCHAR2 (4000) |      | Predicates used to filter rows before producing them                                                                                                                                  |
| PROJECTION        | VARCHAR2 (4000) |      | Expressions produced by the operation                                                                                                                                                 |
| TIME              | NUMBER (38)     |      | Elapsed time (in seconds) of the operation as estimated by the optimizer's cost-based approach. For statements that use the rule-based approach, this column is NULL.                 |
| QBLOCK_NAME       | VARCHAR2 (128)  |      | Name of the query block                                                                                                                                                               |

| Column              | Datatype | NULL | Description                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                       |
|---------------------|----------|------|---------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|
| OTHER_XML           | CLOB     |      | <p>Provides extra information specific to an execution step of the execution plan. The content of this column is structured using XML, which allows multiple pieces of information to be stored, including the following:</p> <ul style="list-style-type: none"> <li>• Name of the schema against which the query was parsed</li> <li>• Release number of the Oracle Database that produced the explain plan</li> <li>• Hash value associated with the execution plan</li> <li>• Name (if any) of the outline or the SQL profile used to build the execution plan</li> <li>• Indication of whether or not dynamic statistics were used to produce the plan</li> <li>• The outline data, a set of optimizer hints that can be used to regenerate the same plan</li> <li>• Additional data that describes the relationship between rows in the plan table and subplans of adaptive plans</li> </ul> |
| EXECUTIONS          | NUMBER   |      | Number of times the plan has been executed                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                        |
| STARTS              | NUMBER   |      | Number of times this operation has been started, accumulated over the past executions                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                             |
| OUTPUT_ROWS         | NUMBER   |      | Number of rows produced by the row source, accumulated over the past executions                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                   |
| CR_BUFFER_GETS      | NUMBER   |      | Number of buffers received in consistent mode, accumulated over the past executions. Buffers are usually retrieved in consistent mode for queries.                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                |
| CU_BUFFER_GETS      | NUMBER   |      | Number of buffers retrieved in current mode, accumulated over the past executions. Buffers are retrieved in current mode for statements such as INSERT, UPDATE, and DELETE.                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                       |
| DISK_READS          | NUMBER   |      | Number of physical disk reads performed by the operation, accumulated over the past executions                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                    |
| DISK_WRITES         | NUMBER   |      | Number of physical disk writes performed by the operation, accumulated over the past executions                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                   |
| ELAPSED_TIME        | NUMBER   |      | Elapsed time (in microseconds) corresponding to this operation, accumulated over the past executions                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                              |
| LAST_STARTS         | NUMBER   |      | Number of times this operation has been started, during the last execution                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                        |
| LAST_OUTPUT_ROWS    | NUMBER   |      | Number of rows produced by the row source, during the last execution                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                              |
| LAST_CR_BUFFER_GETS | NUMBER   |      | Number of buffers retrieved in consistent mode, during the last execution. Buffers are usually retrieved in consistent mode for queries.                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                          |
| LAST_CU_BUFFER_GETS | NUMBER   |      | Number of buffers retrieved in current mode, during the last execution. Buffers are retrieved in current mode for statements such as INSERT, UPDATE, and DELETE.                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                  |
| LAST_DISK_READS     | NUMBER   |      | Number of physical disk reads performed by the operation, during the last execution                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                               |
| LAST_DISK_WRITES    | NUMBER   |      | Number of physical disk writes performed by the operation, during the last execution                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                              |

| ESTIMATED_OPTIMAL_SIZE | NUMBER         |      | Estimated size (in KB) required by this work area to execute the operation completely in memory (optimal execution). This is either derived from optimizer statistics or from previous executions. |
| ESTIMATED_ONEPASS_SIZE | NUMBER         |      | Estimated size (in KB) required by this work area to execute the operation in a single pass. This is either derived from optimizer statistics or from previous executions.                         |
| LAST_MEMORY_USED       | NUMBER         |      | Memory size (in KB) used by this work area during the last execution of the cursor                                                                                                                 |
| LAST_EXECUTION         | VARCHAR2 (10)  |      | Indicates whether this work area ran using OPTIMAL, ONE PASS, or under ONE PASS memory requirement (MULTI-PASS), during the last execution of the cursor                                           |
| LAST_DEGREE            | NUMBER         |      | Degree of parallelism used, during the last execution of the cursor                                                                                                                                |
| TOTAL_EXECUTIONS       | NUMBER         |      | Number of times this work area was active                                                                                                                                                          |
| OPTIMAL_EXECUTIONS     | NUMBER         |      | Number of times this work area ran in optimal mode                                                                                                                                                 |
| ONEPASS_EXECUTIONS     | NUMBER         |      | Number of times this work area ran in one pass mode                                                                                                                                                |
| MULTIPASSES_EXECUTIONS | NUMBER         |      | Number of times this work area ran below the one pass memory requirement                                                                                                                           |
| ACTIVE_TIME            | NUMBER         |      | Average time this work area is active (in hundredths of a second)                                                                                                                                  |
| MAX_TEMPSEG_SIZE       | NUMBER         |      | Maximum temporary segment size (in bytes) created by an instantiation of this work area. This column is null if this work area has never spilled to disk.                                          |
| LAST_TEMPSEG_SIZE      | NUMBER         |      | Temporary segment size (in bytes) created in the last instantiation of this work area. This column is null if the last instantiation of this work area did not spill to disk.                      |
| PARSING_USER_NAME      | VARCHAR2 (128) |      | Name of the parsing user                                                                                                                                                                           |

## 4.100 ALL\_SQLSET\_REFERENCES

ALL\_SQLSET\_REFERENCES describes whether or not the SQL tuning sets accessible to the current user are active.

### Related Views

- DBA\_SQLSET\_REFERENCES describes whether or not all SQL tuning sets in the database are active. A SQL tuning set cannot be dropped if it is referenced.
- USER\_SQLSET\_REFERENCES describes whether or not the SQL tuning sets owned by the current user are active.

| Column       | Datatype       | NULL     | Description                                    |
|--------------|----------------|----------|------------------------------------------------|
| SQLSET_NAME  | VARCHAR2 (128) | NOT NULL | Name of the SQL tuning set                     |
| SQLSET_OWNER | VARCHAR2 (128) |          | User name of SQL tuning set owner              |
| SQLSET_ID    | NUMBER         | NOT NULL | Identifier of the SQL tuning set               |
| ID           | NUMBER         | NOT NULL | Reference identifier                           |
| OWNER        | VARCHAR2 (128) |          | User who registered to use the SQL tuning set  |
| DESCRIPTION  | VARCHAR2 (256) |          | Description of the usage of the SQL tuning set |
| CREATED      | DATE           |          | Date the reference was created                 |

## 4.101 ALL\_SQLSET\_STATEMENTS

ALL\_SQLSET\_STATEMENTS displays information about the SQL statements, along with their statistics, that form all SQL tuning sets accessible to the current user.

### Related Views

- DBA\_SQLSET\_STATEMENTS displays information about the SQL statements, along with their statistics, that form all SQL tuning sets in the database.
- USER\_SQLSET\_STATEMENTS displays information about the SQL statements, along with their statistics, that form the SQL tuning sets owned by the current user. This view does not display the SQLSET\_OWNER column.

| Column       | Datatype       | NULL     | Description                                  |
|--------------|----------------|----------|----------------------------------------------|
| SQLSET_NAME  | VARCHAR2 (128) | NOT NULL | Name of the SQL tuning set for the statement |
| SQLSET_OWNER | VARCHAR2 (128) |          | User name of the SQL tuning set owner        |
| SQLSET_ID    | NUMBER         | NOT NULL | ID of the SQL tuning set for the statement   |
| CON_DBID     | NUMBER         | NOT NULL | The database ID of the PDB                   |

| Column                   | Datatype       | NULL     | Description                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                          |
|--------------------------|----------------|----------|----------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|
| SQL_ID                   | VARCHAR2 (13)  | NOT NULL | SQL identifier of the parent cursor in the library cache                                                                                                                                                                                                                                                                                                                                                                                                                                                             |
| FORCE_MATCHING_SIGNATURE | NUMBER         | NOT NULL | The signature used when the <code>CURSOR_SHARING</code> parameter is set to <code>FORCE</code>                                                                                                                                                                                                                                                                                                                                                                                                                       |
| SQL_TEXT                 | CLOB           |          | Full text for the SQL statement exposed as a CLOB column.                                                                                                                                                                                                                                                                                                                                                                                                                                                            |
| PARSING_SCHEMA_NAME      | VARCHAR2 (128) |          | Name of the user in whose schema the statement was parsed                                                                                                                                                                                                                                                                                                                                                                                                                                                            |
| PLAN_HASH_VALUE          | NUMBER         | NOT NULL | Hash value for the plan corresponding to statistics in this record                                                                                                                                                                                                                                                                                                                                                                                                                                                   |
| BIND_DATA                | RAW (2000)     |          | Bind data                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                            |
| BINDS_CAPTURED           | CHAR (1)       |          | Binds captured                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                       |
| MODULE                   | VARCHAR2 (64)  |          | Contains the name of the module that was executing when the SQL statement was first parsed, which is set by calling <code>DBMS_APPLICATION_INFO.SET_MODULE</code>                                                                                                                                                                                                                                                                                                                                                    |
| ACTION                   | VARCHAR2 (64)  |          | Contains the name of the action that was executing when the SQL statement was first parsed, which is set by calling <code>DBMS_APPLICATION_INFO.SET_ACTION</code>                                                                                                                                                                                                                                                                                                                                                    |
| ELAPSED_TIME             | NUMBER         |          | Elapsed time (in microseconds) used by this cursor for parsing, executing, and fetching                                                                                                                                                                                                                                                                                                                                                                                                                              |
| CPU_TIME                 | NUMBER         |          | CPU time (in microseconds) used by this cursor for parsing, executing, and fetching                                                                                                                                                                                                                                                                                                                                                                                                                                  |
| BUFFER_GETS              | NUMBER         |          | Number of buffer gets for this child cursor                                                                                                                                                                                                                                                                                                                                                                                                                                                                          |
| DISK_READS               | NUMBER         |          | Number of disk reads for this child cursor                                                                                                                                                                                                                                                                                                                                                                                                                                                                           |
| DIRECT_WRITES            | NUMBER         |          | Number of direct writes for this child cursor                                                                                                                                                                                                                                                                                                                                                                                                                                                                        |
| ROWS_PROCESSED           | NUMBER         |          | Total number of rows that the parsed SQL statement returns                                                                                                                                                                                                                                                                                                                                                                                                                                                           |
| FETCHES                  | NUMBER         |          | Number of fetches associated with the SQL statement                                                                                                                                                                                                                                                                                                                                                                                                                                                                  |
| EXECUTIONS               | NUMBER         |          | Number of executions that took place on this object since it was brought into the library cache                                                                                                                                                                                                                                                                                                                                                                                                                      |
| END_OF_FETCH_COUNT       | NUMBER         |          | Number of times this cursor was fully executed since the cursor was brought into the library cache. The value of this statistic is not incremented when the cursor is partially executed, either because it failed during the execution or because only the first few rows produced by this cursor are fetched before the cursor is closed or re-executed. By definition, the value of the <code>END_OF_FETCH_COUNT</code> column should be less than, or equal to, the value of the <code>EXECUTIONS</code> column. |
| OPTIMIZER_COST           | NUMBER         |          | Cost of this query, given by the optimizer                                                                                                                                                                                                                                                                                                                                                                                                                                                                           |
| OPTIMIZER_ENV            | RAW (2000)     |          | Optimizer environment                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                |
| PRIORITY                 | NUMBER         |          | User-defined priority                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                |
| COMMAND_TYPE             | NUMBER         |          | Oracle command type definition                                                                                                                                                                                                                                                                                                                                                                                                                                                                                       |
| FIRST_LOAD_TIME          | VARCHAR2 (19)  |          | Timestamp of the parent creation time                                                                                                                                                                                                                                                                                                                                                                                                                                                                                |
| STAT_PERIOD              | NUMBER         |          | Time (in seconds) during which the statistics of the SQL statement were collected                                                                                                                                                                                                                                                                                                                                                                                                                                    |
| ACTIVE_STAT_PERIOD       | NUMBER         |          | Effective time (in seconds) during which the SQL statement was active                                                                                                                                                                                                                                                                                                                                                                                                                                                |

| Column                   | Datatype       | NULL     | Description                                                                                                                                            |
|--------------------------|----------------|----------|--------------------------------------------------------------------------------------------------------------------------------------------------------|
| OTHER                    | CLOB           |          | Client data, specified by the user, for this statement                                                                                                 |
| PLAN_TIMESTAMP           | DATE           |          | Timestamp for the plan corresponding to the statistics in this record                                                                                  |
| SQL_SEQ                  | NUMBER         | NOT NULL | SQL sequence                                                                                                                                           |
| LAST_EXEC_START_TIME     | VARCHAR2 (19)  |          | For SQLs captured from the cursor cache, this is the time when the most recent execution of this SQL started                                           |
| SHARABLE_MEM             | NUMBER         |          | Amount of shared memory used by the child cursor (in bytes)                                                                                            |
| EXACT_MATCHING_SIGNATURE | NUMBER         |          | Signature calculated on the normalized SQL text. The normalization includes the removal of white space and the uppercasing of all non-literal strings. |
| RESULT_CACHE_EXECUTIONS  | NUMBER         |          | Number of result cache executions                                                                                                                      |
| SQL_PROFILE              | VARCHAR2 (128) |          | SQL profile used for this statement, if any                                                                                                            |
| SQL_PLAN_BASELINE        | VARCHAR2 (128) |          | SQL plan baseline used for this statement, if any                                                                                                      |
| SQL_PATCH                | VARCHAR2 (128) |          | SQL patch used for this statement, if any                                                                                                              |
| AVG_HARD_PARSE_TIME      | NUMBER         |          | Average hard parse time (in microseconds) used by this cursor                                                                                          |
| USER_IO_WAIT_TIME        | NUMBER         |          | User I/O Wait Time (in microseconds); updated as the statement executes                                                                                |
| IO_INTERCONNECT_BYTES    | NUMBER         |          | Number of I/O bytes exchanged between Oracle Database and the storage system                                                                           |
| PARSING_USER_NAME        | VARCHAR2 (128) |          | Name of the parsing user                                                                                                                               |

## 4.102 ALL\_STAT\_EXTENSIONS

`ALL_STAT_EXTENSIONS` displays information about the optimizer statistics extensions accessible to the current user.

### Related Views

- `DBA_STAT_EXTENSIONS` displays information about all optimizer statistics extensions in the database.
- `USER_STAT_EXTENSIONS` displays information about the optimizer statistics extensions owned by the current user. This view does not display the `OWNER` column.

| Column         | Datatype       | NULL     | Description                                                                                         |
|----------------|----------------|----------|-----------------------------------------------------------------------------------------------------|
| OWNER          | VARCHAR2 (128) | NOT NULL | Owner of the extension                                                                              |
| TABLE_NAME     | VARCHAR2 (128) | NOT NULL | Name of the table to which the extension belongs                                                    |
| EXTENSION_NAME | VARCHAR2 (128) | NOT NULL | Name of the statistics extension                                                                    |
| EXTENSION      | CLOB           |          | Extension (the expression or column group)                                                          |
| CREATOR        | VARCHAR2 (6)   |          | Creator of the extension: <ul style="list-style-type: none"><li>• USER</li><li>• SYSTEM</li></ul>   |
| DROPPABLE      | VARCHAR2 (3)   |          | Indicates whether the extension is droppable using DBMS_STATS.DROP_EXTENDED_STATS (YES) or not (NO) |

## 4.103 ALL\_STATEMENTS

ALL\_STATEMENTS describes all SQL statements in stored PL/SQL objects accessible to the user.

**Related Views**

- DBA\_STATEMENTS describes SQL statements in stored PL/SQL objects accessible to SYS.
- USER\_STATEMENTS describes SQL statements in stored PL/SQL objects accessible to the user. This view does not display the OWNER column.

| Column    | Datatype       | NULL     | Description                                                                                                                     |
|-----------|----------------|----------|---------------------------------------------------------------------------------------------------------------------------------|
| OWNER     | VARCHAR2 (128) | NOT NULL | Owner of the statement                                                                                                          |
| SIGNATURE | VARCHAR2 (32)  |          | Signature of the statement. Every statement type has a unique PL/Scope signature that identifies that instance of th statement. |

| Column             | Datatype        | NULL     | Description                                                                                                                                                                                                                                                                                                                                                                                                                                                        |
|--------------------|-----------------|----------|--------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|
| TYPE               | VARCHAR2 (17)   |          | Type of the statement. Statement types correspond to statements that can be used in PL/SQL to execute or otherwise interact with SQL: <ul style="list-style-type: none"> <li>• SELECT</li> <li>• UPDATE</li> <li>• INSERT</li> <li>• DELETE</li> <li>• MERGE</li> <li>• CLOSE</li> <li>• FETCH</li> <li>• OPEN</li> <li>• SAVEPOINT</li> <li>• COMMIT</li> <li>• SET_TRANSACTION</li> <li>• ROLLBACK</li> <li>• LOCK_TABLE</li> <li>• EXECUTE_IMMEDIATE</li> </ul> |
| OBJECT_NAME        | VARCHAR2 (128)  | NOT NULL | Name of the object where the statement usage occurred                                                                                                                                                                                                                                                                                                                                                                                                              |
| OBJECT_TYPE        | VARCHAR2 (12)   |          | Type of the object where the statement usage occurred                                                                                                                                                                                                                                                                                                                                                                                                              |
| USAGE_ID           | NUMBER          |          | Unique key for a statement usage within the object                                                                                                                                                                                                                                                                                                                                                                                                                 |
| LINE               | NUMBER          |          | Line number of the statement usage                                                                                                                                                                                                                                                                                                                                                                                                                                 |
| COL                | NUMBER          |          | Column number of the statement usage                                                                                                                                                                                                                                                                                                                                                                                                                               |
| USAGE_CONTEXT_ID   | NUMBER          |          | Context USAGE_ID of an statement usage                                                                                                                                                                                                                                                                                                                                                                                                                             |
| SQL_ID             | VARCHAR2 (13)   |          | SQL ID of the SQL statement. The value of this column is null for statements that do not have a SQL ID.                                                                                                                                                                                                                                                                                                                                                            |
| HAS_HINT           | VARCHAR2 (3)    |          | YES if the SQL statement contains a hint, NO otherwise.<br>If a hint appears inside of a subquery, then HAS_HINT will be YES for the containing statement or statements of the subquery as well as for the subquery itself.                                                                                                                                                                                                                                        |
| HAS_INTO_BULK      | VARCHAR2 (3)    |          | Indicates whether the statement contains a BULK_COLLECT clause (YES) or not (NO)                                                                                                                                                                                                                                                                                                                                                                                   |
| HAS_INTO_RETURNING | VARCHAR2 (3)    |          | Indicates whether the statement contains a RETURNING INTO clause (YES) or not (NO)                                                                                                                                                                                                                                                                                                                                                                                 |
| HAS_INTO_RECORD    | VARCHAR2 (3)    |          | Indicates whether the statement returns results into a PL/SQL record (YES) or not (NO)                                                                                                                                                                                                                                                                                                                                                                             |
| HAS_CURRENT_OF     | VARCHAR2 (3)    |          | Indicates whether the statement contains a HAS_CURRENT_OF clause (YES) or not (NO)                                                                                                                                                                                                                                                                                                                                                                                 |
| HAS_FOR_UPDATE     | VARCHAR2 (3)    |          | Indicates whether the statement contains a HAS_FOR_UPDATE clause (YES) or not (NO)                                                                                                                                                                                                                                                                                                                                                                                 |
| HAS_IN_BINDS       | VARCHAR2 (3)    |          | Indicates whether the statement contains an IN_BINDS clause (YES) or not (NO)                                                                                                                                                                                                                                                                                                                                                                                      |
| TEXT               | VARCHAR2 (4000) |          | The normalized form of the statement, when the statement has a normalized form. These are typically the same statements that have a SQL ID.<br><br>The column value is null when the statement does not have a normalized form.                                                                                                                                                                                                                                    |

| Column        | Datatype | NULL | Description                                                                                                                                                                                                                                                                                                                                                                       |

## 4.104 ALL\_STORED\_SETTINGS

ALL\_STORED\_SETTINGS provides information about the persistent parameter settings for stored PL/SQL units for which the current user has execute privileges.

#### Related Views

- DBA\_STORED\_SETTINGS lists information about the persistent parameter settings for stored PL/SQL units for which the current user has execute privileges. It also returns parameter information for all objects in the database and is accessible only to users with the SELECT\_CATALOG\_ROLE privilege.
- USER\_STORED\_SETTINGS lists information about the persistent parameter settings for stored PL/SQL units, but only shows information about PL/SQL units owned by the current user. This view does not display the OWNER column.

| Column      | Datatype        | NULL     | Description                                                                                                                                                                 |
|-------------|-----------------|----------|-----------------------------------------------------------------------------------------------------------------------------------------------------------------------------|
| OWNER       | VARCHAR2 (128)  | NOT NULL | Name of the database user owning the stored PL/SQL unit                                                                                                                     |
| OBJECT_NAME | VARCHAR2 (128)  | NOT NULL | Name of the PL/SQL unit                                                                                                                                                     |
| OBJECT_ID   | NUMBER          | NOT NULL | Object number of the PL/SQL unit                                                                                                                                            |
| OBJECT_TYPE | VARCHAR2 (12)   |          | The type of PL/SQL unit: PROCEDURE, FUNCTION, PACKAGE, PACKAGE BODY, TRIGGER, TYPE, or TYPE BODY                                                                            |

## 4.105 ALL\_STREAMS\_GLOBAL\_RULES

`ALL_STREAMS_GLOBAL_RULES` displays information about rules.

`ALL_STREAMS_GLOBAL_RULES` displays information about the following types of rules:

- Global rules created for the capture processes that enqueue the captured changes into queues accessible to the current user
- Global rules created for the propagations that have a source queue accessible to the current user
- Global rules created for the apply processes that dequeue events from queues accessible to the current user

This view does not contain information about rules created using the `DBMS_RULE_ADM` package.

**Related View**

`DBA_STREAMS_GLOBAL_RULES` displays information about the global rules created for all capture processes, propagations, and apply processes in the database.

| Column       | Datatype       | NULL | Description                                                                                                                               |
|--------------|----------------|------|-------------------------------------------------------------------------------------------------------------------------------------------|
| STREAMS_NAME | VARCHAR2 (128) |      | Name of the Replication process or propagation                                                                                            |

## 4.108 ALL\_STREAMS\_SCHEMA\_RULES

ALL\_STREAMS\_SCHEMA\_RULES displays information about several types of schema rules.

ALL\_STREAMS\_SCHEMA\_RULES displays information about these types of schema rules:

- Schema rules created for the capture processes that enqueue the captured changes into queues accessible to the current user
- Schema rules created for the propagations that have a source queue accessible to the current user
- Schema rules created for the apply processes that dequeue events from queues accessible to the current user

This view does not contain information about rules created using the DBMS\_RULE\_ADM package.

### Related View

DBA\_STREAMS\_SCHEMA\_RULES displays information about the schema rules created for all capture processes, propagations, and apply processes in the database.

| Column             | Datatype        | NULL     | Description                                                                                                                                                                                 |
|--------------------|-----------------|----------|---------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|
| STREAMS_NAME       | VARCHAR2 (128)  |          | Name of the Replication process or propagation                                                                                                                                              |
| STREAMS_TYPE       | VARCHAR2 (11)   |          | Type of the Replication process or propagation: <ul style="list-style-type: none"> <li>• CAPTURE</li> <li>• PROPAGATION</li> <li>• APPLY</li> </ul>                                         |
| SCHEMA_NAME        | VARCHAR2 (128)  |          | Schema name in the rule condition. The rule evaluates to <code>true</code> for a redo entry or logical change record (LCR) only if the redo entry or LCR contains this schema name.         |
| RULE_TYPE          | VARCHAR2 (7)    |          | Type of the rule: <ul style="list-style-type: none"> <li>• DML</li> <li>• DDL</li> </ul>                                                                                                    |
| INCLUDE_TAGGED_LCR | VARCHAR2 (3)    |          | Indicates whether a redo entry or logical change record (LCR) with a non-NULL tag is considered for capture, propagation, or apply ( <code>YES</code> ) or not ( <code>NO</code> )          |
| SOURCE_DATABASE    | VARCHAR2 (128)  |          | Source database in the rule condition. The rule evaluates to <code>true</code> for a redo entry or logical change record (LCR) only if the redo entry or LCR contains this source database. |
| RULE_NAME          | VARCHAR2 (128)  | NOT NULL | Name of the rule                                                                                                                                                                            |
| RULE_OWNER         | VARCHAR2 (128)  | NOT NULL | Owner of the rule                                                                                                                                                                           |
| RULE_CONDITION     | VARCHAR2 (4000) |          | First 4000 bytes of the system-generated rule condition evaluated by the rules engine                                                                                                       |

## 4.109 ALL\_STREAMS\_TABLE\_RULES

ALL\_STREAMS\_TABLE\_RULES displays information about several types of rules.

ALL\_STREAMS\_TABLE\_RULES displays information about these types of table and subset rules:

- Table rules created for the capture processes that enqueue the captured changes into queues accessible to the current user
- Table rules created for the propagations that have a source queue accessible to the current user
- Table rules created for the apply processes that dequeue events from queues accessible to the current user
- Subset rules created for the apply processes that have a source queue accessible to the current user

This view does not contain information about rules created using the DBMS\_RULE\_ADM package.

### Related View

DBA\_STREAMS\_TABLE\_RULES displays information about the table rules created for all capture processes, propagations, and apply processes in the database.

| Column        | Datatype        | NULL | Description                                                                                                                                                                         |
|---------------|-----------------|------|-------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|
| STREAMS_NAME  | VARCHAR2 (128)  |      | Name of the Replication process or propagation                                                                                                                                      |
| STREAMS_TYPE  | VARCHAR2 (12)   |      | Type of the Replication process or propagation: <ul style="list-style-type: none"><li>• CAPTURE</li><li>• PROPAGATION</li><li>• APPLY</li><li>• DEQUEUE</li></ul>                   |
| TABLE_OWNER   | VARCHAR2 (128)  |      | Table owner in the rule condition. The rule evaluates to <code>true</code> for a redo entry or logical change record (LCR) only if the redo entry or LCR contains this table owner. |
| TABLE_NAME    | VARCHAR2 (128)  |      | Table name in the rule condition. The rule evaluates to <code>true</code> for a redo entry or logical change record (LCR) only if the redo entry or LCR contains this table name.   |
| RULE_TYPE     | VARCHAR2 (7)    |      | Type of the rule: <ul style="list-style-type: none"><li>• DML</li><li>• DDL</li></ul>                                                                                               |
| DML_CONDITION | VARCHAR2 (4000) |      | Row subsetting condition, if the rule is a subset rule                                                                                                                              |

| Column               | Datatype        | NULL     | Description                                                                                                                                                                                                                                                                                                                          |
|----------------------|-----------------|----------|--------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|

## 4.110 ALL\_STREAMS\_TRANSFORM\_FUNCTION

`ALL_STREAMS_TRANSFORM_FUNCTION` displays information about the rule-based transformation functions accessible to the current user.

### Related View

`DBA_STREAMS_TRANSFORM_FUNCTION` displays information about all rule-based transformation functions in the database.

| Column                  | Datatype        | NULL     | Description                                                                                                                         |
|-------------------------|-----------------|----------|-------------------------------------------------------------------------------------------------------------------------------------|
| RULE_OWNER              | VARCHAR2 (128)  | NOT NULL | Owner of the rule associated with the transformation function                                                                       |
| RULE_NAME               | VARCHAR2 (128)  | NOT NULL | Name of the rule associated with the transformation function                                                                        |
| VALUE_TYPE              | VARCHAR2 (4000) |          | Type of the transformation function name. This type must be <code>VARCHAR2</code> for a rule-based transformation to work properly. |
| TRANSFORM_FUNCTION_NAME | VARCHAR2 (4000) |          | Name of the transformation function (NULL if <code>VALUE_TYPE</code> is not <code>VARCHAR2</code> )                                 |

| Column      | Datatype      | NULL | Description                                                                                                                                                                       |
|-------------|---------------|------|-----------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|
| CUSTOM_TYPE | VARCHAR2 (11) |      | Type of the transformation function: <ul style="list-style-type: none"> <li>ONE TO ONE - One-to-one transformations</li> <li>ONE TO MANY - One-to-many transformations</li> </ul> |

## 4.112 ALL\_SUBPART\_HISTOGRAMS

`ALL_SUBPART_HISTOGRAMS` displays the actual histogram data (end-points per histogram) for histograms on table subpartitions accessible to the current user.

### Related Views

- `DBA_SUBPART_HISTOGRAMS` displays this information for all subpartitions in the database.
- `USER_SUBPART_HISTOGRAMS` displays this information for subpartitions of all partitioned objects owned by the current user. This view does not display the `OWNER` column.

**Note:**

These views are populated only if you collect statistics on the index using the `DBMS_STATS` package.

| Column                | Datatype        | NULL | Description                                                          |
|-----------------------|-----------------|------|----------------------------------------------------------------------|
| OWNER                 | VARCHAR2 (128)  |      | Owner of the table                                                   |
| TABLE_NAME            | VARCHAR2 (128)  |      | Name of the table                                                    |
| SUBPARTITION_NAME     | VARCHAR2 (128)  |      | Table subpartition name                                              |
| COLUMN_NAME           | VARCHAR2 (4000) |      | Column name                                                          |
| BUCKET_NUMBER         | NUMBER          |      | Bucket number                                                        |
| ENDPOINT_VALUE        | NUMBER          |      | Normalized endpoint values for this bucket                           |
| ENDPOINT_ACTUAL_VALUE | VARCHAR2 (4000) |      | Actual (not normalized) string value of the endpoint for this bucket |

| Column                    | Datatype  | NULL | Description                                                                                              |
|---------------------------|-----------|------|----------------------------------------------------------------------------------------------------------|
| ENDPOINT_ACTUAL_VALUE_RAW | RAW(1000) |      | Endpoint actual value in raw format                                                                      |
| ENDPOINT_REPEAT_COUNT     | NUMBER    |      | Frequency of the endpoint (applies only to hybrid histograms, and is set to 0 for other histogram types) |

## 4.113 ALL\_SUBPART\_KEY\_COLUMNS

ALL\_SUBPART\_KEY\_COLUMNS displays subpartitioning key columns for composite-partitioned tables (and local indexes on composite-partitioned tables) accessible to the current user.

#### Related Views

- DBA\_SUBPART\_KEY\_COLUMNS displays this information for all subpartitions in the database.
- USER\_SUBPART\_KEY\_COLUMNS displays this information for subpartitions of all partitioned objects owned by the current user. This view does not display the OWNER column.

| Column             | Datatype       | NULL | Description                                                                               |
|--------------------|----------------|------|-------------------------------------------------------------------------------------------|
| OWNER              | VARCHAR2(128)  |      | Owner of the partitioned table or index                                                   |
| NAME               | VARCHAR2(128)  |      | Name of the partitioned table or index                                                    |
| OBJECT_TYPE        | CHAR(5)        |      | Object type: <ul style="list-style-type: none"> <li>• TABLE</li> <li>• INDEX</li> </ul>   |
| COLUMN_NAME        | VARCHAR2(4000) |      | Column name                                                                               |
| COLUMN_POSITION    | NUMBER         |      | Position of the column within the subpartitioning key                                     |
| COLLATED_COLUMN_ID | NUMBER         |      | Internal sequence number of the column for which this column provides linguistic ordering |

## 4.115 ALL\_SUMDELTA

ALL\_SUMDELTA lists direct path load entries accessible to the current user.

| Column        | Datatype     | NULL     | Description                                                     |
|---------------|--------------|----------|-----------------------------------------------------------------|
| TABLEOBJ#     | NUMBER       | NOT NULL | Object number of the table                                      |
| PARTITIONOBJ# | NUMBER       | NOT NULL | Object number of table partitions (if the table is partitioned) |
| DMLOPERATION  | VARCHAR2 (1) |          | Type of DML operation applied to the table                      |
| SCN           | NUMBER       | NOT NULL | SCN when the bulk DML occurred                                  |
| TIMESTAMP     | DATE         | NOT NULL | Timestamp of the log entry                                      |
| LOWROWID      | ROWID        | NOT NULL | Start ROWID in the loaded rowid range                           |
| HIGHROWID     | ROWID        | NOT NULL | End ROWID in the loaded rowid range                             |
| SEQUENCE      | NUMBER       |          | Sequence number of the direct load                              |
| XID           | NUMBER       |          | Transaction ID                                                  |

## 4.116 ALL\_SYNC\_CAPTURE

ALL\_SYNC\_CAPTURE displays information about the synchronous capture processes that store the captured changes in queues accessible to the current user.

### Related View

DBA\_SYNC\_CAPTURE displays information about all synchronous capture processes in the database.

| Column         | Datatype       | NULL     | Description                                          |
|----------------|----------------|----------|------------------------------------------------------|
| CAPTURE_NAME   | VARCHAR2 (128) | NOT NULL | Name of the capture process                          |
| QUEUE_NAME     | VARCHAR2 (128) | NOT NULL | Name of the queue used for holding captured changes  |
| QUEUE_OWNER    | VARCHAR2 (128) | NOT NULL | Owner of the queue used for holding captured changes |
| RULE_SET_NAME  | VARCHAR2 (128) |          | Rule set used by the capture process                 |
| RULE_SET_OWNER | VARCHAR2 (128) |          | Owner of the rule set                                |
| CAPTURE_USER   | VARCHAR2 (128) |          | Current user who is enqueueing captured messages     |

## 4.117 ALL\_SYNC\_CAPTURE\_PREPARED\_TABS

ALL\_SYNC\_CAPTURE\_PREPARED\_TABS displays information about the tables accessible to the current user that are prepared for synchronous capture instantiation.

### Related View

DBA\_SYNC\_CAPTURE\_PREPARED\_TABS displays information about all tables in the database that are prepared for synchronous capture instantiation.

| Column      | Datatype       | NULL     | Description                                                       |
|-------------|----------------|----------|-------------------------------------------------------------------|
| TABLE_OWNER | VARCHAR2 (128) | NOT NULL | Owner of the table prepared for synchronous capture instantiation |
| TABLE_NAME  | VARCHAR2 (128) | NOT NULL | Name of the table prepared for synchronous capture instantiation  |
| SCN         | NUMBER         | NOT NULL | SCN from which changes can be captured                            |
| TIMESTAMP   | DATE           |          | Time at which the table was ready to be instantiated              |

**See Also:**

"DBA\_SYNC\_CAPTURE\_PREPARED\_TABS"

## 4.118 ALL\_SYNC\_CAPTURE\_TABLES

ALL\_SYNC\_CAPTURE\_TABLES displays information about the tables accessible to the current user that are captured by synchronous captures.

### Related View

DBA\_SYNC\_CAPTURE\_TABLES displays information about all tables in the database that are captured by synchronous captures.

| Column      | Datatype       | NULL | Description                                                                      |
|-------------|----------------|------|----------------------------------------------------------------------------------|
| TABLE_OWNER | VARCHAR2 (128) |      | Owner of the synchronous capture table                                           |
| TABLE_NAME  | VARCHAR2 (128) |      | Name of the synchronous capture table                                            |
| ENABLED     | VARCHAR2 (3)   |      | Indicates whether synchronous capture is enabled for the table (YES) or not (NO) |

**See Also:**

"DBA\_SYNC\_CAPTURE\_TABLES"

## 4.119 ALL\_SYNONYMS

ALL\_SYNONYMS describes the synonyms accessible to the current user.

The following criteria determine the list of synonyms that ALL\_SYNONYMS shows:

- All private synonyms owned by the logged-in user, even if the base object pointed to is not accessible.
- All public synonyms, even if the base object pointed to is not accessible.
- All private synonyms owned by a different user, where the ultimate base object pointed to by that synonym or by any chain of nested synonyms, is known to be accessible because of a grant to the logged-in user, or a grant to a role in effect for this session.
- If the current session has any of the following privileges, then all synonyms that point directly to local objects are shown because it is assumed that the session can access those objects:

- LOCK ANY TABLE
- READ ANY TABLE
- SELECT ANY TABLE
- INSERT ANY TABLE
- UPDATE ANY TABLE
- DELETE ANY TABLE

Synonyms that point to remote objects are excluded because the system privileges just listed do not automatically convey access to those remote objects. Also, if the synonyms point to objects other than tables and views (such as sequences, PL/SQL procedures, and so on) then this rule may show synonyms that ultimately resolve to objects that this session cannot access.

- All private synonyms owned by a different user, where the synonym is via a database link, are excluded.

### Related Views

- DBA\_SYNONYMS describes all synonyms in the database.
- USER\_SYNONYMS describes the synonyms owned by the current user. This view does not display the OWNER column.

| Column       | Datatype       | NULL | Description                                                                                                                                                                                                                                                                                                                                                       |
|--------------|----------------|------|-------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|
| OWNER        | VARCHAR2 (128) |      | Owner of the synonym                                                                                                                                                                                                                                                                                                                                              |
| SYNONYM_NAME | VARCHAR2 (128) |      | Name of the synonym                                                                                                                                                                                                                                                                                                                                               |
| TABLE_OWNER  | VARCHAR2 (128) |      | Owner of the object referenced by the synonym, or creator of the referring synonym if the target is a public synonym (that is, the object referred to by TABLE_NAME).<br><br>Although the column is called TABLE_OWNER, the object owned is not necessarily a table. It can be any general object such as a view, sequence, stored procedure, synonym, and so on. |

| Column        | Datatype       | NULL | Description                                                                                                                                                                                                                                                                                                                                                                       |
|---------------|----------------|------|-----------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|
| TABLE_NAME    | VARCHAR2 (128) |      | Name of the object referenced by the synonym. Although the column is called TABLE_NAME, the object does not necessarily have to be a table. It can be any general object such as a view, sequence, stored procedure, synonym, and so on.                                                                                                                                          |
| DB_LINK       | VARCHAR2 (128) |      | Name of the database link referenced, if any                                                                                                                                                                                                                                                                                                                                      |
| ORIGIN_CON_ID | VARCHAR2 (256) |      | The ID of the container where the data originates. Possible values include: <ul style="list-style-type: none"> <li>0: This value is used for rows in non-CDBs. This value is not used for CDBs.</li> <li><i>n</i>: This value is used for rows containing data that originate in the container with container ID <i>n</i> (<i>n</i> = 1 if the row originates in root)</li> </ul> |

## 4.120 ALL\_TAB\_COL\_STAT\_MODELS

ALL\_TAB\_COL\_STAT\_MODELS describes real-time statistics models for all tables accessible to the current user.

Real-time statistics models use machine learning algorithms to predict the number of distinct values (NDV) for table columns.

#### Related Views

- DBA\_TAB\_COL\_STAT\_MODELS describes real-time statistics models for all tables in the database.
- USER\_TAB\_COL\_STAT\_MODELS describes real-time statistics models for all tables owned by the current user. This view does not display the OWNER column.

| Column      | Datatype                     | NULL     | Description                                                |
|-------------|------------------------------|----------|------------------------------------------------------------|
| OWNER       | VARCHAR2 (128)               | NOT NULL | Owner of the table                                         |
| TABLE_NAME  | VARCHAR2 (128)               | NOT NULL | Name of the table                                          |
| COLUMN_NAME | VARCHAR2 (128)               | NOT NULL | Name of the table column to which the model applies        |
| STATS_TYPE  | VARCHAR2 (7)                 |          | Statistics type<br>The value of this column is always NDV. |
| MODEL_NAME  | VARCHAR2 (200)               | NOT NULL | Name of the model                                          |
| STATUS      | VARCHAR2 (8)                 |          | Status of the model (ENABLED or DISABLED)                  |
| CREATED     | TIMESTAMP (6) WITH TIME ZONE |          | Time at which the model was created                        |

| Column    | Datatype                        | NULL | Description                                    |
|-----------|---------------------------------|------|------------------------------------------------|
| LAST_USED | TIMESTAMP (6) WITH<br>TIME ZONE |      | Time at which the model was most recently used |

## 4.122 ALL\_TAB\_COLS

`ALL_TAB_COLS` describes the columns of the tables, views, and clusters accessible to the current user.

To gather statistics for this view, use the `DBMS_STATS` package.

This view differs from `ALL_TAB_COLUMNS` in that system-generated hidden columns are not filtered out.

#### Related Views

- `DBA_TAB_COLS` describes the columns of all tables, views, and clusters in the database.

- **USER\_TAB\_COLS** describes the columns of the tables, views, and clusters owned by the current user. This view does not display the **OWNER** column.

| Column          | Datatype        | NULL     | Description                                                                                                                                                                                                                                                                                                                                                                                                                                                                                   |

|----------------------|---------------|----------|-------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|
| NUM_BUCKETS          | NUMBER        |          | Number of buckets in the histogram for the column<br><b>Note:</b> The number of buckets in a histogram is specified in the <code>SIZE</code> parameter of the <code>ANALYZE SQL</code> statement. However, Oracle Database does not create a histogram with more buckets than the number of rows in the sample. Also, if the sample contains any values that are very repetitious, Oracle Database creates the specified number of buckets, but the value indicated by this column may be smaller because of an internal compression algorithm. |
| LAST_ANALYZED        | DATE          |          | Date on which this column was most recently analyzed                                                                                                                                                                                                                                                                                                                                                                                                                                                                                            |

| CHAR_COL_DECL_LENGTH | NUMBER        |          | Declaration length of the character type column                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                 |
| GLOBAL_STATS         | VARCHAR2 (3)  |          | GLOBAL_STATS will be YES if statistics are gathered or incrementally maintained, otherwise it will be NO                                                                                                                                                                                                                                                                                                                                                                                                                                        |
| USER_STATS           | VARCHAR2 (3)  |          | Indicates whether statistics were entered directly by the user (YES) or not (NO)                                                                                                                                                                                                                                                                                                                                                                                                                                                                |
| AVG_COL_LEN          | NUMBER        |          | Average length of the column (in bytes)                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                         |
| CHAR_LENGTH          | NUMBER        |          | Displays the length of the column in characters. This value only applies to the following datatypes: <ul style="list-style-type: none"> <li>CHAR</li> <li>VARCHAR2</li> <li>NCHAR</li> <li>NVARCHAR2</li> </ul>                                                                                                                                                                                                                                                                                                                                 |
| CHAR_USED            | VARCHAR2 (1)  |          | Indicates that the column uses BYTE length semantics (B) or CHAR length semantics (C), or whether the datatype is not any of the following (NULL): <ul style="list-style-type: none"> <li>CHAR</li> <li>VARCHAR2</li> <li>NCHAR</li> <li>NVARCHAR2</li> </ul>                                                                                                                                                                                                                                                                                   |
| V80_FMT_IMAGE        | VARCHAR2 (3)  |          | Indicates whether the column data is in release 8.0 image format (YES) or not (NO)                                                                                                                                                                                                                                                                                                                                                                                                                                                              |
| DATA_UPGRADED        | VARCHAR2 (3)  |          | Indicates whether the column data has been upgraded to the latest type version format (YES) or not (NO)                                                                                                                                                                                                                                                                                                                                                                                                                                         |
| HIDDEN_COLUMN        | VARCHAR2 (3)  |          | Indicates whether the column is a hidden column (YES) or not (NO)                                                                                                                                                                                                                                                                                                                                                                                                                                                                               |
| VIRTUAL_COLUMN       | VARCHAR2 (3)  |          | Indicates whether the column is a virtual column (YES) or not (NO)                                                                                                                                                                                                                                                                                                                                                                                                                                                                              |
| SEGMENT_COLUMN_ID    | NUMBER        |          | Sequence number of the column in the segment                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                    |
| INTERNAL_COLUMN_ID   | NUMBER        | NOT NULL | Internal sequence number of the column                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                          |

| Column                | Datatype        | NULL | Description                                                                                                                                                                      |
|-----------------------|-----------------|------|----------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|
| HISTOGRAM             | VARCHAR2 (15)   |      | Indicates existence/type of histogram: <ul style="list-style-type: none"> <li>NONE</li> <li>FREQUENCY</li> <li>TOP-FREQUENCY</li> <li>HEIGHT BALANCED</li> <li>HYBRID</li> </ul> |
| QUALIFIED_COL_NAME    | VARCHAR2 (4000) |      | Qualified column name                                                                                                                                                            |
| USER_GENERATED        | VARCHAR2 (3)    |      | Indicates whether the column is a user-generated column (YES) or a system-generated column (NO).<br>Invisible columns are hidden columns that are also user-generated columns.   |
| DEFAULT_ON_NULL       | VARCHAR2 (3)    |      | Indicates whether the column has DEFAULT ON NULL for INSERT semantics (YES) or not (NO)                                                                                          |
| DEFAULT_ON_NULL_UPD   | VARCHAR2 (3)    |      | Indicates whether the column has DEFAULT ON NULL for UPDATE semantics (YES) or not (NO)                                                                                          |
| RESERVABLE_COLUMN     | VARCHAR2 (3)    |      | Indicates whether the column is a reservable column (YES) or not (NO)                                                                                                            |
| IDENTITY_COLUMN       | VARCHAR2 (3)    |      | Indicates whether the column is an identity column (YES) or not (NO)                                                                                                             |
| EVALUATION_EDITION    | VARCHAR2 (128)  |      | Name of the edition in which editioned objects referenced in an expression column are resolved                                                                                   |
| UNUSABLE_BEFORE       | VARCHAR2 (128)  |      | Name of the oldest edition in which the column is usable                                                                                                                         |
| UNUSABLE_BEGINNING    | VARCHAR2 (128)  |      | Name of the oldest edition in which the column becomes perpetually unusable                                                                                                      |
| COLLATION             | VARCHAR2 (100)  |      | Collation for the column. Only applies to columns with character data types.                                                                                                     |
| COLLATED_COLUMN_ID    | NUMBER          |      | Internal sequence number of a column, for which this virtual column generates a collation key.                                                                                   |
| DOMAIN_OWNER          | VARCHAR2 (128)  |      | If a data use case domain is specified for the column, the owner of the data use case domain                                                                                     |
| DOMAIN_NAME           | VARCHAR2 (128)  |      | If a data use case domain is specified for the column, the name of the data use case domain                                                                                      |
| DOMAIN_COLUMN_NAME    | VARCHAR2 (128)  |      | If a data use case domain is specified for the column, the name of the data use case domain column                                                                               |
| DOMAIN_ASSOCIATION_ID | NUMBER          |      | If a data use case domain is specified for the column, the domain association ID                                                                                                 |

| Column        | Datatype       | NULL | Description                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                           |

## 4.123 ALL\_TAB\_COLUMNS

ALL\_TAB\_COLUMNS describes the columns of the tables, views, and clusters accessible to the current user.

To gather statistics for this view, use the DBMS\_STATS package.

This view filters out system-generated hidden columns. The ALL\_TAB\_COLS view does not filter out system-generated hidden columns.

#### Related Views

- DBA\_TAB\_COLUMNS describes the columns of all tables, views, and clusters in the database.
- USER\_TAB\_COLUMNS describes the columns of the tables, views, and clusters owned by the current user. This view does not display the OWNER column.

| Column          | Datatype        | NULL     | Description                                                                                                                                                                                                                                                                                                                                                                                                                                                                             |

| NUM_BUCKETS          | NUMBER        |      | Number of buckets in the histogram for the column<br><b>Note:</b> The number of buckets in a histogram is specified in the <code>SIZE</code> parameter of the <code>ANALYZE SQL</code> statement. However, Oracle Database does not create a histogram with more buckets than the number of rows in the sample. Also, if the sample contains any values that are very repetitious, Oracle Database creates the specified number of buckets, but the value indicated by this column may be smaller because of an internal compression algorithm. |
| LAST_ANALYZED        | DATE          |      | Date on which this column was most recently analyzed                                                                                                                                                                                                                                                                                                                                                                                                                                                                                            |

## 4.126 ALL\_TAB\_HISTOGRAMS

ALL\_TAB\_HISTOGRAMS describes histograms on tables and views accessible to the current user.

The ALL\_TAB\_HISTOGRAMS view may contain a one-bucket histogram, which in fact signifies "No histogram" to the Oracle Database software. Therefore, it should not be queried to indicate the presence or absence of a histogram on a particular column. Instead, query the value of column HISTOGRAM in the ALL\_TAB\_COL\_STATISTICS view.

### Related Views

- DBA\_TAB\_HISTOGRAMS describes histograms on all tables and views in the database.
- USER\_TAB\_HISTOGRAMS describes histograms on all tables and views owned by the current user. This view does not display the OWNER column.

**Note:**

These views are populated only if you collect statistics on the table using the `DBMS_STATS` package. For more information, see *Oracle Database PL/SQL Packages and Types Reference*.

## 4.129 ALL\_TAB\_PARTITIONS

ALL\_TAB\_PARTITIONS displays partition-level partitioning information, partition storage parameters, and partition statistics generated by the DBMS\_STATS package for the partitions accessible to the current user.

### Related Views

- DBA\_TAB\_PARTITIONS displays such information for all partitions in the database.
- USER\_TAB\_PARTITIONS displays such information for the partitions of all partitioned objects owned by the current user. This view does not display the TABLE\_OWNER column.

 **Note:**

Columns marked with an asterisk (\*) are populated only if you collect statistics on the table with the DBMS\_STATS package.

 **Note:**

The following is true for the columns below that include double asterisks (\*\*) in the column description:

The column can display information about segment-level attributes (for simple partitioned tables) or metadata (for composite partitioned tables). In a simple partitioned table, the partition physically contains the data (the segment) in the database. In a composite partitioned table, the partition is metadata and the data itself is stored in the subpartitions.

| Column             | Datatype       | NULL | Description                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                     |

## 4.130 ALL\_TAB\_PENDING\_STATS

ALL\_TAB\_PENDING\_STATS describes pending statistics for tables, partitions, and subpartitions accessible to the current user.

### Related Views

- DBA\_TAB\_PENDING\_STATS describes pending statistics for tables, partitions, and subpartitions in the database.
- USER\_TAB\_PENDING\_STATS describes pending statistics for tables, partitions, and subpartitions owned by the current user. This view does not display the OWNER column.

| Column            | Datatype       | NULL | Description                                                                                                         |
|-------------------|----------------|------|---------------------------------------------------------------------------------------------------------------------|
| OWNER             | VARCHAR2 (128) |      | Owner of the table                                                                                                  |
| TABLE_NAME        | VARCHAR2 (128) |      | Name of the table                                                                                                   |
| PARTITION_NAME    | VARCHAR2 (128) |      | Name of the partition                                                                                               |

## 4.131 ALL\_TAB\_PRIVS

ALL\_TAB\_PRIVS describes grants.

ALL\_TAB\_PRIVS describes the following types of grants:

- Object grants for which the current user is the object owner, grantor, or grantee
- Object grants for which an enabled role or PUBLIC is the grantee

### Related Views

- DBA\_TAB\_PRIVS describes all object grants in the database.
- USER\_TAB\_PRIVS describes the object grants for which the current user is the object owner, grantor, or grantee.

| Column       | Datatype       | NULL | Description                                                                                                                                                                                                                                            |

| EMPTY_BLOCKS              | NUMBER         |      | Number of empty blocks in the object                                                                                       |
| AVG_SPACE                 | NUMBER         |      | Average available free space in the object                                                                                 |
| CHAIN_CNT                 | NUMBER         |      | Number of chained rows in the object                                                                                       |
| AVG_ROW_LEN               | NUMBER         |      | Average row length, including row overhead                                                                                 |
| AVG_SPACE_FREELIST_BLOCKS | NUMBER         |      | Average freespace of all blocks on a freelist                                                                              |
| NUM_FREELIST_BLOCKS       | NUMBER         |      | Number of blocks on the freelist                                                                                           |
| AVG_CACHED_BLOCKS         | NUMBER         |      | Average number of blocks in the buffer cache                                                                               |
| AVG_CACHE_HIT_RATIO       | NUMBER         |      | Average cache hit ratio for the object                                                                                     |
| IM_IMCU_COUNT             | NUMBER         |      | Number of In-Memory Compression Units (IMCUs) in the table                                                                 |
| IM_BLOCK_COUNT            | NUMBER         |      | Number of In-Memory blocks in the table                                                                                    |
| IM_STAT_UPDATE_TIME       | TIMESTAMP (9)  |      | The timestamp of the most recent update to the In-Memory statistics                                                        |
| SCAN_RATE                 | NUMBER         |      | Scan rate for the object in megabytes per second. This statistic is only relevant or meaningful for external tables.       |

| Column          | Datatype      | NULL | Description                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                              |
|-----------------|---------------|------|----------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|
| SAMPLE_SIZE     | NUMBER        |      | Sample size used in analyzing the table                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                  |
| LAST_ANALYZED   | DATE          |      | Date of the most recent time the table was analyzed                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                      |
| GLOBAL_STATS    | VARCHAR2 (3)  |      | GLOBAL_STATS will be YES if statistics are gathered or incrementally maintained, otherwise it will be NO                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                 |
| USER_STATS      | VARCHAR2 (3)  |      | Indicates whether statistics were entered directly by the user (YES) or not (NO)                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                         |
| STATTYPE_LOCKED | VARCHAR2 (5)  |      | Type of statistics lock: <ul style="list-style-type: none"><li>• DATA</li><li>• CACHE</li><li>• ALL</li></ul>                                                                                                                                                                                                                                                                                                                                                                                                                                                                                            |
| STALE_STATS     | VARCHAR2 (7)  |      | Indicates whether statistics for the object are stale (YES) or not (NO)                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                  |
| NOTES           | VARCHAR2 (25) |      | Describes some additional properties of the statistics. For example, a value of STATS_ON_CONVENTIONAL_LOAD indicates that the statistics are obtained by online statistics gathering for conventional DML.                                                                                                                                                                                                                                                                                                                                                                                               |
| SCOPE           | VARCHAR2 (7)  |      | The value is SHARED for statistics gathered on any table other than global temporary tables.<br>For a global temporary table, the possible values are: <ul style="list-style-type: none"><li>• SESSION - Indicates that the statistics are session-specific</li><li>• SHARED - Indicates that the statistics are shared across all sessions</li></ul> See <i>Oracle Database PL/SQL Packages and Types Reference</i> for information about using the GLOBAL_TEMP_TABLE_STATS preference of the DBMS_STATS package to control whether to gather session or shared statistics for global temporary tables. |

## 4.136 ALL\_TAB\_STATS\_HISTORY

ALL\_TAB\_STATS\_HISTORY provides a history of table statistics modifications for all tables accessible to the current user.

**Related Views**

- DBA\_TAB\_STATS\_HISTORY provides a history of table statistics modifications for all tables in the database.

- `USER_TAB_STATS_HISTORY` provides a history of table statistics modifications for all tables owned by the current user.

| Column            | Datatype                     | NULL | Description                               |
|-------------------|------------------------------|------|-------------------------------------------|
| OWNER             | VARCHAR2 (128)               |      | Owner of the object                       |
| TABLE_NAME        | VARCHAR2 (128)               |      | Name of the table                         |
| PARTITION_NAME    | VARCHAR2 (128)               |      | Name of the partition                     |
| SUBPARTITION_NAME | VARCHAR2 (128)               |      | Name of the subpartition                  |
| STATS_UPDATE_TIME | TIMESTAMP (6) WITH TIME ZONE |      | Time at which the statistics were updated |

## 4.137 ALL\_TAB\_SUBPARTITIONS

`ALL_TAB_SUBPARTITIONS` displays, for each table subpartition accessible to the current user, the subpartition name, name of the table and partition to which it belongs, its storage attributes, and statistics generated by the `DBMS_STATS` package.

#### Related Views

- `DBA_TAB_SUBPARTITIONS` displays such information for all subpartitions in the database.
- `USER_TAB_SUBPARTITIONS` displays such information for subpartitions of all partitioned objects owned by the current user. This view does not display the `TABLE_OWNER` column.

| Column                | Datatype       | NULL     | Description                                        |
|-----------------------|----------------|----------|----------------------------------------------------|
| TABLE_OWNER           | VARCHAR2 (128) | NOT NULL | Owner of the table                                 |
| TABLE_NAME            | VARCHAR2 (128) | NOT NULL | Name of the table                                  |
| PARTITION_NAME        | VARCHAR2 (128) |          | Name of the partition                              |
| SUBPARTITION_NAME     | VARCHAR2 (128) |          | Name of the subpartition                           |
| HIGH_VALUE            | LONG           |          | Subpartition bound value expression                |
| HIGH_VALUE_LENGTH     | NUMBER         | NOT NULL | Length of the subpartition bound value expression  |
| PARTITION_POSITION    | NUMBER         |          | Position of the partition within the table         |
| SUBPARTITION_POSITION | NUMBER         |          | Position of the subpartition within the partition  |
| TABLESPACE_NAME       | VARCHAR2 (30)  | NOT NULL | Name of the tablespace containing the subpartition |
| PCT_FREE              | NUMBER         | NOT NULL | Minimum percentage of free space in a block        |
| PCT_USED              | NUMBER         |          | Minimum percentage of used space in a block        |
| INI_TRANS             | NUMBER         | NOT NULL | Initial number of transactions                     |
| MAX_TRANS             | NUMBER         | NOT NULL | Maximum number of transactions                     |

| Column          | Datatype      | NULL | Description                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                           |

| GLOBAL_STATS        | VARCHAR2 (3)  |      | GLOBAL_STATS will be YES if statistics have been gathered or NO if statistics have not been gathered                                                                                                                                                            |
| USER_STATS          | VARCHAR2 (3)  |      | Indicates whether statistics were entered directly by the user (YES) or not (NO)                                                                                                                                                                                |
| INTERVAL            | VARCHAR2 (3)  |      | Indicates whether the partition is in the interval section of an interval partitioned table (YES) or whether the partition is in the range section (NO)                                                                                                         |
| SEGMENT_CREATED     | VARCHAR2 (3)  |      | Indicates whether the table subpartition segment has been created (YES) or not (NO); N/A indicates that this table is not subpartitioned                                                                                                                        |
| INDEXING            | VARCHAR2 (3)  |      | <p>Indicates the indexing property.</p> <p>Possible values:</p> <ul style="list-style-type: none"> <li>• ON - Indexing is on for this subpartition</li> <li>• OFF - Indexing is off for this subpartition</li> </ul>                                            |
| READ_ONLY           | VARCHAR2 (3)  |      | <p>Indicates whether a subpartition is read-only or read/write:</p> <ul style="list-style-type: none"> <li>• YES: The default setting for the subpartition is read-only.</li> <li>• NO: The default setting for the subpartition is read/write.</li> </ul>      |
| INMEMORY            | VARCHAR2 (8)  |      | Indicates whether the In-Memory Column Store (IM column store) is enabled (ENABLED) or disabled (DISABLED) for this subpartition                                                                                                                                |
| INMEMORY_PRIORITY   | VARCHAR2 (8)  |      | <p>Indicates the priority for In-Memory Column Store (IM column store) population. Possible values:</p> <ul style="list-style-type: none"> <li>• LOW</li> <li>• MEDIUM</li> <li>• HIGH</li> <li>• CRITICAL</li> <li>• NONE</li> <li>• NULL</li> </ul>           |
| INMEMORY_DISTRIBUTE | VARCHAR2 (15) |      | <p>Indicates how the IM column store is distributed in an Oracle Real Application Clusters (Oracle RAC) environment:</p> <ul style="list-style-type: none"> <li>• AUTO</li> <li>• BY ROWID RANGE</li> <li>• DBY PARTITION</li> <li>• BY SUBPARTITION</li> </ul> |

| Column                | Datatype        | NULL | Description                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                  |
|-----------------------|-----------------|------|------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|
| INMEMORY_COMPRESSION  | VARCHAR2 (17)   |      | <p>Indicates the compression level for the IM column store:</p> <ul style="list-style-type: none"> <li>• NO MEMCOMPRESS</li> <li>• FOR DML</li> <li>• FOR QUERY [ LOW   HIGH ]</li> <li>• FOR CAPACITY [ LOW   HIGH ]</li> <li>• AUTO</li> <li>• NULL</li> </ul> <p>This column has a value based on where the segments lie for a table. For example, if the table is partitioned and is enabled for IM column store, the value is NULL for ALL_TABLES but non-NULL for ALL_TAB_SUBPARTITIONS.</p>                                                                                                                                                                                                                                                                           |
| INMEMORY_DUPLICATE    |                 |      | <p>Indicates the duplicate setting for the IM column store in an Oracle RAC environment:</p> <ul style="list-style-type: none"> <li>• DUPLICATE</li> <li>• NO DUPLICATE</li> <li>• DUPLICATE ALL</li> </ul>                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                  |
| INMEMORY_SERVICE      | VARCHAR2 (12)   |      | <p>Indicates how the IM column store is populated on various instances. The possible values are:</p> <ul style="list-style-type: none"> <li>• DEFAULT: Data is populated on all instances specified with the PARALLEL_INSTANCE_GROUP initialization parameter. If that parameter is not set, then the data is populated on all instances. This is the default.</li> <li>• NONE: Data is not populated on any instance.</li> <li>• ALL: Data is populated on all instances, regardless of the value of the PARALLEL_INSTANCE_GROUP initialization parameter.</li> <li>• USER_DEFINED: Data is populated only on the instances on which the user-specified service is active. The service name corresponding to this is stored in the INMEMORY_SERVICE_NAME column.</li> </ul> |
| INMEMORY_SERVICE_NAME | VARCHAR2 (1000) |      | <p>Indicates the service name for the service on which the IM column store should be populated. This column has a value only when the corresponding INMEMORY_SERVICE is USER_DEFINED. In all other cases, this column is null.</p>                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                           |
| CELLMEMORY            | VARCHAR2 (24)   |      | <p>The value for columnar compression in the storage cell flash cache. Possible values:</p> <ul style="list-style-type: none"> <li>• ENABLED: Oracle Exadata Storage will decide automatically whether to cache in columnar form</li> <li>• DISABLED: Oracle Exadata Storage is prevented from caching in columnar form</li> <li>• NO CACHECOMPRESS: Oracle Exadata Storage will cache in HCC format (no recompression)</li> <li>• FOR QUERY: Oracle Exadata Storage will recompress and cache in INMEMORY query high format</li> <li>• FOR CAPACITY: Oracle Exadata Storage will recompress and cache in INMEMORY capacity low format</li> </ul> <p>This column is intended for use with Oracle Exadata.</p>                                                                |

| Column            | Datatype     | NULL | Description                                                                                                    |
|-------------------|--------------|------|----------------------------------------------------------------------------------------------------------------|
| MEMOPTIMIZE_READ  | VARCHAR2 (8) |      | Indicates whether the table is enabled for Fast Key Based Access ( <b>ENABLED</b> ) or not ( <b>DISABLED</b> ) |
| MEMOPTIMIZE_WRITE | VARCHAR2 (8) |      | For internal use only                                                                                          |
| HIGH_VALUE_CLOB   | CLOB         |      | High value (boundary) information for the subpartition, in CLOB format                                         |
| HIGH_VALUE_JSON   | JSON         |      | High value (boundary) information for the subpartition, in JSON format                                         |

## 4.138 ALL\_TABLE\_ACCESS\_STATS

`ALL_TABLE_ACCESS_STATS` displays the scan count for tables and partitions accessible to the current user.

The scan data collection begins at instance startup.

### Related Views

- `DBA_TABLE_ACCESS_STATS` displays the scan count for all tables and partitions in the database.
- `USER_TABLE_ACCESS_STATS` displays the scan count for tables and partitions owned by the current user. This view does not display the `TABLE_OWNER` column.

| Column             | Datatype       | NULL     | Description                                                                            |
|--------------------|----------------|----------|----------------------------------------------------------------------------------------|
| TABLE_OWNER        | VARCHAR2 (128) | NOT NULL | Owner of the table                                                                     |
| TABLE_NAME         | VARCHAR2 (128) | NOT NULL | Name of the table                                                                      |
| PARTITION_NAME     | VARCHAR2 (128) |          | Name of the partition<br>For non-partitioned tables, the value of this column is null. |
| INSTANCE_ID        | NUMBER         |          | ID of the instance in which the table or partition was scanned                         |
| READ_COUNT         | NUMBER         |          | Aggregated scan count since instance startup                                           |
| LAST_ACCESSED_TIME | TIMESTAMP (0)  |          | Date and time of the most recent scan                                                  |

**Note:**

The `ALL_TABLE_ACCESS_STATS` and `DBA_TABLE_ACCESS_STATS` views do not display data for Oracle-maintained schemas. You can view data for an Oracle-maintained schema by connecting to the schema and querying the `USER_TABLE_ACCESS_STATS` view.

**Note:**

This view is available starting with Oracle Database 23ai.

## 4.139 ALL\_TABLE\_VIRTUAL\_COLUMNS

`ALL_TABLE_VIRTUAL_COLUMNS` describes virtual columns in tables accessible to the current user.

### Related Views

- `DBA_TABLE_VIRTUAL_COLUMNS` describes virtual columns in all tables in the database.
- `USER_TABLE_VIRTUAL_COLUMNS` describes virtual columns in tables owned by the current user.

| Column                    | Datatype        | NULL     | Description                                  |
|---------------------------|-----------------|----------|----------------------------------------------|
| TABLE_OWNER               | VARCHAR2 (128)  | NOT NULL | Owner of the table                           |
| TABLE_NAME                | VARCHAR2 (128)  | NOT NULL | Name of the table                            |
| VIRTUAL_COLUMN_NAME       | VARCHAR2 (128)  | NOT NULL | Name of the virtual column                   |
| VIRTUAL_COLUMN_EXPRESSION | VARCHAR2 (4000) |          | Expression of the virtual column             |
| COLUMN_ID                 | NUMBER          | NOT NULL | Sequence number of the column as created     |
| SEGMENT_COLUMN_ID         | NUMBER          | NOT NULL | Sequence number of the column in the segment |
| INTERNAL_COLUMN_ID        | NUMBER          | NOT NULL | Internal sequence number of the column       |

**Note:**

This view is available starting with Oracle Database 23ai.

## 4.140 ALL\_TABLES

ALL\_TABLES describes the relational tables accessible to the current user. To gather statistics for this view, use the DBMS\_STATS package.

### Related Views

- DBA\_TABLES describes all relational tables in the database.
- USER\_TABLES describes the relational tables owned by the current user. This view does not display the OWNER column.

**Note:**

Columns marked with an asterisk (\*) are populated only if you collect statistics on the table with the DBMS\_STATS package.

| Column          | Datatype       | NULL     | Description                                                                                                                                                                         |
|-----------------|----------------|----------|-------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|
| OWNER           | VARCHAR2 (128) | NOT NULL | Owner of the table                                                                                                                                                                  |
| TABLE_NAME      | VARCHAR2 (128) | NOT NULL | Name of the table                                                                                                                                                                   |
| TABLESPACE_NAME | VARCHAR2 (30)  |          | Name of the tablespace containing the table; NULL for partitioned, temporary, and index-organized tables                                                                            |
| CLUSTER_NAME    | VARCHAR2 (128) |          | Name of the cluster, if any, to which the table belongs                                                                                                                             |
| IOT_NAME        | VARCHAR2 (128) |          | Name of the index-organized table, if any, to which the overflow or mapping table entry belongs. If the IOT_TYPE column is not NULL, then this column contains the base table name. |
| STATUS          | VARCHAR2 (8)   |          | If a previous DROP TABLE operation failed, indicates whether the table is unusable (UNUSABLE) or valid (VALID)                                                                      |
| PCT_FREE        | NUMBER         |          | Minimum percentage of free space in a block; NULL for partitioned tables                                                                                                            |
| PCT_USED        | NUMBER         |          | Minimum percentage of used space in a block; NULL for partitioned tables                                                                                                            |
| INI_TRANS       | NUMBER         |          | Initial number of transactions; NULL for partitioned tables                                                                                                                         |
| MAX_TRANS       | NUMBER         |          | Maximum number of transactions; NULL for partitioned tables                                                                                                                         |
| INITIAL_EXTENT  | NUMBER         |          | Size of the initial extent (in bytes); NULL for partitioned tables                                                                                                                  |

| Column                    | Datatype      | NULL | Description                                                                                                                                                        |
|---------------------------|---------------|------|--------------------------------------------------------------------------------------------------------------------------------------------------------------------|
| NEXT_EXTENT               | NUMBER        |      | Size of secondary extents (in bytes); NULL for partitioned tables                                                                                                  |
| MIN_EXTENTS               | NUMBER        |      | Minimum number of extents allowed in the segment; NULL for partitioned tables                                                                                      |
| MAX_EXTENTS               | NUMBER        |      | Maximum number of extents allowed in the segment; NULL for partitioned tables                                                                                      |
| PCT_INCREASE              | NUMBER        |      | Percentage increase in extent size; NULL for partitioned tables                                                                                                    |
| FREELISTS                 | NUMBER        |      | Number of process freelists allocated to the segment; NULL for partitioned tables                                                                                  |
| FREELIST_GROUPS           | NUMBER        |      | Number of freelist groups allocated to the segment; NULL for partitioned tables                                                                                    |
| LOGGING                   | VARCHAR2 (3)  |      | Indicates whether or not changes to the table are logged; NULL for partitioned tables: <ul style="list-style-type: none"> <li>• YES</li> <li>• NO</li> </ul>       |
| BACKED_UP                 | VARCHAR2 (1)  |      | Indicates whether the table has been backed up since the last modification (Y) or not (N)                                                                          |
| NUM_ROWS*                 | NUMBER        |      | Number of rows in the table                                                                                                                                        |
| BLOCKS*                   | NUMBER        |      | Number of used data blocks in the table                                                                                                                            |
| EMPTY_BLOCKS              | NUMBER        |      | Number of empty (never used) data blocks in the table. This column is populated only if you collect statistics on the table using the DBMS_STATS package.          |
| AVG_SPACE*                | NUMBER        |      | Average amount of free space, in bytes, in a data block allocated to the table                                                                                     |
| CHAIN_CNT*                | NUMBER        |      | Number of rows in the table that are chained from one data block to another, or which have migrated to a new block, requiring a link to preserve the old ROWID     |
| AVG_ROW_LEN*              | NUMBER        |      | Average length of a row in the table (in bytes)                                                                                                                    |
| AVG_SPACE_FREELIST_BLOCKS | NUMBER        |      | Average freespace of all blocks on a freelist                                                                                                                      |
| NUM_FREELIST_BLOCKS       | NUMBER        |      | Number of blocks on the freelist                                                                                                                                   |
| DEGREE                    | VARCHAR2 (10) |      | Number of threads per instance for scanning the table, or DEFAULT                                                                                                  |
| INSTANCES                 | VARCHAR2 (10) |      | Number of instances across which the table is to be scanned, or DEFAULT                                                                                            |
| CACHE                     | VARCHAR2 (5)  |      | Indicates whether the table is to be cached in the buffer cache (Y) or not (N)                                                                                     |
| TABLE_LOCK                | VARCHAR2 (8)  |      | Indicates whether table locking is enabled (ENABLED) or disabled (DISABLED)                                                                                        |
| SAMPLE_SIZE               | NUMBER        |      | Sample size used in analyzing the table                                                                                                                            |
| LAST_ANALYZED             | DATE          |      | Date on which the table was most recently analyzed                                                                                                                 |
| PARTITIONED               | VARCHAR2 (3)  |      | Indicates whether the table is partitioned (YES) or not (NO)                                                                                                       |
| IOT_TYPE                  | VARCHAR2 (12) |      | If the table is an index-organized table, then IOT_TYPE is IOT, IOT_OVERFLOW, or IOT_MAPPING. If the table is not an index-organized table, then IOT_TYPE is NULL. |

| Column           | Datatype       | NULL | Description                                                                                                                                                                                                                                           |
|------------------|----------------|------|-------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|
| TEMPORARY        | VARCHAR2 (1)   |      | Indicates whether the table is temporary (Y) or not (N)                                                                                                                                                                                               |
| SECONDARY        | VARCHAR2 (1)   |      | Indicates whether the table is a secondary object created by the <code>ODCIIndexCreate</code> method of the Oracle Data Cartridge (Y) or not (N)                                                                                                      |
| NESTED           | VARCHAR2 (3)   |      | Indicates whether the table is a nested table (YES) or not (NO)                                                                                                                                                                                       |
| BUFFER_POOL      | VARCHAR2 (7)   |      | Buffer pool for the table; NULL for partitioned tables: <ul style="list-style-type: none"> <li>• DEFAULT</li> <li>• KEEP</li> <li>• RECYCLE</li> <li>• NULL</li> </ul>                                                                                |
| FLASH_CACHE      | VARCHAR2 (7)   |      | Database Smart Flash Cache hint to be used for table blocks: <ul style="list-style-type: none"> <li>• DEFAULT</li> <li>• KEEP</li> <li>• NONE</li> </ul> Solaris and Oracle Linux functionality only.                                                 |
| CELL_FLASH_CACHE | VARCHAR2 (7)   |      | Cell flash cache hint to be used for table blocks: <ul style="list-style-type: none"> <li>• DEFAULT</li> <li>• KEEP</li> <li>• NONE</li> </ul> <b>See Also:</b> Oracle Exadata Storage Server Software documentation for more information             |
| ROW_MOVEMENT     | VARCHAR2 (8)   |      | Indicates whether partitioned row movement is enabled (ENABLED) or disabled (DISABLED)                                                                                                                                                                |
| GLOBAL_STATS     | VARCHAR2 (3)   |      | GLOBAL_STATS will be YES if statistics are gathered or incrementally maintained, otherwise it will be NO                                                                                                                                              |
| USER_STATS       | VARCHAR2 (3)   |      | Indicates whether statistics were entered directly by the user (YES) or not (NO)                                                                                                                                                                      |
| DURATION         | VARCHAR2 (15)  |      | Indicates the duration of a temporary table: <ul style="list-style-type: none"> <li>• SYS\$SESSION - Rows are preserved for the duration of the session</li> <li>• SYS\$TRANSACTION - Rows are deleted after COMMIT</li> </ul> Null - Permanent table |
| SKIP_CORRUPT     | VARCHAR2 (8)   |      | Indicates whether Oracle Database ignores blocks marked corrupt during table and index scans (ENABLED) or raises an error (DISABLED). To enable this feature, run the <code>DBMS_REPAIR.SKIP_CORRUPT_BLOCKS</code> procedure.                         |
| MONITORING       | VARCHAR2 (3)   |      | This column is obsolete                                                                                                                                                                                                                               |
| CLUSTER_OWNER    | VARCHAR2 (128) |      | Owner of the cluster, if any, to which the table belongs                                                                                                                                                                                              |
| DEPENDENCIES     | VARCHAR2 (8)   |      | Indicates whether row-level dependency tracking is enabled (ENABLED) or disabled (DISABLED)                                                                                                                                                           |
| COMPRESSION      | VARCHAR2 (8)   |      | Indicates whether table compression is enabled (ENABLED) or not (DISABLED); NULL for partitioned tables                                                                                                                                               |

| Column            | Datatype      | NULL | Description                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                    |
|-------------------|---------------|------|------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|
| COMPRESS_FOR      | VARCHAR2 (30) |      | <p>Default compression for what kind of operations:</p> <ul style="list-style-type: none"> <li>• BASIC</li> <li>• ADVANCED</li> <li>• QUERY LOW</li> <li>• QUERY HIGH</li> <li>• ARCHIVE LOW</li> <li>• ARCHIVE HIGH</li> <li>• QUERY LOW ROW LEVEL LOCKING</li> <li>• QUERY HIGH ROW LEVEL LOCKING</li> <li>• ARCHIVE LOW ROW LEVEL LOCKING</li> <li>• ARCHIVE HIGH ROW LEVEL LOCKING</li> <li>• NO ROW LEVEL LOCKING</li> <li>• NULL</li> </ul> <p>The QUERY LOW, QUERY HIGH, ARCHIVE LOW, ARCHIVE HIGH, QUERY LOW ROW LEVEL LOCKING, QUERY HIGH ROW LEVEL LOCKING, ARCHIVE LOW ROW LEVEL LOCKING, ARCHIVE HIGH ROW LEVEL LOCKING, and NO ROW LEVEL LOCKING values are associated with Hybrid Columnar Compression, a feature of the Enterprise Edition of Oracle Database that is dependent on the underlying storage system. See <i>Oracle Database Concepts</i> for more information.</p> |
| DROPPED           | VARCHAR2 (3)  |      | <p>Indicates whether the table has been dropped and is in the recycle bin (YES) or not (NO); NULL for partitioned tables</p> <p>This view does not return the names of tables that have been dropped.</p>                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                      |
| READ_ONLY         | VARCHAR2 (3)  |      | <p>Indicates whether the table segment is READ-ONLY or not. Possible values:</p> <ul style="list-style-type: none"> <li>• YES - The table segment is READ-ONLY</li> <li>• NO - The table segment is not READ-ONLY</li> <li>• N/A - Not applicable. This value appears in a partitioned table, where there is no segment that relates to the logical table object.</li> </ul>                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                   |
| SEGMENT_CREATED   | VARCHAR2 (3)  |      | <p>Indicates whether the table segment is created. Possible values:</p> <ul style="list-style-type: none"> <li>• YES - The table segment is created.</li> <li>• NO - The table segment is not created.</li> <li>• N/A - Not applicable. This value appears in a partitioned table, where there is no segment that relates to the logical table object.</li> </ul>                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                              |
| RESULT_CACHE      | VARCHAR2 (7)  |      | <p>Result cache mode annotation for the table:</p> <ul style="list-style-type: none"> <li>• DEFAULT - Table has not been annotated</li> <li>• FORCE</li> <li>• MANUAL</li> </ul>                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                               |

| HYBRID                 | VARCHAR2 (3)  |      | Indicates whether the table is a hybrid partitioned table (YES) or not (NO). A hybrid partitioned table can contain a mixture of partitions stored in segments and partitions stored externally.                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                         |
| CELLMEMORY             | VARCHAR2 (24) |      | <p>The value for columnar compression in the storage cell flash cache. Possible values:</p> <ul style="list-style-type: none"> <li>• <b>ENABLED:</b> Oracle Exadata Storage will decide automatically whether to cache in columnar form</li> <li>• <b>DISABLED:</b> Oracle Exadata Storage is prevented from caching in columnar form</li> <li>• <b>NO CACHECOMPRESS:</b> Oracle Exadata Storage will cache in HCC format (no recompression)</li> <li>• <b>FOR QUERY:</b> Oracle Exadata Storage will recompress and cache in INMEMORY query high format</li> <li>• <b>FOR CAPACITY:</b> Oracle Exadata Storage will recompress and cache in INMEMORY capacity low format</li> </ul> <p>This column is intended for use with Oracle Exadata.</p>                                                         |
| CONTAINERS_DEFAULT     | VARCHAR2 (3)  |      | Indicates whether the table is enabled for CONTAINERS () by default (YES) or not (NO)                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                    |
| CONTAINER_MAP          | VARCHAR2 (3)  |      | Indicates whether the table is enabled for use with the container_map database property (YES) or not (NO)                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                |
| EXTENDED_DATA_LINK     | VARCHAR2 (3)  |      | Indicates whether the table is enabled for fetching an extended data link from the root (YES) or not (NO)                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                |
| EXTENDED_DATA_LINK_MAP | VARCHAR2 (3)  |      | For internal use only                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                    |
| INMEMORY_SERVICE       | VARCHAR2 (12) |      | <p>Indicates how the IM column store is populated on various instances. The possible values are:</p> <ul style="list-style-type: none"> <li>• <b>DEFAULT:</b> Data is populated on all instances specified with the PARALLEL_INSTANCE_GROUP initialization parameter. If that parameter is not set, then the data is populated on all instances. This is the default.</li> <li>• <b>NONE:</b> Data is not populated on any instance.</li> <li>• <b>ALL:</b> Data is populated on all instances, regardless of the value of the PARALLEL_INSTANCE_GROUP initialization parameter.</li> <li>• <b>USER_DEFINED:</b> Data is populated only on the instances on which the user-specified service is active. The service name corresponding to this is stored in the INMEMORY_SERVICE_NAME column.</li> </ul> |

| Column                | Datatype        | NULL | Description                                                                                                                                                                                                                 |
|-----------------------|-----------------|------|-----------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|
| INMEMORY_SERVICE_NAME | VARCHAR2 (1000) |      | Indicates the service name for the service on which the IM column store should be populated. This column has a value only when the corresponding INMEMORY_SERVICE is USER_DEFINED. In all other cases, this column is null. |
| CONTAINER_MAP_OBJECT  | VARCHAR2 (3)    |      | Indicates whether the table is used as the value of the container_map database property (YES) or not (NO)                                                                                                                   |
| MEMOPTIMIZE_READ      | VARCHAR2 (8)    |      | Indicates whether the table is enabled for Fast Key Based Access (ENABLED) or not (DISABLED)                                                                                                                                |
| MEMOPTIMIZE_WRITE     | VARCHAR2 (8)    |      | For internal use only                                                                                                                                                                                                       |
| HAS_SENSITIVE_COLUMN  | VARCHAR2 (3)    |      | Indicates whether the table has one or more sensitive columns (YES) or not (NO)                                                                                                                                             |
| ADMIT_NULL            | VARCHAR2 (3)    |      | Indicates whether the table admits null CON_ID data (YES) or not (NO)                                                                                                                                                       |
| DATA_LINK_DML_ENABLED | VARCHAR2 (3)    |      | Indicates whether DML is permitted on the Data Link table (YES) or not (NO)                                                                                                                                                 |
| LOGICAL_REPLICATION   | VARCHAR2 (8)    |      | Indicates whether the table is enabled for logical replication (ENABLED) or not (DISABLED). This setting is ignored if database-wide column data supplemental logging is enabled.                                           |
| STAGING               | VARCHAR2 (3)    |      | Indicates whether the table is a staging table (YES) or not (NO)                                                                                                                                                            |
| HAS_RESERVABLE_COLUMN | VARCHAR2 (3)    |      | Indicates whether the table has one or more reservable columns (YES) or not (NO)                                                                                                                                            |

## Examples

This SQL query returns the names of the tables in the EXAMPLES tablespace:

```
SELECT table_name FROM all_tables
WHERE tablespace_name = 'EXAMPLE' ORDER BY table_name;
```

This SQL query returns the name of the tablespace that contains the HR schema:

```
SELECT DISTINCT tablespace_name FROM all_tables WHERE owner='HR';
```

## 4.141 ALL\_TRANSFORMATIONS

`ALL_TRANSFORMATIONS` displays information about all transformations accessible to the current user.

These transformations can be specified with Advanced Queuing operations such as enqueue, dequeue, and subscribe to automatically integrate transformations in AQ messaging.

### Related Views

- `DBA_TRANSFORMATIONS` displays information about all transformations in the database.
- `USER_TRANSFORMATIONS` displays information about transformations owned by the current user. This view does not display the `OWNER` column.

| Column                         | Datatype       | NULL     | Description                              |
|--------------------------------|----------------|----------|------------------------------------------|
| <code>TRANSFORMATION_ID</code> | NUMBER         | NOT NULL | Unique identifier for the transformation |
| <code>OWNER</code>             | VARCHAR2 (128) | NOT NULL | Owning user of the transformation        |
| <code>NAME</code>              | VARCHAR2 (128) | NOT NULL | Transformation name                      |
| <code>FROM_TYPE</code>         | VARCHAR2 (128) |          | Source type name                         |
| <code>TO_TYPE</code>           | VARCHAR2 (256) |          | Target type name                         |

## 4.142 ALL\_TRIGGER\_COLS

`ALL_TRIGGER_COLS` describes the use of columns in the triggers accessible to the current user and in triggers on tables accessible to the current user.

If the user has the `CREATE ANY TRIGGER` privilege, then this view describes the use of columns in all triggers in the database.

### Related Views

- `DBA_TRIGGER_COLS` describes the use of columns in all triggers in the database.
- `USER_TRIGGER_COLS` describes the use of columns in the triggers owned by the current user and in triggers on tables owned by the current user.

| Column                     | Datatype       | NULL | Description                                        |
|----------------------------|----------------|------|----------------------------------------------------|
| <code>TRIGGER_OWNER</code> | VARCHAR2 (128) |      | Owner of the trigger                               |
| <code>TRIGGER_NAME</code>  | VARCHAR2 (128) |      | Name of the trigger                                |
| <code>TABLE_OWNER</code>   | VARCHAR2 (128) |      | Owner of the table on which the trigger is defined |
| <code>TABLE_NAME</code>    | VARCHAR2 (128) |      | Table on which the trigger is defined              |

| Column       | Datatype        | NULL | Description                                                                                                                                                                                                                                                       |
|--------------|-----------------|------|-------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|
| COLUMN_NAME  | VARCHAR2 (4000) |      | Name of the column used in the trigger                                                                                                                                                                                                                            |
| COLUMN_LIST  | VARCHAR2 (3)    |      | Indicates whether the column is specified in the UPDATE clause (YES) or not (NO)                                                                                                                                                                                  |
| COLUMN_USAGE | VARCHAR2 (17)   |      | How the column is used in the trigger: <ul style="list-style-type: none"> <li>• NEW IN</li> <li>• OLD IN</li> <li>• NEW IN OLD IN</li> <li>• NEW OUT</li> <li>• NEW IN OUT</li> <li>• NEW OUT OLD IN</li> <li>• NEW IN OUT OLD IN</li> <li>• PARENT IN</li> </ul> |

## 4.143 ALL\_TRIGGER\_ORDERING

ALL\_TRIGGER\_ORDERING describes the triggers accessible to the current user that have `FOLLOWS` or `PRECEDES` ordering.

#### Related Views

- DBA\_TRIGGER\_ORDERING describes all triggers in the database that have `FOLLOWS` or `PRECEDES` ordering.
- USER\_TRIGGER\_ORDERING describes the triggers owned by the current user that have `FOLLOWS` or `PRECEDES` ordering. This view does not display the `TRIGGER_OWNER` column.

| Column                   | Datatype       | NULL     | Description                                                                                                                                          |
|--------------------------|----------------|----------|------------------------------------------------------------------------------------------------------------------------------------------------------|
| TRIGGER_OWNER            | VARCHAR2 (128) | NOT NULL | Owner of the trigger                                                                                                                                 |
| TRIGGER_NAME             | VARCHAR2 (128) | NOT NULL | Name of the trigger                                                                                                                                  |
| REFERENCED_TRIGGER_OWNER | VARCHAR2 (128) |          | Owner of the referenced trigger                                                                                                                      |
| REFERENCED_TRIGGER_NAME  | VARCHAR2 (128) |          | Name of the referenced trigger                                                                                                                       |
| ORDERING_TYPE            | VARCHAR2 (8)   |          | Type of the ordering between the trigger and the referenced trigger: <ul style="list-style-type: none"> <li>• FOLLOWS</li> <li>• PRECEDES</li> </ul> |

## 4.144 ALL\_TRIGGERS

ALL\_TRIGGERS describes the triggers on tables accessible to the current user.

If the user has the CREATE ANY TRIGGER privilege, then this view describes all triggers in the database.

**Related Views**

- DBA\_TRIGGERS describes all triggers in the database.
- USER\_TRIGGERS describes the triggers owned by the current user. This view does not display the OWNER column.

| Column            | Datatype        | NULL | Description                                                                                                                                                                                                                        |
|-------------------|-----------------|------|------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|
| OWNER             | VARCHAR2 (128)  |      | Owner of the trigger                                                                                                                                                                                                               |
| TRIGGER_NAME      | VARCHAR2 (128)  |      | Name of the trigger                                                                                                                                                                                                                |
| TRIGGER_TYPE      | VARCHAR2 (16)   |      | When the trigger fires: <ul style="list-style-type: none"> <li>• BEFORE STATEMENT</li> <li>• BEFORE EACH ROW</li> <li>• AFTER STATEMENT</li> <li>• AFTER EACH ROW</li> <li>• INSTEAD OF</li> <li>• COMPOUND</li> </ul>             |
| TRIGGERING_EVENT  | VARCHAR2 (246)  |      | DML, DDL, or database event that fires the trigger<br><b>See Also:</b> <i>Oracle Database PL/SQL Language Reference</i> for additional information about triggers and triggering events.                                           |
| TABLE_OWNER       | VARCHAR2 (128)  |      | Owner of the table on which the trigger is defined                                                                                                                                                                                 |
| BASE_OBJECT_TYPE  | VARCHAR2 (18)   |      | Base object on which the trigger is defined: <ul style="list-style-type: none"> <li>• TABLE</li> <li>• VIEW</li> <li>• SCHEMA</li> <li>• DATABASE</li> </ul>                                                                       |
| TABLE_NAME        | VARCHAR2 (128)  |      | If the base object type of the trigger is SCHEMA or DATABASE, then this column is NULL; if the base object type of the trigger is TABLE or VIEW, then this column indicates the table or view name on which the trigger is defined |
| COLUMN_NAME       | VARCHAR2 (4000) |      | Name of the nested table column (if a nested table trigger), else NULL                                                                                                                                                             |
| REFERENCING_NAMES | VARCHAR2 (422)  |      | Names used for referencing OLD and NEW column values from within the trigger                                                                                                                                                       |
| WHEN_CLAUSE       | VARCHAR2 (4000) |      | Must evaluate to TRUE for TRIGGER_BODY to execute                                                                                                                                                                                  |

| Column            | Datatype        | NULL | Description                                                                                                                                                                                                                                       |
|-------------------|-----------------|------|---------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|
| STATUS            | VARCHAR2 (8)    |      | Indicates whether the trigger is enabled (ENABLED) or disabled (DISABLED); a disabled trigger will not fire                                                                                                                                       |
| DESCRIPTION       | VARCHAR2 (4000) |      | Trigger description; useful for re-creating a trigger creation statement                                                                                                                                                                          |
| ACTION_TYPE       | VARCHAR2 (11)   |      | Action type of the trigger body: <ul style="list-style-type: none"> <li>CALL</li> <li>PL/SQL</li> </ul>                                                                                                                                           |
| TRIGGER_BODY      | LONG            |      | Statements executed by the trigger when it fires                                                                                                                                                                                                  |
| CROSSEDITION      | VARCHAR2 (7)    |      | Type of crossedition trigger: <ul style="list-style-type: none"> <li>FORWARD</li> <li>REVERSE</li> <li>NO</li> </ul>                                                                                                                              |
| BEFORE_STATEMENT  | VARCHAR2 (3)    |      | Indicates whether the trigger has a BEFORE STATEMENT section (YES) or not (NO)                                                                                                                                                                    |
| BEFORE_ROW        | VARCHAR2 (3)    |      | Indicates whether the trigger has a BEFORE EACH ROW section (YES) or not (NO)                                                                                                                                                                     |
| AFTER_ROW         | VARCHAR2 (3)    |      | Indicates whether the trigger has an AFTER EACH ROW section (YES) or not (NO)                                                                                                                                                                     |
| AFTER_STATEMENT   | VARCHAR2 (3)    |      | Indicates whether the trigger has an AFTER STATEMENT section (YES) or not (NO)                                                                                                                                                                    |
| INSTEAD_OF_ROW    | VARCHAR2 (3)    |      | Indicates whether the trigger has an INSTEAD OF section (YES) or not (NO)                                                                                                                                                                         |
| FIRE_ONCE         | VARCHAR2 (3)    |      | Indicates whether the trigger will fire only for user processes making changes (YES) or whether the trigger will also fire for Replication Apply or SQL Apply processes (NO)                                                                      |
| APPLY_SERVER_ONLY | VARCHAR2 (3)    |      | Indicates whether the trigger will only fire for a Replication Apply or SQL Apply process (YES) or not (NO). If set to YES, then the setting of FIRE_ONCE does not matter.<br><b>See Also:</b> the DBMS_DDL.SET_TRIGGER_FIRING_PROPERTY procedure |

## 4.145 ALL\_TRIGGERS\_AE

ALL\_TRIGGERS\_AE describes the triggers on tables (across all editions) accessible to the current user.

If the user has the CREATE ANY TRIGGER privilege, then this view describes all triggers (across all editions) in the database.

### Related Views

- DBA\_TRIGGERS\_AE describes all triggers (across all editions) in the database.
- USER\_TRIGGERS\_AE describes the triggers (across all editions) owned by the current user. This view does not display the OWNER column.

| Column            | Datatype        | NULL | Description                                                                                                                                                                                                                        |

## 4.146 ALL\_TSTZ\_TAB\_COLS

ALL\_TSTZ\_TAB\_COLS displays information about the columns of the tables accessible to the current user, which have columns defined on `TIMESTAMP WITH TIME ZONE` data types or object types containing attributes of `TIMESTAMP WITH TIME ZONE` data types.

### Related Views

- **DBA\_TSTZ\_TAB\_COLS** displays information about the columns of all tables in the database, which have columns defined on `TIMESTAMP WITH TIME ZONE` data types or object types containing attributes of `TIMESTAMP WITH TIME ZONE` data types. This view does not display the `COLUMN_NAME`, `NESTED`, and `VIRTUAL_COLUMN` columns.
- **USER\_TSTZ\_TAB\_COLS** displays information about the columns of the tables owned by the current user, which have columns defined on `TIMESTAMP WITH TIME ZONE` data types or object types containing attributes of `TIMESTAMP WITH TIME ZONE` data types. This view does not display the `OWNER`, `COLUMN_NAME`, `NESTED`, and `VIRTUAL_COLUMN` columns.

| Column             | Datatype        | NULL     | Description                                                     |
|--------------------|-----------------|----------|-----------------------------------------------------------------|
| OWNER              | VARCHAR2 (128)  | NOT NULL | Owner of the table                                              |
| TABLE_NAME         | VARCHAR2 (128)  | NOT NULL | Name of the table                                               |
| COLUMN_NAME        | VARCHAR2 (128)  | NOT NULL | Column name                                                     |
| QUALIFIED_COL_NAME | VARCHAR2 (4000) |          | Qualified column name                                           |
| NESTED             | NUMBER          |          | Indicates whether the column is a nested table (1) or not (0)   |
| VIRTUAL_COLUMN     | NUMBER          |          | Indicates whether the column is a virtual column (1) or not (0) |
| SCALAR_COLUMN      | NUMBER          |          | Indicates whether the column is a scalar column (1) or not (0)  |
| UNUSED_COLUMN      | NUMBER          |          | Indicates whether the column is an unused column (1) or not (0) |

## 4.148 ALL\_TXEVENTQ\_MIGRATION\_STATUS

ALL\_TXEVENTQ\_MIGRATION\_STATUS provides information about migrations from AQ classic queues to Transactional Event Queues (TxEventQs) accessible to the current user.

### Related Views

- `DBA_TXEVENTQ_MIGRATION_STATUS` provides information about all migrations from AQ classic queues to Transactional Event Queues (TxEventQs). This view also displays the `SUFFIX` column.
- `USER_TXEVENTQ_MIGRATION_STATUS` provides information about migrations from AQ classic queues to Transactional Event Queues (TxEventQs) owned by the current user. This view does not display the `SOURCE_SCHEMA_NAME` and `SUFFIX` columns.

| Column             | Datatype       | NULL     | Description        |
|--------------------|----------------|----------|--------------------|
| SOURCE_SCHEMA_NAME | VARCHAR2 (128) | NOT NULL | Source schema name |

| Column               | Datatype                        | NULL     | Description                                                                                                                                                                                                                                                                                                                                  |
|----------------------|---------------------------------|----------|----------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|

| ATTR_TYPE_OWNER    | VARCHAR2 (128) |      | Owner of the type of the attribute                                                                                                                            |
| ATTR_TYPE_NAME     | VARCHAR2 (128) |      | Name of the type of the attribute                                                                                                                             |
| LENGTH             | NUMBER         |      | Length of the CHAR attribute, or maximum length of the VARCHAR or VARCHAR2 attribute.                                                                         |
| PRECISION          | NUMBER         |      | Decimal precision of the NUMBER or DECIMAL attribute, or binary precision of the FLOAT attribute.                                                             |
| SCALE              | NUMBER         |      | Scale of the NUMBER or DECIMAL attribute                                                                                                                      |
| CHARACTER_SET_NAME | VARCHAR2 (44)  |      | Character set name of the attribute (CHAR_CS or NCHAR_CS)                                                                                                     |
| ATTR_NO            | NUMBER         |      | Syntactical order number or position of the attribute as specified in the type specification or CREATE TYPE statement (not to be used as an ID number)        |
| INHERITED          | VARCHAR2 (3)   |      | Indicates whether the attribute is inherited from a supertype (YES) or not (NO)                                                                               |
| CHAR_USED          | VARCHAR2 (1)   |      | Indicates whether the attribute uses BYTE length semantics (B) or CHAR length semantics (C). For NCHAR and NVARCHAR2 attribute types, this value is always C. |

## 4.150 ALL\_TYPE\_METHODS

ALL\_TYPE\_METHODS describes the methods of the object types accessible to the current user.

#### Related Views

- DBA\_TYPE\_METHODS describes the methods of all object types in the database.
- USER\_TYPE\_METHODS describes the methods of the object types owned by the current user. This view does not display the OWNER column.

| Column      | Datatype       | NULL     | Description        |
|-------------|----------------|----------|--------------------|
| OWNER       | VARCHAR2 (128) | NOT NULL | Owner of the type  |
| TYPE_NAME   | VARCHAR2 (128) | NOT NULL | Name of the type   |
| METHOD_NAME | VARCHAR2 (128) | NOT NULL | Name of the method |

| Column       | Datatype     | NULL     | Description                                                                                                    |
|--------------|--------------|----------|----------------------------------------------------------------------------------------------------------------|
| METHOD_NO    | NUMBER       | NOT NULL | Method number for distinguishing overloaded methods (not to be used as ID number)                              |
| METHOD_TYPE  | VARCHAR2 (6) |          | Type of the method: <ul style="list-style-type: none"> <li>• MAP</li> <li>• ORDER</li> <li>• PUBLIC</li> </ul> |
| PARAMETERS   | NUMBER       | NOT NULL | Number of parameters to the method                                                                             |
| RESULTS      | NUMBER       | NOT NULL | Number of results returned by the method                                                                       |
| FINAL        | VARCHAR2 (3) |          | Indicates whether the method is final (YES) or not (NO)                                                        |
| INSTANTIABLE | VARCHAR2 (3) |          | Indicates whether the method is instantiable (YES) or not (NO)                                                 |
| OVERRIDING   | VARCHAR2 (3) |          | Indicates whether the method is overriding a supertype method (YES) or not (NO)                                |
| INHERITED    | VARCHAR2 (3) |          | Indicates whether the method is inherited from a supertype (YES) or not (NO)                                   |

## 4.153 ALL\_UNIFIED\_AUDIT\_ACTIONS

ALL\_UNIFIED\_AUDIT\_ACTIONS describes unified audit trail actions.

The actions described in this view are valid for audit trail records from the UNIFIED\_AUDIT\_TRAIL view. Such records are generated only when unified auditing is enabled.

**See Also:**

- *Oracle Database Security Guide* for more information about unified auditing.
- *Oracle Database Upgrade Guide* for more information about migrating to unified auditing.

| Column    | Datatype      | NULL     | Description                                                                                                                                                                                                                                                                                                                                                                                      |
|-----------|---------------|----------|--------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|
| TYPE      | NUMBER        | NOT NULL | Numeric component type for system wide actions                                                                                                                                                                                                                                                                                                                                                   |
| COMPONENT | VARCHAR2 (64) | NOT NULL | Name of component for system wide actions                                                                                                                                                                                                                                                                                                                                                        |
| ACTION    | NUMBER        | NOT NULL | Numeric auditable action code for system wide actions<br><b>Note:</b> The action code values have changed from Oracle Database release 12.2 to the current release. If your applications have queries that include the ACTION column, and if these queries were written in release 12.2, then be aware that the output may be different if you are running these queries in the current release. |
| NAME      | VARCHAR2 (64) | NOT NULL | Name of auditable action                                                                                                                                                                                                                                                                                                                                                                         |

**See Also:**

["UNIFIED\\_AUDIT\\_TRAIL"](#)

## 4.154 ALL\_UNUSED\_COL\_TABS

ALL\_UNUSED\_COL\_TABS describes the tables accessible to the current user that contain unused columns.

**Related Views**

- DBA\_UNUSED\_COL\_TABS describes all tables in the database that contain unused columns.

- `USER_UNUSED_COL_TABS` describes the tables owned by the current user that contain unused columns. This view does not display the `OWNER` column.

| Column     | Datatype       | NULL     | Description              |
|------------|----------------|----------|--------------------------|
| OWNER      | VARCHAR2 (128) | NOT NULL | Owner of the table       |
| TABLE_NAME | VARCHAR2 (128) | NOT NULL | Name of the table        |
| COUNT      | NUMBER         |          | Number of unused columns |

**See Also:**

- ["DBA\\_UNUSED\\_COL\\_TABS"](#)
- ["USER\\_UNUSED\\_COL\\_TABS"](#)

## 4.155 ALL\_UPDATABLE\_COLUMNS

`ALL_UPDATABLE_COLUMNS` describes all columns in a join view that are updatable by the current user, subject to appropriate privileges.

**Related Views**

- `DBA_UPDATABLE_COLUMNS` describes all columns in a join view that are updatable by the database administrator, subject to appropriate privileges.
- `USER_UPDATABLE_COLUMNS` describes all columns owned by the current user that are in a join view and are updatable by the current user, subject to appropriate privileges.

| Column      | Datatype       | NULL     | Description                                                  |
|-------------|----------------|----------|--------------------------------------------------------------|
| OWNER       | VARCHAR2 (128) | NOT NULL | Owner of the table                                           |
| TABLE_NAME  | VARCHAR2 (128) | NOT NULL | Name of the table                                            |
| COLUMN_NAME | VARCHAR2 (128) | NOT NULL | Column name                                                  |
| UPDATABLE   | VARCHAR2 (3)   |          | Indicates whether the column is updatable (YES) or not (NO)  |
| INSERTABLE  | VARCHAR2 (3)   |          | Indicates whether the column is insertable (YES) or not (NO) |
| DELETABLE   | VARCHAR2 (3)   |          | Indicates whether the column is deletable (YES) or not (NO)  |

**Note:**

The values shown in the `UPDATABLE`, `INSERTABLE`, and `DELETABLE` columns are not instantly updated when a DDL operation that would affect these attributes occurs on one of the tables referenced in the `FROM` clause of the view definition. For example, these columns are not instantly updated when a primary key or unique constraint is added to or removed from the non-key-preserved table. To remedy this situation, recompile the view using the `ALTER VIEW COMPILE` statement to ensure that the latest information is displayed.

**See Also:**

- ["USER\\_UPDATABLE\\_COLUMNS"](#)
- *Oracle Database Concepts* for information on updatable join views

## 4.156 ALL\_USERS

`ALL_USERS` lists all users of the database visible to the current user.

This view does not describe the users (see the related views).

**Related Views**

- `DBA_USERS` describes all users of the database, and contains more columns than `ALL_USERS`.
- `USER_USERS` describes the current user, and contains more columns than `ALL_USERS`.

| Column            | Datatype       | NULL     | Description                                                                                                                                                                                                                                                                                |
|-------------------|----------------|----------|--------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|
| USERNAME          | VARCHAR2 (128) | NOT NULL | Name of the user                                                                                                                                                                                                                                                                           |
| USER_ID           | NUMBER         | NOT NULL | ID number of the user                                                                                                                                                                                                                                                                      |
| CREATED           | DATE           | NOT NULL | User creation date                                                                                                                                                                                                                                                                         |
| COMMON            | VARCHAR2 (3)   |          | Indicates whether a given user is common. Possible values: <ul style="list-style-type: none"> <li>• YES if a user is common</li> <li>• NO if a user is local (not common)</li> </ul>                                                                                                       |
| ORACLE_MAINTAINED | VARCHAR2 (1)   |          | Denotes whether the user was created, and is maintained, by Oracle-supplied scripts (such as <code>catalog.sql</code> or <code>catproc.sql</code> ). A user for which this column has the value <code>Y</code> must not be changed in any way except by running an Oracle-supplied script. |
| INHERITED         | VARCHAR2 (3)   |          | Indicates whether the user definition was inherited from another container (YES) or not (NO)                                                                                                                                                                                               |
| DEFAULT_COLLATION | VARCHAR2 (100) |          | Default collation for the user's schema                                                                                                                                                                                                                                                    |
| IMPLICIT          | VARCHAR2 (3)   |          | Indicates whether this user is a common user created by an implicit application (YES) or not (NO)                                                                                                                                                                                          |

| Column                            | Datatype     | NULL | Description                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                |
|-----------------------------------|--------------|------|--------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|
| ALL_SHARD                         | VARCHAR2 (3) |      | <p>In a sharded database, the value in this column indicates whether the user was created with shard DDL enabled. The possible values are:</p> <ul style="list-style-type: none"> <li>• <b>YES</b>: The user was created with shard DDL enabled. The user exists on all shards and the shard catalog.</li> <li>• <b>NO</b>: The user was created without shard DDL enabled. The user exists only in the database in which the user was created.</li> </ul> <p>In a non-sharded database, the value in this column is always <b>NO</b>.</p> |
| EXTERNAL_SHARD                    | VARCHAR2 (3) |      | <p>In a federated sharded database, the value in this column indicates whether the user is an external shard user (<b>YES</b>) or not (<b>NO</b>).</p> <p>In other types of databases, the value in this column is always <b>NO</b>.</p>                                                                                                                                                                                                                                                                                                   |
| DICTIONARY_PROTECTED <sup>1</sup> | VARCHAR2 (3) |      | <p>Indicates whether the user's schema is dictionary protected (<b>YES</b>) or not (<b>NO</b>)</p> <p><b>See Also:</b> <i>Oracle Database Security Guide</i> for more information about dictionary-protected schemas</p>                                                                                                                                                                                                                                                                                                                   |

## 4.157 ALL\_USTATS

ALL\_USTATS describes the user-defined statistics collected on the tables and indexes accessible to the current user.

### Related Views

- DBA\_USTATS describes the user-defined statistics collected on all tables and indexes in the database.
- USER\_USTATS describes the user-defined statistics collected on the tables and indexes owned by the current user.

| Column       | Datatype       | NULL | Description                                                              |
|--------------|----------------|------|--------------------------------------------------------------------------|
| OBJECT_OWNER | VARCHAR2 (128) |      | Owner of the table or index for which the statistics have been collected |

| Column           | Datatype       | NULL | Description                                                                                                                                                                                                                                                                                                                                                   |
|------------------|----------------|------|---------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|
| OBJECT_NAME      | VARCHAR2 (128) |      | Name of the table or index for which the statistics have been collected                                                                                                                                                                                                                                                                                       |
| PARTITION_NAME   | VARCHAR2 (128) |      | Partition name of a table; NULL if the table is either nonpartitioned or the entry corresponds to the aggregate statistics for the table                                                                                                                                                                                                                      |
| OBJECT_TYPE      | VARCHAR2 (6)   |      | Type of the object for which statistics have been collected: <ul style="list-style-type: none"> <li>• INDEX</li> <li>• COLUMN</li> </ul>                                                                                                                                                                                                                      |
| ASSOCIATION      | VARCHAR2 (8)   |      | Statistics type association: <ul style="list-style-type: none"> <li>• DIRECT Direct association with the object for which the statistics have been collected</li> <li>• IMPLICIT - Association for which the statistics have been collected is with the column type or index type, and the object is an instance of that column type or index type</li> </ul> |
| COLUMN_NAME      | VARCHAR2 (128) |      | Column name, if OBJECT_TYPE is COLUMN, for which statistics have been collected                                                                                                                                                                                                                                                                               |
| STATSTYPE_SCHEMA | VARCHAR2 (128) |      | Schema of the statistics type which was used to collect the statistics                                                                                                                                                                                                                                                                                        |
| STATSTYPE_NAME   | VARCHAR2 (128) |      | Name of the statistics type which was used to collect statistics                                                                                                                                                                                                                                                                                              |
| STATISTICS       | RAW (2000)     |      | User-collected statistics for the object                                                                                                                                                                                                                                                                                                                      |

| OWNER            | VARCHAR2 (128)  | NOT NULL | Owner of the view                                                                                                                                                                      |
| VIEW_NAME        | VARCHAR2 (128)  | NOT NULL | Name of the view                                                                                                                                                                       |
| TEXT_LENGTH      | NUMBER          |          | Length of the view text                                                                                                                                                                |
| TEXT             | LONG            |          | View text. This column returns the correct value only when the row originates from the current container. The BEQUEATH clause will not appear as part of the TEXT column in this view. |
| TEXT_VC          | VARCHAR2 (4000) |          | View text. This column may truncate the view text. The BEQUEATH clause will not appear as part of the TEXT_VC column in this view.                                                     |
| TYPE_TEXT_LENGTH | NUMBER          |          | Length of the type clause of the typed view                                                                                                                                            |
| TYPE_TEXT        | VARCHAR2 (4000) |          | Type clause of the typed view                                                                                                                                                          |
| OID_TEXT_LENGTH  | NUMBER          |          | Length of the WITH OID clause of the typed view                                                                                                                                        |
| OID_TEXT         | VARCHAR2 (4000) |          | WITH OID clause of the typed view                                                                                                                                                      |
| VIEW_TYPE_OWNER  | VARCHAR2 (128)  |          | Owner of the type of the view if the view is a typed view                                                                                                                              |
| VIEW_TYPE        | VARCHAR2 (128)  |          | Type of the view if the view is a typed view                                                                                                                                           |

| Column                 | Datatype       | NULL | Description                                                                                                                                                                                                                                                                                                                                                  |
|------------------------|----------------|------|--------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|
| SUPERVIEW_NAME         | VARCHAR2 (128) |      | Name of the superview                                                                                                                                                                                                                                                                                                                                        |
| EDITIONING_VIEW        | VARCHAR2 (1)   |      | Reserved for future use                                                                                                                                                                                                                                                                                                                                      |
| READ_ONLY              | VARCHAR2 (1)   |      | Indicates whether the view is read-only (Y) or not (N)                                                                                                                                                                                                                                                                                                       |
| CONTAINER_DATA         | VARCHAR2 (1)   |      | Indicates whether the view contains container-specific data. Possible values: <ul style="list-style-type: none"> <li>Y if the view was created with the CONTAINER_DATA clause</li> <li>N otherwise</li> </ul>                                                                                                                                                |
| BEQUEATH               | VARCHAR2 (12)  |      | Possible values: <ul style="list-style-type: none"> <li>CURRENT_USER: When the view is a BEQUEATH CURRENT_USER view</li> <li>DEFINER: When the view is a BEQUEATH DEFINER view</li> </ul> For more information about the syntax and semantics of the BEQUEATH clause in the SQL CREATE VIEW statement, see <i>Oracle Database SQL Language Reference</i> .   |
| ORIGIN_CON_ID          | VARCHAR2 (256) |      | The ID of the container where the data originates. Possible values include: <ul style="list-style-type: none"> <li>0: This value is used for rows in non-CDBs. This value is not used for CDBs.</li> <li>n: This value is used for rows containing data that originate in the container with container ID n (n = 1 if the row originates in root)</li> </ul> |
| DEFAULT_COLLATION      | VARCHAR2 (100) |      | Default collation for the view                                                                                                                                                                                                                                                                                                                               |
| CONTAINERS_DEFAULT     | VARCHAR2 (3)   |      | Indicates whether the view is enabled for CONTAINERS () by default (YES) or not (NO)                                                                                                                                                                                                                                                                         |
| CONTAINER_MAP          | VARCHAR2 (3)   |      | Indicates whether the view is enabled for use with the container_map database property (YES) or not (NO)                                                                                                                                                                                                                                                     |
| EXTENDED_DATA_LINK     | VARCHAR2 (3)   |      | Indicates whether the view is enabled for fetching an extended data link from the root (YES) or not (NO)                                                                                                                                                                                                                                                     |
| EXTENDED_DATA_LINK_MAP | VARCHAR2 (3)   |      | For internal use only                                                                                                                                                                                                                                                                                                                                        |
| HAS_SENSITIVE_COLUMN   | VARCHAR2 (3)   |      | Indicates whether the view has one or more sensitive columns (YES) or not (NO)                                                                                                                                                                                                                                                                               |
| ADMIT_NULL             | VARCHAR2 (3)   |      | Indicates whether the view admits null CON_ID data (YES) or not (NO)                                                                                                                                                                                                                                                                                         |
| PDB_LOCAL_ONLY         | VARCHAR2 (3)   |      | For internal use only                                                                                                                                                                                                                                                                                                                                        |
| DUALITY_VIEW           | VARCHAR2 (3)   |      | Indicates whether the view is a JSON-relational duality view (YES) or not (NO)                                                                                                                                                                                                                                                                               |

## 4.160 ALL\_VIEWS\_AE

ALL\_VIEWS\_AE describes the views (across all editions) accessible to the current user.

### Related Views

- DBA\_VIEWS\_AE describes all views (across all editions) in the database.
- USER\_VIEWS\_AE describes the views (across all editions) owned by the current user. This view does not display the OWNER column.

| Column           | Datatype        | NULL     | Description                                                                                                                                                                                                                                                                                                                                                    |
|------------------|-----------------|----------|----------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|
| OWNER            | VARCHAR2 (128)  | NOT NULL | Owner of the view                                                                                                                                                                                                                                                                                                                                              |

| TEXT_LENGTH      | NUMBER          |          | Length of the view text                                                                                                                                                                                                                                                                                                                                        |
| TEXT             | LONG            |          | View text. The BEQUEATH clause will not appear as part of the TEXT column in this view.                                                                                                                                                                                                                                                                        |
| TEXT_VC          | VARCHAR2 (4000) |          | View text. This column may truncate the view text. The BEQUEATH clause will not appear as part of the TEXT_VC column in this view.                                                                                                                                                                                                                             |
| TYPE_TEXT_LENGTH | NUMBER          |          | Length of the type clause of the typed view                                                                                                                                                                                                                                                                                                                    |
| TYPE_TEXT        | VARCHAR2 (4000) |          | Type clause of the typed view                                                                                                                                                                                                                                                                                                                                  |
| OID_TEXT_LENGTH  | NUMBER          |          | Length of the WITH OID clause of the typed view                                                                                                                                                                                                                                                                                                                |
| OID_TEXT         | VARCHAR2 (4000) |          | WITH OID clause of the typed view                                                                                                                                                                                                                                                                                                                              |
| VIEW_TYPE_OWNER  | VARCHAR2 (128)  |          | Owner of the type of the view if the view is an typed view                                                                                                                                                                                                                                                                                                     |
| VIEW_TYPE        | VARCHAR2 (128)  |          | Type of the view if the view is a typed view                                                                                                                                                                                                                                                                                                                   |
| SUPERVIEW_NAME   | VARCHAR2 (128)  |          | Name of the superview, if the view is a subview                                                                                                                                                                                                                                                                                                                |
| EDITIONING_VIEW  | VARCHAR2 (1)    |          | Indicates whether the view is an editioning view (Y) or not (N)                                                                                                                                                                                                                                                                                                |
| READ_ONLY        | VARCHAR2 (1)    |          | Indicates whether the view is read-only (Y) or not (N)                                                                                                                                                                                                                                                                                                         |
| EDITION_NAME     | VARCHAR2 (128)  |          | Name of the application edition where the object is defined                                                                                                                                                                                                                                                                                                    |
| CONTAINER_DATA   | VARCHAR2 (1)    |          | Indicates whether the view contains container-specific data. Possible values: <ul style="list-style-type: none"> <li>• Y if the view was created with the CONTAINER_DATA clause</li> <li>• N otherwise</li> </ul>                                                                                                                                              |
| BEQUEATH         | VARCHAR2 (12)   |          | Possible values: <ul style="list-style-type: none"> <li>• CURRENT_USER: When the view is a BEQUEATH CURRENT_USER view</li> <li>• DEFINER: When the view is a BEQUEATH DEFINER view</li> </ul> For more information about the syntax and semantics of the BEQUEATH clause in the SQL CREATE VIEW statement, see <i>Oracle Database SQL Language Reference</i> . |

| Column                 | Datatype       | NULL | Description                                                                                                                                                                                                                                                                                                                                                                       |
|------------------------|----------------|------|-----------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|
| ORIGIN_CON_ID          | NUMBER         |      | The ID of the container where the data originates. Possible values include: <ul style="list-style-type: none"> <li>0: This value is used for rows in non-CDBs. This value is not used for CDBs.</li> <li><i>n</i>: This value is used for rows containing data that originate in the container with container ID <i>n</i> (<i>n</i> = 1 if the row originates in root)</li> </ul> |
| DEFAULT_COLLATION      | VARCHAR2 (100) |      | Default collation for the view                                                                                                                                                                                                                                                                                                                                                    |
| CONTAINERS_DEFAULT     | VARCHAR2 (3)   |      | Indicates whether the view is enabled for <code>CONTAINERS ()</code> by default (YES) or not (NO)                                                                                                                                                                                                                                                                                 |
| CONTAINER_MAP          | VARCHAR2 (3)   |      | Indicates whether the view is enabled for use with the <code>container_map</code> database property (YES) or not (NO)                                                                                                                                                                                                                                                             |
| EXTENDED_DATA_LINK     | VARCHAR2 (3)   |      | Indicates whether the view is enabled for fetching an extended data link from the root (YES) or not (NO)                                                                                                                                                                                                                                                                          |
| EXTENDED_DATA_LINK_MAP | VARCHAR2 (3)   |      | For internal use only                                                                                                                                                                                                                                                                                                                                                             |
| HAS_SENSITIVE_COLUMN   | VARCHAR2 (3)   |      | Indicates whether the view has one or more sensitive columns (YES) or not (NO)                                                                                                                                                                                                                                                                                                    |
| ADMIT_NULL             | VARCHAR2 (3)   |      | Indicates whether the view admits null <code>CON_ID</code> data (YES) or not (NO)                                                                                                                                                                                                                                                                                                 |
| PDB_LOCAL_ONLY         | VARCHAR2 (3)   |      | For internal use only                                                                                                                                                                                                                                                                                                                                                             |
| DUALITY_VIEW           | VARCHAR2 (3)   |      | Indicates whether the view is a JSON-relational duality view (YES) or not (NO)                                                                                                                                                                                                                                                                                                    |

| APPLIED_LOW_POSITION   | RAW (64)       |          | All messages with a commit position less than this value have been applied                                                                                                                                                                                                                                                                 |
| APPLIED_HIGH_POSITION  | RAW (64)       |          | Highest commit position of a transaction that has been applied                                                                                                                                                                                                                                                                             |
| SPILL_POSITION         | RAW (64)       |          | Position of the spill low watermark of the transactions currently being applied                                                                                                                                                                                                                                                            |
| OLDEST_POSITION        | RAW (64)       |          | Earliest position of the transactions currently being applied                                                                                                                                                                                                                                                                              |
| OLDEST_MESSAGE_NUMBER  | NUMBER         | NOT NULL | Earliest message number of the transactions currently being applied                                                                                                                                                                                                                                                                        |
| APPLIED_MESSAGE_NUMBER | NUMBER         | NOT NULL | Message number up to which all transactions have definitely been applied. This value is the low watermark for the inbound server. That is, messages with a commit message number less than or equal to this message number have definitely been applied, but some messages with a higher commit message number may also have been applied. |

| Column                      | Datatype       | NULL     | Description                                                                                                                                                                                                                                                                     |
|-----------------------------|----------------|----------|---------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|
| APPLIED_TIME                | DATE           |          | Time at which the message with the message number displayed in the APPLIED_MESSAGE_NUMBER column was applied                                                                                                                                                                    |
| APPLIED_MESSAGE_CREATE_TIME | DATE           |          | Time at which the message with the message number displayed in the APPLIED_MESSAGE_NUMBER column was created at its source database                                                                                                                                             |
| SPILL_MESSAGE_NUMBER        | NUMBER         |          | Spill low watermark. Any message with a lower SCN has either been applied or spilled to disk. The XStream client application does not need to send logical change records (LCRs) with a lower SCN than the spill low watermark. Spilled messages may not have been applied yet. |
| SOURCE_DATABASE             | VARCHAR2 (128) | NOT NULL | Database where the transaction originated                                                                                                                                                                                                                                       |
| SOURCE_ROOT_NAME            | VARCHAR2 (128) |          | The global name of the source root database                                                                                                                                                                                                                                     |

| SERVER_NAME     | VARCHAR2 (128)  | NOT NULL | Name of the outbound server                                                                                                                                                                                                                                                                                                                                                                                                                     |
| CONNECT_USER    | VARCHAR2 (128)  |          | Name of the user who can connect to the outbound server and process the outbound LCRs                                                                                                                                                                                                                                                                                                                                                           |
| CAPTURE_NAME    | VARCHAR2 (128)  |          | Name of the Replication capture process                                                                                                                                                                                                                                                                                                                                                                                                         |
| SOURCE_DATABASE | VARCHAR2 (128)  |          | Database where the transaction originated                                                                                                                                                                                                                                                                                                                                                                                                       |
| CAPTURE_USER    | VARCHAR2 (128)  |          | Current user who is enqueueing captured messages                                                                                                                                                                                                                                                                                                                                                                                                |
| QUEUE_OWNER     | VARCHAR2 (128)  | NOT NULL | Owner of the queue associated with the outbound server                                                                                                                                                                                                                                                                                                                                                                                          |
| QUEUE_NAME      | VARCHAR2 (128)  | NOT NULL | Name of the queue associated with the outbound server                                                                                                                                                                                                                                                                                                                                                                                           |
| USER_COMMENT    | VARCHAR2 (4000) |          | User comment                                                                                                                                                                                                                                                                                                                                                                                                                                    |
| CREATE_DATE     | TIMESTAMP (6)   |          | Date when the outbound server was created                                                                                                                                                                                                                                                                                                                                                                                                       |
| STATUS          | VARCHAR2 (8)    |          | Status of the outbound server: <ul style="list-style-type: none"> <li>DISABLED - The outbound server is not running.</li> <li>DETACHED - The outbound server is running, but the XStream client application is not attached to it.</li> <li>ATTACHED - The outbound server is running, and the XStream client application is attached to it.</li> <li>ABORTED - The outbound server became disabled because it encountered an error.</li> </ul> |

| Column              | Datatype       | NULL | Description                                                                                                                                                                                                                                                                                                                                                                 |
|---------------------|----------------|------|-----------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|
| COMMITTED_DATA_ONLY | VARCHAR2 (3)   |      | YES if the outbound server can send only LCRs in committed transactions to the XStream client application. A committed transaction is an assembled, noninterleaving transaction with no rollbacks.<br><br>NO if the outbound server can send LCRs in transactions that have not yet committed to the XStream client application. This mode is for internal Oracle use only. |
| START_SCN           | NUMBER         |      | The SCN from which the outbound server's capture process started capturing changes when it was last started                                                                                                                                                                                                                                                                 |
| START_TIME          | TIMESTAMP (6)  |      | The time from which the outbound server's capture process started capturing changes when it was last started                                                                                                                                                                                                                                                                |
| SOURCE_ROOT_NAME    | VARCHAR2 (128) |      | The global name of the source root database                                                                                                                                                                                                                                                                                                                                 |
| LCRID_VERSION       | NUMBER         |      | LCR ID format currently being used                                                                                                                                                                                                                                                                                                                                          |

| STREAMS_RULE_TYPE       | VARCHAR2 (9)    |          | The XStream type of the rule: <ul style="list-style-type: none"> <li>• TABLE</li> <li>• SCHEMA</li> <li>• GLOBAL</li> </ul>             |
| RULE_SET_OWNER          | VARCHAR2 (128)  |          | Owner of the rule set                                                                                                                   |
| RULE_SET_NAME           | VARCHAR2 (128)  |          | Name of the rule set                                                                                                                    |
| RULE_SET_TYPE           | CHAR (8)        |          | Type of the rule set: <ul style="list-style-type: none"> <li>• POSITIVE</li> <li>• NEGATIVE</li> </ul>                                  |
| RULE_OWNER              | VARCHAR2 (128)  | NOT NULL | Owner of the rule                                                                                                                       |
| RULE_NAME               | VARCHAR2 (128)  | NOT NULL | Name of the rule                                                                                                                        |
| RULE_TYPE               | VARCHAR2 (9)    |          | The type of the rule: <ul style="list-style-type: none"> <li>• DML</li> <li>• DDL</li> </ul>                                            |
| RULE_CONDITION          | CLOB            |          | Current rule condition                                                                                                                  |
| SCHEMA_NAME             | VARCHAR2 (128)  |          | For table and schema rules, the schema name                                                                                             |
| OBJECT_NAME             | VARCHAR2 (128)  |          | For table rules, the table name                                                                                                         |
| INCLUDE_TAGGED_LCR      | VARCHAR2 (3)    |          | Indicates whether to include tagged LCRs (YES) or not (NO)                                                                              |
| SUBSETTING_OPERATION    | VARCHAR2 (6)    |          | For subset rules, the type of operation: <ul style="list-style-type: none"> <li>• INSERT</li> <li>• UPDATE</li> <li>• DELETE</li> </ul> |
| DML_CONDITION           | VARCHAR2 (4000) |          | For subset rules, the row subsetting condition                                                                                          |
| SOURCE_DATABASE         | VARCHAR2 (128)  |          | The global name of the database where the LCRs originated. In a PDB, this is the global name of the PDB.                                |
| ORIGINAL_RULE_CONDITION | VARCHAR2 (4000) |          | For rules created by the XStream administrative APIs, the original rule condition when the rule was created                             |

| Column                | Datatype       | NULL | Description                                                                                                                                                     |
|-----------------------|----------------|------|-----------------------------------------------------------------------------------------------------------------------------------------------------------------|
| SAME_RULE_CONDITION   | VARCHAR2 (3)   |      | For rules created by the XStream administrative APIs, indicates whether the current rule condition is the same as the original rule condition (YES) or not (NO) |
| SOURCE_ROOT_NAME      | VARCHAR2 (128) |      | The global name of the source root database                                                                                                                     |
| SOURCE_CONTAINER_NAME | VARCHAR2 (128) |      | The container name of the database where the transactions originated                                                                                            |

## 4.185 ALL\_XTERNAL\_LOC\_PARTITIONS

ALL\_XTERNAL\_LOC\_PARTITIONS describes partition-level locations accessible to the current user.

If an external table is partitioned, then the existing ALL\_EXTERNAL\_LOCATIONS, DBA\_EXTERNAL\_LOCATIONS, and USER\_EXTERNAL\_LOCATIONS views will have no rows for that table. Instead, locations will be indicated in the ALL\_XTERNAL\_LOC\_PARTITIONS, DBA\_XTERNAL\_LOC\_PARTITIONS, USER\_XTERNAL\_LOC\_PARTITIONS, ALL\_XTERNAL\_LOC\_SUBPARTITIONS, DBA\_XTERNAL\_LOC\_SUBPARTITIONS, and USER\_XTERNAL\_LOC\_SUBPARTITIONS views.

### Related Views

- DBA\_XTERNAL\_LOC\_PARTITIONS describes partition-level locations in the database.
- USER\_XTERNAL\_LOC\_PARTITIONS describes partition-level locations owned by the current user. This view does not display the OWNER column.

| Column         | Datatype       | NULL | Description                             |
|----------------|----------------|------|-----------------------------------------|
| OWNER          | VARCHAR2 (128) |      | Owner of the partitioned external table |
| TABLE_NAME     | VARCHAR2 (128) |      | Name of the partitioned external table  |
| PARTITION_NAME | VARCHAR2 (128) |      | Name of the partition                   |

| Column          | Datatype        | NULL | Description                                                             |
|-----------------|-----------------|------|-------------------------------------------------------------------------|
| LOCATION        | VARCHAR2 (4000) |      | External table location clause for the partition                        |
| DIRECTORY_OWNER | CHAR (3)        |      | Owner of the directory containing the external table partition location |
| DIRECTORY_NAME  | VARCHAR2 (128)  |      | Name of the directory containing the external table partition location  |

## 4.187 ALL\_XTERNAL\_PART\_TABLES

ALL\_XTERNAL\_PART\_TABLES describes object-level information for partitioned external tables accessible to the current user.

### Related Views

- DBA\_XTERNAL\_PART\_TABLES describes object-level information for partitioned external tables in the database
- USER\_XTERNAL\_PART\_TABLES describes object-level information for partitioned external tables owned by the current user. This view does not display the OWNER column.

| Column                            | Datatype       | NULL     | Description                                                                                                                                                                                                                                       |
|-----------------------------------|----------------|----------|---------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|
| OWNER                             | VARCHAR2 (128) | NOT NULL | Owner of the partitioned external table                                                                                                                                                                                                           |
| TABLE_NAME                        | VARCHAR2 (128) | NOT NULL | Name of the partitioned external table                                                                                                                                                                                                            |
| TYPE_OWNER                        | CHAR (3)       |          | Owner of the implementation type for the external table access driver                                                                                                                                                                             |
| TYPE_NAME                         | VARCHAR2 (128) |          | Name of the implementation type for the external table access driver                                                                                                                                                                              |
| DEFAULT_DIRECTORY_OWNER           | CHAR (3)       |          | Owner of the default directory for the external table                                                                                                                                                                                             |
| DEFAULT_DIRECTORY_NAME            | VARCHAR2 (128) |          | Name of the default directory for the external table                                                                                                                                                                                              |
| REJECT_LIMIT                      | VARCHAR2 (40)  |          | Reject limit for the external table, or UNLIMITED                                                                                                                                                                                                 |
| ACCESS_TYPE                       | VARCHAR2 (7)   |          | Type of access parameters for the external table (BLOB, CLOB)                                                                                                                                                                                     |
| ACCESS_PARAMETERS                 | CLOB           |          | Access parameters for the external table                                                                                                                                                                                                          |
| PROPERTY                          | VARCHAR2 (10)  |          | Property of the external table (REFERENCED, ALL)                                                                                                                                                                                                  |
| INMEMORY <sup>1</sup>             | VARCHAR2 (8)   |          | Indicates whether the In-Memory Column Store (IM column store) is by default enabled (ENABLED), disabled (DISABLED), or not specified (NONE) for partitions in the external table                                                                 |
| INMEMORY_COMPRESSION <sup>1</sup> | VARCHAR2 (17)  |          | Indicates the default compression level for the IM column store: <ul style="list-style-type: none"> <li>• NO MEMCOMPRESS</li> <li>• FOR DML</li> <li>• FOR QUERY [ LOW   HIGH ]</li> <li>• FOR CAPACITY [ LOW   HIGH ]</li> <li>• NULL</li> </ul> |

<sup>1</sup> This column is available starting with Oracle Database 21c. It appears in the USER\_XTERNAL\_PART\_TABLES view and is omitted from the ALL\_XTERNAL\_PART\_TABLES and DBA\_XTERNAL\_PART\_TABLES views.

| WITH_CLUSTERING | VARCHAR2 (15)  |      | Indicates whether the zone map is created with the CLUSTERING clause (YES) or not (NO) |

| Column              | Datatype      | NULL | Description                                                                                                                                                                                                                                         |
|---------------------|---------------|------|-----------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|
| AUTOMATIC           | VARCHAR2 (9)  |      | Indicates whether the zone map is automatic (YES) or not (NO)                                                                                                                                                                                       |
| QUERY               | LONG          |      | Zone map defining query                                                                                                                                                                                                                             |
| QUERY_LEN           | NUMBER (38)   |      | Length of defining query in bytes                                                                                                                                                                                                                   |
| PRUNING             | VARCHAR2 (8)  |      | Indicates whether the zone map is enabled for pruning (ENABLED) or not (DISABLED)                                                                                                                                                                   |
| REFRESH_MODE        | VARCHAR2 (17) |      | Refresh mode for the zone map: <ul style="list-style-type: none"> <li>• COMMIT</li> <li>• DEMAND</li> <li>• DATAMOVEMENT</li> <li>• LOAD</li> <li>• LOAD DATAMOVEMENT</li> </ul>                                                                    |
| REFRESH_METHOD      | VARCHAR2 (14) |      | Refresh method for the zone map <ul style="list-style-type: none"> <li>• COMPLETE</li> <li>• FORCE</li> <li>• FAST</li> </ul>                                                                                                                       |
| LAST_REFRESH_METHOD | VARCHAR2 (19) |      | The last refresh method used for the zone map: <ul style="list-style-type: none"> <li>• NA</li> <li>• COMPLETE</li> <li>• FAST</li> <li>• ERROR-UNKNOWN</li> </ul>                                                                                  |
| LAST_REFRESH_TIME   | TIMESTAMP (9) |      | Time of the last refresh                                                                                                                                                                                                                            |
| INVALID             | VARCHAR2 (7)  |      | Indicates whether the zone map is invalid due to some DDL (YES) or not (NO)                                                                                                                                                                         |
| STALE               | VARCHAR2 (7)  |      | Indicates whether the zone map is stale because of DML operations and cannot be used for pruning (YES) or not (NO), or whether this cannot be determined (UNKNOWN)                                                                                  |
| PARTLY_STALE        | VARCHAR2 (12) |      | Indicates whether the zone map is partly stale (YES) or not (NO), or whether this cannot be determined (UNKNOWN). A partly stale zone map contains both fresh and stale zones.                                                                      |
| INCOMPLETE          | VARCHAR2 (12) |      | Indicates whether the zone map has missing zones (YES) or not (NO), or whether this cannot be determined (UNKNOWN). Missing zones result when data is added to the base table and a subsequent refresh of the zone map is not performed.            |
| UNUSABLE            | VARCHAR2 (8)  |      | Indicates whether the zone map has been marked unusable by the owner (YES) or not (NO)                                                                                                                                                              |
| COMPILE_STATE       | VARCHAR2 (19) |      | Current compile state of the zone map: <ul style="list-style-type: none"> <li>• VALID</li> <li>• AUTHORIZATION_ERROR</li> <li>• COMPILATION_ERROR</li> <li>• NEEDS_COMPILE</li> <li>• ERROR_UNKNOWN</li> </ul> Similar to ALL_MVIEWS.COMPILE_STATE. |

**Note:**

This view is intended for use with Oracle Exadata release 12.1.2.1.1 or later.

**See Also:**

## 4.192 AUDIT\_ACTIONS

AUDIT\_ACTIONS describes audit trail action type codes. This table can be used to map action type numbers to action type names.

**Note:**

The mapping explained in this view is valid for audit trail records from the following views only, and such audit records are generated only when unified auditing is not enabled:

- DBA\_AUDIT\_TRAIL
- DBA\_COMMON\_AUDIT\_TRAIL
- DBA\_FGA\_AUDIT\_TRAIL
- USER\_AUDIT\_TRAIL
- V\$XML\_AUDIT\_TRAIL

**Note:**

This view is deprecated and applies only to traditional auditing. Traditional auditing is desupported starting in Oracle Database 23ai. Though traditional auditing is desupported, any current traditional audit settings that you have will still be honored and are viewable with this view. See *Oracle Database Security Guide* for more information about how this desupport works.

| Column | Datatype      | NULL     | Description                            |
|--------|---------------|----------|----------------------------------------|
| ACTION | NUMBER        | NOT NULL | Numeric audit trail action type code.  |
| NAME   | VARCHAR2 (28) | NOT NULL | Name of the type of audit trail action |

## 4.193 AUDIT\_UNIFIED\_CONTEXTS

AUDIT\_UNIFIED\_CONTEXTS describes the application context's attributes, which are configured to be captured in the audit trail.

### Note:

This view is populated only in an Oracle Database where unified auditing is enabled.

- See *Oracle Database Security Guide* for more information about unified auditing.
- See *Oracle Database Upgrade Guide* for more information about migrating to unified auditing.

| Column    | Datatype       | NULL | Description                                                                                                            |
|-----------|----------------|------|------------------------------------------------------------------------------------------------------------------------|
| NAMESPACE | VARCHAR2 (128) |      | Application context namespace                                                                                          |
| ATTRIBUTE | VARCHAR2 (128) |      | Application context attribute                                                                                          |
| USER_NAME | VARCHAR2 (128) |      | Username of database user for whom the application context's attribute is configured to be captured in the audit trail |

## 4.194 AUDIT\_UNIFIED\_ENABLED\_POLICIES

AUDIT\_UNIFIED\_ENABLED\_POLICIES describes all the audit policies that are enabled in the database.

### Note:

This view is populated only in an Oracle Database where unified auditing is enabled.

- See *Oracle Database Security Guide* for more information about unified auditing.
- See *Oracle Database Upgrade Guide* for more information about migrating to unified auditing.

| Column         | Datatype       | NULL | Description                                                                                                                                                                                                                                                                                                                                                          |
|----------------|----------------|------|----------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|
| POLICY_NAME    | VARCHAR2 (128) |      | Name of the audit policy                                                                                                                                                                                                                                                                                                                                             |
| ENABLED_OPTION | VARCHAR2 (15)  |      | Enabled option of the audit policy. Possible values: <ul style="list-style-type: none"><li>• BY USER: For policies that are enabled on users</li><li>• EXCEPT USER: For policies that are enabled on users</li><li>• BY GRANTED ROLE: For policies that are enabled on roles</li><li>• INVALID: For policies that are not enabled on either users or roles</li></ul> |

| Column      | Datatype       | NULL | Description                                                                                                                                                                                                                         |
|-------------|----------------|------|-------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|
| ENTITY_NAME | VARCHAR2 (128) |      | Database entity (user name or role name) on which the audit policy is enabled.<br><br>When an audit policy is enabled on all database users, ALL USERS is displayed in this column.                                                 |
| ENTITY_TYPE | VARCHAR2 (7)   |      | Database entity type. Possible values: <ul style="list-style-type: none"> <li>• USER: Indicates that the policy is enabled on a user or users.</li> <li>• ROLE: Indicates that the policy is enabled on a role or roles.</li> </ul> |
| SUCCESS     | VARCHAR2 (3)   |      | Indicates whether the audit policy is enabled for auditing successful events (YES) or not (NO)                                                                                                                                      |
| FAILURE     | VARCHAR2 (3)   |      | Indicates whether the audit policy is enabled for auditing unsuccessful events (YES) or not (NO)                                                                                                                                    |

## 4.195 AUDIT\_UNIFIED\_POLICIES

AUDIT\_UNIFIED\_POLICIES describes all audit policies created in the database.

### Note:

This view is populated only in an Oracle Database where unified auditing is enabled.

- See *Oracle Database Security Guide* for more information about unified auditing.
- See *Oracle Database Upgrade Guide* for more information about migrating to unified auditing.

| Column             | Datatype        | NULL | Description                                                                                                                                                                                                                                                                                                                                                                                    |
|--------------------|-----------------|------|------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|
| POLICY_NAME        | VARCHAR2 (128)  |      | Name of the audit policy                                                                                                                                                                                                                                                                                                                                                                       |
| AUDIT_CONDITION    | VARCHAR2 (4000) |      | Condition associated with the audit policy                                                                                                                                                                                                                                                                                                                                                     |
| CONDITION_EVAL_OPT | VARCHAR2 (9)    |      | Evaluation option associated with the audit policy's condition. The possible values are STATEMENT, SESSION, INSTANCE, and NONE.                                                                                                                                                                                                                                                                |
| AUDIT_OPTION       | VARCHAR2 (128)  |      | Auditing option defined in the audit policy                                                                                                                                                                                                                                                                                                                                                    |

| INHERITED           | VARCHAR2 (3)   |      | Indicates whether the audit policy was inherited from another container ( <code>YES</code> ) or not ( <code>NO</code> ). This value is <code>NULL</code> for non-CDBs.                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                             |
| AUDIT_ONLY_TOPLEVEL | VARCHAR2 (3)   |      | Indicates whether the audit policy is defined to audit only top level SQL statements ( <code>YES</code> ) or both top level SQL statements and recursive SQL statements ( <code>NO</code> )                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                        |
| ORACLE_SUPPLIED     | VARCHAR2 (3)   |      | <p>Indicates whether the audit policy is an Oracle-supplied policy (<code>YES</code>) or not (<code>NO</code>)</p> <p>Oracle-supplied policies are also called predefined policies.</p>                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                            |
| COLUMN_NAME         | VARCHAR2 (128) |      | <p>If <code>AUDIT_OPTION_TYPE = COLUMN ACTION</code>, then this column displays the name of the table column on which the audit policy was created. In this case, the <code>OBJECT_SCHEMA</code>, <code>OBJECT_NAME</code>, and <code>OBJECT_TYPE</code> columns apply to the table containing the audited column.</p> <p>Otherwise, the value of this column is null.</p>                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                         |

## 4.196 AUDIT\_UNIFIED\_POLICY\_COMMENTS

AUDIT\_UNIFIED\_POLICY\_COMMENTS shows the description of each unified audit policy, if a description was entered for the unified audit policy using the COMMENT SQL statement.

### Note:

This view is populated only in an Oracle Database where unified auditing is enabled.

- See *Oracle Database Security Guide* for more information about unified auditing.
- See *Oracle Database Upgrade Guide* for more information about migrating to unified auditing.

| Column      | Datatype        | NULL     | Description                                                                                 |
|-------------|-----------------|----------|---------------------------------------------------------------------------------------------|
| POLICY_NAME | VARCHAR2 (128)  | NOT NULL | Name of the unified audit policy                                                            |
| COMMENTS    | VARCHAR2 (4000) |          | Description of the unified audit policy, if one was entered using the COMMENT SQL statement |

## 4.197 AUDITABLE\_SYSTEM\_ACTIONS

AUDITABLE\_SYSTEM\_ACTIONS maps the auditable system action numbers to the action names. These actions are configurable for audit when unified auditing is enabled.

The actions include:

- All standard RDBMS actions (from the V\$SQLCOMMAND view) except the following, which are not configurable for auditing:
  - ALTER EDITION
  - ALTER REWRITE EQUIVALENCE
  - ALTER SUMMARY
  - ALTER TRACING
  - CREATE BITMAPFILE
  - CREATE CONTROL FILE
  - CREATE DATABASE
  - CREATE SUMMARY
  - DECLARE REWRITE EQUIVALENCE
  - DROP BITMAPFILE
  - DROP DATABASE
  - DROP REWRITE EQUIVALENCE
  - DROP SUMMARY
  - FLASHBACK DATABASE
  - MERGE

- SAVEPOINT
- SET CONSTRAINTS
- UNDROP OBJECT
- UPDATE INDEXES
- UPDATE JOIN INDEX
- VALIDATE INDEX
- Other actions:
  - ALL
  - LOGON
  - LOGOFF

**Note:**

This view is populated only in an Oracle Database where unified auditing is enabled.

- See *Oracle Database Security Guide* for more information about unified auditing.
- See *Oracle Database Upgrade Guide* for more information about migrating to unified auditing.

| Column    | Datatype      | NULL | Description                                           |
|-----------|---------------|------|-------------------------------------------------------|
| TYPE      | NUMBER        |      | Numeric component type for system wide actions        |
| COMPONENT | VARCHAR2 (64) |      | Name of component for system wide actions             |
| ACTION    | NUMBER        |      | Numeric auditable action code for system wide actions |
| NAME      | VARCHAR2 (64) |      | Name of auditable action                              |

Some auditable actions in `AUDITABLE_SYSTEM_ACTIONS` have different names than their equivalent commands in `V$SQLCOMMAND`, as shown in the following table:

| <b>AUDITABLE_SYSTEM_ACTIONS Action Name</b> | <b>V\$SQLCOMMAND Command Name</b> |
|---------------------------------------------|-----------------------------------|
| GRANT                                       | GRANT OBJECT                      |
| REVOKE                                      | REVOKE OBJECT                     |
| AUDIT                                       | AUDIT OBJECT                      |
| NOAUDIT                                     | NOAUDIT OBJECT                    |
| EXECUTE                                     | PL/SQL EXECUTE                    |
| EXPLAIN PLAN                                | EXPLAIN                           |
| CALL                                        | CALL METHOD                       |
| PURGE DBA_RECYCLEBIN                        | PURGE DBA RECYCLEBIN              |

## 4.198 CAT

CAT is a synonym for USER\_CATALOG.

### See Also:

"USER\_CATALOG"

## 4.199 CATALOG

CATALOG is included for compatibility. Oracle recommends that you not use this view.

## 4.200 CHAINED\_ROWS

CHAINED\_ROWS stores the output for the ANALYZE statement with the LIST CHAINED ROWS clause.

You must run the utlchain.sql or utlchn1.sql script to create this table.

| Column            | Description                                     |
|-------------------|-------------------------------------------------|
| OWNER_NAME        | Table owner                                     |
| TABLE_NAME        | Table name                                      |
| CLUSTER_NAME      | Cluster the table is in, if any                 |
| PARTITION_NAME    | The name of the partition                       |
| SUBPARTITION_NAME | The name of the subpartition                    |
| HEAD_ROWID        | ROWID the chained row is accessed by            |
| ANALYZE_TIMESTAMP | Date/time that the ANALYZE statement was issued |

## 4.201 CLIENT\_RESULT\_CACHE\_STAT\$\$

CLIENT\_RESULT\_CACHE\_STAT\$\$ displays various client result cache settings and usage statistics.

Statistics are stored as name, value pairs. For each client cache ID, there will be multiple rows for each statistic.

| Column   | Datatype       | NULL     | Description                                            |
|----------|----------------|----------|--------------------------------------------------------|
| CACHE_ID | NUMBER         | NOT NULL | Unique ID per client cache                             |
| STAT_ID  | NUMBER         | NOT NULL | Statistic ID                                           |
| NAME     | VARCHAR2 (128) |          | Name of the statistic (see <a href="#">Table 4-1</a> ) |
| VALUE    | NUMBER         |          | Value of the statistic                                 |

**Table 4-1 CLIENT\_RESULT\_CACHE\_STAT\$\$ Statistics**

| Statistic Name       | Description                                                                                                                                  |
|----------------------|----------------------------------------------------------------------------------------------------------------------------------------------|
| Block Size           | Size (in bytes) of each memory block in the result cache.                                                                                    |
| Block Count Max      | Maximum number of blocks that can be allocated in the result cache based on the cache size configuration parameters on server and on client. |
| Block Count Current  | Current number of blocks allocated by the client result cache.                                                                               |
| Hash Bucket Count    | Size of the hash table used for query matching.                                                                                              |
| Create Count Success | Number of cached result sets that did not get invalidated before caching all the rows of the result set.                                     |
| Create Count Failure | Number of cached result sets that did not fetch all the rows in the result set.                                                              |
| Find Count           | Number of cache hits.                                                                                                                        |
| Invalidation Count   | Number of cached result sets that got invalidated due to database changes that could have affected the result set.                           |
| Delete Count Invalid | Number of cached result sets not invalidated whose memory was reclaimed by result cache.                                                     |
| Delete Count Valid   | Number of invalidated cached result sets whose memory was reclaimed by result cache.                                                         |

## 4.202 CLU

CLU is a synonym for USER\_CLUSTERS.

"USER\_CLUSTERS"

## 4.203 COL

COL is included for compatibility. Oracle recommends that you not use this view.

## 4.204 COLS

COLS is a synonym for USER\_TAB\_COLUMNS.

**See Also:**

"USER\_TAB\_COLUMNS"

## 4.205 DATABASE\_EXPORT\_OBJECTS

DATABASE\_EXPORT\_OBJECTS lists simple path names for some of the object types belonging to a full Data Pump export, which is invoked using the FULL=Y parameter on the expdp command.

Users of the Data Pump Export and Import utilities can query this view to determine valid values for the EXCLUDE and INCLUDE parameters.

| Column      | Datatype        | NULL     | Description                                                                                                                                       |
|-------------|-----------------|----------|---------------------------------------------------------------------------------------------------------------------------------------------------|
| OBJECT_PATH | VARCHAR2 (200)  | NOT NULL | Simple path name for the object type                                                                                                              |
| COMMENTS    | VARCHAR2 (2000) |          | Comment on the object type                                                                                                                        |
| NAMED       | CHAR (1)        |          | Do objects of this type have names? If yes (Y), then the name can be specified in the optional name_clause on the EXCLUDE and INCLUDE parameters. |

## 4.206 DATABASE\_PROPERTIES

DATABASE\_PROPERTIES lists permanent database properties.

| Column         | Datatype        | NULL     | Description          |
|----------------|-----------------|----------|----------------------|
| PROPERTY_NAME  | VARCHAR2 (128)  | NOT NULL | Property name        |
| PROPERTY_VALUE | VARCHAR2 (4000) |          | Property value       |
| DESCRIPTION    | VARCHAR2 (4000) |          | Property description |

### Note:

The CDB\_PROPERTIES view provides access to data visible to PDBs through the DATABASE\_PROPERTIES view.

# 5

## Static Data Dictionary Views: DBA\_2PC\_NEIGHBORS to DBA\_HIST\_JAVA\_POOL\_ADVICE

This chapter contains the static data dictionary views `DBA_2PC_NEIGHBORS` through `DBA_HIST_JAVA_POOL_ADVICE`.

### 5.1 DBA\_2PC\_NEIGHBORS

`DBA_2PC_NEIGHBORS` describes incoming and outgoing connections for pending transactions.

| Column        | Datatype       | NULL | Description                                                               |
|---------------|----------------|------|---------------------------------------------------------------------------|
| LOCAL_TRAN_ID | VARCHAR2 (22)  |      | Local identifier of a transaction                                         |
| IN_OUT        | VARCHAR2 (3)   |      | IN for incoming connections, OUT for outgoing                             |
| DATABASE      | VARCHAR2 (128) |      | IN for client database name, OUT for outgoing database link               |
| DBUSER_OWNER  | VARCHAR2 (128) |      | IN for name of local user, OUT for owner of database link                 |
| INTERFACE     | VARCHAR2 (1)   |      | C for request commit, otherwise N for prepare or request read only commit |
| DBID          | VARCHAR2 (16)  |      | Database ID at the other end of the connection                            |
| SESS#         | NUMBER (38)    |      | Session number of the connection at this database                         |
| BRANCH        | VARCHAR2 (128) |      | Transaction branch ID of the connection at this database                  |

### 5.2 DBA\_2PC\_PENDING

`DBA_2PC_PENDING` describes distributed transactions awaiting recovery.

| Column         | Datatype       | NULL     | Description                                                                 |
|----------------|----------------|----------|-----------------------------------------------------------------------------|
| LOCAL_TRAN_ID  | VARCHAR2 (22)  | NOT NULL | String of form: n.n.n; n is a number                                        |
| GLOBAL_TRAN_ID | VARCHAR2 (169) |          | Globally unique transaction ID                                              |
| STATE          | VARCHAR2 (16)  | NOT NULL | Collecting, prepared, committed, forced commit, or forced rollback          |
| MIXED          | VARCHAR2 (3)   |          | YES indicates part of the transaction committed and part rolled back        |
| ADVICE         | VARCHAR2 (1)   |          | C for commit, R for rollback, else NULL                                     |
| TRAN_COMMENT   | VARCHAR2 (255) |          | Text for commit work comment text                                           |
| FAIL_TIME      | DATE           | NOT NULL | Value of SYSDATE when the row was inserted (transaction or system recovery) |

| Column      | Datatype       | NULL     | Description                                                          |
|-------------|----------------|----------|----------------------------------------------------------------------|
| FORCE_TIME  | DATE           |          | Time of manual force decision (null if not forced locally)           |
| RETRY_TIME  | DATE           | NOT NULL | Time automatic recovery (RECO) last tried to recover the transaction |
| OS_USER     | VARCHAR2 (64)  |          | Operating system-specific name for the end-user                      |
| OS_TERMINAL | VARCHAR2 (255) |          | Operating system-specific name for the end-user terminal             |
| HOST        | VARCHAR2 (128) |          | Name of the host system for the end-user                             |
| DB_USER     | VARCHAR2 (128) |          | Oracle user name of the end-user at the topmost database             |
| COMMIT#     | VARCHAR2 (16)  |          | Global commit number for committed transactions                      |

## 5.3 DBA\_ACCHK\_EVENTS

DBA\_ACCHK\_EVENTS displays information about events that occurred during an Application Continuity Protection Check (ACCHK) workload run.

Each row in this view represents one trace record for an event. You can use this view in conjunction with the DBA\_ACCHK\_STATISTICS view. Join the SESSION\_ID and SERIAL# columns in this view with the SESSION\_ID and SERIAL# columns in DBA\_ACCHK\_STATISTICS to view Application Continuity protection statistics for a particular session.

The ACCHK\_READ role allows users with no administrative privileges to query this view.

| Column       | Datatype                     | NULL | Description                                                                                                                                                                                                                                                                                                                                                                                                                                        |
|--------------|------------------------------|------|----------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|
| INST_ID      | NUMBER                       |      | Identifier for the instance in which the trace record was generated                                                                                                                                                                                                                                                                                                                                                                                |
| CON_ID       | NUMBER                       |      | The ID of the container to which the data pertains.<br>Possible values include: <ul style="list-style-type: none"> <li>0: This value is used for rows containing data that pertain to the entire CDB. This value is also used for rows in non-CDBs.</li> <li>1: This value is used for rows containing data that pertain to only the root</li> <li><i>n</i>: Where <i>n</i> is the applicable container ID for the rows containing data</li> </ul> |
| TIMESTAMP    | TIMESTAMP (3) WITH TIME ZONE |      | Time at which the event occurred                                                                                                                                                                                                                                                                                                                                                                                                                   |
| SESSION_ID   | NUMBER                       |      | ID of the session that generated the trace record                                                                                                                                                                                                                                                                                                                                                                                                  |
| SERIAL#      | NUMBER                       |      | Serial number of the session that generated the trace record                                                                                                                                                                                                                                                                                                                                                                                       |
| SERVICE_NAME | VARCHAR2 (64)                |      | Service name of the session that generated the trace record                                                                                                                                                                                                                                                                                                                                                                                        |
| PROGRAM      | VARCHAR2 (84)                |      | Name of the operating system program that generated the trace record                                                                                                                                                                                                                                                                                                                                                                               |
| MODULE       | VARCHAR2 (64)                |      | Name of the module that generated the trace record                                                                                                                                                                                                                                                                                                                                                                                                 |
| ACTION       | VARCHAR2 (64)                |      | Name of the action that generated the trace record                                                                                                                                                                                                                                                                                                                                                                                                 |

| Column     | Datatype      | NULL | Description                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                           |
|------------|---------------|------|-----------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|
| SQL_ID     | VARCHAR2 (13) |      | SQL identifier of the SQL statement that generated the trace record                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                   |
| CALL_NAME  | VARCHAR2 (20) |      | Name of the user call that generated the trace record                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                 |
| EVENT_TYPE | VARCHAR2 (16) |      | Event type. Possible values: <ul style="list-style-type: none"><li>• <b>DISABLED</b> - The event caused capture or replay to be disabled. Refer to the <code>ERROR_CODE</code> column for more information.</li><li>• <b>NEVER ENABLED</b> - Neither Application Continuity nor Transparent Application Continuity was enabled for the session when the event occurred.</li><li>• <b>NOT ENABLING</b> - The event describes why the database could not reenable protection after protection was disabled. Refer to the <code>ERROR_CODE</code> column for more information.</li><li>• <b>REPLAY FAILED</b> - The event describes why the session did not fail over. This event only occurs if Application Continuity could not fail over. Refer to the <code>ERROR_CODE</code> column for more information.</li></ul> |
| ERROR_CODE | NUMBER        |      | If an error occurred, this column displays the error code: <i>ORA-number</i> . Otherwise, the value of this column is 0.                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                              |

## 5.4 DBA\_ACCHK\_EVENTS\_SUMMARY

DBA\_ACCHK\_EVENTS\_SUMMARY displays summary information about events that occurred during an Application Continuity Protection Check (ACCHK) workload run.

This view describes the number of times a particular type of event occurred in a session. You can use this view in conjunction with the DBA\_ACCHK\_STATISTICS\_SUMMARY view. Join the INST\_ID and CON\_ID columns in this view with the INST\_ID and CON\_ID columns in DBA\_ACCHK\_STATISTICS\_SUMMARY to view Application Continuity protection statistics for a particular instance.

The ACCHK\_READ role allows users with no administrative privileges to query this view.

| Column  | Datatype | NULL | Description                 |
|---------|----------|------|-----------------------------|
| INST_ID | NUMBER   |      | Identifier for the instance |

| Column           | Datatype      | NULL | Description                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                       |
|------------------|---------------|------|---------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|
| CON_ID           | NUMBER        |      | The ID of the container to which the data pertains. Possible values include: <ul style="list-style-type: none"> <li>0: This value is used for rows containing data that pertain to the entire CDB. This value is also used for rows in non-CDBs.</li> <li>1: This value is used for rows containing data that pertain to only the root</li> <li><i>n</i>: Where <i>n</i> is the applicable container ID for the rows containing data</li> </ul>                                                                                                                                                                                                                                                                                                   |
| SERVICE_NAME     | VARCHAR2 (64) |      | Service name of the session                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                       |
| FAILOVER_TYPE    | VARCHAR2 (16) |      | Indicates the FAILOVER_TYPE service setting for the session. Possible values: <ul style="list-style-type: none"> <li>AUTO - Transparent Application Continuity (TAC) was enabled for the session</li> <li>TRANSACTION - Application Continuity (AC) was enabled for the session</li> <li>NONE - Failover was disabled for the session</li> </ul>                                                                                                                                                                                                                                                                                                                                                                                                  |
| FAILOVER_RESTORE | VARCHAR2 (16) |      | Indicates the FAILOVER_RESTORE service setting for the session. Possible values: <ul style="list-style-type: none"> <li>AUTO - Transparent Application Continuity</li> <li>LEVEL1 - Application Continuity</li> <li>NONE - Session state was not restored at failover</li> </ul>                                                                                                                                                                                                                                                                                                                                                                                                                                                                  |
| RESET_STATE      | VARCHAR2 (16) |      | Indicates the RESET_STATE service setting for the session. Possible values: <ul style="list-style-type: none"> <li>LEVEL1 - The session state was cleaned at the end of a request</li> <li>NONE - The session state was not cleaned at the end of a request</li> </ul>                                                                                                                                                                                                                                                                                                                                                                                                                                                                            |
| PROGRAM          | VARCHAR2 (84) |      | Name of the operating system program that generated the trace record                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                              |
| MODULE           | VARCHAR2 (64) |      | Name of the module that generated the trace record                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                |
| ACTION           | VARCHAR2 (64) |      | Name of the action that generated the trace record                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                |
| SQL_ID           | VARCHAR2 (13) |      | SQL identifier of the SQL statement that generated the trace record                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                               |
| CALL_NAME        | VARCHAR2 (20) |      | Name of the user call that generated the trace record                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                             |
| EVENT_TYPE       | VARCHAR2 (16) |      | Event type. Possible values: <ul style="list-style-type: none"> <li>DISABLED - The event caused capture or replay to be disabled. Refer to the ERROR_CODE column for more information.</li> <li>NEVER ENABLED - Neither Application Continuity nor Transparent Application Continuity was enabled for the session when the event occurred.</li> <li>NOT ENABLING - The event describes why the database could not reenabling protection after protection was disabled. Refer to the ERROR_CODE column for more information.</li> <li>REPLAY FAILED - The event describes why the session did not fail over. This event only occurs if Application Continuity could not fail over. Refer to the ERROR_CODE column for more information.</li> </ul> |

| Column     | Datatype | NULL | Description                                                                                                              |
|------------|----------|------|--------------------------------------------------------------------------------------------------------------------------|
| ERROR_CODE | NUMBER   |      | If an error occurred, this column displays the error code: <i>ORA-number</i> . Otherwise, the value of this column is 0. |
| FREQUENCY  | NUMBER   |      | Number of times the event occurred during the workload run                                                               |

## 5.5 DBA\_ACCHK\_STATISTICS

DBA\_ACCHK\_STATISTICS displays Application Continuity protection statistics for each session that executed during an Application Continuity Protection Check (ACCHK) workload run.

ACCHK should be used on a running workload. Sessions that are terminated are not included in this view.

The ACCHK\_READ role allows users with no administrative privileges to query this view.

| Column           | Datatype                    | NULL | Description                                                                                                                                                                                                                                                                                                                                                                                                                                     |
|------------------|-----------------------------|------|-------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|
| INST_ID          | NUMBER                      |      | Identifier for the instance for the session                                                                                                                                                                                                                                                                                                                                                                                                     |
| CON_ID           | NUMBER                      |      | The ID of the container to which the data pertains. Possible values include: <ul style="list-style-type: none"> <li>0: This value is used for rows containing data that pertain to the entire CDB. This value is also used for rows in non-CDBs.</li> <li>1: This value is used for rows containing data that pertain to only the root</li> <li><i>n</i>: Where <i>n</i> is the applicable container ID for the rows containing data</li> </ul> |
| TIMESTAMP        | TIMESTAMP(3) WITH TIME ZONE |      | Time at which the session was terminated and the statistics were reported                                                                                                                                                                                                                                                                                                                                                                       |
| SESSION_ID       | NUMBER                      |      | ID of the session                                                                                                                                                                                                                                                                                                                                                                                                                               |
| SERIAL#          | NUMBER                      |      | Serial number of the session                                                                                                                                                                                                                                                                                                                                                                                                                    |
| STAT_TYPE        | VARCHAR2(32)                |      | Type of statistic<br>The value of this column is always SESSION_STATISTICS.                                                                                                                                                                                                                                                                                                                                                                     |
| SERVICE_NAME     | VARCHAR2(64)                |      | Service name of the session                                                                                                                                                                                                                                                                                                                                                                                                                     |
| FAILOVER_TYPE    | VARCHAR2(16)                |      | Indicates the FAILOVER_TYPE service setting for the session. Possible values: <ul style="list-style-type: none"> <li>AUTO - Transparent Application Continuity (TAC) was enabled for the session</li> <li>TRANSACTION - Application Continuity (AC) was enabled for the session</li> <li>NONE - Failover was disabled for the session</li> </ul>                                                                                                |
| FAILOVER_RESTORE | VARCHAR2(16)                |      | Indicates the FAILOVER_RESTORE service setting for the session. Possible values: <ul style="list-style-type: none"> <li>AUTO - Transparent Application Continuity</li> <li>LEVEL1 - Application Continuity</li> <li>NONE - Session state was not restored at failover</li> </ul>                                                                                                                                                                |

| Column                      | Datatype      | NULL | Description                                                                                                                                                                                                                                                                |
|-----------------------------|---------------|------|----------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|
| RESET_STATE                 | VARCHAR2 (16) |      | Indicates the RESET_STATE service setting for the session. Possible values: <ul style="list-style-type: none"> <li>• LEVEL1 - The session state was cleaned at the end of a request</li> <li>• NONE - The session state was not cleaned at the end of a request</li> </ul> |
| PROGRAM                     | VARCHAR2 (84) |      | Name of the operating system program                                                                                                                                                                                                                                       |
| BEGIN_REQUESTS              | NUMBER        |      | Number of begin requests received for the session                                                                                                                                                                                                                          |
| END_REQUESTS                | NUMBER        |      | Number of end requests received for the session                                                                                                                                                                                                                            |
| USER_CALLS_IN_REQUESTS      | NUMBER        |      | Number of user calls received from the application within requests (between begin request and end request)                                                                                                                                                                 |
| PROTECTED_CALLS_IN_REQUESTS | NUMBER        |      | Number of user calls protected by Application Continuity (between begin request and end request)                                                                                                                                                                           |
| TIME_IN_REQUESTS            | NUMBER        |      | Time in microseconds spent in user calls within requests (between begin request and end request)                                                                                                                                                                           |
| TIME_PROTECTED_IN_REQUESTS  | NUMBER        |      | Time in microseconds for user calls protected by Application Continuity within requests (between begin request and end request)                                                                                                                                            |

## 5.6 DBA\_ACCHK\_STATISTICS\_SUMMARY

DBA\_ACCHK\_STATISTICS\_SUMMARY displays a summary of Application Continuity protection statistics for each session that executed during an Application Continuity Protection Check (ACCHK) workload run.

ACCHK should be used on a running workload. Sessions that are terminated are not included in this view.

The ACCHK\_READ role allows users with no administrative privileges to query this view.

| Column       | Datatype      | NULL | Description                                                                                                                                                                                                                                                                                                                                                                                                                                           |
|--------------|---------------|------|-------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|
| INST_ID      | NUMBER        |      | Identifier for the instance for the session                                                                                                                                                                                                                                                                                                                                                                                                           |
| CON_ID       | NUMBER        |      | The ID of the container to which the data pertains. Possible values include: <ul style="list-style-type: none"> <li>• 0: This value is used for rows containing data that pertain to the entire CDB. This value is also used for rows in non-CDBs.</li> <li>• 1: This value is used for rows containing data that pertain to only the root</li> <li>• <i>n</i>: Where <i>n</i> is the applicable container ID for the rows containing data</li> </ul> |
| SERVICE_NAME | VARCHAR2 (64) |      | Service name of the session                                                                                                                                                                                                                                                                                                                                                                                                                           |

| Column                          | Datatype      | NULL | Description                                                                                                                                                                                                                                                                                                                                      |
|---------------------------------|---------------|------|--------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|
| FAILOVER_TYPE                   | VARCHAR2 (16) |      | Indicates the FAILOVER_TYPE service setting for the session. Possible values: <ul style="list-style-type: none"> <li>AUTO - Transparent Application Continuity (TAC) was enabled for the session</li> <li>TRANSACTION - Application Continuity (AC) was enabled for the session</li> <li>NONE - Failover was disabled for the session</li> </ul> |
| FAILOVER_RESTORE                | VARCHAR2 (16) |      | Indicates the FAILOVER_RESTORE service setting for the session. Possible values: <ul style="list-style-type: none"> <li>AUTO - Transparent Application Continuity</li> <li>LEVEL1 - Application Continuity</li> <li>NONE - Session state is not restored at failover</li> </ul>                                                                  |
| RESET_STATE                     | VARCHAR2 (16) |      | Indicates the RESET_STATE service setting for the session. Possible values: <ul style="list-style-type: none"> <li>LEVEL1 - The session state was cleaned at the end of a request</li> <li>NONE - The session state was not cleaned at the end of a request</li> </ul>                                                                           |
| TOTAL_REQUESTS                  | NUMBER        |      | Number of requests received for this session                                                                                                                                                                                                                                                                                                     |
| PROTECTED_CALLS_PERCENT         | NUMBER        |      | Percentage of user calls within requests protected by Application Continuity for failover                                                                                                                                                                                                                                                        |
| PROTECTED_TIME_PERCENT          | NUMBER        |      | Percentage of time spent within requests protected by Application Continuity for failover                                                                                                                                                                                                                                                        |
| AVG_USER_CALLS_IN_REQUESTS      | NUMBER        |      | Average number of user calls received from the application within requests (between begin request and end request)                                                                                                                                                                                                                               |
| AVG_PROTECTED_CALLS_IN_REQUESTS | NUMBER        |      | Average number of user calls protected by Application Continuity within requests (between begin request and end request)                                                                                                                                                                                                                         |
| AVG_TIME_IN_REQUESTS            | NUMBER        |      | Average time in microseconds spent in user calls within requests (between begin request and end request)                                                                                                                                                                                                                                         |
| AVG_TIME_PROTECTED_IN_REQUESTS  | NUMBER        |      | Average time in microseconds for user calls protected by Application Continuity within requests (between begin request and end request)                                                                                                                                                                                                          |

## 5.7 DBA\_ACL\_NAME\_MAP

DBA\_ACL\_NAME\_MAP maps new names of the access control lists for PL/SQL network utility packages from old XDB names.

| Column    | Datatype        | NULL     | Description                                 |
|-----------|-----------------|----------|---------------------------------------------|
| XDB_NAME  | VARCHAR2 (4000) | NOT NULL | The old XDB name of the access control list |
| ACL       | VARCHAR2 (128)  |          | The new name of the access control list     |
| ACL_OWNER | VARCHAR2 (128)  |          | The owner of the access control list        |

## 5.8 DBA\_ACTIVITY\_CONFIG

DBA\_ACTIVITY\_CONFIG describes the configuration parameters that control the Object Activity Tracking System (OATS).

| Column            | Datatype        | NULL     | Description                                                                                                                                                                      |
|-------------------|-----------------|----------|----------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|
| CON_DBNAME        | VARCHAR2 (128)  | NOT NULL | Name of the container to which the data pertains                                                                                                                                 |
| PARAMETER_NAME    | VARCHAR2 (128)  | NOT NULL | Name of the configuration parameter                                                                                                                                              |
| PARAMETER_VALUE   | VARCHAR2 (4000) |          | Value of the configuration parameter                                                                                                                                             |
| LAST_UPDATED_TIME | TIMESTAMP (3)   |          | If the value of the configuration parameter was last updated by a user, then this column displays the time at which the parameter was updated. Otherwise, this column is null.   |
| LAST_UPDATED_USER | VARCHAR2 (128)  |          | If the value of the configuration parameter was last updated by a user, then this column displays the name of the user who performed the update. Otherwise, this column is null. |

## 5.9 DBA\_ACTIVITY\_MVIEW

DBA\_ACTIVITY\_MVIEW describes materialized view activity snapshots that were recently taken by the Object Activity Tracking System (OATS).

Each row in this view represents one recently completed activity snapshot and describes the materialized view activity that occurred during the snapshot interval.

| Column             | Datatype       | NULL     | Description                                                                                                                                                                                                                                                                                                                               |
|--------------------|----------------|----------|-------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|
| SNAP_ID            | NUMBER         | NOT NULL | Activity snapshot identifier                                                                                                                                                                                                                                                                                                              |
| CON_DBNAME         | VARCHAR2 (128) | NOT NULL | Name of the container to which the data pertains                                                                                                                                                                                                                                                                                          |
| INSTANCE_NUMBER    | NUMBER         | NOT NULL | Identifier for the instance in which the activity snapshot was taken                                                                                                                                                                                                                                                                      |
| BEGIN_TIME         | TIMESTAMP (3)  | NOT NULL | Begin time for the activity snapshot interval                                                                                                                                                                                                                                                                                             |
| END_TIME           | TIMESTAMP (3)  | NOT NULL | End time for the activity snapshot interval                                                                                                                                                                                                                                                                                               |
| MVIEW_NAME         | VARCHAR2 (128) | NOT NULL | Name of the materialized view for which the activity snapshot was taken                                                                                                                                                                                                                                                                   |
| MVIEW_OWNER        | VARCHAR2 (128) | NOT NULL | Owner of materialized view for which the activity snapshot was taken                                                                                                                                                                                                                                                                      |
| USER_CLASS         | VARCHAR2 (7)   |          | Indicates whether the activity was performed by the RDBMS (SYS) or by a user (NON-SYS)                                                                                                                                                                                                                                                    |
| COMPILES           | NUMBER         |          | Number of times the materialized view was compiled<br>This number includes: <ul style="list-style-type: none"> <li>• Explicit compiles performed with the SQL statement <code>ALTER MATERIALIZED VIEW ... COMPILE</code></li> <li>• Automatic compiles that occurred because the structure of an underlying base table changed</li> </ul> |
| REWRITES_TEXTMATCH | NUMBER         |          | Number of query rewrites that used the text match rewrite method                                                                                                                                                                                                                                                                          |

| Column                 | Datatype | NULL | Description                                                                                                                                                                                                                                                                                                                                                                                                                                          |
|------------------------|----------|------|------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|
| REWRITES_GENERAL       | NUMBER   |      | Number of query rewrites that used general rewrite methods                                                                                                                                                                                                                                                                                                                                                                                           |
| REWRITES_PARTIAL       | NUMBER   |      | Number of query rewrites that occurred when the view was partially stale<br>This number includes: <ul style="list-style-type: none"> <li>• UNION ALL operations involving rewritten queries that had one branch with the materialized view and the other branch with its underlying base tables (partial rewrites)</li> <li>• Single query block rewrites of the materialized view that involved a join back to its underlying base table</li> </ul> |
| REWRITES_DELTA         | NUMBER   |      | Number of query rewrites that used stale data in the materialized view plus the delta information stored in the materialized view logs                                                                                                                                                                                                                                                                                                               |
| REWRITES_PCT           | NUMBER   |      | Number of partition change tracking (PCT) rewrites                                                                                                                                                                                                                                                                                                                                                                                                   |
| REWRITES_HINTED        | NUMBER   |      | Number of query rewrites that occurred because the materialized view was eligible for query rewrite and the SELECT statement contained the REWRITE hint with the name of the materialized view specified in the hint                                                                                                                                                                                                                                 |
| NOREWRITES_HINTED      | NUMBER   |      | Reserved for future use                                                                                                                                                                                                                                                                                                                                                                                                                              |
| NOREWRITES_STALE       | NUMBER   |      | Number of query executions that did not use query rewrite because the materialized view was eligible for query rewrite, but stale                                                                                                                                                                                                                                                                                                                    |
| REFRESHES_ON_DEMAND    | NUMBER   |      | Number of ON DEMAND refreshes<br>This type of refresh is performed on materialized views that use the ON DEMAND refresh mode, which instructs the database to refresh the materialized view only when a manual refresh is launched by one of the three DBMS_MVIEW refresh procedures.                                                                                                                                                                |
| REFRESHES_ON_COMMIT    | NUMBER   |      | Number of ON COMMIT refreshes<br>This type of refresh is performed on materialized views that use the ON COMMIT refresh mode, which instructs the database to refresh the materialized view whenever the database commits a transaction that operates on a master table of the materialized view.                                                                                                                                                    |
| REFRESHES_ON_STATEMENT | NUMBER   |      | Number of ON STATEMENT refreshes<br>This type of refresh is performed on materialized views that use the ON STATEMENT refresh mode, which instructs the database to perform an automatic refresh of the materialized view every time a DML operation is performed on any of the view's base tables.                                                                                                                                                  |
| REFRESHES_SCHEDULED    | NUMBER   |      | Number of scheduled refreshes                                                                                                                                                                                                                                                                                                                                                                                                                        |
| REFRESHES_AUTOMATIC    | NUMBER   |      | Number of automatic refreshes                                                                                                                                                                                                                                                                                                                                                                                                                        |
| REFRESHES_FAST         | NUMBER   |      | Number of incremental refreshes                                                                                                                                                                                                                                                                                                                                                                                                                      |
| REFRESHES_COMPLETE     | NUMBER   |      | Number of full refreshes                                                                                                                                                                                                                                                                                                                                                                                                                             |
| REFRESHES_PCT          | NUMBER   |      | Number of partition change tracking (PCT) refreshes                                                                                                                                                                                                                                                                                                                                                                                                  |

**Note:**

The counts in this view are approximate in order to keep system overhead low. Also, there are database activities, such as statistics collection, query compilation, and query optimization, that may cause the counts to be different than expected or to vary slightly across successive queries.

## 5.10 DBA\_ACTIVITY\_SNAPSHOT\_META

DBA\_ACTIVITY\_SNAPSHOT\_META displays information about activity snapshots taken by the Object Activity Tracking System (OATS).

| Column             | Datatype                          | NULL     | Description                                                                    |
|--------------------|-----------------------------------|----------|--------------------------------------------------------------------------------|
| SNAP_ID            | NUMBER                            | NOT NULL | Activity snapshot identifier                                                   |
| CON_DBNAME         | VARCHAR2 (128)                    | NOT NULL | Name of the container to which the data pertains                               |
| INSTANCE_NUMBER    | NUMBER                            | NOT NULL | Identifier for the instance in which the activity snapshot was taken           |
| BEGIN_TIME         | TIMESTAMP (3)                     | NOT NULL | Begin time for the activity snapshot interval                                  |
| END_TIME           | TIMESTAMP (3)                     | NOT NULL | End time for the activity snapshot interval                                    |
| FLUSH_ELAPSED_TIME | INTERVAL DAY (2)<br>TO SECOND (3) |          | Amount of time spent creating the activity snapshot                            |
| FLUSH_IS_MANUAL    | VARCHAR2 (3)                      |          | Indicates whether the activity snapshot was created manually (YES) or not (NO) |

## 5.11 DBA\_ACTIVITY\_TABLE

DBA\_ACTIVITY\_TABLE describes table activity snapshots that were recently taken by the Object Activity Tracking System (OATS).

Each row in this view represents one recently completed activity snapshot and describes the table activity that occurred during the snapshot interval.

| Column          | Datatype       | NULL     | Description                                                          |
|-----------------|----------------|----------|----------------------------------------------------------------------|
| SNAP_ID         | NUMBER         | NOT NULL | Activity snapshot identifier                                         |
| CON_DBNAME      | VARCHAR2 (128) | NOT NULL | Name of the container to which the data pertains                     |
| INSTANCE_NUMBER | NUMBER         | NOT NULL | Identifier for the instance in which the activity snapshot was taken |
| BEGIN_TIME      | TIMESTAMP (3)  | NOT NULL | Begin time for the activity snapshot interval                        |
| END_TIME        | TIMESTAMP (3)  | NOT NULL | End time for the activity snapshot interval                          |

| Column                   | Datatype       | NULL     | Description                                                                                   |
|--------------------------|----------------|----------|-----------------------------------------------------------------------------------------------|
| TABLE_NAME               | VARCHAR2 (128) | NOT NULL | Name of the table for which the activity snapshot was taken                                   |
| TABLE_OWNER              | VARCHAR2 (128) | NOT NULL | Owner of the table for which the activity snapshot was taken                                  |
| USER_CLASS               | VARCHAR2 (7)   |          | Reserved for future use                                                                       |
| SCANS                    | NUMBER         |          | Number of table scans                                                                         |
| LOADS                    | NUMBER         |          | Number of table loads                                                                         |
| LOAD_ROWS                | NUMBER         |          | Number of rows that were loaded into the table                                                |
| INSERT_ROWS              | NUMBER         |          | Number of rows that were inserted into the table                                              |
| DELETE_ROWS              | NUMBER         |          | Number of rows that were deleted from the table                                               |
| UPDATE_ROWS              | NUMBER         |          | Number of table rows that were updated                                                        |
| TRUNCATES                | NUMBER         |          | Number of table truncations                                                                   |
| TRUNCATED_ROWS           | NUMBER         |          | Number of table rows that were deleted due to table truncations                               |
| PARTITION_TRUNCATES      | NUMBER         |          | Number of table partition or subpartition truncations                                         |
| PARTITION_TRUNCATED_ROWS | NUMBER         |          | Number of table rows that were deleted due to table partition or subpartition truncations     |
| PARTITION_CREATES        | NUMBER         |          | Number of table partitions or subpartitions that were created                                 |
| PARTITION_DROPS          | NUMBER         |          | Number of table partition or subpartition drops                                               |
| PARTITION_DROPS_ROWS     | NUMBER         |          | Number of table rows that were dropped due to table partition or subpartition drops           |
| PARTITION_MOVES          | NUMBER         |          | Number of table partition or subpartition moves                                               |
| PARTITION_MOVES_ROWS     | NUMBER         |          | Number of table rows that were moved due to table partition or subpartition moves             |
| PARTITION_SPLITS         | NUMBER         |          | Number of table partition or subpartition splits                                              |
| PARTITION_SPLITS_ROWS    | NUMBER         |          | Number of table rows that were split due to table partition or subpartition splits            |
| PARTITION_MERGES         | NUMBER         |          | Number of table partition or subpartition merges                                              |
| PARTITION_MERGES_ROWS    | NUMBER         |          | Number of table rows that were merged due to table partition or subpartition merges           |
| PARTITION_COALESCE       | NUMBER         |          | Number of table partition or subpartition coalesces                                           |
| PARTITION_COALESCE_ROWS  | NUMBER         |          | Number of table rows that were redistributed due to table partition or subpartition coalesces |
| PARTITION_EXCHANGES      | NUMBER         |          | Number of table partition or subpartition exchanges                                           |
| PARTITION_EXCHANGES_ROWS | NUMBER         |          | Number of table rows that were exchanged due to table partition or subpartition exchanges     |

 **Note:**

The counts in this view are approximate in order to keep system overhead low. Also, there are database activities, such as statistics collection, query compilation, and query optimization, that may cause the counts to be different than expected or to vary slightly across successive queries.

**Note:**

This view does not contain information related to temporary tables or external tables.

## 5.12 DBA\_ADDM\_FDG\_BREAKDOWN

DBA\_ADDM\_FDG\_BREAKDOWN describes the contribution for each finding from the different instances.

There is one row for each finding and for each instance participating in the analysis. Rows are omitted if the impact from that instance is not sufficient to register a finding in a local ADDM analysis.

**Related View**

USER\_ADDM\_FDG\_BREAKDOWN describes the contribution for each finding from the different instances owned by the current user.

| Column               | Datatype | NULL     | Description                                                                                   |
|----------------------|----------|----------|-----------------------------------------------------------------------------------------------|
| TASK_ID              | NUMBER   | NOT NULL | Identifies the task to which this finding belongs (see DBA_ADVISOR_TASKS)                     |
| FINDING_ID           | NUMBER   | NOT NULL | Identifies the finding (see DBA_ADVISOR_FINDINGS)                                             |
| INSTANCE_NUMBER      | NUMBER   | NOT NULL | The number of the instance contributing to the finding                                        |
| DATABASE_TIME        | NUMBER   |          | The database time, in microseconds, accumulated by this instance during the analysis period   |
| ACTIVE_SESSIONS      | NUMBER   |          | The average number of active sessions of the finding in this instance                         |
| PERC_ACTIVE_SESSIONS | NUMBER   |          | The percentage of contribution from this instance compared to the total impact of the finding |

## 5.13 DBA\_ADDM\_FINDINGS

DBA\_ADDM\_FINDINGS displays the ADDM findings discovered by all advisors in the database.

Each row for ADDM tasks in the related DBA\_ADVISOR\_FINDINGS view has a corresponding row in this view.

## Related View

USER\_ADDM\_FINDINGS displays the ADDM findings discovered by the advisors owned by the current user. Each row for ADDM tasks in the related USER\_ADVISOR\_FINDINGS view has a corresponding row in this view. The USER\_ADDM\_FINDINGS view does not display the OWNER column.

| Column           | Datatype        | NULL     | Description                                                                                                                                                                                                                                                                              |
|------------------|-----------------|----------|------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|
| OWNER            | VARCHAR2 (128)  |          | Owner of the task                                                                                                                                                                                                                                                                        |
| TASK_ID          | NUMBER          | NOT NULL | Identifier of the task                                                                                                                                                                                                                                                                   |
| TASK_NAME        | VARCHAR2 (128)  |          | Name of the task                                                                                                                                                                                                                                                                         |
| EXECUTION_NAME   | VARCHAR2 (128)  |          | The name of the task execution with which this entry (row) is associated                                                                                                                                                                                                                 |
| FINDING_ID       | NUMBER          | NOT NULL | Identifier of the finding                                                                                                                                                                                                                                                                |
| FINDING_NAME     | VARCHAR2 (4000) |          | Name of the finding                                                                                                                                                                                                                                                                      |
| TYPE             | VARCHAR2 (11)   |          | Type of the finding:<br>PROBLEM<br>SYMPTOM<br>ERROR<br>INFORMATION                                                                                                                                                                                                                       |

## 5.14 DBA\_ADDM\_INSTANCES

DBA\_ADDM\_INSTANCES displays instance-level information for ADDM tasks that finished executing.

For each instance that was supposed to be analyzed (whether it was or not) there is one row describing information about it.

### Related View

USER\_ADDM\_INSTANCES displays instance-level information for ADDM tasks that finished executing in all instances owned by the current user.

| Column           | Datatype      | NULL     | Description                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                 |

| TASK_ID          | NUMBER        | NOT NULL | The ID of the main ADDM task                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                |
| INSTANCE_NUMBER  | NUMBER        | NOT NULL | The number of the instance                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                  |
| INSTANCE_NAME    | VARCHAR2 (16) |          | The name of the instance                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                    |
| HOST_NAME        | VARCHAR2 (64) |          | The name of the system on which the instance was running                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                    |
| STATUS           | VARCHAR2 (10) |          | How information from this instance was used by the ADDM task.<br><br>A value of ANALYZED means that the instance participated fully in the analysis. For the following remaining values, the instance was not used during task execution, for the stated reason:<br><br>BOUNCED - the instance was shut down or started during the analysis period<br><br>NO_SNAPS - there were either begin or end snapshots missing for the instance<br><br>NO_STATS - there were key statistics missing for the instance<br><br>NOT_FOUND - no mention of this instance could be found in AWR during the analysis period |
| DATABASE_TIME    | NUMBER        |          | The database time, in microseconds, accumulated by this instance during the analysis period                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                 |
| ACTIVE_SESSIONS  | NUMBER        |          | The average number of active sessions for the instance during the analysis period                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                           |
| PERC_ACTIVE_SESS | NUMBER        |          | The percentage of active sessions for this instance, out of the total active sessions for the task                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                          |
| METER_LEVEL      | VARCHAR2 (6)  |          | Reserved for future use                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                     |

| Column        | Datatype | NULL | Description                                                                                                                                                                                                       |
|---------------|----------|------|-------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|
| LOCAL_TASK_ID | NUMBER   |      | The ID of a local ADDM task that contained an analysis of the instance for the same analysis period as that of the main task. If the main task is a local ADDM, then this value is the same as the TASK_ID value. |

## 5.15 DBA\_ADDM\_PENDING\_AUTOTASKS

DBA\_ADDM\_PENDING\_AUTOTASKS displays information about all automatic ADDM tasks in the database that are currently being executed.

This view is accessible at both the CDB and PDB level and contains information about the ADDM tasks that were executed at each level. Oracle Autonomous Database and Oracle Cloud users can see information about the tasks that were executed in their PDB, obtain more diagnostic information on failed tasks, and manually re-execute those tasks. Once a task is executed successfully, its entry is removed from this view. Failed tasks automatically age out and are removed when the corresponding AWR snapshots age out.

| Column                 | Datatype       | NULL | Description                                                              |
|------------------------|----------------|------|--------------------------------------------------------------------------|
| DBID                   | NUMBER         |      | Database ID for the ADDM task                                            |
| INSTANCE_NUMBER        | NUMBER         |      | Instance number for the ADDM task                                        |
| END_SNAP_ID            | NUMBER         |      | End snapshot for the ADDM task                                           |
| STATUS                 | VARCHAR2 (20)  |      | Status of the task execution                                             |
| REGISTERED_TIME        | TIMESTAMP (6)  |      | Time at which the ADDM task was first registered for automatic execution |
| ERROR_MESSAGE          | VARCHAR2 (200) |      | If the execution of the ADDM task failed, the error message              |
| CREATION_ATTEMPTS      | NUMBER         |      | The number of attempts to automatically start the ADDM task.             |
| LAST_CREATION_ATTEMPT  | TIMESTAMP (6)  |      | The time of the last attempt to automatically start the ADDM task.       |
| EXECUTION_ATTEMPTS     | NUMBER         |      | Number of times the ADDM task has attempted to be run                    |
| LAST_EXECUTION_ATTEMPT | TIMESTAMP (6)  |      | Time of the most recent attempt to execute the ADDM task                 |

**Note:**

This view is available starting with Oracle Database 23ai.

## 5.16 DBA\_ADDM\_SCHEDULED\_AUTOTASKS

DBA\_ADDM\_SCHEDULED\_AUTOTASKS displays information about all automatic ADDM tasks in the database that are currently scheduled to be executed by the Manageability Monitor Process (MMON).

This view is accessible at both the CDB and PDB level and contains information about the ADDM tasks that are scheduled to be executed at each level. Oracle Autonomous Database and Oracle Cloud users can see information about the tasks that are scheduled for their PDB. Once a task starts executing, its entry is removed from this view.

| Column              | Datatype                     | NULL     | Description                                                                                                |
|---------------------|------------------------------|----------|------------------------------------------------------------------------------------------------------------|
| INSTANCE_NUMBER     | NUMBER                       | NOT NULL | Instance number for the ADDM task                                                                          |
| DBID                | NUMBER                       | NOT NULL | Database ID for the ADDM task                                                                              |
| END_SNAP_ID         | NUMBER                       | NOT NULL | End snapshot for the ADDM task                                                                             |
| TASK_TYPE           | VARCHAR2 (14)                |          | Type of ADDM task: <ul style="list-style-type: none"><li>• INSTANCE LEVEL</li><li>• SYSTEM LEVEL</li></ul> |
| SCHEDULED_SINCE_UTC | TIMESTAMP (6) WITH TIME ZONE |          | Time at which the ADDM task was scheduled to be executed, in UTC (Coordinated Universal Time) time zone    |

### Note:

This view is available starting with Oracle Database 23ai.

## 5.17 DBA\_ADDM\_SYSTEM\_DIRECTIVES

DBA\_ADDM\_SYSTEM\_DIRECTIVES displays information about global instances for ADDM system directives.

| Column         | Datatype        | NULL     | Description                                                                                                                    |
|----------------|-----------------|----------|--------------------------------------------------------------------------------------------------------------------------------|
| INSTANCE_ID    | NUMBER          | NOT NULL | Unique ID for the directive instance. The directive management engine automatically generates ID numbers.                      |
| INSTANCE_NAME  | VARCHAR2 (128)  | NOT NULL | User-assigned name for the directive instance.                                                                                 |
| DIRECTIVE_NAME | VARCHAR2 (128)  | NOT NULL | Any value that further classifies this directive within a domain. The domain and the name form a unique key for the directive. |
| DESCRIPTION    | VARCHAR2 (4000) |          | Description of the ADDM system directive, shown in the language used by the current session                                    |

## 5.18 DBA\_ADDM\_TASK\_DIRECTIVES

DBA\_ADDM\_TASK\_DIRECTIVES displays information about all ADDM task directives in the database.

### Related View

USER\_ADDM\_TASK\_DIRECTIVES displays information about ADDM task directives owned by the current user.

| Column         | Datatype        | NULL     | Description                                                                                                                    |
|----------------|-----------------|----------|--------------------------------------------------------------------------------------------------------------------------------|
| TASK_ID        | NUMBER          |          | An ADDM advisor task identifier to which the directive instance is associated                                                  |
| TASK_NAME      | VARCHAR2 (128)  |          | An ADDM advisor task to which the directive instance is associated                                                             |
| USERNAME       | VARCHAR2 (128)  | NOT NULL | Database user who owns the ADDM task instance                                                                                  |
| SEQ_ID         | NUMBER          | NOT NULL | Unique ID for the directive instance. The directive management engine automatically generates ID numbers.                      |
| INSTANCE_NAME  | VARCHAR2 (128)  | NOT NULL | A user-assigned name for the ADDM task directive instance                                                                      |
| DIRECTIVE_NAME | VARCHAR2 (128)  | NOT NULL | Any value that further classifies this directive within a domain. The domain and the name form a unique key for the directive. |
| DESCRIPTION    | VARCHAR2 (4000) |          | Description of the ADDM task directive, shown in the language used by the current session                                      |

## 5.19 DBA\_ADDM\_TASKS

DBA\_ADDM\_TASKS displays information about all ADDM tasks in the database.

The view contains one row for each row in the related DBA\_ADVISOR\_TASKS view that has ADVISOR\_NAME=ADDM and STATUS=COMPLETED.

### Related View

USER\_ADDM\_TASKS displays information about the ADDM tasks owned by the current user. The view contains one row for each row in the related USER\_ADVISOR\_TASKS view that has ADVISOR\_NAME=ADDM and STATUS=COMPLETED. This view does not display the OWNER column.

| Column  | Datatype       | NULL     | Description                   |
|---------|----------------|----------|-------------------------------|
| OWNER   | VARCHAR2 (128) |          | Owner of the task             |
| TASK_ID | NUMBER         | NOT NULL | Unique identifier of the task |

| REQUESTED_ANALYSIS            | VARCHAR2 (8)  |          | The type of ADDM analysis that was requested before task execution, as follows:<br>DATABASE - global ADDM<br>INSTANCE - local ADDM<br>PARTIAL - continental ADDM                                                                                                                                                                                                                                                            |
| ACTUAL_ANALYSIS               | VARCHAR2 (8)  |          | The type of ADDM analysis that was actually performed when the task was executed (either <b>DATABASE</b> , <b>INSTANCE</b> , or <b>PARTIAL</b> )                                                                                                                                                                                                                                                                            |
| DATABASE_TIME                 | NUMBER        |          | The total database time accumulated in the analysis period (and analyzed instances) in microseconds                                                                                                                                                                                                                                                                                                                         |
| ACTIVE_SESSIONS               | NUMBER        |          | The average active sessions during the analysis period (and analyzed sessions)                                                                                                                                                                                                                                                                                                                                              |
| METER_LEVEL                   | VARCHAR2 (6)  |          | Reserved for future use                                                                                                                                                                                                                                                                                                                                                                                                     |
| FDG_COUNT                     | NUMBER        |          | The number of findings for the ADDM task, which will appear in the list of findings in a default ADDM report                                                                                                                                                                                                                                                                                                                |
| DB_TYPE_DETECTED <sup>1</sup> | VARCHAR2 (10) |          | Indicates the open mode of the database that the task was analyzing, as detected by ADDM. Possible values: <ul style="list-style-type: none"> <li>• READ-ONLY</li> <li>• READ-WRITE</li> </ul>                                                                                                                                                                                                                              |
| DB_TYPE_ANALYZED <sup>1</sup> | VARCHAR2 (10) |          | Indicates the assumed open mode of the database that the task was analyzing. If the value of this column is different from the value of the <b>DB_TYPE_DETECTED</b> column, then ADDM ignored the detected open mode of the database and analyzed the task as if it occurred on a database with the assumed open mode. Possible values: <ul style="list-style-type: none"> <li>• READ-ONLY</li> <li>• READ-WRITE</li> </ul> |

| Column                         | Datatype      | NULL | Description                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                       |
|--------------------------------|---------------|------|---------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|
| CDB_TYPE_DETECTED <sup>1</sup> | VARCHAR2 (25) |      | Indicates the type of database that the task was analyzing, as detected by ADDM. Possible values: <ul style="list-style-type: none"> <li>• NON-CDB - A non-CDB</li> <li>• CDB ROOT - The root container in a CDB</li> <li>• PDB - A pluggable database (PDB) in a CDB</li> <li>• AUTONOMOUS DATA WAREHOUSE - A PDB that hosts an Oracle Autonomous Data Warehouse Cloud service</li> <li>• AUTONOMOUS OLTP - A PDB that hosts an Oracle Autonomous Transaction Processing service</li> </ul>                                                                                                                                                                                                      |
| CDB_TYPE_ANALYZED <sup>1</sup> | VARCHAR2 (25) |      | Indicates the assumed type of database that the task was analyzing. If the value of this column is different from the value of the CDB_TYPE_DETECTED column, then ADDM ignored the detected type of database and analyzed the task as if it occurred on the assumed type of database. Possible values: <ul style="list-style-type: none"> <li>• NON-CDB - A non-CDB</li> <li>• CDB ROOT - The root container in a CDB</li> <li>• PDB - A pluggable database (PDB) in a CDB</li> <li>• AUTONOMOUS DATA WAREHOUSE - A PDB that hosts an Oracle Autonomous Data Warehouse Cloud service</li> <li>• AUTONOMOUS OLTP - A PDB that hosts an Oracle Autonomous Transaction Processing service</li> </ul> |

<sup>1</sup> This column is available starting with Oracle Database 19c. If the task was analyzing a database at a release earlier than Oracle Database 19c, and that database was subsequently upgraded to Oracle Database 19c, then the value of this column is NULL.

## 5.20 DBA\_ADVISOR\_ACTIONS

DBA\_ADVISOR\_ACTIONS displays information about the actions associated with all recommendations in the database.

Each action is specified by the COMMAND and ATTR1 through ATTR6 columns. Each command defines how the attribute columns will be used.

### Related View

USER\_ADVISOR\_ACTIONS displays information about the actions associated with the recommendations owned by the current user. This view does not display the OWNER column.

| Column    | Datatype       | NULL     | Description            |
|-----------|----------------|----------|------------------------|
| OWNER     | VARCHAR2 (128) |          | Owner of the task      |
| TASK_ID   | NUMBER         | NOT NULL | Identifier of the task |
| TASK_NAME | VARCHAR2 (128) |          | Name of the task       |

| Column               | Datatype        | NULL     | Description                                                                                                                                                                                                                                                                                |
|----------------------|-----------------|----------|--------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|

## 5.21 DBA\_ADVISOR\_COMMANDS

DBA\_ADVISOR\_COMMANDS displays information about the commands used by all advisors in the database for specifying recommendation actions.

In addition to the set of commands in the COMMAND column of V\$SESSION, the following additional commands are defined:

- RUN ADVISOR
- CHECK EXECUTION PLAN
- ALTER PARAMETER
- ENABLE TRACE

| Column       | Datatype      | NULL | Description               |
|--------------|---------------|------|---------------------------|
| COMMAND_ID   | NUMBER        |      | Identifier of the command |
| COMMAND_NAME | VARCHAR2 (64) |      | Name of the command       |

## 5.22 DBA\_ADVISOR\_DEF\_PARAMETERS

DBA\_ADVISOR\_DEF\_PARAMETERS displays all default task parameters and their current values in the database.

When a task or object is created, the parameters and their values are copied into the private parameter table.

| Column          | Datatype        | NULL     | Description                                                                                                                                                                                                       |
|-----------------|-----------------|----------|-------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|
| ADVISOR_NAME    | VARCHAR2 (128)  | NOT NULL | Name of the advisor that supports the parameter                                                                                                                                                                   |
| PARAMETER_NAME  | VARCHAR2 (128)  | NOT NULL | Name of the parameter                                                                                                                                                                                             |
| PARAMETER_VALUE | VARCHAR2 (4000) | NOT NULL | Value of the parameter. Numeric parameter values are converted to a string equivalent.<br>Possible keywords as values: <ul style="list-style-type: none"><li>• ALL</li><li>• UNLIMITED</li><li>• UNUSED</li></ul> |

| Column                | Datatype        | NULL | Description                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                              |
|-----------------------|-----------------|------|------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|
| PARAMETER_TYPE        | VARCHAR2 (10)   |      | Datatype of the parameter: <ul style="list-style-type: none"> <li>NUMBER - Numeric value</li> <li>STRING - String value. If the string contains special characters, then it will be enclosed in single quotes.</li> <li>STRINGLIST - Comma-separated list of string elements. If a string element contains a comma or other special characters, then the element will be enclosed in single quotes.</li> <li>TABLE - Single table reference. A reference will contain a schema name, followed by an optional table name.<br/>If the table name is omitted or is the character %, then the table name is interpreted as a wildcard. SQL quoted identifiers are supported.</li> <li>TABLELIST - List of one or more comma-separated table references. A reference will contain schema name, followed by an optional table name.<br/>If the table name is omitted or is the character %, then the table name is interpreted as a wildcard. SQL quoted identifiers are supported.</li> </ul> |
| IS_DEFAULT            | VARCHAR2 (1)    |      | Indicates whether the parameter value is set to the advisor's default value (Y) or not (N)                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                               |
| IS_OUTPUT             | VARCHAR2 (1)    |      | Indicates whether the task execution process sets the parameter value (Y) or not (N)                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                     |
| IS_MODIFIABLE_ANYTIME | VARCHAR2 (1)    |      | Indicates whether the parameter value can be modified when the task is not in its initial state (Y) or not (N)                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                           |

| DESCRIPTION           | VARCHAR2 (4000) |      | Optional description of the parameter                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                    |
| EXECUTION_TYPE        | VARCHAR2 (128)  |      | Type of the last execution. This information is optional for single-execution tasks.                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                     |

## 5.23 DBA\_ADVISOR\_DEFINITIONS

DBA\_ADVISOR\_DEFINITIONS displays the properties of all advisors in the database.

The view contains one row for each task, representing the current state of the task as well as execution-specific data such as progress monitoring and completion status.

| Column       | Datatype       | NULL     | Description                       |
|--------------|----------------|----------|-----------------------------------|
| ADVISOR_ID   | NUMBER         | NOT NULL | Unique identifier for the advisor |
| ADVISOR_NAME | VARCHAR2 (128) | NOT NULL | Name of the advisor               |

| Column   | Datatype | NULL     | Description                                                                                                                                                                                                                                                                                                                                                                                                                 |
|----------|----------|----------|-----------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|
| PROPERTY | NUMBER   | NOT NULL | Properties: <ul style="list-style-type: none"> <li>• Bit 0: - Indicates whether the advisor runs in <b>COMPREHENSIVE</b> mode (1) or not (0)</li> <li>• Bit 1: - Indicates whether the advisor runs in <b>LIMITED</b> mode (1) or not (0)</li> <li>• Bit 2: - Indicates whether the advisor is resumable (1) or not (0)</li> <li>• Bit 3: - Indicates whether the advisor accepts user directives (1) or not (0)</li> </ul> |

## 5.24 DBA\_ADVISOR\_DIR\_DEFINITIONS

DBA\_ADVISOR\_DIR\_DEFINITIONS provides a definition of the base directive.

| Column         | Datatype       | NULL     | Description                                                                                                                                                                                                                                                                                                                                                                                                                                                      |
|----------------|----------------|----------|------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|
| ID             | NUMBER         | NOT NULL | Unique id for directive. The directive management engine automatically generates ID numbers. The identifier is unique among all directives regardless of the domain name and directive name.                                                                                                                                                                                                                                                                     |
| ADVISOR_ID     | NUMBER         | NOT NULL | Identifier number of the owner advisor.                                                                                                                                                                                                                                                                                                                                                                                                                          |
| ADVISOR_NAME   | VARCHAR2 (128) | NOT NULL | The name of the advisor to which this directive belongs.                                                                                                                                                                                                                                                                                                                                                                                                         |
| DIRECTIVE_NAME | VARCHAR2 (128) | NOT NULL | Any value that further classifies this directive within a domain. The domain and the name form a unique key for the directive.                                                                                                                                                                                                                                                                                                                                   |
| DOMAIN_NAME    | VARCHAR2 (128) | NOT NULL | Domain or namespace name.                                                                                                                                                                                                                                                                                                                                                                                                                                        |
| DESCRIPTION    | VARCHAR2 (256) | NOT NULL | An optional description that documents the purpose of the directive.                                                                                                                                                                                                                                                                                                                                                                                             |
| TYPE           | NUMBER         | NOT NULL | Further describes the use of the directive. Possible values are: <ol style="list-style-type: none"> <li>1. <b>Filter</b> - An Xpath filter</li> <li>2. <b>Single Value</b> - Evaluation returns a single string value</li> <li>3. <b>Multiple Values</b> - Evaluation returns one to many string values</li> <li>4. <b>Conditional</b> - Evaluation returns a single value based on an input key, similar to a <b>CASE</b> or <b>SWITCH</b> statement</li> </ol> |
| TYPE_NAME      | VARCHAR2 (15)  |          | A decoded version of the <b>TYPE</b> column.                                                                                                                                                                                                                                                                                                                                                                                                                     |
| TASK_STATUS    | VARCHAR2 (9)   |          | The status of the directive instances when a task is not in its initial state. Possible values are: <ul style="list-style-type: none"> <li>• IMMUTABLE</li> <li>• MUTABLE</li> </ul>                                                                                                                                                                                                                                                                             |
| INSTANCES      | VARCHAR2 (8)   |          | Indicates whether a directive will permit multiple instances. Possible values are: <ul style="list-style-type: none"> <li>• SINGLE</li> <li>• MULTIPLE</li> </ul>                                                                                                                                                                                                                                                                                                |

| Column   | Datatype | NULL     | Description                                  |
|----------|----------|----------|----------------------------------------------|
| METADATA | CLOB     | NOT NULL | A DTD that is used to process the directive. |

## 5.25 DBA\_ADVISOR\_DIR\_INSTANCES

DBA\_ADVISOR\_DIR\_INSTANCES provides information about all global instances for a directive.

| Column        | Datatype       | NULL     | Description                                                                                               |
|---------------|----------------|----------|-----------------------------------------------------------------------------------------------------------|
| DIRECTIVE_ID  | NUMBER         | NOT NULL | Unique id for directive. The directive management engine automatically generates ID numbers.              |
| INSTANCE_ID   | NUMBER         | NOT NULL | Unique id for the directive instance. The directive management engine automatically generates ID numbers. |
| INSTANCE_NAME | VARCHAR2 (128) | NOT NULL | A user-assigned name for the directive instance.                                                          |
| DATA          | CLOB           | NOT NULL | An XML document that gives meaningful default values for all parts of the directive.                      |

## 5.26 DBA\_ADVISOR\_DIR\_TASK\_INST

DBA\_ADVISOR\_DIR\_TASK\_INST provides information about all task directive instances.

### Related View

USER\_ADVISOR\_DIR\_TASK\_INST provides information about all task directive instances owned by the current user.

| Column        | Datatype       | NULL     | Description                                                                                               |
|---------------|----------------|----------|-----------------------------------------------------------------------------------------------------------|
| DIRECTIVE_ID  | NUMBER         | NOT NULL | Unique id for directive. The directive management engine automatically generates ID numbers.              |
| SEQ_ID        | NUMBER         | NOT NULL | Unique id for the directive instance. The directive management engine automatically generates ID numbers. |
| INSTANCE_NAME | VARCHAR2 (128) | NOT NULL | A user-assigned name for the directive instance.                                                          |
| USERNAME      | VARCHAR2 (128) | NOT NULL | Database user who owns the task instance.                                                                 |
| TASK_ID       | NUMBER         |          | An advisor task identifier to which the directive instance is associated                                  |
| TASK_NAME     | VARCHAR2 (128) |          | An advisor task to which the directive instance is associated.                                            |
| DATA          | CLOB           | NOT NULL | An XML document that gives meaningful default values for all parts of the directive.                      |

## 5.27 DBA\_ADVISOR\_EXEC\_PARAMETERS

DBA\_ADVISOR\_EXEC\_PARAMETERS displays the parameter values used for past executions of tasks.

It is more useful for advisors supporting multiple executions, such as SQL Performance Analyzer, where a parameter can have different values for different executions.

### Related View

USER\_ADVISOR\_EXEC\_PARAMETERS displays the parameter values used for past executions of tasks owned by the current user.

| Column                | Datatype        | NULL     | Description                                                                                                    |
|-----------------------|-----------------|----------|----------------------------------------------------------------------------------------------------------------|
| OWNER                 | VARCHAR2 (128)  |          | Owner of the task                                                                                              |
| TASK_ID               | NUMBER          | NOT NULL | Unique identifier of the task                                                                                  |
| TASK_NAME             | VARCHAR2 (128)  |          | Name of the task                                                                                               |
| EXECUTION_NAME        | VARCHAR2 (128)  | NOT NULL | Name of the task execution with which this entry (row) is associated                                           |
| EXECUTION_TYPE        | VARCHAR2 (128)  |          | Type of the last execution. This information is optional for single-execution tasks.                           |
| PARAMETER_NAME        | VARCHAR2 (128)  | NOT NULL | Name of the parameter                                                                                          |
| PARAMETER_VALUE       | VARCHAR2 (4000) |          | Value of the parameter. Numeric parameter values are converted to a string equivalent.                         |
| PARAMETER_TYPE        | VARCHAR2 (10)   |          | Datatype of the parameter (see DBA_ADVISOR_PARAMETERS)                                                         |
| IS_DEFAULT            | VARCHAR2 (1)    |          | Indicates whether the parameter value is set to the advisor's default value (Y) or not (N)                     |
| IS_OUTPUT             | VARCHAR2 (1)    |          | Indicates whether the task execution process sets the parameter value (Y) or not (N)                           |
| IS_MODIFIABLE_ANYTIME | VARCHAR2 (1)    |          | Indicates whether the parameter value can be modified when the task is not in its initial state (Y) or not (N) |
| DESCRIPTION           | VARCHAR2 (4000) |          | Optional description of the parameter                                                                          |
| PARAMETER_FLAGS       | NUMBER          | NOT NULL | Reserved for internal use                                                                                      |
| PARAMETER_TYPE#       | NUMBER          | NOT NULL | Reserved for internal use                                                                                      |

## 5.28 DBA\_ADVISOR\_EXECUTION\_TYPES

DBA\_ADVISOR\_EXECUTION\_TYPES displays possible execution action for a given advisor.

Only advisors that support multiple executions of their tasks have entries in this view.

| Column                | Datatype        | NULL     | Description                                |
|-----------------------|-----------------|----------|--------------------------------------------|
| ADVISOR_NAME          | VARCHAR2 (128)  | NOT NULL | Name of the advisor                        |
| EXECUTION_TYPE        | VARCHAR2 (128)  | NOT NULL | Execution type supported by the advisor    |
| EXECUTION_DESCRIPTION | VARCHAR2 (4000) |          | Optional description of the execution type |

## 5.29 DBA\_ADVISOR\_EXECUTIONS

DBA\_ADVISOR\_EXECUTIONS displays metadata information for task executions.

For example, the SQL Performance Analyzer creates a minimum of three executions to perform a change impact analysis on a SQL workload. The first one collects performance data for the version of the workload before the change, the second one collects data for the version of the workload after the change, and the third one performs impact analysis. All of these executions belong to the same task and are grouped into this view. Similarly, the automatic SQL tuning task, SYS\_AUTO\_SQL\_TUNING\_TASK, creates a new execution for each tuning run.

### Related View

USER\_ADVISOR\_EXECUTIONS displays metadata information for task executions owned by the current user.

| Column                  | Datatype       | NULL     | Description                                                                                                                                                                                                     |
|-------------------------|----------------|----------|-----------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|
| OWNER                   | VARCHAR2 (128) |          | Owner of the task                                                                                                                                                                                               |
| TASK_ID                 | NUMBER         | NOT NULL | Unique identifier of the task                                                                                                                                                                                   |
| TASK_NAME               | VARCHAR2 (128) |          | Name of the task                                                                                                                                                                                                |
| EXECUTION_NAME          | VARCHAR2 (128) | NOT NULL | Name of the task execution with which this entry (row) is associated                                                                                                                                            |
| EXECUTION_ID            | NUMBER         | NOT NULL | Execution ID                                                                                                                                                                                                    |
| DESCRIPTION             | VARCHAR2 (256) |          | User-supplied description of the task                                                                                                                                                                           |
| EXECUTION_TYPE          | VARCHAR2 (128) |          | Type of the last execution (optional for single-execution tasks)                                                                                                                                                |
| EXECUTION_TYPE#         | NUMBER         |          | Reserved for internal use                                                                                                                                                                                       |
| EXECUTION_START         | DATE           |          | Execution start date and time                                                                                                                                                                                   |
| EXECUTION_LAST_MODIFIED | DATE           | NOT NULL | Last modified date and time for the execution                                                                                                                                                                   |
| EXECUTION_END           | DATE           |          | Execution end date and time                                                                                                                                                                                     |
| ADVISOR_NAME            | VARCHAR2 (128) |          | Advisor associated with the task                                                                                                                                                                                |
| REQUESTED_DOP           | NUMBER         |          | The degree of parallelism (DOP) value requested by the user (through the TEST_EXECUTE_DOP parameter). It can be any value greater or equal to zero.                                                             |
| ACTUAL_DOP              | NUMBER         |          | The actual degree of parallelism (DOP) with which the execution finished. If the requested DOP is greater than what is available on the system, the ACTUAL_DOP value can be lower than the REQUESTED_DOP value. |
| CONCURRENT_EXECUTION    | VARCHAR2 (3)   |          | Indicates whether concurrency was used for this execution (YES) or not (NO)                                                                                                                                     |
| ADVISOR_ID              | NUMBER         | NOT NULL | Unique identifier for the advisor                                                                                                                                                                               |

| Column         | Datatype        | NULL     | Description                                                                                                                                                                                   |
|----------------|-----------------|----------|-----------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|
| STATUS         | VARCHAR2 (11)   |          | Current operational status of the task: <ul style="list-style-type: none"> <li>• EXECUTING</li> <li>• COMPLETED</li> <li>• INTERRUPTED</li> <li>• CANCELLED</li> <li>• FATAL ERROR</li> </ul> |
| STATUS#        | NUMBER          | NOT NULL | Reserved for internal use                                                                                                                                                                     |
| STATUS_MESSAGE | VARCHAR2 (4000) |          | Informational message provided by the advisor regarding the status                                                                                                                            |
| ERROR_MESSAGE  | VARCHAR2 (4000) |          | Informational message or an error message indicating the current operation or condition                                                                                                       |

## 5.30 DBA\_ADVISOR\_FDG\_BREAKDOWN

DBA\_ADVISOR\_FDG\_BREAKDOWN describes the contribution from the different instances to the findings for each ADDM task.

This view is populated only with ADDM tasks that are analyzing multiple instances (that is, the ACTUAL\_ANALYSIS column in the task's row in DBA\_ADDM\_TASKS is set to DATABASE or PARTIAL).

### Related View

USER\_ADVISOR\_FDG\_BREAKDOWN describes the contribution from the different instances to the findings for each ADDM task owned by the current user.

| Column          | Datatype       | NULL     | Description                                                                                                |
|-----------------|----------------|----------|------------------------------------------------------------------------------------------------------------|
| TASK_ID         | NUMBER         | NOT NULL | Unique identifier of the task (see DBA_ADVISOR_TASKS and DBA_ADDM_TASKS)                                   |
| FINDING_ID      | NUMBER         | NOT NULL | Identifier of the finding to which this breakdown applies (see DBA_ADVISOR_FINDINGS and DBA_ADDM_FINDINGS) |
| INSTANCE_NUMBER | NUMBER         | NOT NULL | The number of the instance for the breakdown                                                               |
| IMPACT          | NUMBER         |          | The database time (in microseconds) of the finding in the instance                                         |
| PERC_IMPACT     | NUMBER         |          | Percentage of the contribution of the instance to the overall finding's impact                             |
| EXECUTION_NAME  | VARCHAR2 (128) |          | The name of the task execution with which this entry (row) is associated                                   |

## 5.31 DBA\_ADVISOR\_FINDING\_NAMES

DBA\_ADVISOR\_FINDING\_NAMES provides a list of all finding names registered with the Advisor Framework.

| Column       | Datatype        | NULL     | Description            |
|--------------|-----------------|----------|------------------------|
| ID           | NUMBER          |          | ID of the finding name |
| ADVISOR_NAME | VARCHAR2 (128)  | NOT NULL | Advisor name           |
| FINDING_NAME | VARCHAR2 (4000) |          | Finding name           |

## 5.32 DBA\_ADVISOR\_FINDINGS

DBA\_ADVISOR\_FINDINGS displays the findings discovered by all advisors in the database.

### Related View

USER\_ADVISOR\_FINDINGS displays the findings discovered by the advisors owned by the current user. This view does not display the OWNER column.

| Column         | Datatype        | NULL     | Description                                                                                                                                 |
|----------------|-----------------|----------|---------------------------------------------------------------------------------------------------------------------------------------------|
| OWNER          | VARCHAR2 (128)  |          | Owner of the task                                                                                                                           |
| TASK_ID        | NUMBER          | NOT NULL | Identifier of the task                                                                                                                      |
| TASK_NAME      | VARCHAR2 (128)  |          | Name of the task                                                                                                                            |
| EXECUTION_NAME | VARCHAR2 (128)  |          | The name of the task execution with which this entry (row) is associated                                                                    |
| FINDING_ID     | NUMBER          | NOT NULL | Identifier of the finding                                                                                                                   |
| FINDING_NAME   | VARCHAR2 (4000) |          | Name of the finding                                                                                                                         |
| TYPE           | VARCHAR2 (11)   |          | Type of the finding: <ul style="list-style-type: none"> <li>• PROBLEM</li> <li>• SYMPTOM</li> <li>• ERROR</li> <li>• INFORMATION</li> </ul> |
| TYPE_ID        | NUMBER          | NOT NULL | Numeric ID for the value in column TYPE                                                                                                     |
| PARENT         | NUMBER          | NOT NULL | Identifier of the parent finding                                                                                                            |
| OBJECT_ID      | NUMBER          |          | Identifier of the associated object, if any                                                                                                 |
| IMPACT_TYPE    | VARCHAR2 (4000) |          | Impact of the finding on the system                                                                                                         |
| IMPACT         | NUMBER          |          | Impact value                                                                                                                                |
| MESSAGE        | VARCHAR2 (4000) |          | Message describing the finding                                                                                                              |
| MORE_INFO      | VARCHAR2 (4000) |          | Additional info associated with the finding                                                                                                 |

| Column   | Datatype     | NULL | Description                                                                                                                                                                   |
|----------|--------------|------|-------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|
| FILTERED | VARCHAR2 (1) |      | A value of <b>Y</b> means that the row in the view was filtered out by a directive (or a combination of directives). A value of <b>N</b> means that the row was not filtered. |
| FLAGS    | NUMBER       |      | For internal use only by advisor framework clients                                                                                                                            |

## 5.33 DBA\_ADVISOR\_JOURNAL

DBA\_ADVISOR\_JOURNAL displays the journal entries for all tasks in the database.

### Related View

USER\_ADVISOR\_JOURNAL displays the journal entries for the tasks owned by the current user. This view does not display the OWNER column.

| Column             | Datatype        | NULL     | Description                                                                                                                                                                |
|--------------------|-----------------|----------|----------------------------------------------------------------------------------------------------------------------------------------------------------------------------|
| OWNER              | VARCHAR2 (128)  |          | Owner of the task                                                                                                                                                          |
| TASK_ID            | NUMBER          | NOT NULL | Identifier of the task or workload object                                                                                                                                  |
| TASK_NAME          | VARCHAR2 (128)  |          | Name of the task or workload object                                                                                                                                        |
| EXECUTION_NAME     | VARCHAR2 (128)  |          | The name of the task execution with which this entry (row) is associated                                                                                                   |
| JOURNAL_ENTRY_SEQ  | NUMBER          | NOT NULL | Sequence number of the journal entry (unique for each task). This sequence number is used to order the data.                                                               |
| JOURNAL_ENTRY_TYPE | VARCHAR2 (12)   |          | Type of the task: <ul style="list-style-type: none"><li>• FATAL</li><li>• ERROR</li><li>• WARNING</li><li>• INFORMATION</li><li>• INFORMATION[2   3   4   5   6]</li></ul> |
| JOURNAL_ENTRY      | VARCHAR2 (4000) |          | Entry in the journal                                                                                                                                                       |

## 5.34 DBA\_ADVISOR\_LOG

DBA\_ADVISOR\_LOG displays information about the current state of all tasks in the database, as well as execution-specific data such as progress monitoring and completion status.

The view contains one row for each task.

### Related View

USER\_ADVISOR\_LOG displays information about the current state of the tasks owned by the current user. This view does not display the OWNER column.

| Column               | Datatype        | NULL     | Description                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                     |

## 5.35 DBA\_ADVISOR\_OBJECT\_TYPES

DBA\_ADVISOR\_OBJECT\_TYPES displays information about the object types used by all advisors in the database.

In addition to the regular database object types (such as TABLE and INDEX), the following types are defined:

- SYSTEM
- I/O

| Column         | Datatype      | NULL | Description     |
|----------------|---------------|------|-----------------|
| OBJECT_TYPE_ID | NUMBER        |      | Type identifier |
| OBJECT_TYPE    | VARCHAR2 (64) |      | Type name       |

## 5.36 DBA\_ADVISOR\_OBJECTS

DBA\_ADVISOR\_OBJECTS displays information about the objects currently referenced by all advisors in the database.

Each row in the view pertains to an object instantiation.

### Related View

USER\_ADVISOR\_OBJECTS displays information about the objects currently referenced by the advisors owned by the current user. This view does not display the OWNER ATTR21, and ATTR22 columns.

| Column         | Datatype        | NULL     | Description                                                                                                                                              |
|----------------|-----------------|----------|----------------------------------------------------------------------------------------------------------------------------------------------------------|
| OWNER          | VARCHAR2 (128)  |          | Owner of the object                                                                                                                                      |
| OBJECT_ID      | NUMBER          | NOT NULL | Identifier of the object                                                                                                                                 |
| TYPE           | VARCHAR2 (64)   |          | Name of the type                                                                                                                                         |
| TYPE_ID        | NUMBER          | NOT NULL | Type identifier number                                                                                                                                   |
| TASK_ID        | NUMBER          | NOT NULL | Task referencing the object                                                                                                                              |
| TASK_NAME      | VARCHAR2 (128)  |          | Name of the task                                                                                                                                         |
| EXECUTION_NAME | VARCHAR2 (128)  |          | The name of the task execution with which this entry (row) is associated                                                                                 |
| ATTR1          | VARCHAR2 (4000) |          | Attributes and identifier of the object                                                                                                                  |
| ATTR2          | VARCHAR2 (4000) |          | Attributes and identifier of the object                                                                                                                  |
| ATTR3          | VARCHAR2 (4000) |          | Attributes and identifier of the object                                                                                                                  |
| ATTR4          | CLOB            |          | Attributes and identifiers that cannot be expressed in the ATTR1, ATTR2, and ATTR3 columns                                                               |
| ATTR5          | VARCHAR2 (4000) |          | Attributes and identifier of the object                                                                                                                  |
| ATTR6          | RAW (2000)      |          | Attributes and identifier of the object                                                                                                                  |
| ATTR7          | NUMBER          |          | Attributes and identifier of the object                                                                                                                  |
| ATTR8          | NUMBER          |          | Attributes and identifier of the object                                                                                                                  |
| ATTR9          | NUMBER          |          | Attributes and identifier of the object                                                                                                                  |
| ATTR10         | NUMBER          |          | Attributes and identifier of the object                                                                                                                  |
| ATTR11         | NUMBER          |          | Attributes and identifier of the object                                                                                                                  |
| ATTR16         | VARCHAR2 (4000) |          | Attributes and identifier of the object                                                                                                                  |
| ATTR17         | VARCHAR2 (4000) |          | Attributes and identifier of the object                                                                                                                  |
| ATTR18         | VARCHAR2 (4000) |          | Attributes and identifier of the object                                                                                                                  |
| ATTR21         | DATE            |          | Attributes and identifier of the object                                                                                                                  |
| ATTR22         | DATE            |          | Attributes and identifier of the object                                                                                                                  |
| OTHER          | CLOB            |          | Other attributes and identifiers of the object                                                                                                           |
| ADV_SQL_ID     | VARCHAR2 (13)   |          | If the object type is <code>SQL</code> , then this column contains the SQL identifier of the SQL statement. Otherwise, the value of this column is null. |

#### Note:

The definition of the `ATTRn` columns depends on the advisors that are using the object. For example, the `SQL` object type defines the attribute columns as follows:

- `ATTR1` contains the SQL ID
- `ATTR2` contains the SQL address (in the cursor cache)
- `ATTR4` contains the SQL text

## 5.37 DBA\_ADVISOR\_PARAMETERS

DBA\_ADVISOR\_PARAMETERS displays all task parameters and their current values in the database.

This data is accessible by all tasks.

### Related View

USER\_ADVISOR\_PARAMETERS displays the task parameters and their current values for the tasks owned by the current user. This view does not display the OWNER column.

| Column          | Datatype        | NULL     | Description                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                        |

| TASK_NAME      | VARCHAR2 (128)  |          | Name of the task                                                                                                                                                                                                                                                                                                                   |
| EXECUTION_NAME | VARCHAR2 (128)  |          | The name of the task execution with which this entry (row) is associated                                                                                                                                                                                                                                                           |
| REC_ID         | NUMBER          |          | Recommendation associated with the rationale                                                                                                                                                                                                                                                                                       |
| RATIONALE_ID   | NUMBER          | NOT NULL | Unique identifier for the rationale                                                                                                                                                                                                                                                                                                |
| IMPACT_TYPE    | VARCHAR2 (4000) |          | Impact on the system due to the problem described in the rationale. The impact can be described in terms of time, cost, or % degradation.                                                                                                                                                                                          |
| IMPACT         | NUMBER          |          | Calculated impact value                                                                                                                                                                                                                                                                                                            |
| MESSAGE        | VARCHAR2 (4000) |          | Message containing an overview of the rationale                                                                                                                                                                                                                                                                                    |
| OBJECT_ID      | NUMBER          |          | Identifier of an object specified in the DBA_ADVISOR_OBJECTS view                                                                                                                                                                                                                                                                  |
| TYPE           | VARCHAR2 (30)   |          | Type of the rationale; defines what data exists in the attribute columns and how to interpret it: <ul style="list-style-type: none"> <li>TEXT - Text sentence for descriptive messages. The ATTR1 column contains the text.</li> <li>CHART - Chart containing data to be displayed. The ATTR1 column contains the data.</li> </ul> |
| ATTR1          | VARCHAR2 (4000) |          | Parameters defining the rationale                                                                                                                                                                                                                                                                                                  |

| Column | Datatype        | NULL | Description                       |
|--------|-----------------|------|-----------------------------------|
| ATTR2  | VARCHAR2 (4000) |      | Parameters defining the rationale |
| ATTR3  | VARCHAR2 (4000) |      | Parameters defining the rationale |
| ATTR4  | VARCHAR2 (4000) |      | Parameters defining the rationale |
| ATTR5  | CLOB            |      | Parameters defining the rationale |

## 5.39 DBA\_ADVISOR\_RECOMMENDATIONS

DBA\_ADVISOR\_RECOMMENDATIONS displays the results of an analysis of all recommendations in the database.

A recommendation can have multiple actions associated with it. Actions are described in the DBA\_ADVISOR\_ACTIONS view. A recommendation also points to a set of rationales that present a justification/reasoning for that recommendation. These rationales are in the DBA\_ADVISOR\_RATIONALE view.

### Related View

USER\_ADVISOR\_RECOMMENDATIONS displays the results of an analysis of the recommendations owned by the current user. This view does not display the OWNER column.

| Column         | Datatype        | NULL     | Description                                                                                                                                                                                                      |
|----------------|-----------------|----------|------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|
| OWNER          | VARCHAR2 (128)  |          | Owner of the task                                                                                                                                                                                                |
| REC_ID         | NUMBER          | NOT NULL | Unique identifier of the recommendation                                                                                                                                                                          |
| TASK_ID        | NUMBER          | NOT NULL | Task that owns the recommendation                                                                                                                                                                                |
| TASK_NAME      | VARCHAR2 (128)  |          | Name of the task                                                                                                                                                                                                 |
| EXECUTION_NAME | VARCHAR2 (128)  |          | The name of the task execution with which this entry (row) is associated                                                                                                                                         |
| FINDING_ID     | NUMBER          |          | Unique identifier of the finding                                                                                                                                                                                 |
| TYPE           | VARCHAR2 (30)   |          | Type of the recommendation                                                                                                                                                                                       |
| RANK           | NUMBER          |          | Ranking, in terms of importance, within the set of recommendations generated for the task                                                                                                                        |
| PARENT_REC_IDS | VARCHAR2 (4000) |          | Comma-separated list of the recommendation IDs of the parent recommendations. If this column is nonzero, then the recommendation depends on the parents, and cannot be accepted if the parents are not accepted. |

| Column            | Datatype        | NULL | Description                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                         |
|-------------------|-----------------|------|---------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|
| BENEFIT_TYPE      | VARCHAR2 (4000) |      | <p>Describes the benefit obtained by carrying out the recommendation</p> <p>If there is a set of parents for the recommendation, then the benefit is the cumulative benefit (the improvement in system performance when this and all prior parent recommendations are accepted).</p> <p>If there are no parents, then this is the improvement when the recommendation is accepted, independent of other recommendations.</p>                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                        |
| BENEFIT           | NUMBER          |      | <p>Calculated benefit value</p> <p>This column displays an estimate of the savings in total activity (or load) on the system if all actions of the recommendation are implemented.</p> <p>Recommendations are not additive, that is, the benefit from one recommendation may overlap with the benefit from another. For example, Oracle might recommend increasing the shared pool size, or reducing hard parses (by not using literals), and both recommendations might reduce the same part of the workload related to parsing.</p> <p>The benefit is given in both pure active sessions and as a percent of the average active sessions of the analysis time period. Therefore, if the benefit is 20% of active sessions, Oracle estimates that if you apply the actions on the same workload, the average active sessions on the server will be reduced by 20%. The <code>DBA_ADDM_TASKS</code> view displays the average active sessions for an ADDM task.</p> |
| ANNOTATION_STATUS | VARCHAR2 (11)   |      | <p>When a task is complete, the recommendations are marked <code>ACCEPT</code>. The status can be changed later using the <code>MARK_RECOMMENDATION</code> procedure:</p> <ul style="list-style-type: none"><li>• <code>ACCEPT</code> - Current recommendation is ready to implement. This recommendation can also be used as advice for future analysis operations.</li><li>• <code>REJECT</code> - Current recommendation is not acceptable to the user, and therefore will be excluded from any implementation scripts. This recommendation can also be used as advice for future analysis operations.</li><li>• <code>IGNORE</code> - Though not rejected, the current recommendation will be ignored when generating scripts and will never be used as advice to future analysis operations.</li></ul>                                                                                                                                                         |
| FLAGS             | NUMBER          |      | Advisor-specific flags                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                              |

## 5.40 DBA\_ADVISOR\_SQLA\_REC\_SUM

DBA\_ADVISOR\_SQLA\_REC\_SUM displays recommendation rollup information for all workload objects in the database after an Access Advisor analysis operation.

### Related View

USER\_ADVISOR\_SQLA\_REC\_SUM displays recommendation rollup information for the workload objects owned by the current user. This view does not display the OWNER column.

| Column         | Datatype       | NULL | Description                                                                                                                              |
|----------------|----------------|------|------------------------------------------------------------------------------------------------------------------------------------------|
| OWNER          | VARCHAR2 (128) |      | Owner of the task                                                                                                                        |
| TASK_ID        | NUMBER         |      | Unique identifier of the task                                                                                                            |
| TASK_NAME      | VARCHAR2 (128) |      | Name of the task                                                                                                                         |
| REC_ID         | NUMBER         |      | Identifier of the recommendation                                                                                                         |
| TOTAL_STMTS    | NUMBER         |      | Total number of statements processed during analysis                                                                                     |
| TOTAL_PRECOST  | NUMBER         |      | Total cost of executing the statements in which the recommended object will be used, before the recommendations                          |
| TOTAL_POSTCOST | NUMBER         |      | Total cost of executing the statements in which the recommended object will be utilized, after the recommendations have been implemented |

## 5.41 DBA\_ADVISOR\_SQLA\_TABLES

DBA\_ADVISOR\_SQLA\_TABLES displays cross references between the workload statements and the tables referenced in the statement.

### Related View

USER\_ADVISOR\_SQLA\_TABLES displays cross references between the workload statements and the tables referenced in the statement for the current user. This view does not display the OWNER column.

| Column | Datatype       | NULL | Description                  |
|--------|----------------|------|------------------------------|
| OWNER  | VARCHAR2 (128) |      | Owner of the workload object |

| Column      | Datatype       | NULL | Description                                              |
|-------------|----------------|------|----------------------------------------------------------|
| TASK_ID     | NUMBER         |      | Unique identifier of the task                            |
| TASK_NAME   | VARCHAR2 (128) |      | Name of the task                                         |
| SQL_ID      | VARCHAR2 (13)  |      | SQL identifier of the parent cursor in the library cache |
| STMT_ID     | NUMBER         |      | Statement ID                                             |
| TABLE_OWNER | VARCHAR2 (128) |      | Owner of the table                                       |
| TABLE_NAME  | VARCHAR2 (128) |      | Table name                                               |

## 5.42 DBA\_ADVISOR\_SQLA\_WK\_MAP

DBA\_ADVISOR\_SQLA\_WK\_MAP displays the workload references for all tasks in the database.

Workload references are necessary to allow the SQL Access Advisor to find required workload data.

### Related View

USER\_ADVISOR\_SQLA\_WK\_MAP displays the workload references for the tasks owned by the current user. This view does not display the OWNER column.

| Column        | Datatype       | NULL | Description                                                                                                                     |
|---------------|----------------|------|---------------------------------------------------------------------------------------------------------------------------------|
| OWNER         | VARCHAR2 (128) |      | Owner of the task                                                                                                               |
| TASK_ID       | NUMBER         |      | Unique identifier of the task                                                                                                   |

| SQLSET_NAME         | VARCHAR2 (128) |          | Name of the SQL tuning set for the statement                                                                                                                                                                  |
| WORKLOAD_NAME       | VARCHAR2 (128) |          | Name of the workload                                                                                                                                                                                          |
| SQL_ID              | VARCHAR (13)   | NOT NULL | Generated identifier of the statement                                                                                                                                                                         |
| SQL_SEQ             | NUMBER         | NOT NULL | SQL sequence                                                                                                                                                                                                  |
| PLAN_HASH_VALUE     | NUMBER         | NOT NULL | Numerical representation of the SQL plan for the cursor. Comparing one PLAN_HASH_VALUE to another easily identifies whether or not two plans are the same (rather than comparing the two plans line-by-line). |
| PARSING_SCHEMA_NAME | VARCHAR2 (128) |          | Schema name that was used to originally build this child cursor                                                                                                                                               |
| USERNAME            | VARCHAR2 (128) |          | Name of the user executing the statement                                                                                                                                                                      |
| MODULE              | VARCHAR2 (64)  |          | Name of the module issuing the statement                                                                                                                                                                      |
| ACTION              | VARCHAR2 (64)  |          | Module action for the statement                                                                                                                                                                               |
| CPU_TIME            | NUMBER         |          | Total CPU count (in seconds) of the executing statement                                                                                                                                                       |
| BUFFER_GETS         | NUMBER         |          | Total number of buffer gets for the statement                                                                                                                                                                 |
| DISK_READS          | NUMBER         |          | Total disk-read I/O count for the statement                                                                                                                                                                   |
| ELAPSED_TIME        | NUMBER         |          | Total elapsed time (in seconds) of the executing statement                                                                                                                                                    |
| ROWS_PROCESSED      | NUMBER         |          | Total number of rows processed by the statement                                                                                                                                                               |
| EXECUTIONS          | NUMBER         |          | Total number of times the statement was executed                                                                                                                                                              |
| FIRST_LOAD_TIME     | DATE           |          | Load time of parent cursor                                                                                                                                                                                    |
| LAST_EXECUTION_DATE | DATE           |          | Date on which the statement was last executed                                                                                                                                                                 |
| PRIORITY            | NUMBER         |          | Business importance of the statement: <ul style="list-style-type: none"> <li>• 1 - High</li> <li>• 2 - Medium</li> <li>• 3 - Low</li> </ul>                                                                   |
| COMMAND_TYPE        | NUMBER         |          | Type of the command                                                                                                                                                                                           |
| STAT_PERIOD         | NUMBER         |          | Unused                                                                                                                                                                                                        |

| Column             | Datatype | NULL | Description                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                     |
|--------------------|----------|------|---------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|
| ACTIVE_STAT_PERIOD | NUMBER   |      | Effective period of time (in seconds) during which the SQL statement was active                                                                                                                                                                                                                                                                                                                                                                                                                                                 |
| SQL_TEXT           | CLOB     |      | Text of the SQL statement                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                       |
| PRECOST            | NUMBER   |      | Cost of executing the statement in the workload prior to the recommendations                                                                                                                                                                                                                                                                                                                                                                                                                                                    |
| POSTCOST           | NUMBER   |      | Cost of executing the statement in the workload after the recommendations                                                                                                                                                                                                                                                                                                                                                                                                                                                       |
| IMPORTANCE         | NUMBER   |      | Advisor-calculated importance value                                                                                                                                                                                                                                                                                                                                                                                                                                                                                             |
| REC_ID             | NUMBER   |      | Associated recommendation identifier                                                                                                                                                                                                                                                                                                                                                                                                                                                                                            |
| VALIDATED          | NUMBER   |      | Indicates whether the statement is valid for analysis: <ul style="list-style-type: none"> <li>0 - Statement will not be analyzed by the <code>EXECUTE_TASK</code> procedure. Typically, the statement references one or more tables that do not have valid statistics. To correct this problem, ensure that the tables have valid statistics and execute the <code>RESET_SQLWKLD</code> procedure on the current workload.</li> <li>1- Statement is eligible for analysis by the <code>EXECUTE_TASK</code> procedure</li> </ul> |

## 5.44 DBA\_ADVISOR\_SQLPLANS

DBA\_ADVISOR\_SQLPLANS displays the different SQL execution plans generated as part of an advisor analysis.

### Related View

USER\_ADVISOR\_SQLPLANS displays the different SQL execution plans owned by the current user generated as part of an advisor analysis.

| Column         | Datatype       | NULL     | Description                                                                             |
|----------------|----------------|----------|-----------------------------------------------------------------------------------------|
| TASK_NAME      | VARCHAR2 (128) |          | Advisor task name in which the SQL plan was generated (see DBA_ADVISOR_TASKS)           |
| TASK_ID        | NUMBER (38)    | NOT NULL | Advisor task ID in which the SQL plan was generated (see DBA_ADVISOR_TASKS)             |
| EXECUTION_NAME | VARCHAR2 (128) | NOT NULL | Advisor task execution in which the SQL plan was generated (see DBA_ADVISOR_EXECUTIONS) |
| SQL_ID         | VARCHAR2 (13)  | NOT NULL | Identifier for the relevant SQL statement                                               |
| OBJECT_ID      | NUMBER (38)    | NOT NULL | Advisor object ID identifying the relevant SQL statement (see DBA_ADVISOR_OBJECTS)      |

| Column          | Datatype        | NULL     | Description                                                                                                                                                                                                                                                                                                                                                                                               |
|-----------------|-----------------|----------|-----------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|
| ATTRIBUTE       | VARCHAR2 (34)   |          | Text string identifying the type of the execution plan. The following values are used by the SQL Tuning Advisor: <ul style="list-style-type: none"> <li>Original - Original plan of the query</li> <li>Original with adjusted cost - Same as Original but with adjusted cost</li> <li>Using SQL profile - Plan with SQL profile applied</li> <li>Using new indices - Plan with indexes applied</li> </ul> |
| STATEMENT_ID    | VARCHAR2 (30)   |          | Optional statement identifier specified in the <code>EXPLAIN PLAN</code> statement                                                                                                                                                                                                                                                                                                                        |
| PLAN_HASH_VALUE | NUMBER          | NOT NULL | Numerical representation of the execution plan                                                                                                                                                                                                                                                                                                                                                            |
| PLAN_ID         | NUMBER          | NOT NULL | Plan identifier                                                                                                                                                                                                                                                                                                                                                                                           |
| TIMESTAMP       | DATE            |          | Date and time when the <code>EXPLAIN PLAN</code> statement was issued                                                                                                                                                                                                                                                                                                                                     |
| REMARKS         | VARCHAR2 (4000) |          | Place for comments that can be added to the steps of the execution plan                                                                                                                                                                                                                                                                                                                                   |
| OPERATION       | VARCHAR2 (30)   |          | Name of the operation performed at this step                                                                                                                                                                                                                                                                                                                                                              |
| OPTIONS         | VARCHAR2 (255)  |          | Options used for the operation performed at this step                                                                                                                                                                                                                                                                                                                                                     |
| OBJECT_NODE     | VARCHAR2 (128)  |          | Name of the database link used to reference the object                                                                                                                                                                                                                                                                                                                                                    |

## 5.45 DBA\_ADVISOR\_SQLSTATS

DBA\_ADVISOR\_SQLSTATS displays execution statistics for the test-execution of different SQL plans during the advisor analysis.

### Related View

USER\_ADVISOR\_SQLSTATS displays execution statistics owned by the current user for the test-execution of different SQL plans during the advisor analysis.

| Column         | Datatype      | NULL     | Description                                                                                                               |
|----------------|---------------|----------|---------------------------------------------------------------------------------------------------------------------------|
| TASK_NAME      | VARCHAR2(128) |          | Advisor task name in which the SQL statement was executed (see DBA_ADVISOR_TASKS)                                         |
| TASK_ID        | NUMBER(38)    | NOT NULL | Advisor task ID in which the SQL statement was executed (see DBA_ADVISOR_TASKS)                                           |
| EXECUTION_NAME | VARCHAR2(128) | NOT NULL | Advisor task execution in which the SQL statement was executed (see DBA_ADVISOR_EXECUTIONS)                               |
| EXECUTION_TYPE | VARCHAR2(128) |          | Type of the advisor task execution in which the SQL statement was executed (see DBA_ADVISOR_EXECUTIONS)                   |
| OBJECT_ID      | NUMBER(38)    | NOT NULL | Advisor object ID identifying the relevant SQL statement (see DBA_ADVISOR_OBJECTS)                                        |
| PLAN_ID        | NUMBER        | NOT NULL | Plan ID number generated to uniquely identify a plan for a particular SQL statement (foreign key to DBA_ADVISOR_SQLPLANS) |

| Column                      | Datatype      | NULL     | Description                                                                                      |
|-----------------------------|---------------|----------|--------------------------------------------------------------------------------------------------|
| SQL_ID                      | VARCHAR2 (13) | NOT NULL | Identifier for the SQL statement executed                                                        |
| PLAN_HASH_VALUE             | NUMBER        | NOT NULL | Hash value of the SQL execution plan                                                             |
| ATTR1                       | NUMBER        |          | For internal use only                                                                            |
| CON_DBID                    | NUMBER        |          | The database ID of the pluggable database (PDB)                                                  |
| PARSE_TIME                  | NUMBER        |          | Parse time (in microseconds) measured for the SQL                                                |
| ELAPSED_TIME                | NUMBER        |          | Elapsed time (in microseconds) to execute the SQL and fetch all of its rows, after parsing       |
| CPU_TIME                    | NUMBER        |          | CPU time (in microseconds) to execute the SQL and fetch all of its rows, after parsing           |
| USER_IO_TIME                | NUMBER        |          | I/O time (in microseconds) to execute the SQL and fetch all of its rows, after parsing           |
| BUFFER_GETS                 | NUMBER        |          | Number of buffer gets measured for executing the SQL and fetching all of its rows                |
| DISK_READS                  | NUMBER        |          | Number of disk reads measured for executing the SQL and fetching all of its rows                 |
| DIRECT_WRITES               | NUMBER        |          | Number of direct writes measured for executing the SQL and fetching all of its rows              |
| PHYSICAL_READ_REQUESTS      | NUMBER        |          | Number of physical read I/O requests issued by the monitored SQL                                 |
| PHYSICAL_WRITE_REQUESTS     | NUMBER        |          | Number of physical write I/O requests issued by the monitored SQL                                |
| PHYSICAL_READ_BYTES         | NUMBER        |          | Number of bytes read from disks by the monitored SQL                                             |
| PHYSICAL_WRITE_BYTES        | NUMBER        |          | Number of bytes written to disks by the monitored SQL                                            |
| ROWS_PROCESSED              | NUMBER        |          | Number of rows returned by the SQL execution                                                     |
| FETCHES                     | NUMBER        |          | Number of fetches for the SQL execution                                                          |
| EXECUTIONS                  | NUMBER        |          | Execution count for the SQL. This column will always have a value of 1 or 0.                     |
| END_OF_FETCH_COUNT          | NUMBER        |          | Indicates whether the SQL was executed to end-of-fetch (1) or not (0)                            |
| OPTIMIZER_COST              | NUMBER        |          | Optimizer cost for the execution plan                                                            |
| OTHER                       | CLOB          |          | For internal use only                                                                            |
| TESTEXEC_TOTAL_EXECS        | NUMBER        |          | Total number of executions during test execute                                                   |
| IO_INTERCONNECT_BYTES       | NUMBER        |          | Number of I/O bytes exchanged between Oracle Database and the storage system                     |
| TESTEXEC_FIRST_EXEC_IGNORED | VARCHAR2 (1)  |          | Indicates whether the first execution in test execute is ignored (Y) or not (N)                  |
| CON_DBID                    | NUMBER        |          | The database ID of the PDB                                                                       |
| ATTR2                       | NUMBER        |          | For internal use only                                                                            |
| ATTR3                       | NUMBER        |          | For internal use only                                                                            |
| CACHED_GETS                 | NUMBER        |          | The total of the db block gets from cache statistic and the consistent gets from cache statistic |
| DIRECT_GETS                 | NUMBER        |          | The total of the db block gets direct statistic and the consistent gets direct statistic         |

| Column              | Datatype | NULL | Description                                                                            |
|---------------------|----------|------|----------------------------------------------------------------------------------------|
| EXECUTIONS_ORIGINAL | NUMBER   |      | Number of original executions from the SQL tuning set, independent of trial executions |
| OBJECT_FLAGS        | NUMBER   |      | Value of the flags from the execution of the SQL, such as timeout or error             |

## 5.47 DBA\_ADVISOR\_SQLW\_PARAMETERS

DBA\_ADVISOR\_SQLW\_PARAMETERS displays all workload parameters and their current values in the database.

### Related View

USER\_ADVISOR\_SQLW\_PARAMETERS displays the workload parameters and their current values owned by the current user. This view does not display the OWNER column.

| Column          | Datatype        | NULL     | Description                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                            |

"USER\_ADVISOR\_SQLW\_PARAMETERS"

## 5.48 DBA\_ADVISOR\_SQLW\_STMTS

DBA\_ADVISOR\_SQLW\_STMTS displays rows that correspond to all statements in the workload.

All columns are guaranteed to be non-null.

### Related View

USER\_ADVISOR\_SQLW\_STMTS displays rows that correspond to the statements in the workload owned by the current user. This view does not display the OWNER column.

| Column              | Datatype       | NULL     | Description                                                                                                                                                                                                                                                                                                                                                                                                                                                                                 |

## 5.49 DBA\_ADVISOR\_SQLW\_SUM

DBA\_ADVISOR\_SQLW\_SUM displays an aggregated picture of all SQLWkld workload objects in the database.

### Related View

USER\_ADVISOR\_SQLW\_SUM displays an aggregated picture of the SQLWkld workload objects owned by the current user. This view does not display the OWNER column.

| Column          | Datatype        | NULL     | Description                                                                            |
|-----------------|-----------------|----------|----------------------------------------------------------------------------------------|
| OWNER           | VARCHAR2 (128)  |          | Owner of the workload object                                                           |
| WORKLOAD_ID     | NUMBER          | NOT NULL | Unique identifier number of the workload object                                        |
| WORKLOAD_NAME   | VARCHAR2 (128)  |          | Unique name of the workload                                                            |
| DESCRIPTION     | VARCHAR2 (256)  |          | User-specified description of the workload                                             |
| CREATE_DATE     | DATE            | NOT NULL | Date on which the workload object was created                                          |
| MODIFY_DATE     | DATE            | NOT NULL | Date of last update to the current workload                                            |
| NUM_SELECT_STMT | NUMBER          |          | Number of SELECT statements in the workload                                            |
| NUM_UPDATE_STMT | NUMBER          |          | Number of UPDATE statements in the workload                                            |
| NUM_DELETE_STMT | NUMBER          |          | Number of DELETE statements in the workload                                            |
| NUM_INSERT_STMT | NUMBER          |          | Number of INSERT statements in the workload                                            |
| NUM_MERGE_STMT  | NUMBER          |          | Number of MERGE statements in the workload                                             |
| SOURCE          | VARCHAR2 (128)  |          | Optional name that identifies the creator of the object                                |
| HOW_CREATED     | VARCHAR2 (30)   |          | Optional object or template on which the object was based                              |
| DATA_SOURCE     | VARCHAR2 (2000) |          | Workload data source                                                                   |
| READ_ONLY       | VARCHAR2 (5)    |          | Indicates whether or not the workload can be modified or deleted (TRUE) or not (FALSE) |

## 5.52 DBA\_ADVISOR\_TASKS

DBA\_ADVISOR\_TASKS displays information about all tasks in the database.

The view contains one row for each task. Each task has a name that is unique to the owner. Task names are just informational and no uniqueness is enforced within any other namespace.

### Related View

USER\_ADVISOR\_TASKS displays information about the tasks owned by the current user. This view does not display the OWNER column.

| Column                | Datatype       | NULL     | Description                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                               |

| EXECUTION_DESCRIPTION | VARCHAR2 (256) |          | Optional description of the last execution                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                |
| EXECUTION_START       | DATE           |          | Execution start date and time of the task                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                 |
| EXECUTION_END         | DATE           |          | Execution end date and time of the task                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                   |
| STATUS                | VARCHAR2 (11)  |          | Current operational status of the task: <ul style="list-style-type: none"> <li>INITIAL - Initial state of the task; no recommendations are present</li> <li>EXECUTING - Task is currently running</li> <li>INTERRUPTED - Task analysis was interrupted by the user. Recommendation data, if present, can be viewed and reported at this time.</li> <li>COMPLETED - Task successfully completed the analysis operation. Recommendation data can be viewed and reported.</li> <li>ERROR - An error occurred during the analysis operation. Recommendations, if present, can be viewed and reported at this time.</li> </ul> |

| Column               | Datatype        | NULL     | Description                                                                                                                                                                                  |
|----------------------|-----------------|----------|----------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|
| STATUS_MESSAGE       | VARCHAR2 (4000) |          | Informational message provided by the advisor regarding the status                                                                                                                           |
| PCT_COMPLETION_TIME  | NUMBER          |          | Percent completion, in terms of time, of the task when it is executing                                                                                                                       |
| PROGRESS_METRIC      | NUMBER          |          | Metric that measures the progress of the task in terms of quality. Each advisor may have its own metric.                                                                                     |
| METRIC_UNITS         | VARCHAR2 (64)   |          | Unit of the metric used to measure progress                                                                                                                                                  |
| ACTIVITY_COUNTER     | NUMBER          |          | Counter that is updated frequently by the advisor, denoting that useful work is being performed                                                                                              |
| RECOMMENDATION_COUNT | NUMBER          |          | Number of recommendations produced                                                                                                                                                           |
| ERROR_MESSAGE        | VARCHAR2 (4000) |          | Informational message or an error message indicating the current operation or condition                                                                                                      |
| SOURCE               | VARCHAR2 (128)  |          | Optional name that identifies the creator of the task                                                                                                                                        |
| HOW_CREATED          | VARCHAR2 (30)   |          | Optional task or template on which the object was based                                                                                                                                      |
| READ_ONLY            | VARCHAR2 (5)    |          | Indicates whether the task is read-only ( <b>TRUE</b> ) or not ( <b>FALSE</b> )                                                                                                              |
| SYSTEM_TASK          | VARCHAR2 (5)    |          | Indicates whether the task is a system task ( <b>TRUE</b> ) or not ( <b>FALSE</b> ). The automatic SQL tuning task, <code>SYS_AUTO_SQL_TUNING_TASK</code> , is one example of a system task. |
| ADVISOR_ID           | NUMBER          | NOT NULL | Unique identifier for the advisor                                                                                                                                                            |
| STATUS#              | NUMBER          |          | Reserved for internal use                                                                                                                                                                    |

## 5.53 DBA\_ADVISOR\_TEMPLATES

DBA\_ADVISOR\_TEMPLATES displays information about all templates in the database.

### Related View

USER\_ADVISOR\_TEMPLATES displays information about the templates owned by the current user. This view does not display the `OWNER` column.

| Column       | Datatype       | NULL     | Description                           |
|--------------|----------------|----------|---------------------------------------|
| OWNER        | VARCHAR2 (128) |          | Owner of the task                     |
| TASK_ID      | NUMBER         | NOT NULL | Unique identifier of the task         |
| TASK_NAME    | VARCHAR2 (128) |          | Name of the task                      |
| DESCRIPTION  | VARCHAR2 (256) |          | User-supplied description of the task |
| ADVISOR_NAME | VARCHAR2 (128) |          | Advisor associated with the task      |
| CREATED      | DATE           | NOT NULL | Creation date of the task             |

| Column        | Datatype       | NULL     | Description                                                                 |
|---------------|----------------|----------|-----------------------------------------------------------------------------|
| LAST_MODIFIED | DATE           | NOT NULL | Date on which the task was last modified                                    |
| SOURCE        | VARCHAR2 (128) |          | Optional task or template on which the template was based                   |
| READ_ONLY     | VARCHAR2 (5)   |          | Indicates whether the task can be modified or deleted (TRUE) or not (FALSE) |

## 5.54 DBA\_ADVISOR\_USAGE

DBA\_ADVISOR\_USAGE displays the usage information for each type of advisor in the database.

| Column            | Datatype       | NULL     | Description                     |
|-------------------|----------------|----------|---------------------------------|
| ADVISOR_ID        | NUMBER         | NOT NULL | Type of the advisor             |
| ADVISOR_NAME      | VARCHAR2 (128) | NOT NULL | Name of the advisor             |
| LAST_EXEC_TIME    | DATE           | NOT NULL | Date of the last execution      |
| NUM_EXECS         | NUMBER         | NOT NULL | Cumulative number of executions |
| NUM_DB_REPORTS    | NUMBER         | NOT NULL | Cumulative number of reports    |
| FIRST_REPORT_TIME | DATE           |          | Time of the first report        |
| LAST_REPORT_TIME  | DATE           |          | Time of the last report         |

## 5.55 DBA\_AIM\_PERF\_FEATURES

DBA\_AIM\_PERF\_FEATURES describes table columns on which Automatic In-Memory (AIM) performance features are enabled.

| Column                   | Datatype       | NULL     | Description                                                                                                               |
|--------------------------|----------------|----------|---------------------------------------------------------------------------------------------------------------------------|
| OWNER_NAME               | VARCHAR2 (128) | NOT NULL | Table owner                                                                                                               |
| TABLE_NAME               | VARCHAR2 (128) | NOT NULL | Table name                                                                                                                |
| COLUMN_NAME              | VARCHAR2 (128) | NOT NULL | Name of the column on which AIM performance features are enabled                                                          |
| OPTIMIZED_ARITHMETIC     | CHAR (1)       |          | Indicates whether the column is optimized for arithmetic operations (Y) or not (N)                                        |
| BLOOMFILTER_OPTIMIZATION | CHAR (1)       |          | Indicates whether queries on the column use cached hash values to probe the bloom filter during hash joins (Y) or not (N) |
| VECTOR_OPTIMIZATION      | CHAR (1)       |          | Indicates whether data is stored in the column using vector optimization (Y) or not (N)                                   |
| JOIN_GROUP               | CHAR (1)       |          | Indicates whether the column is part of a join group that was created by AIM (Y) or not (N)                               |

| Column        | Datatype | NULL | Description                                                          |
|---------------|----------|------|----------------------------------------------------------------------|
| CREATION_DATE | DATE     |      | Date and time at which the AIM performance features were implemented |

**Note:**

This view is available starting with Oracle Database 23ai.

## 5.56 DBA\_ALERT\_HISTORY

DBA\_ALERT\_HISTORY describes a time-limited history of alerts which are no longer outstanding.

| Column            | Datatype                     | NULL     | Description                                                                                   |
|-------------------|------------------------------|----------|-----------------------------------------------------------------------------------------------|
| SEQUENCE_ID       | NUMBER                       | NOT NULL | Alert sequence number                                                                         |
| REASON_ID         | NUMBER                       |          | ID of the alert reason                                                                        |
| OWNER             | VARCHAR2 (128)               |          | Owner of the object on which the alert was issued                                             |
| OBJECT_NAME       | VARCHAR2 (513)               |          | Name of the object                                                                            |
| SUBOBJECT_NAME    | VARCHAR2 (128)               |          | Name of the subobject (for example: partition)                                                |
| OBJECT_TYPE       | VARCHAR2 (64)                |          | Type of the object (for example: table, tablespace)                                           |
| REASON            | VARCHAR2 (4000)              |          | Reason for the alert                                                                          |
| TIME_SUGGESTED    | TIMESTAMP (6) WITH TIME ZONE |          | Time when the alert was last updated                                                          |
| CREATION_TIME     | TIMESTAMP (6) WITH TIME ZONE |          | Time when the alert was first created                                                         |

| PROCESS_ID              | VARCHAR2 (128) |          | Process id                                                                                                                                                                                                                                                                                                                                                                                                                                               |
| HOST_ID                 | VARCHAR2 (256) |          | DNS host name of the originating host                                                                                                                                                                                                                                                                                                                                                                                                                    |
| HOST_NW_ADDR            | VARCHAR2 (256) |          | IP or other network address of originating host                                                                                                                                                                                                                                                                                                                                                                                                          |
| INSTANCE_NAME           | VARCHAR2 (16)  |          | Originating instance name                                                                                                                                                                                                                                                                                                                                                                                                                                |
| INSTANCE_NUMBER         | NUMBER         |          | Originating instance number                                                                                                                                                                                                                                                                                                                                                                                                                              |
| USER_ID                 | VARCHAR2 (128) |          | User ID                                                                                                                                                                                                                                                                                                                                                                                                                                                  |
| EXECUTION_CONTEXT_ID    | VARCHAR2 (128) |          | Execution Context ID                                                                                                                                                                                                                                                                                                                                                                                                                                     |
| ERROR_INSTANCE_ID       | VARCHAR2 (142) |          | ID of an error instance plus a sequence number                                                                                                                                                                                                                                                                                                                                                                                                           |
| RESOLUTION              | VARCHAR2 (11)  |          | Resolution: <ul style="list-style-type: none"> <li>• Cleared</li> <li>• Outstanding</li> <li>• N/A</li> </ul>                                                                                                                                                                                                                                                                                                                                            |
| STATE_TRANSITION_NUMBER | NUMBER         | NOT NULL | Sequence number of the state transition for the alert                                                                                                                                                                                                                                                                                                                                                                                                    |
| PDB_NAME                | VARCHAR2 (128) |          | PDB name                                                                                                                                                                                                                                                                                                                                                                                                                                                 |
| CON_ID                  | NUMBER         |          | The ID of the container to which the data pertains.<br>Possible values include: <ul style="list-style-type: none"> <li>• 0: This value is used for rows containing data that pertain to the entire CDB. This value is also used for rows in non-CDBs.</li> <li>• 1: This value is used for rows containing data that pertain to only the root</li> <li>• <i>n</i>: Where <i>n</i> is the applicable container ID for the rows containing data</li> </ul> |

## 5.58 DBA\_ALL\_TABLES

DBA\_ALL\_TABLES describes all object tables and relational tables in the database. Its columns are the same as those in ALL\_ALL\_TABLES.

**See Also:**

"ALL\_ALL\_TABLES"

## 5.59 DBA\_ANALYTIC\_VIEW\_AGGR\_DIMS

DBA\_ANALYTIC\_VIEW\_AGGR\_DIMS describes the aggregation function dimensions of all analytic views in the database. Its columns are the same as those in ALL\_ANALYTIC\_VIEW\_AGGR\_DIMS.

**See Also:**

"ALL\_ANALYTIC\_VIEW\_AGGR\_DIMS"

## 5.60 DBA\_ANALYTIC\_VIEW\_AGGR\_FNS

DBA\_ANALYTIC\_VIEW\_AGGR\_FNS describes the aggregation functions of all analytic views in the database. Its columns are the same as those in ALL\_ANALYTIC\_VIEW\_AGGR\_FNS.

**See Also:**

["ALL\\_ANALYTIC\\_VIEW\\_AGGR\\_FNS"](#)

## 5.61 DBA\_ANALYTIC\_VIEW\_AGGR\_FNS\_AE

DBA\_ANALYTIC\_VIEW\_AGGR\_FNS\_AE describes the aggregation functions of all analytic views (across all editions) in the database. Its columns are the same as those in ALL\_ANALYTIC\_VIEW\_AGGR\_FNS\_AE.

**See Also:**

["ALL\\_ANALYTIC\\_VIEW\\_AGGR\\_FNS\\_AE"](#)

## 5.62 DBA\_ANALYTIC\_VIEW\_AGR\_DIMS

DBA\_ANALYTIC\_VIEW\_AGR\_DIMS describes the aggregation function dimensions of all analytic views in the database. Its columns are the same as those in ALL\_ANALYTIC\_VIEW\_AGR\_DIMS.

**See Also:**

["ALL\\_ANALYTIC\\_VIEW\\_AGR\\_DIMS"](#)

## 5.63 DBA\_ANALYTIC\_VIEW\_AGR\_DIMS\_AE

DBA\_ANALYTIC\_VIEW\_AGR\_DIMS\_AE describes the aggregation function dimensions of all analytic views (across all editions) in the database. Its columns are the same as those in ALL\_ANALYTIC\_VIEW\_AGR\_DIMS\_AE.

**See Also:**

["ALL\\_ANALYTIC\\_VIEW\\_AGR\\_DIMS\\_AE"](#)

## 5.64 DBA\_ANALYTIC\_VIEW\_ATTR\_CLASS

DBA\_ANALYTIC\_VIEW\_ATTR\_CLASS describes the attribute classifications of all analytic views in the database. Its columns are the same as those in ALL\_ANALYTIC\_VIEW\_ATTR\_CLASS.

**See Also:**

"ALL\_ANALYTIC\_VIEW\_ATTR\_CLASS"

## 5.65 DBA\_ANALYTIC\_VIEW\_ATTR\_CLS

DBA\_ANALYTIC\_VIEW\_ATTR\_CLS is identical to DBA\_ANALYTIC\_VIEW\_ATTR\_CLASS.

**See Also:**

"DBA\_ANALYTIC\_VIEW\_ATTR\_CLASS"

## 5.66 DBA\_ANALYTIC\_VIEW\_ATTR\_CLS\_AE

DBA\_ANALYTIC\_VIEW\_ATTR\_CLS\_AE describes the attribute classifications of all analytic views (across all editions) in the database. Its columns are the same as those in ALL\_ANALYTIC\_VIEW\_ATTR\_CLS\_AE.

**See Also:**

"ALL\_ANALYTIC\_VIEW\_ATTR\_CLS\_AE"

## 5.67 DBA\_ANALYTIC\_VIEW\_BASE\_MEAS

DBA\_ANALYTIC\_VIEW\_BASE\_MEAS is identical to DBA\_ANALYTIC\_VIEW\_BASE\_MEAS.

**See Also:**

"DBA\_ANALYTIC\_VIEW\_BASE\_MEAS"

## 5.68 DBA\_ANALYTIC\_VIEW\_BAS\_MEAS\_AE

DBA\_ANALYTIC\_VIEW\_BAS\_MEAS\_AE describes the base measures in all analytic views (across all editions) in the database. Its columns are the same as those in ALL\_ANALYTIC\_VIEW\_BAS\_MEAS\_AE.

**See Also:**

["ALL\\_ANALYTIC\\_VIEW\\_BAS\\_MEAS\\_AE"](#)

## 5.69 DBA\_ANALYTIC\_VIEW\_BASE\_MEAS

DBA\_ANALYTIC\_VIEW\_BASE\_MEAS describes the base measures in all analytic views in the database. Its columns are the same as those in ALL\_ANALYTIC\_VIEW\_BASE\_MEAS.

**See Also:**

["ALL\\_ANALYTIC\\_VIEW\\_BASE\\_MEAS"](#)

## 5.70 DBA\_ANALYTIC\_VIEW\_CALC\_MEAS

DBA\_ANALYTIC\_VIEW\_CALC\_MEAS describes the calculated measures in all analytic views in the database. Its columns are the same as those in ALL\_ANALYTIC\_VIEW\_CALC\_MEAS.

**See Also:**

["ALL\\_ANALYTIC\\_VIEW\\_CALC\\_MEAS"](#)

## 5.71 DBA\_ANALYTIC\_VIEW\_CLASS

DBA\_ANALYTIC\_VIEW\_CLASS describes the classifications of all analytic views in the database. Its columns are the same as those in ALL\_ANALYTIC\_VIEW\_CLASS.

**See Also:**

["ALL\\_ANALYTIC\\_VIEW\\_CLASS"](#)

## 5.72 DBA\_ANALYTIC\_VIEW\_CLASS\_AE

DBA\_ANALYTIC\_VIEW\_CLASS\_AE describes the classifications of all analytic views (across all editions) in the database. Its columns are the same as those in ALL\_ANALYTIC\_VIEW\_CLASS\_AE.

**See Also:**

"ALL\_ANALYTIC\_VIEW\_CLASS\_AE"

## 5.73 DBA\_ANALYTIC\_VIEW\_CLC\_MEAS

DBA\_ANALYTIC\_VIEW\_CLC\_MEAS is identical to DBA\_ANALYTIC\_VIEW\_CALC\_MEAS.

**See Also:**

"DBA\_ANALYTIC\_VIEW\_CALC\_MEAS"

## 5.74 DBA\_ANALYTIC\_VIEW\_CLC\_MEAS\_AE

DBA\_ANALYTIC\_VIEW\_CLC\_MEAS\_AE describes the calculated measures in all analytic views (across all editions) in the database. Its columns are the same as those in ALL\_ANALYTIC\_VIEW\_CLC\_MEAS\_AE.

**See Also:**

"ALL\_ANALYTIC\_VIEW\_CLC\_MEAS\_AE"

## 5.75 DBA\_ANALYTIC\_VIEW\_COLUMNS

DBA\_ANALYTIC\_VIEW\_COLUMNS describes the columns of all analytic views in the database. Its columns are the same as those in ALL\_ANALYTIC\_VIEW\_COLUMNS.

**See Also:**

"ALL\_ANALYTIC\_VIEW\_COLUMNS"

## 5.76 DBA\_ANALYTIC\_VIEW\_COLUMNS\_AE

DBA\_ANALYTIC\_VIEW\_COLUMNS\_AE describes the columns of all analytic views (across all editions) in the database. Its columns are the same as those in ALL\_ANALYTIC\_VIEW\_COLUMNS\_AE.

**See Also:**

["ALL\\_ANALYTIC\\_VIEW\\_COLUMNS\\_AE"](#)

## 5.77 DBA\_ANALYTIC\_VIEW\_DIM\_ATTRS

DBA\_ANALYTIC\_VIEW\_DIM\_ATTRS is identical to DBA\_ANALYTIC\_VIEW\_DIM\_ATTRS.

**See Also:**

["DBA\\_ANALYTIC\\_VIEW\\_DIM\\_ATTRS"](#)

## 5.78 DBA\_ANALYTIC\_VIEW\_DIM\_ATTRS\_AE

DBA\_ANALYTIC\_VIEW\_DIM\_ATTRS\_AE describes the attributes of the attribute dimensions in all analytic views (across all editions) in the database. Its columns are the same as those in ALL\_ANALYTIC\_VIEW\_DIM\_ATTRS\_AE.

**See Also:**

["ALL\\_ANALYTIC\\_VIEW\\_DIM\\_ATTRS\\_AE"](#)

## 5.79 DBA\_ANALYTIC\_VIEW\_DIM\_ATTRS

DBA\_ANALYTIC\_VIEW\_DIM\_ATTRS describes the attributes of all attribute dimensions in the database. Its columns are the same as those in ALL\_ANALYTIC\_VIEW\_DIM\_ATTRS.

**See Also:**

["ALL\\_ANALYTIC\\_VIEW\\_DIM\\_ATTRS"](#)

## 5.80 DBA\_ANALYTIC\_VIEW\_DIM\_CLASS

DBA\_ANALYTIC\_VIEW\_DIM\_CLASS describes the classifications of the attribute dimensions in all analytic views in the database. Its columns are the same as those in ALL\_ANALYTIC\_VIEW\_DIM\_CLASS.

### See Also:

"ALL\_ANALYTIC\_VIEW\_DIM\_CLASS"

## 5.81 DBA\_ANALYTIC\_VIEW\_DIM\_CLS

DBA\_ANALYTIC\_VIEW\_DIM\_CLS is identical to DBA\_ANALYTIC\_VIEW\_DIM\_CLASS.

### See Also:

"DBA\_ANALYTIC\_VIEW\_DIM\_CLASS"

## 5.82 DBA\_ANALYTIC\_VIEW\_DIM\_CLS\_AE

DBA\_ANALYTIC\_VIEW\_DIM\_CLS\_AE describes the classifications of the attribute dimensions in all analytic views (across all editions) in the database. Its columns are the same as those in ALL\_ANALYTIC\_VIEW\_DIM\_CLS\_AE.

### See Also:

"ALL\_ANALYTIC\_VIEW\_DIM\_CLS\_AE"

## 5.83 DBA\_ANALYTIC\_VIEW\_DIMENSIONS

DBA\_ANALYTIC\_VIEW\_DIMENSIONS describes the attribute dimensions in all analytic views in the database. Its columns are the same as those in ALL\_ANALYTIC\_VIEW\_DIMENSIONS.

### See Also:

"ALL\_ANALYTIC\_VIEW\_DIMENSIONS"

## 5.84 DBA\_ANALYTIC\_VIEW\_DIMS

DBA\_ANALYTIC\_VIEW\_DIMS is identical to DBA\_ANALYTIC\_VIEW\_DIMENSIONS.

**See Also:**

["DBA\\_ANALYTIC\\_VIEW\\_DIMENSIONS"](#)

## 5.85 DBA\_ANALYTIC\_VIEW\_DIMS\_AE

DBA\_ANALYTIC\_VIEW\_DIMS\_AE describes the attribute dimensions in all analytic views (across all editions) in the database. Its columns are the same as those in ALL\_ANALYTIC\_VIEW\_DIMS\_AE.

**See Also:**

["ALL\\_ANALYTIC\\_VIEW\\_DIMS\\_AE"](#)

## 5.86 DBA\_ANALYTIC\_VIEW\_FACT\_COLS

DBA\_ANALYTIC\_VIEW\_FACT\_COLS describes the fact columns of all analytic views in the database. Its columns are the same as those in ALL\_ANALYTIC\_VIEW\_FACT\_COLS.

**See Also:**

["ALL\\_ANALYTIC\\_VIEW\\_FACT\\_COLS"](#)

## 5.87 DBA\_ANALYTIC\_VIEW\_FCT\_COLS

DBA\_ANALYTIC\_VIEW\_FCT\_COLS is identical to DBA\_ANALYTIC\_VIEW\_FACT\_COLS.

**See Also:**

["DBA\\_ANALYTIC\\_VIEW\\_FACT\\_COLS"](#)

## 5.88 DBA\_ANALYTIC\_VIEW\_FCT\_COLS\_AE

DBA\_ANALYTIC\_VIEW\_FCT\_COLS\_AE describes the fact columns of all analytic views (across all editions) in the database. Its columns are the same as those in ALL\_ANALYTIC\_VIEW\_FCT\_COLS\_AE.

### See Also:

["ALL\\_ANALYTIC\\_VIEW\\_FCT\\_COLS\\_AE"](#)

## 5.89 DBA\_ANALYTIC\_VIEW\_HIER\_CLASS

DBA\_ANALYTIC\_VIEW\_HIER\_CLASS describes the classifications of the hierarchies in all analytic views in the database. Its columns are the same as those in ALL\_ANALYTIC\_VIEW\_HIER\_CLASS.

### See Also:

["ALL\\_ANALYTIC\\_VIEW\\_HIER\\_CLASS"](#)

## 5.90 DBA\_ANALYTIC\_VIEW\_HIER\_CLS

DBA\_ANALYTIC\_VIEW\_HIER\_CLS is identical to DBA\_ANALYTIC\_VIEW\_HIER\_CLASS.

### See Also:

["DBA\\_ANALYTIC\\_VIEW\\_HIER\\_CLASS"](#)

## 5.91 DBA\_ANALYTIC\_VIEW\_HIER\_CLS\_AE

DBA\_ANALYTIC\_VIEW\_HIER\_CLS\_AE describes the classifications of the hierarchies in all analytic views (across all editions) in the database. Its columns are the same as those in ALL\_ANALYTIC\_VIEW\_HIER\_CLS\_AE.

### See Also:

["ALL\\_ANALYTIC\\_VIEW\\_HIER\\_CLS\\_AE"](#)

## 5.92 DBA\_ANALYTIC\_VIEW\_HIERS

DBA\_ANALYTIC\_VIEW\_HIERS describes the hierarchies in all analytic views in the database. Its columns are the same as those in ALL\_ANALYTIC\_VIEW\_HIERS.

**See Also:**

["ALL\\_ANALYTIC\\_VIEW\\_HIERS"](#)

## 5.93 DBA\_ANALYTIC\_VIEW\_HIERS\_AE

DBA\_ANALYTIC\_VIEW\_HIERS\_AE describes the hierarchies in all analytic views (across all editions) in the database. Its columns are the same as those in ALL\_ANALYTIC\_VIEW\_HIERS\_AE.

**See Also:**

["ALL\\_ANALYTIC\\_VIEW\\_HIERS\\_AE"](#)

## 5.94 DBA\_ANALYTIC\_VIEW\_KEYS

DBA\_ANALYTIC\_VIEW\_KEYS describes the key columns of the attribute dimensions in all analytic views in the database. Its columns are the same as those in ALL\_ANALYTIC\_VIEW\_KEYS.

**See Also:**

["ALL\\_ANALYTIC\\_VIEW\\_KEYS"](#)

## 5.95 DBA\_ANALYTIC\_VIEW\_KEYS\_AE

DBA\_ANALYTIC\_VIEW\_KEYS\_AE describes the key columns of the attribute dimensions in all analytic views (across all editions) in the database. Its columns are the same as those in ALL\_ANALYTIC\_VIEW\_KEYS\_AE.

**See Also:**

["ALL\\_ANALYTIC\\_VIEW\\_KEYS\\_AE"](#)

## 5.96 DBA\_ANALYTIC\_VIEW\_LEVEL\_CLASS

DBA\_ANALYTIC\_VIEW\_LEVEL\_CLASS describes the level classifications of all analytic views in the database. Its columns are the same as those in ALL\_ANALYTIC\_VIEW\_LEVEL\_CLASS.

**See Also:**

"ALL\_ANALYTIC\_VIEW\_LEVEL\_CLASS"

## 5.97 DBA\_ANALYTIC\_VIEW\_LEVELS

DBA\_ANALYTIC\_VIEW\_LEVELS describes the levels in the hierarchies in all analytic views in the database. Its columns are the same as those in ALL\_ANALYTIC\_VIEW\_LEVELS.

**See Also:**

"ALL\_ANALYTIC\_VIEW\_LEVELS"

## 5.98 DBA\_ANALYTIC\_VIEW\_LEVELS\_AE

DBA\_ANALYTIC\_VIEW\_LEVELS\_AE describes the levels in the hierarchies in all analytic views (across all editions) in the database. Its columns are the same as those in ALL\_ANALYTIC\_VIEW\_LEVELS\_AE.

**See Also:**

"ALL\_ANALYTIC\_VIEW\_LEVELS\_AE"

## 5.99 DBA\_ANALYTIC\_VIEW\_LVL\_CLS

DBA\_ANALYTIC\_VIEW\_LVL\_CLS is identical to DBA\_ANALYTIC\_VIEW\_LEVEL\_CLASS.

**See Also:**

"DBA\_ANALYTIC\_VIEW\_LEVEL\_CLASS"

## 5.100 DBA\_ANALYTIC\_VIEW\_LVL\_CLS\_AE

DBA\_ANALYTIC\_VIEW\_LVL\_CLS\_AE describes the level classifications of all analytic views (across all editions) in the database. Its columns are the same as those in ALL\_ANALYTIC\_VIEW\_LVL\_CLS\_AE.

### See Also:

"ALL\_ANALYTIC\_VIEW\_LVL\_CLS\_AE"

## 5.101 DBA\_ANALYTIC\_VIEW\_LVLGRPS

DBA\_ANALYTIC\_VIEW\_LVLGRPS describes the analytic view measure and level groups of all analytic views in the database. Its columns are the same as those in ALL\_ANALYTIC\_VIEW\_LVLGRPS.

### See Also:

"ALL\_ANALYTIC\_VIEW\_LVLGRPS"

## 5.102 DBA\_ANALYTIC\_VIEW\_LVLGRPS\_AE

DBA\_ANALYTIC\_VIEW\_LVLGRPS\_AE describes the analytic view measure and level groups of all analytic views (across all editions) in the database. Its columns are the same as those in ALL\_ANALYTIC\_VIEW\_LVLGRPS\_AE.

### See Also:

"ALL\_ANALYTIC\_VIEW\_LVLGRPS\_AE"

## 5.103 DBA\_ANALYTIC\_VIEW\_MEAS\_CLASS

DBA\_ANALYTIC\_VIEW\_MEAS\_CLASS describes the classifications of the measures of all analytic views in the database. Its columns are the same as those in ALL\_ANALYTIC\_VIEW\_MEAS\_CLASS.

### See Also:

"ALL\_ANALYTIC\_VIEW\_MEAS\_CLASS"

## 5.104 DBA\_ANALYTIC\_VIEW\_MEAS\_CLS

DBA\_ANALYTIC\_VIEW\_MEAS\_CLS is identical to DBA\_ANALYTIC\_VIEW\_MEAS\_CLASS.

**See Also:**

["DBA\\_ANALYTIC\\_VIEW\\_MEAS\\_CLASS"](#)

## 5.105 DBA\_ANALYTIC\_VIEW\_MEAS\_CLS\_AE

DBA\_ANALYTIC\_VIEW\_MEAS\_CLS\_AE describes the classifications of the measures of all analytic views (across all editions) in the database. Its columns are the same as those in ALL\_ANALYTIC\_VIEW\_MEAS\_CLS\_AE.

**See Also:**

["ALL\\_ANALYTIC\\_VIEW\\_MEAS\\_CLS\\_AE"](#)

## 5.106 DBA\_ANALYTIC\_VIEWS

DBA\_ANALYTIC\_VIEWS describes all analytic views in the database. Its columns are the same as those in ALL\_ANALYTIC\_VIEWS.

**See Also:**

["ALL\\_ANALYTIC\\_VIEWS"](#)

## 5.107 DBA\_ANALYTIC\_VIEWS\_AE

DBA\_ANALYTIC\_VIEWS\_AE describes all analytic views (across all editions) in the database. Its columns are the same as those in ALL\_ANALYTIC\_VIEWS\_AE.

**See Also:**

["ALL\\_ANALYTIC\\_VIEWS\\_AE"](#)

## 5.108 DBA\_ANNOTATION\_VALUES

DBA\_ANNOTATION\_VALUES displays the values for all schema annotations in the database. Its columns are the same as those in ALL\_ANNOTATION\_VALUES.

**Note:**

This view is available starting with Oracle Database 23ai.

**See Also:**

["ALL\\_ANNOTATION\\_VALUES"](#)

## 5.109 DBA\_ANNOTATIONS

DBA\_ANNOTATIONS displays all schema annotations in the database. Its columns are the same as those in ALL\_ANNOTATIONS.

**Note:**

This view is available starting with Oracle Database 23ai.

**See Also:**

["ALL\\_ANNOTATIONS"](#)

## 5.110 DBA\_ANNOTATIONS\_USAGE

DBA\_ANNOTATIONS\_USAGE provides usage information about all schema annotations in the database. Its columns are the same as those in ALL\_ANNOTATIONS\_USAGE.

**Note:**

This view is available starting with Oracle Database 23ai.

**See Also:**["ALL\\_ANNOTATIONS\\_USAGE"](#)

## 5.111 DBA\_APP\_ERRORS

DBA\_APP\_ERRORS displays errors raised when an application PDB synchronizes with an application in the application root.

This view displays errors raised during the last synchronization for each application.

| Column            | Datatype        | NULL     | Description                                                            |
|-------------------|-----------------|----------|------------------------------------------------------------------------|
| APP_NAME          | VARCHAR2 (128)  |          | Name of the application whose statement was captured                   |
| APP_STATEMENT     | CLOB            |          | Application statement                                                  |
| ERRORNUM          | NUMBER          |          | Error number for the statement                                         |
| ERRORMSG          | VARCHAR2 (4000) |          | Error message for the statement                                        |
| SYNC_TIME         | DATE            | NOT NULL | Sync time for the statement                                            |
| SYSTEM_IGNOREABLE | VARCHAR2 (1)    |          | Indicates whether the error is a system-ignorable error (Y) or not (N) |
| USER_IGNOREABLE   | VARCHAR2 (1)    |          | Indicates whether the error is a user-ignorable error (Y) or not (N)   |

## 5.112 DBA\_APP\_ERRORS\_HISTORY

DBA\_APP\_ERRORS\_HISTORY displays the history of errors raised when an application PDB synchronizes with an application in the application root.

This view displays errors raised during the last 10 synchronizations for each application.

| Column            | Datatype        | NULL     | Description                                                            |
|-------------------|-----------------|----------|------------------------------------------------------------------------|
| APP_NAME          | VARCHAR2 (128)  |          | Name of the application whose statement was captured                   |
| APP_STATEMENT     | CLOB            |          | Application statement                                                  |
| ERRORNUM          | NUMBER          |          | Error number for the statement                                         |
| ERRORMSG          | VARCHAR2 (4000) |          | Error message for the statement                                        |
| SYNC_TIME         | TIMESTAMP (6)   | NOT NULL | Sync time for the statement                                            |
| SYSTEM_IGNOREABLE | VARCHAR2 (1)    |          | Indicates whether the error is a system-ignorable error (Y) or not (N) |
| USER_IGNOREABLE   | VARCHAR2 (1)    |          | Indicates whether the error is a user-ignorable error (Y) or not (N)   |

## 5.113 DBA\_APP\_PATCHES

DBA\_APP\_PATCHES describes all the application patches in the Application Container.

| Column            | Datatype        | NULL | Description                               |
|-------------------|-----------------|------|-------------------------------------------|
| APP_NAME          | VARCHAR2 (128)  |      | Name of the application                   |
| PATCH_NUMBER      | NUMBER          |      | Patch number                              |
| PATCH_MIN_VERSION | VARCHAR2 (30)   |      | Minimum application version for the patch |
| PATCH_STATUS      | VARCHAR2 (10)   |      | Status of the patch                       |
| PATCH_COMMENT     | VARCHAR2 (4000) |      | Comment associated with the patch         |
| PATCH_CHECKSUM    | NUMBER          |      | Checksum for the patch                    |

## 5.114 DBA\_APP\_PDB\_STATUS

DBA\_APP\_PDB\_STATUS provides information about applications in all the application PDBs in the current application container. It provides this information when queried in the application root.

The view should be queried in the application root.

This view can be used to show which version of an application has been synced to which application PDBs.

| Column      | Datatype       | NULL | Description                |
|-------------|----------------|------|----------------------------|
| CON_UID     | NUMBER         |      | Unique ID of the PDB       |
| APP_NAME    | VARCHAR2 (128) |      | Name of the application    |
| APP_ID      | NUMBER         |      | Id of the application      |
| APP_VERSION | VARCHAR2 (30)  |      | Version of the application |
| APP_STATUS  | VARCHAR2 (12)  |      | Status of the application  |

## 5.115 DBA\_APP\_STATEMENTS

DBA\_APP\_STATEMENTS describes all statements from all the applications in the Application Container.

| Column        | Datatype       | NULL     | Description                                                                                                                                                                                                                                                                                                                                                                        |
|---------------|----------------|----------|------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|
| ORIGIN_CON_ID | NUMBER         |          | The ID of the container where the data originates.<br>Possible values include: <ul style="list-style-type: none"> <li>0: This value is used for rows in non-CDBs. This value is not used for CDBs.</li> <li><i>n</i>: This value is used for rows containing data that originate in the container with container ID <i>n</i> (<i>n</i>=1 if the row originates in root)</li> </ul> |
| STATEMENT_ID  | NUMBER         |          | Statement ID                                                                                                                                                                                                                                                                                                                                                                       |
| CAPTURE_TIME  | DATE           | NOT NULL | Time of capture of the application statement                                                                                                                                                                                                                                                                                                                                       |
| APP_STATEMENT | CLOB           |          | Application statement                                                                                                                                                                                                                                                                                                                                                              |
| APP_NAME      | VARCHAR2 (128) |          | Name of the application whose statement was captured                                                                                                                                                                                                                                                                                                                               |
| APP_STATUS    | VARCHAR2 (12)  |          | Status of the application when the statement was captured                                                                                                                                                                                                                                                                                                                          |

| Column         | Datatype | NULL     | Description                                                        |
|----------------|----------|----------|--------------------------------------------------------------------|
| PATCH_NUMBER   | NUMBER   |          | Patch number of patch installation when the statement was captured |
| VERSION_NUMBER | NUMBER   |          | Version number when the statement was captured                     |
| SESSION_ID     | NUMBER   |          | Unique session ID when the statement was captured                  |
| OPCODE         | NUMBER   | NOT NULL | Operation code indicating the statement type                       |

## 5.116 DBA\_APP\_VERSIONS

DBA\_APP\_VERSIONS displays information about all application versions installed in an application container.

| Column                 | Datatype        | NULL | Description                                                            |
|------------------------|-----------------|------|------------------------------------------------------------------------|
| APP_NAME               | VARCHAR2 (128)  |      | Name of the application                                                |
| APP_VERSION            | VARCHAR2 (30)   |      | Version of the application                                             |
| APP_VERSION_COMMENT    | VARCHAR2 (4000) |      | Comment associated with the application version                        |
| APP_VERSION_CHECKSUM   | NUMBER          |      | Checksum for the application version                                   |
| APP_ROOT_CLONE_NAME    | VARCHAR2 (64)   |      | Name of the application root clone that corresponds to the application |
| APP_VERSION_BEGIN_TIME | DATE            |      | Begin time of the most recent sync of the application                  |
| APP_VERSION_END_TIME   | DATE            |      | End time of the most recent sync of the application                    |
| APP_VERSION_NUMBER     | NUMBER          |      | Version number of the application version                              |

### See Also:

## 5.117 DBA\_APPLICATION\_ROLES

DBA\_APPLICATION\_ROLES describes all the roles that have authorization policy functions defined.

### Related View

USER\_APPLICATION\_ROLES describes all the roles for the current user that have authorization policy functions defined.

| Column  | Datatype       | NULL     | Description                      |
|---------|----------------|----------|----------------------------------|
| ROLE    | VARCHAR2 (128) | NOT NULL | Name of the application role     |
| SCHEMA  | VARCHAR2 (128) | NOT NULL | Schema of the authorized package |
| PACKAGE | VARCHAR2 (128) | NOT NULL | Name of the authorized package   |

**See Also:**["USER\\_APPLICATION\\_ROLES"](#)

## 5.118 DBA\_APPLICATIONS

DBA\_APPLICATIONS provides information about the applications in the current application container.

| Column              | Datatype       | NULL | Description                                                  |
|---------------------|----------------|------|--------------------------------------------------------------|
| APP_NAME            | VARCHAR2 (128) |      | Name of the application                                      |
| APP_ID              | NUMBER         |      | ID of the application                                        |
| APP_VERSION         | VARCHAR2 (30)  |      | Version of the application                                   |
| APP_STATUS          | VARCHAR2 (12)  |      | Status of the application                                    |
| APP_IMPLICIT        | VARCHAR2 (1)   |      | Indicates whether the application is implicit (Y) or not (N) |
| APP_CAPTURE_SERVICE | VARCHAR2 (64)  |      | Service name used for the capture                            |
| APP_CAPTURE_MODULE  | VARCHAR2 (64)  |      | Module name used for the capture                             |

## 5.119 DBA\_APPLY

DBA\_APPLY displays information about all apply processes in the database. Its columns are the same as those in ALL\_APPLY.

**See Also:**["ALL\\_APPLY"](#)

## 5.120 DBA\_APPLY\_CHANGE\_HANDLERS

DBA\_APPLY\_CHANGE\_HANDLERS displays information about the change handlers on all tables in the database. Its columns are the same as those in ALL\_APPLY\_CHANGE\_HANDLERS.

**See Also:**["ALL\\_APPLY\\_CHANGE\\_HANDLERS"](#)

## 5.121 DBA\_APPLY\_CONFLICT\_COLUMNS

DBA\_APPLY\_CONFLICT\_COLUMNS displays information about the conflict handlers on all tables in the database. Its columns are the same as those in ALL\_APPLY\_CONFLICT\_COLUMNS.

**See Also:**

["ALL\\_APPLY\\_CONFLICT\\_COLUMNS"](#)

## 5.122 DBA\_APPLY\_DML\_CONF\_HANDLERS

DBA\_APPLY\_DML\_CONF\_HANDLERS provides details about DML conflict handlers. Its columns are the same as those in ALL\_APPLY\_DML\_CONF\_HANDLERS.

**See Also:**

["ALL\\_APPLY\\_DML\\_CONF\\_HANDLERS"](#)

## 5.123 DBA\_APPLY\_DML\_HANDLERS

DBA\_APPLY\_DML\_HANDLERS displays information about the DML handlers on all tables in the database. Its columns are the same as those in ALL\_APPLY\_DML\_HANDLERS.

**See Also:**

["ALL\\_APPLY\\_DML\\_HANDLERS"](#)

## 5.124 DBA\_APPLY\_ENQUEUE

DBA\_APPLY\_ENQUEUE displays information about the apply enqueue actions for all rules in the database. Its columns are the same as those in ALL\_APPLY\_ENQUEUE.

**See Also:**

["ALL\\_APPLY\\_ENQUEUE"](#)

## 5.125 DBA\_APPLY\_ERROR

DBA\_APPLY\_ERROR displays information about the error transactions generated by all apply processes in the database. Its columns are the same as those in ALL\_APPLY\_ERROR.

### See Also:

"ALL\_APPLY\_ERROR"

## 5.126 DBA\_APPLY\_ERROR\_MESSAGES

DBA\_APPLY\_ERROR\_MESSAGES displays information about the individual messages in all of the error transactions generated by all apply processes in the database. Its columns are the same as those in ALL\_APPLY\_ERROR\_MESSAGES.

For XStream inbound servers, each message in an error transaction is an LCR.

### Note:

- Messages that were spilled from memory to hard disk do not appear in this view.
- This view does not contain information related to XStream outbound servers.

### See Also:

"ALL\_APPLY\_ERROR\_MESSAGES"

## 5.127 DBA\_APPLY\_EXECUTE

DBA\_APPLY\_EXECUTE displays information about the apply execute actions for all rules in the database. Its columns are the same as those in ALL\_APPLY\_EXECUTE.

### See Also:

"ALL\_APPLY\_EXECUTE"

## 5.128 DBA\_APPLY\_HANDLE\_COLLISIONS

DBA\_APPLY\_HANDLE\_COLLISIONS provides details about apply handlers for collisions at the table level. Its columns are the same as those in ALL\_APPLY\_HANDLE\_COLLISIONS.

### See Also:

"ALL\_APPLY\_HANDLE\_COLLISIONS"

## 5.129 DBA\_APPLY\_INSTANTIATED\_GLOBAL

DBA\_APPLY\_INSTANTIATED\_GLOBAL displays information about databases for which an instantiation SCN has been set. Its columns are the same as those in ALL\_APPLY\_INSTANTIATED\_GLOBAL.

### See Also:

"ALL\_APPLY\_INSTANTIATED\_GLOBAL"

## 5.130 DBA\_APPLY\_INSTANTIATED\_OBJECTS

DBA\_APPLY\_INSTANTIATED\_OBJECTS displays information about objects for which an instantiation SCN has been set. Its columns are the same as those in ALL\_APPLY\_INSTANTIATED\_OBJECTS.

### See Also:

"ALL\_APPLY\_INSTANTIATED\_OBJECTS"

## 5.131 DBA\_APPLY\_INSTANTIATED\_SCHEMAS

DBA\_APPLY\_INSTANTIATED\_SCHEMAS displays information about schemas for which an instantiation SCN has been set. Its columns are the same as those in ALL\_APPLY\_INSTANTIATED\_SCHEMAS.

### See Also:

"ALL\_APPLY\_INSTANTIATED\_SCHEMAS"

## 5.132 DBA\_APPLY\_KEY\_COLUMNS

DBA\_APPLY\_KEY\_COLUMNS displays information about the substitute key columns for all tables in the database. Its columns are the same as those in ALL\_APPLY\_KEY\_COLUMNS.

**See Also:**

["ALL\\_APPLY\\_KEY\\_COLUMNS"](#)

## 5.133 DBA\_APPLY\_OBJECT\_DEPENDENCIES

DBA\_APPLY\_OBJECT\_DEPENDENCIES displays information about the object dependencies for all apply processes in the database.

| Column              | Datatype       | NULL     | Description                |
|---------------------|----------------|----------|----------------------------|
| OBJECT_OWNER        | VARCHAR2 (128) | NOT NULL | Owner of the object        |
| OBJECT_NAME         | VARCHAR2 (128) | NOT NULL | Name of the object         |
| PARENT_OBJECT_OWNER | VARCHAR2 (128) | NOT NULL | Parent of the object owner |
| PARENT_OBJECT_NAME  | VARCHAR2 (128) | NOT NULL | Parent of the named object |

## 5.134 DBA\_APPLY\_PARAMETERS

DBA\_APPLY\_PARAMETERS displays information about the parameters for all apply processes in the database. Its columns are the same as those in ALL\_APPLY\_PARAMETERS.

**See Also:**

["ALL\\_APPLY\\_PARAMETERS"](#)

## 5.135 DBA\_APPLY\_PROGRESS

DBA\_APPLY\_PROGRESS displays information about the progress made by all apply processes in the database. Its columns are the same as those in ALL\_APPLY\_PROGRESS.

**See Also:**

["ALL\\_APPLY\\_PROGRESS"](#)

## 5.136 DBA\_APPLY\_REPERROR\_HANDLERS

DBA\_APPLY\_REPERROR\_HANDLERS provides details about apply reperror handlers. Its columns are the same as those in ALL\_APPLY\_REPERROR\_HANDLERS.

**See Also:**

"ALL\_APPLY\_REPERROR\_HANDLERS"

## 5.137 DBA\_APPLY\_SPILL\_TXN

DBA\_APPLY\_SPILL\_TXN displays information about the transactions spilled from memory to hard disk by all apply processes in the database.

| Column                    | Datatype       | NULL     | Description                                                                                                     |
|---------------------------|----------------|----------|-----------------------------------------------------------------------------------------------------------------|
| APPLY_NAME                | VARCHAR2 (128) | NOT NULL | Name of the apply process that spilled one or more transactions                                                 |
| XIDUSN                    | NUMBER         | NOT NULL | Transaction ID undo segment number                                                                              |
| XIDSLT                    | NUMBER         | NOT NULL | Transaction ID slot number                                                                                      |
| XIDSQN                    | NUMBER         | NOT NULL | Transaction ID sequence number                                                                                  |
| PDB_ID                    | NUMBER         |          | PDB ID number                                                                                                   |
| FIRST_SCN                 | NUMBER         | NOT NULL | SCN of the first message in the transaction                                                                     |
| MESSAGE_COUNT             | NUMBER         |          | Number of messages spilled for the transaction                                                                  |
| FIRST_MESSAGE_CREATE_TIME | DATE           |          | Source creation time of the first message in the transaction                                                    |
| SPILL_CREATION_TIME       | DATE           |          | Time the first message was spilled                                                                              |
| FIRST_POSITION            | RAW (64)       |          | Position of the first message in this transaction. This column is populated only for an XStream inbound server. |
| TRANSACTION_ID            | VARCHAR2 (128) |          | Transaction ID of the spilled transaction                                                                       |

## 5.138 DBA\_APPLY\_TABLE\_COLUMNS

DBA\_APPLY\_TABLE\_COLUMNS displays, for all tables in the database, information about the nonkey table columns for which apply process conflict detection has been stopped for update and delete operations. Its columns are the same as those in ALL\_APPLY\_TABLE\_COLUMNS.

**See Also:**

"ALL\_APPLY\_TABLE\_COLUMNS"

## 5.139 DBA\_APPLY\_VALUE\_DEPENDENCIES

DBA\_APPLY\_VALUE\_DEPENDENCIES displays information about the value dependencies for all apply processes in the database.

| Column          | Datatype       | NULL     | Description            |
|-----------------|----------------|----------|------------------------|
| DEPENDENCY_NAME | VARCHAR2 (128) | NOT NULL | Name of the dependency |
| OBJECT_OWNER    | VARCHAR2 (128) | NOT NULL | Owner of the object    |
| OBJECT_NAME     | VARCHAR2 (128) | NOT NULL | Name of the object     |
| COLUMN_NAME     | VARCHAR2 (128) | NOT NULL | Name of the column     |
| COLUMN_POSITION | NUMBER         |          | Position of the column |

## 5.140 DBA\_AQ\_AGENT\_PRIVS

DBA\_AQ\_AGENT\_PRIVS displays information about the registered AQ agents that are mapped to all users in the database.

### Related View

USER\_AQ\_AGENT\_PRIVS displays information about the registered AQ agents that are mapped to the current user. This view does not display the DB\_USERNAME column.

| Column       | Datatype       | NULL     | Description                                                                        |
|--------------|----------------|----------|------------------------------------------------------------------------------------|
| AGENT_NAME   | VARCHAR2 (128) | NOT NULL | Name of the AQ agent                                                               |
| DB_USERNAME  | VARCHAR2 (128) |          | Name of the database user that the agent maps to                                   |
| HTTP_ENABLED | VARCHAR2 (4)   |          | Indicates whether the agent is allowed to access AQ through HTTP (YES) or not (NO) |
| SMTP_ENABLED | VARCHAR2 (4)   |          | Indicates whether the agent is allowed to access AQ through SMTP (YES) or not (NO) |

**See Also:**

"USER\_AQ\_AGENT\_PRIVS"

## 5.141 DBA\_AQ\_AGENTS

DBA\_AQ\_AGENTS displays information about all registered AQ agents in the database.

| Column       | Datatype       | NULL     | Description                                                                        |
|--------------|----------------|----------|------------------------------------------------------------------------------------|
| AGENT_NAME   | VARCHAR2 (128) | NOT NULL | Name of the AQ agent                                                               |
| HTTP_ENABLED | VARCHAR2 (4)   |          | Indicates whether the agent is allowed to access AQ through HTTP (YES) or not (NO) |
| SMTP_ENABLED | VARCHAR2 (4)   |          | Indicates whether the agent is allowed to access AQ through SMTP (YES) or not (NO) |

## 5.142 DBA\_ARGUMENTS

DBA\_ARGUMENTS lists the arguments of the functions and procedures that are available in the database. Its columns are the same as those in ALL\_ARGUMENTS.

### See Also:

- ["ALL\\_ARGUMENTS"](#)
- ["DBA\\_PROCEEDURES"](#) for information about the functions and procedures that are available in the database

## 5.143 DBA\_ASSEMBLIES

DBA\_ASSEMBLIES provides information about all assemblies in the database. Its columns are the same as those in ALL\_ASSEMBLIES.

### See Also:

- ["ALL\\_ASSEMBLIES"](#)

## 5.144 DBA\_ASSOCIATIONS

DBA\_ASSOCIATIONS describes all user-defined statistics in the database. Its columns are the same as those in ALL\_ASSOCIATIONS.

### See Also:

- ["ALL\\_ASSOCIATIONS"](#)

## 5.145 DBA\_ATTRIBUTE\_DIM\_ATTR\_CLASS

DBA\_ATTRIBUTE\_DIM\_ATTR\_CLASS describes the attribute classifications of all attribute dimensions in the database. Its columns are the same as those in ALL\_ATTRIBUTE\_DIM\_ATTR\_CLASS.

### See Also:

- ["ALL\\_ATTRIBUTE\\_DIM\\_ATTR\\_CLASS"](#)

## 5.146 DBA\_ATTRIBUTE\_DIM\_ATTR\_CLS

DBA\_ATTRIBUTE\_DIM\_ATTR\_CLS is identical to DBA\_ATTRIBUTE\_DIM\_ATTR\_CLASS.

**See Also:**

["DBA\\_ATTRIBUTE\\_DIM\\_ATTR\\_CLASS"](#)

## 5.147 DBA\_ATTRIBUTE\_DIM\_ATTR\_CLS\_AE

DBA\_ATTRIBUTE\_DIM\_ATTR\_CLS\_AE describes the attribute classifications of all attribute dimensions (across all editions) in the database. Its columns are the same as those in ALL\_ATTRIBUTE\_DIM\_ATTR\_CLS\_AE.

**See Also:**

["ALL\\_ATTRIBUTE\\_DIM\\_ATTR\\_CLS\\_AE"](#)

## 5.148 DBA\_ATTRIBUTE\_DIM\_ATTRS

DBA\_ATTRIBUTE\_DIM\_ATTRS describes the attributes of all attribute dimensions in the database. Its columns are the same as those in ALL\_ATTRIBUTE\_DIM\_ATTRS.

**See Also:**

["ALL\\_ATTRIBUTE\\_DIM\\_ATTRS"](#)

## 5.149 DBA\_ATTRIBUTE\_DIM\_ATTRS\_AE

DBA\_ATTRIBUTE\_DIM\_ATTRS\_AE describes the attributes of all attribute dimensions (across all editions) in the database. Its columns are the same as those in ALL\_ATTRIBUTE\_DIM\_ATTRS\_AE.

**See Also:**

["ALL\\_ATTRIBUTE\\_DIM\\_ATTRS\\_AE"](#)

## 5.150 DBA\_ATTRIBUTE\_DIM\_CLASS

DBA\_ATTRIBUTE\_DIM\_CLASS describes the classifications of all attribute dimensions in the database. Its columns are the same as those in ALL\_ATTRIBUTE\_DIM\_CLASS.

**See Also:**

"ALL\_ATTRIBUTE\_DIM\_CLASS"

## 5.151 DBA\_ATTRIBUTE\_DIM\_CLASS\_AE

DBA\_ATTRIBUTE\_DIM\_CLASS\_AE describes the classifications of all attribute dimensions (across all editions) in the database. Its columns are the same as those in ALL\_ATTRIBUTE\_DIM\_CLASS\_AE.

**See Also:**

"ALL\_ATTRIBUTE\_DIM\_CLASS\_AE"

## 5.152 DBA\_ATTRIBUTE\_DIM\_JN\_PTHS

DBA\_ATTRIBUTE\_DIM\_JN\_PTHS is identical to DBA\_ATTRIBUTE\_DIM\_JOIN\_PATHS.

**See Also:**

"DBA\_ATTRIBUTE\_DIM\_JOIN\_PATHS"

## 5.153 DBA\_ATTRIBUTE\_DIM\_JN\_PTHS\_AE

DBA\_ATTRIBUTE\_DIM\_JN\_PTHS\_AE describes the join paths for all attribute dimensions (across all editions) in the database. Its columns are the same as those in ALL\_ATTRIBUTE\_DIM\_JN\_PTHS\_AE.

**See Also:**

"ALL\_ATTRIBUTE\_DIM\_JN\_PTHS\_AE"

## 5.154 DBA\_ATTRIBUTE\_DIM\_JOIN\_PATHS

DBA\_ATTRIBUTE\_DIM\_JOIN\_PATHS describes the join paths for all attribute dimensions in the database. Its columns are the same as those in ALL\_ATTRIBUTE\_DIM\_JOIN\_PATHS.

**See Also:**

["ALL\\_ATTRIBUTE\\_DIM\\_JOIN\\_PATHS"](#)

## 5.155 DBA\_ATTRIBUTE\_DIM\_KEYS

DBA\_ATTRIBUTE\_DIM\_KEYS describes the keys of all attribute dimensions in the database. Its columns are the same as those in ALL\_ATTRIBUTE\_DIM\_KEYS.

**See Also:**

["ALL\\_ATTRIBUTE\\_DIM\\_KEYS"](#)

## 5.156 DBA\_ATTRIBUTE\_DIM\_KEYS\_AE

DBA\_ATTRIBUTE\_DIM\_KEYS\_AE describes the keys of all attribute dimensions (across all editions) in the database. Its columns are the same as those in ALL\_ATTRIBUTE\_DIM\_KEYS\_AE.

**See Also:**

["ALL\\_ATTRIBUTE\\_DIM\\_KEYS\\_AE"](#)

## 5.157 DBA\_ATTRIBUTE\_DIM\_LEVEL\_ATTRS

DBA\_ATTRIBUTE\_DIM\_LEVEL\_ATTRS describes the attributes of the levels of all attribute dimensions in the database. Its columns are the same as those in ALL\_ATTRIBUTE\_DIM\_LEVEL\_ATTRS.

**See Also:**

["ALL\\_ATTRIBUTE\\_DIM\\_LEVEL\\_ATTRS"](#)

## 5.158 DBA\_ATTRIBUTE\_DIM\_LEVELS

DBA\_ATTRIBUTE\_DIM\_LEVELS describes the levels of all attribute dimensions in the database. Its columns are the same as those in ALL\_ATTRIBUTE\_DIM\_LEVELS.

**See Also:**

["ALL\\_ATTRIBUTE\\_DIM\\_LEVELS"](#)

## 5.159 DBA\_ATTRIBUTE\_DIM\_LEVELS\_AE

DBA\_ATTRIBUTE\_DIM\_LEVELS\_AE describes the levels of all attribute dimensions (across all editions) in the database. Its columns are the same as those in ALL\_ATTRIBUTE\_DIM\_LEVELS\_AE.

**See Also:**

["ALL\\_ATTRIBUTE\\_DIM\\_LEVELS\\_AE"](#)

## 5.160 DBA\_ATTRIBUTE\_DIM\_LVL\_ATTRS

DBA\_ATTRIBUTE\_DIM\_LVL\_ATTRS is identical to DBA\_ATTRIBUTE\_DIM\_LEVEL\_ATTRS.

**See Also:**

["DBA\\_ATTRIBUTE\\_DIM\\_LEVEL\\_ATTRS"](#)

## 5.161 DBA\_ATTRIBUTE\_DIM\_LVL\_ATTRS\_AE

DBA\_ATTRIBUTE\_DIM\_LVL\_ATTRS\_AE describes the attributes of the levels of all attribute dimensions (across all editions) in the database. Its columns are the same as those in ALL\_ATTRIBUTE\_DIM\_LVL\_ATTRS\_AE.

**See Also:**

["ALL\\_ATTRIBUTE\\_DIM\\_LVL\\_ATTRS\\_AE"](#)

## 5.162 DBA\_ATTRIBUTE\_DIM\_LVL\_CLASS

DBA\_ATTRIBUTE\_DIM\_LVL\_CLASS describes the level classifications of all attribute dimensions in the database. Its columns are the same as those in ALL\_ATTRIBUTE\_DIM\_LVL\_CLASS.

**See Also:**

["ALL\\_ATTRIBUTE\\_DIM\\_LVL\\_CLASS"](#)

## 5.163 DBA\_ATTRIBUTE\_DIM\_LVL\_CLS

DBA\_ATTRIBUTE\_DIM\_LVL\_CLS is identical to DBA\_ATTRIBUTE\_DIM\_LVL\_CLASS.

**See Also:**

["DBA\\_ATTRIBUTE\\_DIM\\_LVL\\_CLASS"](#)

## 5.164 DBA\_ATTRIBUTE\_DIM\_LVL\_CLS\_AE

DBA\_ATTRIBUTE\_DIM\_LVL\_CLS\_AE describes the level classifications of all attribute dimensions (across all editions) in the database. Its columns are the same as those in ALL\_ATTRIBUTE\_DIM\_LVL\_CLS\_AE.

**See Also:**

["ALL\\_ATTRIBUTE\\_DIM\\_LVL\\_CLS\\_AE"](#)

## 5.165 DBA\_ATTRIBUTE\_DIM\_ORD\_ATTRS

DBA\_ATTRIBUTE\_DIM\_ORD\_ATTRS is identical to DBA\_ATTRIBUTE\_DIM\_ORDER\_ATTRS.

**See Also:**

["DBA\\_ATTRIBUTE\\_DIM\\_ORDER\\_ATTRS"](#)

## 5.166 DBA\_ATTRIBUTE\_DIM\_ORD\_ATTRS\_AE

DBA\_ATTRIBUTE\_DIM\_ORD\_ATTRS\_AE describes the order attributes of all attribute dimensions (across all editions) in the database. Its columns are the same as those in ALL\_ATTRIBUTE\_DIM\_ORD\_ATTRS\_AE.

**See Also:**

["ALL\\_ATTRIBUTE\\_DIM\\_ORD\\_ATTRS\\_AE"](#)

## 5.167 DBA\_ATTRIBUTE\_DIM\_ORDER\_ATTRS

DBA\_ATTRIBUTE\_DIM\_ORDER\_ATTRS describes the order attributes of all attribute dimensions in the database. Its columns are the same as those in ALL\_ATTRIBUTE\_DIM\_ORDER\_ATTRS.

**See Also:**

["ALL\\_ATTRIBUTE\\_DIM\\_ORDER\\_ATTRS"](#)

## 5.168 DBA\_ATTRIBUTE\_DIM\_TABLES

DBA\_ATTRIBUTE\_DIM\_TABLES describes the tables used by all attribute dimensions in the database. Its columns are the same as those in ALL\_ATTRIBUTE\_DIM\_TABLES.

**See Also:**

["ALL\\_ATTRIBUTE\\_DIM\\_TABLES"](#)

## 5.169 DBA\_ATTRIBUTE\_DIM\_TABLES\_AE

DBA\_ATTRIBUTE\_DIM\_TABLES\_AE describes the tables used by all attribute dimensions (across all editions) in the database. Its columns are the same as those in ALL\_ATTRIBUTE\_DIM\_TABLES\_AE.

**See Also:**

["ALL\\_ATTRIBUTE\\_DIM\\_TABLES\\_AE"](#)

## 5.170 DBA\_ATTRIBUTE\_DIMENSIONS

DBA\_ATTRIBUTE\_DIMENSIONS describes all attribute dimensions in the database. Its columns are the same as those in ALL\_ATTRIBUTE\_DIMENSIONS.

### See Also:

"ALL\_ATTRIBUTE\_DIMENSIONS"

## 5.171 DBA\_ATTRIBUTE\_DIMENSIONS\_AE

DBA\_ATTRIBUTE\_DIMENSIONS\_AE describes all attribute dimensions (across all editions) in the database. Its columns are the same as those in ALL\_ATTRIBUTE\_DIMENSIONS\_AE.

### See Also:

"ALL\_ATTRIBUTE\_DIMENSIONS\_AE"

## 5.172 DBA\_ATTRIBUTE\_TRANSFORMATIONS

DBA\_ATTRIBUTE\_TRANSFORMATIONS describes the transformation functions for all transformations in the database. Its columns are the same as those in ALL\_ATTRIBUTE\_TRANSFORMATIONS.

### See Also:

"ALL\_ATTRIBUTE\_TRANSFORMATIONS"

## 5.173 DBA\_AUDIT\_EXISTS

DBA\_AUDIT\_EXISTS displays audit trail entries produced by AUDIT EXISTS and AUDIT NOT EXISTS.

### Note:

This view is deprecated and applies only to traditional auditing. Traditional auditing is desupported starting in Oracle Database 23ai. Though traditional auditing is desupported, any current traditional audit settings that you have will still be honored and are viewable with this view. See *Oracle Database Security Guide* for more information about how this desupport works.

| Column      | Datatype       | NULL | Description                                                                                                                                                                     |
|-------------|----------------|------|---------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|
| OS_USERNAME | VARCHAR2 (255) |      | Operating system login username of the user whose actions were audited                                                                                                          |
| USERNAME    | VARCHAR2 (128) |      | Name (not ID number) of the user whose actions were audited                                                                                                                     |
| USERHOST    | VARCHAR2 (128) |      | Client host machine name                                                                                                                                                        |
| TERMINAL    | VARCHAR2 (255) |      | Identifier of the user's terminal                                                                                                                                               |
| TIMESTAMP   | DATE           |      | Date and time of the creation of the audit trail entry (date and time of user login for entries created by <code>AUDIT SESSION</code> ) in the local database session time zone |
| OWNER       | VARCHAR2 (128) |      | Intended creator of the non-existent object                                                                                                                                     |
| OBJ_NAME    | VARCHAR2 (128) |      | Name of the object affected by the action                                                                                                                                       |
| ACTION_NAME | VARCHAR2 (28)  |      | Name of the action type corresponding to the numeric code in the <code>ACTION</code> column in <code>DBA_AUDIT_TRAIL</code>                                                     |
| NEW_OWNER   | VARCHAR2 (128) |      | Owner of the object named in the <code>NEW_NAME</code> column                                                                                                                   |
| NEW_NAME    | VARCHAR2 (128) |      | New name of an object after a <code>RENAME</code> or the name of the underlying object                                                                                          |

| Column        | Datatype       | NULL | Description                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                 |
|---------------|----------------|------|---------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|
| OBJ_PRIVILEGE | VARCHAR2 (32)  |      | <p>Object privileges granted or revoked by a <b>GRANT</b> or <b>REVOKE</b> statement. The value of this column is a 32-character string of <b>Y</b> and dash (-) characters. Each character corresponds to a numbered privilege in the following list. The left-most character corresponds to privilege 0, the next character corresponds to privilege 1, and so on. The right-most character corresponds to privilege 31.</p> <ul style="list-style-type: none"> <li>0 - ALTER</li> <li>1 - AUDIT</li> <li>2 - COMMENT</li> <li>3 - DELETE</li> <li>4 - GRANT</li> <li>5 - INDEX</li> <li>6 - INSERT</li> <li>7 - LOCK</li> <li>8 - CREATE</li> <li>9 - SELECT</li> <li>10 - UPDATE</li> <li>11 - REFERENCES</li> <li>12 - EXECUTE</li> <li>13 - VIEW</li> <li>14 - DROP</li> <li>15 - ANALYZE</li> <li>16 - CREATE</li> <li>17 - READ</li> <li>18 - WRITE</li> <li>19 - KEEP SEQUENCE</li> <li>20 - ENQUEUE</li> <li>21 - DEQUEUE</li> <li>22 - UNDER</li> <li>23 - ON COMMIT</li> <li>24 - REWRITE</li> <li>25 - UPSERT</li> <li>26 - DEBUG</li> <li>27 - FLASHBACK</li> <li>28 - MERGE</li> <li>29 - USE</li> <li>30 - FLASHBACK ARCHIVE</li> <li>31 - DIRECTORY EXECUTE</li> </ul> <p>A <b>Y</b> indicates that the privilege was granted or revoked by the statement. A dash indicates that the privilege was not affected by the statement. For example, the following value indicates that the <b>MERGE</b> privilege was granted or revoked by the statement:</p> <p>-----Y---</p> |
| SYS_PRIVILEGE | VARCHAR2 (40)  |      | System privileges granted or revoked by a <b>GRANT</b> or <b>REVOKE</b> statement                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                           |
| GRANTEE       | VARCHAR2 (128) |      | Name of the grantee specified in a <b>GRANT</b> or <b>REVOKE</b> statement                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                  |

| Column             | Datatype                     | NULL     | Description                                                                                                                                                                   |
|--------------------|------------------------------|----------|-------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|
| SESSIONID          | NUMBER                       | NOT NULL | Numeric ID for each Oracle session                                                                                                                                            |
| ENTRYID            | NUMBER                       | NOT NULL | Numeric ID for each audit trail entry in the session                                                                                                                          |
| STATEMENTID        | NUMBER                       | NOT NULL | Numeric ID for each statement run                                                                                                                                             |
| RETURNCODE         | NUMBER                       | NOT NULL | Oracle error code generated by the action. Some useful values: <ul style="list-style-type: none"> <li>0 - Action succeeded</li> <li>2004 - Security violation</li> </ul>      |
| CLIENT_ID          | VARCHAR2 (128)               |          | Client identifier in each Oracle session                                                                                                                                      |
| ECONTEXT_ID        | VARCHAR2 (64)                |          | Application execution context identifier                                                                                                                                      |
| SESSION_CPU        | NUMBER                       |          | Amount of CPU time used by each Oracle session                                                                                                                                |
| EXTENDED_TIMESTAMP | TIMESTAMP (6) WITH TIME ZONE |          | Timestamp of the creation of the audit trail entry (timestamp of user login for entries created by <code>AUDIT SESSION</code> ) in UTC (Coordinated Universal Time) time zone |
| PROXY_SESSIONID    | NUMBER                       |          | Proxy session serial number, if an enterprise user has logged in through the proxy mechanism                                                                                  |
| GLOBAL_UID         | VARCHAR2 (32)                |          | Global user identifier for the user, if the user has logged in as an enterprise user                                                                                          |
| INSTANCE_NUMBER    | NUMBER                       |          | Instance number as specified by the <code>INSTANCE_NUMBER</code> initialization parameter                                                                                     |
| OS_PROCESS         | VARCHAR2 (16)                |          | Operating System process identifier of the Oracle process                                                                                                                     |
| TRANSACTIONID      | RAW (8)                      |          | Transaction identifier of the transaction in which the object is accessed or modified                                                                                         |
| SCN                | NUMBER                       |          | System change number (SCN) of the query                                                                                                                                       |
| SQL_BIND           | NVARCHAR2 (2000)             |          | Bind variable data of the query                                                                                                                                               |
| SQL_TEXT           | NVARCHAR2 (2000)             |          | SQL text of the query                                                                                                                                                         |
| OBJ_EDITION_NAME   | VARCHAR2 (128)               |          | Name of the edition containing the audited object                                                                                                                             |

**Note:**

The `SQL_BIND` and `SQL_TEXT` columns are only populated if the `AUDIT_TRAIL` initialization parameter is set to `db, extended`.

**See Also:**

"`AUDIT_TRAIL`"

## 5.174 DBA\_AUDIT\_MGMT\_CLEAN\_EVENTS

DBA\_AUDIT\_MGMT\_CLEAN\_EVENTS displays information about the history of audit trail cleanup or purge events.

Periodically, you should delete the contents of this view so that it will not grow too large.

### Note:

This view is intended for use with traditional auditing (pre-Oracle Database 12c auditing) only, not for unified auditing.

- See *Oracle Database Security Guide* for more information about unified auditing.
- See *Oracle Database Upgrade Guide* for more information about migrating to unified auditing.

| Column       | Datatype                     | NULL     | Description                                                                                                                                                                                                                                                                                                   |
|--------------|------------------------------|----------|---------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|
| AUDIT_TRAIL  | VARCHAR2 (28)                |          | Audit trail that was cleaned at the time of the event: <ul style="list-style-type: none"><li>• STANDARD AUDIT TRAIL</li><li>• FGA AUDIT TRAIL</li><li>• STANDARD AND FGA AUDIT TRAIL</li><li>• OS AUDIT TRAIL</li><li>• XML AUDIT TRAIL</li><li>• OS AND XML AUDIT TRAIL</li><li>• ALL AUDIT TRAILS</li></ul> |
| RAC_INSTANCE | NUMBER                       | NOT NULL | Instance number indicating the Oracle RAC instance that was cleaned up at the time of the event; 0 implies not applicable                                                                                                                                                                                     |
| CLEANUP_TIME | TIMESTAMP (6) WITH TIME ZONE |          | Timestamp when the cleanup event completed                                                                                                                                                                                                                                                                    |
| DELETE_COUNT | NUMBER                       |          | Number of audit records or audit files that were deleted at the time of the event                                                                                                                                                                                                                             |
| WAS_FORCED   | VARCHAR2 (3)                 |          | Indicates whether a forced cleanup occurred (YES) or not (NO); forced cleanup bypasses the last archive timestamp set                                                                                                                                                                                         |

### Note:

In a read-only database, including an Oracle Active Data Guard physical standby database, this view is not populated. Instead, a summary of cleanup events is written to the respective database instance's alert log file.

## 5.175 DBA\_AUDIT\_MGMT\_CLEANUP\_JOBS

DBA\_AUDIT\_MGMT\_CLEANUP\_JOBS displays information about the configured audit trail purge jobs.

### Note:

This view is populated in any Oracle Database where auditing is enabled, regardless of whether pre-Oracle Database 12c auditing or unified auditing is enabled for the database.

- See *Oracle Database Security Guide* for more information about unified auditing.
- See *Oracle Database Upgrade Guide* for more information about migrating to unified auditing.

| Column                     | Datatype       | NULL     | Description                                                                                                                                                                                                                                                                                                                                                                                                                                                                   |
|----------------------------|----------------|----------|-------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|
| JOB_NAME                   | VARCHAR2 (100) | NOT NULL | Name of the audit trail purge job                                                                                                                                                                                                                                                                                                                                                                                                                                             |
| JOB_STATUS                 | VARCHAR2 (8)   |          | Current status of the audit trail purge job (ENABLED) or (DISABLED)                                                                                                                                                                                                                                                                                                                                                                                                           |
| AUDIT_TRAIL                | VARCHAR2 (28)  |          | Audit trail for which the audit trail purge job is configured: <ul style="list-style-type: none"> <li>• STANDARD AUDIT TRAIL</li> <li>• FGA AUDIT TRAIL</li> <li>• STANDARD AND FGA AUDIT TRAIL</li> <li>• OS AUDIT TRAIL</li> <li>• XML AUDIT TRAIL</li> <li>• OS AND XML AUDIT TRAIL</li> <li>• ALL AUDIT TRAILS</li> <li>• UNIFIED AUDIT TRAIL</li> </ul>                                                                                                                  |
| JOB_FREQUENCY              | VARCHAR2 (100) |          | Frequency at which the audit trail purge job runs                                                                                                                                                                                                                                                                                                                                                                                                                             |
| USE_LAST_ARCHIVE_TIMESTAMP | VARCHAR2 (3)   |          | Indicates whether the audit trail purge job invocation uses the last archive timestamp. The last archive timestamp is shown in the LAST_ARCHIVE_TS column of the DBA_AUDIT_MGMT_LAST_ARCH_TS view. Possible values: <ul style="list-style-type: none"> <li>• YES - Indicates that the audit trail purge job invocation uses the last archive timestamp</li> <li>• NO - Indicates that the audit trail purge job invocation does not use the last archive timestamp</li> </ul> |
| JOB_CONTAINER              | VARCHAR2 (7)   |          | In a CDB, indicates whether audit trail purge job will be performed only in the current container or in all the containers. Possible values: <ul style="list-style-type: none"> <li>• CURRENT - Indicates that audit trail purge job will be performed only in the current container</li> <li>• ALL - Indicates that audit trail purge job will be performed in all the containers</li> </ul> In a non-CDB, the value in this column is always CURRENT.                       |

**See Also:**

"DBA\_AUDIT\_MGMT\_LAST\_ARCH\_TS"

## 5.176 DBA\_AUDIT\_MGMT\_CONFIG\_PARAMS

DBA\_AUDIT\_MGMT\_CONFIG\_PARAMS displays information about the currently configured audit trail properties that are used by the DBMS\_AUDIT\_MGMT PL/SQL package.

**Note:**

This view is populated in any Oracle Database where auditing is enabled, regardless of whether pre-Oracle Database 12c auditing or unified auditing is enabled for the database.

- See *Oracle Database Security Guide* for more information about unified auditing.
- See *Oracle Database Upgrade Guide* for more information about migrating to unified auditing.

| Column          | Datatype        | NULL     | Description                                                                                                                                                                                                                                                                                                                             |
|-----------------|-----------------|----------|-----------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|
| PARAMETER_NAME  | VARCHAR2 (1024) | NOT NULL | Name of the property                                                                                                                                                                                                                                                                                                                    |
| PARAMETER_VALUE | VARCHAR2 (4000) |          | Value of the property                                                                                                                                                                                                                                                                                                                   |
| AUDIT_TRAIL     | VARCHAR2 (28)   |          | Audit trails for which the property is configured: <ul style="list-style-type: none"><li>• STANDARD AUDIT TRAIL</li><li>• FGA AUDIT TRAIL</li><li>• STANDARD AND FGA AUDIT TRAIL</li><li>• OS AUDIT TRAIL</li><li>• XML AUDIT TRAIL</li><li>• OS AND XML AUDIT TRAIL</li><li>• ALL AUDIT TRAILS</li><li>• UNIFIED AUDIT TRAIL</li></ul> |

**Note:**

In a read-only database, including an Oracle Active Data Guard physical standby database, this view is not populated when the DBMS\_AUDIT\_MGMT.SET\_AUDIT\_TRAIL PL/SQL procedure is invoked. If the procedure was used when the database was in read-only mode, use DBMS\_AUDIT\_MGMT.GET\_AUDIT\_TRAIL to check the value of the property.

 **See Also:**

*Oracle Database PL/SQL Packages and Types Reference* for more information about the parameters specified with the `DBMS_AUDIT_MGMT.SET_AUDIT_TRAIL_PROPERTY` procedure

## 5.177 DBA\_AUDIT\_MGMT\_LAST\_ARCH\_TS

`DBA_AUDIT_MGMT_LAST_ARCH_TS` displays information about the last archive timestamps set for audit trail cleanup or purges.

 **Note:**

This view is populated in any Oracle Database where auditing is enabled, regardless of whether pre-Oracle Database 12c auditing or unified auditing is enabled for the database.

- See *Oracle Database Security Guide* for more information about unified auditing.
- See *Oracle Database Upgrade Guide* for more information about migrating to unified auditing.

| Column          | Datatype                     | NULL     | Description                                                                                                                                                                                                                                           |
|-----------------|------------------------------|----------|-------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|
| AUDIT_TRAIL     | VARCHAR2 (20)                |          | Audit trail for which the last archive timestamp applies: <ul style="list-style-type: none"><li>• STANDARD AUDIT TRAIL</li><li>• FGA AUDIT TRAIL</li><li>• OS AUDIT TRAIL</li><li>• XML AUDIT TRAIL</li><li>• UNIFIED AUDIT TRAIL</li></ul>           |
| RAC_INSTANCE    | NUMBER                       | NOT NULL | Oracle RAC instance number for which the last archive timestamp applies; 0 implies not applicable                                                                                                                                                     |
| LAST_ARCHIVE_TS | TIMESTAMP (6) WITH TIME ZONE |          | Timestamp of the last audit record or audit file that has been archived                                                                                                                                                                               |
| DATABASE_ID     | NUMBER                       | NOT NULL | Database ID of the audit records to clean up                                                                                                                                                                                                          |
| CONTAINER_GUID  | VARCHAR2 (33)                | NOT NULL | GUID of the container of the audit records to clean up                                                                                                                                                                                                |
| DB_UNIQUE_NAME  | VARCHAR2 (257)               | NOT NULL | Unique database name of the audited database, which is defined by the <code>DB_UNIQUE_NAME</code> initialization parameter. This value is useful for differentiating between the primary and standby databases in an Oracle Data Guard configuration. |

**Note:**

In a read-only database, including an Oracle Active Data Guard physical standby database, this view is not populated when `DBMS_AUDIT_MGMT.SET_LAST_ARCHIVE_TIMESTAMP` is invoked. In such a case, use `DBMS_AUDIT_MGMT.GET_LAST_ARCHIVE_TIMESTAMP` to check for the timestamp, if it was configured for the database instance.

**See Also:**

*Oracle Database PL/SQL Packages and Types Reference* for more information about `DBMS_AUDIT_MGMT` subprograms

## 5.178 DBA\_AUDIT\_OBJECT

`DBA_AUDIT_OBJECT` displays audit trail records for all objects in the database.

**Note:**

This view is deprecated and applies only to traditional auditing. Traditional auditing is desupported starting in Oracle Database 23ai. Though traditional auditing is desupported, any current traditional audit settings that you have will still be honored and are viewable with this view. See *Oracle Database Security Guide* for more information about how this desupport works.

`USER_AUDIT_OBJECT` displays audit trail records for the objects accessible to the current user.

| Column      | Datatype       | NULL | Description                                                                                                                                                                     |
|-------------|----------------|------|---------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|
| OS_USERNAME | VARCHAR2 (255) |      | Operating system login username of the user whose actions were audited                                                                                                          |
| USERNAME    | VARCHAR2 (128) |      | Name (not ID number) of the user whose actions were audited                                                                                                                     |
| USERHOST    | VARCHAR2 (128) |      | Client host machine name                                                                                                                                                        |
| TERMINAL    | VARCHAR2 (255) |      | Identifier of the user's terminal                                                                                                                                               |
| TIMESTAMP   | DATE           |      | Date and time of the creation of the audit trail entry (date and time of user login for entries created by <code>AUDIT SESSION</code> ) in the local database session time zone |
| OWNER       | VARCHAR2 (128) |      | Creator of the object affected by the action                                                                                                                                    |
| OBJ_NAME    | VARCHAR2 (128) |      | Name of the object affected by the action                                                                                                                                       |
| ACTION_NAME | VARCHAR2 (28)  |      | Name of the action type corresponding to the numeric code in the <code>ACTION</code> column in <code>DBA_AUDIT_TRAIL</code>                                                     |

| Column             | Datatype                     | NULL     | Description                                                                                                                                                                                                                                                                                                                                                                                     |
|--------------------|------------------------------|----------|-------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|
| NEW_OWNER          | VARCHAR2 (128)               |          | Owner of the object named in the NEW_NAME column                                                                                                                                                                                                                                                                                                                                                |
| NEW_NAME           | VARCHAR2 (128)               |          | New name of an object after a RENAME or the name of the underlying object                                                                                                                                                                                                                                                                                                                       |
| SES_ACTIONS        | VARCHAR2 (19)                |          | Session summary (a string of 16 characters, one for each action type in the order ALTER, AUDIT, COMMENT, DELETE, GRANT, INDEX, INSERT, LOCK, RENAME, SELECT, UPDATE, REFERENCES, and EXECUTE). Positions 14, 15, and 16 are reserved for future use. The characters are: <ul style="list-style-type: none"> <li>- - None</li> <li>S - Success</li> <li>F - Failure</li> <li>B - Both</li> </ul> |
| COMMENT_TEXT       | VARCHAR2 (4000)              |          | Text comment on the audit trail                                                                                                                                                                                                                                                                                                                                                                 |
| SESSIONID          | NUMBER                       | NOT NULL | Numeric ID for each Oracle session                                                                                                                                                                                                                                                                                                                                                              |
| ENTRYID            | NUMBER                       | NOT NULL | Numeric ID for each audit trail entry in the session                                                                                                                                                                                                                                                                                                                                            |
| STATEMENTID        | NUMBER                       | NOT NULL | Numeric ID for each statement run                                                                                                                                                                                                                                                                                                                                                               |
| RETURNCODE         | NUMBER                       | NOT NULL | Oracle error code generated by the action. Some useful values: <ul style="list-style-type: none"> <li>0 - Action succeeded</li> <li>2004 - Security violation</li> </ul>                                                                                                                                                                                                                        |
| PRIV_USED          | VARCHAR2 (40)                |          | System privilege used to execute the action                                                                                                                                                                                                                                                                                                                                                     |
| CLIENT_ID          | VARCHAR2 (128)               |          | Client identifier in each Oracle session                                                                                                                                                                                                                                                                                                                                                        |
| ECONTEXT_ID        | VARCHAR2 (64)                |          | Application execution context identifier                                                                                                                                                                                                                                                                                                                                                        |
| SESSION_CPU        | NUMBER                       |          | Amount of CPU time used by each Oracle session                                                                                                                                                                                                                                                                                                                                                  |
| EXTENDED_TIMESTAMP | TIMESTAMP (6) WITH TIME ZONE |          | Timestamp of the creation of the audit trail entry (timestamp of user login for entries created by AUDIT SESSION) in UTC (Coordinated Universal Time) time zone                                                                                                                                                                                                                                 |
| PROXY_SESSIONID    | NUMBER                       |          | Proxy session serial number, if an enterprise user has logged in through the proxy mechanism                                                                                                                                                                                                                                                                                                    |
| GLOBAL_UID         | VARCHAR2 (32)                |          | Global user identifier for the user, if the user has logged in as an enterprise user                                                                                                                                                                                                                                                                                                            |
| INSTANCE_NUMBER    | NUMBER                       |          | Instance number as specified by the INSTANCE_NUMBER initialization parameter                                                                                                                                                                                                                                                                                                                    |
| OS_PROCESS         | VARCHAR2 (16)                |          | Operating System process identifier of the Oracle process                                                                                                                                                                                                                                                                                                                                       |
| TRANSACTIONID      | RAW (8)                      |          | Transaction identifier of the transaction in which the object is accessed or modified                                                                                                                                                                                                                                                                                                           |
| SCN                | NUMBER                       |          | System change number (SCN) of the query                                                                                                                                                                                                                                                                                                                                                         |
| SQL_BIND           | NVARCHAR2 (2000)             |          | Bind variable data of the query                                                                                                                                                                                                                                                                                                                                                                 |
| SQL_TEXT           | NVARCHAR2 (2000)             |          | SQL text of the query                                                                                                                                                                                                                                                                                                                                                                           |
| OBJ_EDITION_NAME   | VARCHAR2 (128)               |          | Name of the edition containing the audited object                                                                                                                                                                                                                                                                                                                                               |

**Note:**

The `SQL_BIND` and `SQL_TEXT` columns are only populated if the `AUDIT_TRAIL` initialization parameter is set to `db, extended`.

## 5.179 DBA\_AUDIT\_POLICIES

`DBA_AUDIT_POLICIES` describes all fine-grained auditing policies in the database. Its columns are the same as those in `ALL_AUDIT_POLICIES`.

**Note:**

This view is populated only in an Oracle Database where unified auditing is not enabled. When unified auditing is enabled in Oracle Database, the audit records are populated in the new audit trail and can be viewed from `UNIFIED_AUDIT_TRAIL`.

- See *Oracle Database Security Guide* for more information about unified auditing.
- See *Oracle Database Upgrade Guide* for more information about migrating to unified auditing.

**See Also:**

## 5.180 DBA\_AUDIT\_POLICY\_COLUMNS

DBA\_AUDIT\_POLICY\_COLUMNS describes all fine-grained auditing policy columns in the database. Its columns are the same as those in ALL\_AUDIT\_POLICY\_COLUMNS.

### Note:

This view is populated only in an Oracle Database where unified auditing is not enabled. When unified auditing is enabled in Oracle Database, the audit records are populated in the new audit trail and can be viewed from UNIFIED\_AUDIT\_TRAIL.

- See *Oracle Database Security Guide* for more information about unified auditing.
- See *Oracle Database Upgrade Guide* for more information about migrating to unified auditing.

"ALL\_AUDIT\_POLICY\_COLUMNS"

## 5.181 DBA\_AUDIT\_SESSION

DBA\_AUDIT\_SESSION displays all audit trail records concerning CONNECT and DISCONNECT.

### Note:

This view is deprecated and applies only to traditional auditing. Traditional auditing is desupported starting in Oracle Database 23ai. Though traditional auditing is desupported, any current traditional audit settings that you have will still be honored and are viewable with this view. See *Oracle Database Security Guide* for more information about how this desupport works.

### Related View

USER\_AUDIT\_SESSION displays the audit trail records concerning connections and disconnections of the current user.

| Column      | Datatype       | NULL | Description                                                            |
|-------------|----------------|------|------------------------------------------------------------------------|
| OS_USERNAME | VARCHAR2 (255) |      | Operating system login username of the user whose actions were audited |
| USERNAME    | VARCHAR2 (128) |      | Name (not ID number) of the user whose actions were audited            |
| USERHOST    | VARCHAR2 (128) |      | Client host machine name                                               |
| TERMINAL    | VARCHAR2 (255) |      | Identifier of the user's terminal                                      |

| Column             | Datatype                     | NULL     | Description                                                                                                                                                                     |
|--------------------|------------------------------|----------|---------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|
| TIMESTAMP          | DATE                         |          | Date and time of the creation of the audit trail entry (date and time of user login for entries created by <code>AUDIT_SESSION</code> ) in the local database session time zone |
| ACTION_NAME        | VARCHAR2 (28)                |          | Name of the action type corresponding to the numeric code in the <code>ACTION</code> column in <code>DBA_AUDIT_TRAIL</code>                                                     |
| LOGOFF_TIME        | DATE                         |          | Date and time of user log off                                                                                                                                                   |
| LOGOFF_LREAD       | NUMBER                       |          | Logical reads for the session                                                                                                                                                   |
| LOGOFF_PREAD       | NUMBER                       |          | Physical reads for the session                                                                                                                                                  |
| LOGOFF_LWRITE      | NUMBER                       |          | Logical writes for the session                                                                                                                                                  |
| LOGOFF_DLOCK       | VARCHAR2 (40)                |          | Deadlocks detected during the session                                                                                                                                           |
| SESSIONID          | NUMBER                       | NOT NULL | Numeric ID for each Oracle session                                                                                                                                              |
| RETURNCODE         | NUMBER                       | NOT NULL | Oracle error code generated by the action. Some useful values: <ul style="list-style-type: none"> <li>• 0 - Action succeeded</li> <li>• 2004 - Security violation</li> </ul>    |
| CLIENT_ID          | VARCHAR2 (128)               |          | Client identifier in each Oracle session                                                                                                                                        |
| SESSION_CPU        | NUMBER                       |          | Amount of CPU time used by each Oracle session (in centiseconds)                                                                                                                |
| EXTENDED_TIMESTAMP | TIMESTAMP (6) WITH TIME ZONE |          | Timestamp of the creation of the audit trail entry (timestamp of user login for entries created by <code>AUDIT_SESSION</code> ) in UTC (Coordinated Universal Time) time zone   |
| PROXY_SESSIONID    | NUMBER                       |          | Proxy session serial number, if an enterprise user has logged in through the proxy mechanism                                                                                    |
| GLOBAL_UID         | VARCHAR2 (32)                |          | Global user identifier for the user, if the user has logged in as an enterprise user                                                                                            |
| INSTANCE_NUMBER    | NUMBER                       |          | Instance number as specified by the <code>INSTANCE_NUMBER</code> initialization parameter                                                                                       |
| OS_PROCESS         | VARCHAR2 (16)                |          | Operating System process identifier of the Oracle process                                                                                                                       |

| ACTION_NAME | VARCHAR2 (28)  |      | Name of the action type corresponding to the numeric code in the ACTION column in DBA_AUDIT_TRAIL                                                                 |
| NEW_NAME    | VARCHAR2 (128) |      | New name of an object after a RENAME or the name of the underlying object                                                                                         |

| Column        | Datatype      | NULL | Description                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                            |
|---------------|---------------|------|----------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|
| OBJ_PRIVILEGE | VARCHAR2 (32) |      | <p>Object privileges granted or revoked by a <code>GRANT</code> or <code>REVOKE</code> statement. The value of this column is a 32-character string of <code>Y</code> and dash (<code>-</code>) characters. Each character corresponds to a numbered privilege in the following list. The left-most character corresponds to privilege 0, the next character corresponds to privilege 1, and so on. The right-most character corresponds to privilege 31.</p> <ul style="list-style-type: none"> <li>0 - ALTER</li> <li>1 - AUDIT</li> <li>2 - COMMENT</li> <li>3 - DELETE</li> <li>4 - GRANT</li> <li>5 - INDEX</li> <li>6 - INSERT</li> <li>7 - LOCK</li> <li>8 - CREATE</li> <li>9 - SELECT</li> <li>10 - UPDATE</li> <li>11 - REFERENCES</li> <li>12 - EXECUTE</li> <li>13 - VIEW</li> <li>14 - DROP</li> <li>15 - ANALYZE</li> <li>16 - CREATE</li> <li>17 - READ</li> <li>18 - WRITE</li> <li>19 - KEEP SEQUENCE</li> <li>20 - ENQUEUE</li> <li>21 - DEQUEUE</li> <li>22 - UNDER</li> <li>23 - ON COMMIT</li> <li>24 - REWRITE</li> <li>25 - UPSERT</li> <li>26 - DEBUG</li> <li>27 - FLASHBACK</li> <li>28 - MERGE</li> <li>29 - USE</li> <li>30 - FLASHBACK ARCHIVE</li> <li>31 - DIRECTORY EXECUTE</li> </ul> <p>A <code>Y</code> indicates that the privilege was granted or revoked by the statement. A dash indicates that the privilege was not affected by the statement. For example, the following value indicates that the <code>MERGE</code> privilege was granted or revoked by the statement:</p> <p>-----Y---</p> |
| SYS_PRIVILEGE | VARCHAR2 (40) |      | System privileges granted or revoked by a <code>GRANT</code> or <code>REVOKE</code> statement                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                          |
| ADMIN_OPTION  | VARCHAR2 (1)  |      | Signifies the role or system privilege was granted with the <code>ADMIN</code> option                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                  |

| Column             | Datatype                     | NULL     | Description                                                                                                                                                                                                                                                                                                                                                                                     |
|--------------------|------------------------------|----------|-------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|
| GRANTEE            | VARCHAR2 (128)               |          | Name of the grantee specified in a GRANT or REVOKE statement                                                                                                                                                                                                                                                                                                                                    |
| AUDIT_OPTION       | VARCHAR2 (40)                |          | Auditing option set with the AUDIT statement                                                                                                                                                                                                                                                                                                                                                    |
| SES_ACTIONS        | VARCHAR2 (19)                |          | Session summary (a string of 16 characters, one for each action type in the order ALTER, AUDIT, COMMENT, DELETE, GRANT, INDEX, INSERT, LOCK, RENAME, SELECT, UPDATE, REFERENCES, and EXECUTE). Positions 14, 15, and 16 are reserved for future use. The characters are: <ul style="list-style-type: none"> <li>- - None</li> <li>S - Success</li> <li>F - Failure</li> <li>B - Both</li> </ul> |
| COMMENT_TEXT       | VARCHAR2 (4000)              |          | Text comment on the audit trail, inserted by the application                                                                                                                                                                                                                                                                                                                                    |
| SESSIONID          | NUMBER                       | NOT NULL | Numeric ID for each Oracle session                                                                                                                                                                                                                                                                                                                                                              |
| ENTRYID            | NUMBER                       | NOT NULL | Numeric ID for each audit trail entry in the session                                                                                                                                                                                                                                                                                                                                            |
| STATEMENTID        | NUMBER                       | NOT NULL | Numeric ID for each statement run                                                                                                                                                                                                                                                                                                                                                               |
| RETURNCODE         | NUMBER                       | NOT NULL | Oracle error code generated by the action. Some useful values: <ul style="list-style-type: none"> <li>0 - Action succeeded</li> <li>2004 - Security violation</li> </ul>                                                                                                                                                                                                                        |
| PRIV_USED          | VARCHAR2 (40)                |          | System privilege used to execute the action                                                                                                                                                                                                                                                                                                                                                     |

## 5.183 DBA\_AUDIT\_TRAIL

`DBA_AUDIT_TRAIL` displays all standard audit trail entries.

**Note:**

This view is deprecated and applies only to traditional auditing. Traditional auditing is desupported starting in Oracle Database 23ai. Though traditional auditing is desupported, any current traditional audit settings that you have will still be honored and are viewable with this view. See *Oracle Database Security Guide* for more information about how this desupport works.

### Related View

`USER_AUDIT_TRAIL` displays the standard audit trail entries related to the current user.

| Column      | Datatype       | NULL     | Description                                                                                                                                                                     |

| NEW_OWNER     | VARCHAR2 (128) |      | Owner of the object named in the NEW_NAME column                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                  |
| NEW_NAME      | VARCHAR2 (128) |      | New name of the object after a RENAME or the name of the underlying object                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                        |
| OBJ_PRIVILEGE | VARCHAR2 (32)  |      | <p>Object privileges granted or revoked by a GRANT or REVOKE statement. The value of this column is a 32-character string of Y and dash (-) characters. Each character corresponds to a numbered privilege in the following list. The left-most character corresponds to privilege 0, the next character corresponds to privilege 1, and so on. The right-most character corresponds to privilege 31.</p> <p>0 - ALTER<br/> 1 - AUDIT<br/> 2 - COMMENT<br/> 3 - DELETE<br/> 4 - GRANT<br/> 5 - INDEX<br/> 6 - INSERT<br/> 7 - LOCK<br/> 8 - CREATE<br/> 9 - SELECT<br/> 10 - UPDATE<br/> 11 - REFERENCES<br/> 12 - EXECUTE<br/> 13 - VIEW<br/> 14 - DROP<br/> 15 - ANALYZE<br/> 16 - CREATE<br/> 17 - READ<br/> 18 - WRITE<br/> 19 - KEEP SEQUENCE<br/> 20 - ENQUEUE<br/> 21 - DEQUEUE<br/> 22 - UNDER<br/> 23 - ON COMMIT<br/> 24 - REWRITE<br/> 25 - UPSERT<br/> 26 - DEBUG<br/> 27 - FLASHBACK<br/> 28 - MERGE<br/> 29 - USE<br/> 30 - FLASHBACK ARCHIVE<br/> 31 - DIRECTORY EXECUTE</p> <p>A Y indicates that the privilege was granted or revoked by the statement. A dash indicates that the privilege was not affected by the statement. For example, the following value indicates that the MERGE privilege was granted or revoked by the statement:</p> <p>-----Y---</p> |

| Column        | Datatype        | NULL     | Description                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                              |

| LOGOFF_LWRITE | NUMBER          |          | Logical writes for the session                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                           |
| LOGOFF_DLOCK  | VARCHAR2 (40)   |          | Deadlocks detected during the session                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                    |
| COMMENT_TEXT  | VARCHAR2 (4000) |          | Text comment on the audit trail entry, providing more information about the statement audited<br>Also indicates how the user or remote call was authenticated. The method can be one of the following: <ul style="list-style-type: none"> <li>DATABASE - Authentication was done by password</li> <li>NETWORK - Authentication was done by Oracle Net Services or strong authentication</li> <li>PROXY - Client was authenticated by another user; the name of the proxy user follows the method type</li> </ul> When an object is accessed remotely over a database link, the COMMENT_TEXT column also captures the information about the database link. For example: <pre> DBLINK_INFO: (SOURCE_GLOBAL_NAME=view02.regress.rdbms.dev .us.example.com, DBLINK_NAME=VIEW05_LINK.REGRESS.RDBMS.DEV.US .EXAMPLE.COM, SOURCE_AUDIT_SESSIONID=250805) </pre> |
| SESSIONID     | NUMBER          | NOT NULL | Numeric ID for each Oracle session. Each user session gets a unique session ID.                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                          |
| ENTRYID       | NUMBER          | NOT NULL | Numeric ID for each audit trail entry in the session. The entry ID is an index of a session's audit entries that starts at 1 and increases to the number of entries that are written.                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                    |

| Column             | Datatype                     | NULL     | Description                                                                                                                                                                                                                                                                                                                                                                                                                                                        |
|--------------------|------------------------------|----------|--------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|
| STATEMENTID        | NUMBER                       | NOT NULL | <i>n</i> th statement in the user session. The first SQL statement gets a value of 1 and the value is incremented for each subsequent SQL statement. Note that one SQL statement can create more than one audit trail entry (for example, when more than one object is audited from the same SQL statement), and in this case the statement ID remains the same for that statement and the entry ID increases for each audit trail entry created by the statement. |
| RETURNCODE         | NUMBER                       | NOT NULL | Oracle error code generated by the action. Some useful values: <ul style="list-style-type: none"> <li>0 - Action succeeded</li> <li>2004 - Security violation</li> </ul>                                                                                                                                                                                                                                                                                           |
| PRIV_USED          | VARCHAR2 (40)                |          | System privilege used to execute the action                                                                                                                                                                                                                                                                                                                                                                                                                        |
| CLIENT_ID          | VARCHAR2 (128)               |          | Client identifier in each Oracle session                                                                                                                                                                                                                                                                                                                                                                                                                           |
| ECONTEXT_ID        | VARCHAR2 (64)                |          | Application execution context identifier                                                                                                                                                                                                                                                                                                                                                                                                                           |
| SESSION_CPU        | NUMBER                       |          | Amount of CPU time used by each Oracle session (in centiseconds)                                                                                                                                                                                                                                                                                                                                                                                                   |
| EXTENDED_TIMESTAMP | TIMESTAMP (6) WITH TIME ZONE |          | Timestamp of the creation of the audit trail entry (timestamp of user login for entries created by <code>AUDIT SESSION</code> ) in UTC (Coordinated Universal Time) time zone                                                                                                                                                                                                                                                                                      |
| PROXY_SESSIONID    | NUMBER                       |          | Proxy session serial number, if an enterprise user has logged in through the proxy mechanism                                                                                                                                                                                                                                                                                                                                                                       |
| GLOBAL_UID         | VARCHAR2 (32)                |          | Global user identifier for the user, if the user has logged in as an enterprise user                                                                                                                                                                                                                                                                                                                                                                               |
| INSTANCE_NUMBER    | NUMBER                       |          | Instance number as specified by the <code>INSTANCE_NUMBER</code> initialization parameter                                                                                                                                                                                                                                                                                                                                                                          |
| OS_PROCESS         | VARCHAR2 (16)                |          | Operating System process identifier of the Oracle process                                                                                                                                                                                                                                                                                                                                                                                                          |
| TRANSACTIONID      | RAW (8)                      |          | Transaction identifier of the transaction in which the object is accessed or modified                                                                                                                                                                                                                                                                                                                                                                              |
| SCN                | NUMBER                       |          | System change number (SCN) of the creation of the audit trail entry                                                                                                                                                                                                                                                                                                                                                                                                |
| SQL_BIND           | NVARCHAR2 (2000)             |          | Bind variable data of the query                                                                                                                                                                                                                                                                                                                                                                                                                                    |

## 5.184 DBA\_AUTO\_CLUSTERING\_CONFIG

`DBA_AUTO_CLUSTERING_CONFIG` displays the current configuration parameter settings for automatic clustering.

| Column                       | Datatype                                 | NULL     | Description                                                 |
|------------------------------|------------------------------------------|----------|-------------------------------------------------------------|
| <code>PARAMETER_NAME</code>  | <code>VARCHAR2(128)</code>               | NOT NULL | Name of the configuration parameter                         |
| <code>PARAMETER_VALUE</code> | <code>VARCHAR2(4000)</code>              |          | Value of the configuration parameter                        |
| <code>LAST_UPDATED</code>    | <code>TIMESTAMP(6) WITH TIME ZONE</code> |          | Date and time at which the parameter value was last updated |
| <code>UPDATED_BY</code>      | <code>VARCHAR2(128)</code>               |          | User who last updated the parameter value                   |
| <code>DESCRIPTION</code>     | <code>VARCHAR2(73)</code>                |          | Brief description of the parameter                          |

**Note:**

This view is available starting with Oracle Database 23ai.

## 5.185 DBA\_AUTO\_CLUSTERING\_RECOMMENDATIONS

`DBA_AUTO_CLUSTERING_RECOMMENDATIONS` displays recommendations associated with automatic clustering.

| Column                         | Datatype                   | NULL     | Description                                                     |
|--------------------------------|----------------------------|----------|-----------------------------------------------------------------|
| <code>TABLE_OWNER</code>       | <code>VARCHAR2(128)</code> | NOT NULL | Owner of the table                                              |
| <code>TABLE_NAME</code>        | <code>VARCHAR2(128)</code> | NOT NULL | Name of the table                                               |
| <code>RECOMMENDATION_ID</code> | <code>RAW(16)</code>       | NOT NULL | Unique ID representing the recommendation                       |
| <code>SQLSET_OWNER</code>      | <code>VARCHAR2(128)</code> |          | Owner of the SQL tuning set that is used for the recommendation |

| Column                | Datatype                     | NULL     | Description                                                                                                                                                                                                                                                                                                                                                                                            |
|-----------------------|------------------------------|----------|--------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|
| SQLSET_NAME           | VARCHAR2 (128)               |          | Name of the SQL tuning set that is used for the recommendation                                                                                                                                                                                                                                                                                                                                         |
| CLUSTERING_METHOD     | VARCHAR2 (8)                 |          | Recommended clustering method for the table.<br>Possible values: <ul style="list-style-type: none"> <li>SINGLE - Single table clustering (clustering is based on columns from a single table)</li> <li>JOIN - Join clustering (clustering is based on columns from two or more tables that are joined together)</li> </ul> A null value means there is no recommended clustering method for the table. |
| CLUSTERING_DDL        | VARCHAR2 (4000)              |          | Not currently used                                                                                                                                                                                                                                                                                                                                                                                     |
| ZONEMAP_DDL           | VARCHAR2 (4000)              |          | Not currently used                                                                                                                                                                                                                                                                                                                                                                                     |

## 5.186 DBA\_AUTO\_INDEX\_CONFIG

DBA\_AUTO\_INDEX\_CONFIG displays the current configuration parameter settings for automatic indexing.

You can set automatic indexing configuration parameters by using the DBMS\_AUTO\_INDEX.CONFIGURE procedure.

| Column         | Datatype       | NULL     | Description                         |
|----------------|----------------|----------|-------------------------------------|
| PARAMETER_NAME | VARCHAR2 (128) | NOT NULL | Name of the configuration parameter |

| Column          | Datatype        | NULL | Description                                         |
|-----------------|-----------------|------|-----------------------------------------------------|
| PARAMETER_VALUE | VARCHAR2 (4000) |      | Value of the configuration parameter                |
| LAST_MODIFIED   | TIMESTAMP (6)   |      | Time at which the parameter value was last modified |
| MODIFIED_BY     | VARCHAR2 (128)  |      | User who last modified the parameter value          |

#### See Also:

## 5.187 DBA\_AUTO\_MV\_ANALYSIS\_ACTIONS

`DBA_AUTO_MV_ANALYSIS_ACTIONS` displays information about analysis and tuning activities associated with automatic materialized views.

Each action is specified by the `COMMAND` and attribute (`ATTR1` through `ATTR6`) columns. Each command defines how the attribute columns will be used.

| Column         | Datatype        | NULL     | Description                                                                                                                                |
|----------------|-----------------|----------|--------------------------------------------------------------------------------------------------------------------------------------------|
| OWNER          | VARCHAR2 (128)  |          | Owner of the task                                                                                                                          |
| TASK_ID        | NUMBER          | NOT NULL | Identifier of the task                                                                                                                     |
| TASK_NAME      | VARCHAR2 (128)  |          | Name of the task<br>The value of this column is always <code>SYS_AUTO_MV_TASK</code> .                                                     |
| EXECUTION_NAME | VARCHAR2 (128)  |          | The name of the task execution with which this entry (row) is associated                                                                   |
| REC_ID         | NUMBER          | NOT NULL | Recommendation associated with the action                                                                                                  |
| ACTION_ID      | NUMBER          | NOT NULL | Unique identifier for the action                                                                                                           |
| OBJECT_ID      | NUMBER          |          | Object associated with the action                                                                                                          |

| NUM_ATTR5            | NUMBER          |      | General numeric attribute                                                                                                                                                                                                                                                    |
| MESSAGE              | VARCHAR2 (4000) |      | Message associated with the action                                                                                                                                                                                                                                           |
| FILTERED             | VARCHAR2 (1)    |      | A value of Y means that the row in the view was filtered out by a directive (or a combination of directives). A value of N means that the row was not filtered.                                                                                                              |
| RESULT_STATUS        | VARCHAR2 (25)   |      | Result status. Possible values: <ul style="list-style-type: none"> <li>AUTOMATION PENDING</li> <li>TIMED OUT</li> <li>MISSING INFORMATION</li> <li>COMPLETED WITH NO RESULTS</li> <li>COMPLETED AND IMPLEMENTED</li> <li>ENCOUNTERED ERROR</li> <li>NOT AUTOMATED</li> </ul> |
| RESULT_LAST_MODIFIED | TIMESTAMP (3)   |      | Time at which result status was last modified                                                                                                                                                                                                                                |
| RESULT_MESSAGE       | VARCHAR2 (4000) |      | Result message text                                                                                                                                                                                                                                                          |

## 5.188 DBA\_AUTO\_MV\_ANALYSIS\_EXECUTIONS

DBA\_AUTO\_MV\_ANALYSIS\_EXECUTIONS displays information about analysis and tuning executions associated with automatic materialized views.

| Column                  | Datatype       | NULL     | Description                                                              |
|-------------------------|----------------|----------|--------------------------------------------------------------------------|
| OWNER                   | VARCHAR2 (128) |          | Owner of the task                                                        |
| TASK_ID                 | NUMBER         | NOT NULL | Unique identifier of the task                                            |
| TASK_NAME               | VARCHAR2 (128) |          | Name of the task<br>The value of this column is always SYS_AUTO_MV_TASK. |
| EXECUTION_NAME          | VARCHAR2 (128) | NOT NULL | Name of the task execution with which this entry (row) is associated     |
| EXECUTION_ID            | NUMBER         | NOT NULL | Execution ID                                                             |
| DESCRIPTION             | VARCHAR2 (256) |          | User-supplied description of the task                                    |
| EXECUTION_TYPE          | VARCHAR2 (128) |          | Type of the last execution (optional for single-execution tasks)         |
| EXECUTION_TYPE#         | NUMBER         |          | Reserved for internal use                                                |
| EXECUTION_START         | DATE           |          | Execution start date and time                                            |
| EXECUTION_LAST_MODIFIED | DATE           | NOT NULL | Last modified date and time for the execution                            |
| EXECUTION_END           | DATE           |          | Execution end date and time                                              |

| Column               | Datatype        | NULL     | Description                                                                                                                                                                                                                               |
|----------------------|-----------------|----------|-------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|
| REQUESTED_DOP        | NUMBER          |          | The degree of parallelism (DOP) value requested by the user (through the <code>TEST_EXECUTE_DOP</code> parameter). It can be any value greater or equal to zero.                                                                          |
| ACTUAL_DOP           | NUMBER          |          | The actual degree of parallelism (DOP) with which the execution finished. If the requested DOP is greater than what is available on the system, the <code>ACTUAL_DOP</code> value can be lower than the <code>REQUESTED_DOP</code> value. |
| CONCURRENT_EXECUTION | VARCHAR2 (3)    |          | Indicates whether concurrency was used for this execution (YES) or not (NO)                                                                                                                                                               |
| ADVISOR_NAME         | VARCHAR2 (128)  |          | Advisor associated with the task                                                                                                                                                                                                          |
| ADVISOR_ID           | NUMBER          | NOT NULL | Unique identifier for the advisor                                                                                                                                                                                                         |
| STATUS               | VARCHAR2 (11)   |          | Current operational status of the task: <ul style="list-style-type: none"> <li>• EXECUTING</li> <li>• COMPLETED</li> <li>• INTERRUPTED</li> <li>• CANCELLED</li> <li>• FATAL ERROR</li> </ul>                                             |
| STATUS#              | NUMBER          | NOT NULL | Reserved for internal use                                                                                                                                                                                                                 |
| STATUS_MESSAGE       | VARCHAR2 (4000) |          | Informational message provided by the advisor regarding the status                                                                                                                                                                        |
| ERROR_MESSAGE        | VARCHAR2 (4000) |          | Informational message or an error message indicating the current operation or condition                                                                                                                                                   |

## 5.189 DBA\_AUTO\_MV\_ANALYSIS\_RECOMMENDATIONS

`DBA_AUTO_MV_ANALYSIS_RECOMMENDATIONS` displays recommendations associated with automatic materialized views.

| Column          | Datatype       | NULL     | Description                                                                            |
|-----------------|----------------|----------|----------------------------------------------------------------------------------------|
| TASK_NAME       | VARCHAR2 (128) |          | Name of the task<br>The value of this column is always <code>SYS_AUTO_MV_TASK</code> . |
| EXECUTION_NAME  | VARCHAR2 (128) | NOT NULL | The name of the task execution with which this entry (row) is associated               |
| RECOMMENDATIONS | CLOB           |          | Recommendation for the task                                                            |

## 5.190 DBA\_AUTO\_MV\_ANALYSIS\_REPORT

`DBA_AUTO_MV_ANALYSIS_REPORT` reports on analyses and recommendations associated with automatic materialized views.

| Column         | Datatype       | NULL | Description                                                                            |
|----------------|----------------|------|----------------------------------------------------------------------------------------|
| TASK_NAME      | VARCHAR2 (128) |      | Name of the task<br>The value of this column is always <code>SYS_AUTO_MV_TASK</code> . |
| EXECUTION_NAME | VARCHAR2 (128) |      | The name of the task execution with which this entry (row) is associated               |

| Column   | Datatype        | NULL     | Description                                                                                                  |
|----------|-----------------|----------|--------------------------------------------------------------------------------------------------------------|
| SEQUENCE | NUMBER          | NOT NULL | Sequence number of the journal entry (unique for each task). This sequence number is used to order the data. |
| MESSAGE  | VARCHAR2 (4000) |          | Entry in the journal                                                                                         |

## 5.191 DBA\_AUTO\_MV\_ANALYSIS\_TASK

DBA\_AUTO\_MV\_ANALYSIS\_TASK display analysis information associated with automatic materialized views.

| Column                | Datatype        | NULL     | Description                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                               |

| EXECUTION_TYPE        | VARCHAR2 (128)  |          | Type of the last execution. This information is optional for single-execution tasks.                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                      |
| EXECUTION_TYPE#       | NUMBER          |          | Reserved for internal use                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                 |
| EXECUTION_DESCRIPTION | VARCHAR2 (256)  |          | Optional description of the last execution                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                |
| EXECUTION_START       | DATE            |          | Execution start date and time of the task                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                 |
| EXECUTION_END         | DATE            |          | Execution end date and time of the task                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                   |
| STATUS                | VARCHAR2 (11)   |          | Current operational status of the task: <ul style="list-style-type: none"> <li>INITIAL - Initial state of the task; no recommendations are present</li> <li>EXECUTING - Task is currently running</li> <li>INTERRUPTED - Task analysis was interrupted by the user. Recommendation data, if present, can be viewed and reported at this time.</li> <li>COMPLETED - Task successfully completed the analysis operation. Recommendation data can be viewed and reported.</li> <li>ERROR - An error occurred during the analysis operation. Recommendations, if present, can be viewed and reported at this time.</li> </ul> |
| STATUS_MESSAGE        | VARCHAR2 (4000) |          | Informational message provided by the advisor regarding the status                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                        |
| PCT_COMPLETION_TIME   | NUMBER          |          | Percent completion, in terms of time, of the task when it is executing                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                    |

| Column               | Datatype        | NULL     | Description                                                                                              |
|----------------------|-----------------|----------|----------------------------------------------------------------------------------------------------------|
| PROGRESS_METRIC      | NUMBER          |          | Metric that measures the progress of the task in terms of quality. Each advisor may have its own metric. |
| METRIC_UNITS         | VARCHAR2 (64)   |          | Unit of the metric used to measure progress                                                              |
| ACTIVITY_COUNTER     | NUMBER          |          | Counter that is updated frequently by the advisor, denoting that useful work is being performed          |
| RECOMMENDATION_COUNT | NUMBER          |          | Number of recommendations produced                                                                       |
| ERROR_MESSAGE        | VARCHAR2 (4000) |          | Informational message or an error message indicating the current operation or condition                  |
| SOURCE               | VARCHAR2 (128)  |          | Optional name that identifies the creator of the task                                                    |
| HOW_CREATED          | VARCHAR2 (30)   |          | Optional task or template on which the object was based                                                  |
| READ_ONLY            | VARCHAR2 (5)    |          | Indicates whether the task is read-only ( <code>TRUE</code> ) or not ( <code>FALSE</code> )              |
| SYSTEM_TASK          | VARCHAR2 (5)    |          | Indicates whether the task is a system task ( <code>TRUE</code> ) or not ( <code>FALSE</code> )          |
| ADVISOR_ID           | NUMBER          | NOT NULL | Unique identifier for the advisor                                                                        |
| STATUS#              | NUMBER          |          | Reserved for internal use                                                                                |

## 5.192 DBA\_AUTO\_MV\_CONFIG

DBA\_AUTO\_MV\_CONFIG displays configuration parameters associated with automatic materialized views and automatic zone maps.

The configuration parameters displayed in this view can be updated with `CONFIGURE` procedure of the `DBMS_AUTO_MV` package.

| Column          | Datatype        | NULL     | Description                                      |
|-----------------|-----------------|----------|--------------------------------------------------|
| PARAMETER_NAME  | VARCHAR2 (128)  | NOT NULL | Name of the configuration parameter              |
| PARAMETER_VALUE | VARCHAR2 (4000) |          | Value of the configuration parameter             |
| LAST_UPDATED    | TIMESTAMP (6)   |          | Date and time of the last parameter value update |
| UPDATED_BY      | VARCHAR2 (128)  |          | User who last updated the parameter value        |
| DESCRIPTION     | VARCHAR2 (72)   |          | Description of the configuration parameter       |

## 5.193 DBA\_AUTO\_MV\_MAINT\_REPORT

DBA\_AUTO\_MV\_MAINT\_REPORT displays maintenance operation details associated with automatic materialized view refresh.

| Column             | Datatype        | NULL | Description                                                      |
|--------------------|-----------------|------|------------------------------------------------------------------|
| SWAT_MM_START_TIME | DATE            |      | Date and time of the maintenance invocation                      |
| MESSAGE            | VARCHAR2 (4000) |      | Message associated with the materialized view maintenance action |

## 5.194 DBA\_AUTO\_MV\_REFRESH\_HISTORY

DBA\_AUTO\_MV\_REFRESH\_HISTORY describes automatic materialized view refreshes.

| Column               | Datatype       | NULL     | Description                                                                                                                                                                                                                                                                                                                      |
|----------------------|----------------|----------|----------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|
| MVIEW_OWNER          | VARCHAR2 (128) | NOT NULL | Owner of the materialized view                                                                                                                                                                                                                                                                                                   |
| MVIEW_NAME           | VARCHAR2 (128) | NOT NULL | Name of the materialized view                                                                                                                                                                                                                                                                                                    |
| SWAT_MM_START_TIME   | DATE           |          | Date and time of the maintenance invocation                                                                                                                                                                                                                                                                                      |
| REFRESH_START_TIME   | DATE           |          | Date and time the refresh started                                                                                                                                                                                                                                                                                                |
| REFRESH_END_TIME     | DATE           |          | Date and time the refresh ended                                                                                                                                                                                                                                                                                                  |
| ELAPSED_REFRESH_TIME | NUMBER         |          | Duration of the refresh (in seconds)                                                                                                                                                                                                                                                                                             |
| STATUS               | NUMBER         |          | Status of the refresh. Possible values: <ul style="list-style-type: none"> <li>0 - The refresh is in-progress</li> <li>1 - The refresh completed successfully</li> <li>2 - An error occurred during the refresh. Refer to the value of the ERROR column for more information.</li> <li>3 - The refresh was terminated</li> </ul> |
| ERROR                | NUMBER         |          | If an error occurred during the refresh, this column displays the error number, which corresponds to error code <i>ORA-number</i> . Otherwise, the value of this column is 0.                                                                                                                                                    |

## 5.195 DBA\_AUTO\_MV\_VERIFICATION\_REPORT

DBA\_AUTO\_MV\_VERIFICATION\_REPORT displays information about verifications associated with automatic materialized views.

| Column         | Datatype        | NULL | Description                                                              |
|----------------|-----------------|------|--------------------------------------------------------------------------|
| TASK_NAME      | VARCHAR2 (128)  |      | Name of the task                                                         |
| EXECUTION_NAME | VARCHAR2 (128)  |      | The name of the task execution with which this entry (row) is associated |
| MESSAGE        | VARCHAR2 (4000) |      | Message associated with the inference                                    |

## 5.196 DBA\_AUTO\_MV\_VERIFICATION\_STATUS

DBA\_AUTO\_MV\_VERIFICATION\_STATUS displays the status of verifications associated with automatic materialized views.

| Column                          | Datatype       | NULL     | Description                                                                             |
|---------------------------------|----------------|----------|-----------------------------------------------------------------------------------------|
| TASK_NAME                       | VARCHAR2 (128) |          | Name of the task                                                                        |
| EXECUTION_NAME                  | VARCHAR2 (128) | NOT NULL | The name of the task execution with which this entry (row) is associated                |
| STS_NAME_FOR_SRS                | VARCHAR2 (256) |          | Name of the SQL tuning set used for simple random sampling                              |
| STS_OWNER_NAME_FOR_SRS          | CHAR (3)       |          | Owner of the SQL tuning set used for simple random sampling                             |
| SPA_TASK_NAME_FOR_SRS           | VARCHAR2 (256) |          | Name of the SQL Performance Analyzer task used for simple random sampling               |
| SPA_OWNER_NAME_FOR_SRS          | CHAR (3)       |          | Owner of the SQL Performance Analyzer task used for simple random sampling              |
| STS_NAME_FOR_VERIFICATION       | VARCHAR2 (256) |          | Name of the SQL tuning set used for verification on sampled queries                     |
| STS_OWNER_NAME_FOR_VERIFICATION | CHAR (3)       |          | Owner of the SQL tuning set used for verification on sampled queries                    |
| SPA_TASK_NAME_FOR_VERIFICATION  | VARCHAR2 (256) |          | Name of the SQL Performance Analyzer task used for for verification on sampled queries  |
| SPA_OWNER_NAME_FOR_VERIFICATION | CHAR (3)       |          | Owner of the SQL Performance Analyzer task used for for verification on sampled queries |
| START_TIME                      | TIMESTAMP (6)  |          | Date and time the verification started                                                  |
| END_TIME                        | TIMESTAMP (6)  |          | Date and time the verification ended                                                    |
| STATUS                          | VARCHAR2 (128) |          | Verification status                                                                     |

## 5.197 DBA\_AUTO\_SEGADV\_CTL

DBA\_AUTO\_SEGADV\_CTL exposes the control information used by the segment advisor.

This information gives the DBA an idea of what is happening in the auto advisor.

| Column          | Datatype       | NULL | Description                                   |
|-----------------|----------------|------|-----------------------------------------------|
| AUTO_TASKID     | NUMBER         |      | Unique task ID generated by the auto advisor  |
| TABLESPACE_NAME | VARCHAR2 (30)  |      | Name of the tablespace containing the segment |
| SEGMENT_OWNER   | VARCHAR2 (128) |      | Owner of the segment                          |
| SEGMENT_NAME    | VARCHAR2 (128) |      | Name of the segment                           |
| SEGMENT_TYPE    | VARCHAR2 (18)  |      | The type of segment (TABLE, INDEX, and so on) |
| PARTITION_NAME  | VARCHAR2 (128) |      | Name of the subsegment (if partitioned)       |

| Column           | Datatype      | NULL | Description                                                                                                                                                                                                                                                                                                            |
|------------------|---------------|------|------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|
| STATUS           | VARCHAR2 (40) |      | Status of the analysis: <ul style="list-style-type: none"><li>• NEW - the segment/tablespace has not been analyzed</li><li>• BEING-PROCESSED - the segment/tablespace is being processed</li><li>• COMPLETE - the segment/tablespace has been analyzed</li><li>• ERROR - problem with the segment/tablespace</li></ul> |
| REASON           | VARCHAR2 (40) |      | Reason why this segment was chosen                                                                                                                                                                                                                                                                                     |
| REASON_VALUE     | NUMBER        |      | A value associated with the reason                                                                                                                                                                                                                                                                                     |
| CREATION_TIME    | TIMESTAMP (6) |      | Time when this entry was created                                                                                                                                                                                                                                                                                       |
| PROCESSED_TASKID | NUMBER        |      | Auto advisor task that was used to process the segment/tablespace                                                                                                                                                                                                                                                      |
| END_TIME         | TIMESTAMP (6) |      | Time at which the advisor task was completed                                                                                                                                                                                                                                                                           |

## 5.198 DBA\_AUTO\_SEGADV\_SUMMARY

DBA\_AUTO\_SEGADV\_SUMMARY provides a summary of the auto advisor task runs.

| Column                | Datatype      | NULL     | Description                                     |
|-----------------------|---------------|----------|-------------------------------------------------|
| AUTO_TASKID           | NUMBER        | NOT NULL | Unique auto task ID                             |
| SNAPID                | NUMBER        |          | Maximum AWR snapid used to process the segments |
| SEGMENTS_SELECTED     | NUMBER        |          | Number of segments chosen for analysis          |
| SEGMENTS_PROCESSED    | NUMBER        |          | Number of segments actually processed           |
| TABLESPACE_SELECTED   | NUMBER        |          | Number of tablespaces chosen for analysis       |
| TABLESPACE_PROCESSED  | NUMBER        |          | Number of tablespaces actually processed        |
| RECOMMENDATIONS_COUNT | NUMBER        |          | Number of recommendations generated             |
| START_TIME            | TIMESTAMP (6) |          | Time at which the auto task was started         |
| END_TIME              | TIMESTAMP (6) |          | Time at which the auto task ended               |

## 5.199 DBA\_AUTO\_STAT\_EXECUTIONS

DBA\_AUTO\_STAT\_EXECUTIONS displays information about automatic optimizer statistics collection tasks, which are executed by the automated maintenance tasks infrastructure (known as AutoTask).

| Column | Datatype | NULL | Description                                     |
|--------|----------|------|-------------------------------------------------|
| OPID   | NUMBER   |      | Unique identifier for the execution of the task |

| Column      | Datatype                     | NULL | Description                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                |
|-------------|------------------------------|------|------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|
| ORIGIN      | VARCHAR2 (19)                |      | Origin of the execution of the task. Possible values: <ul style="list-style-type: none"> <li><b>AUTO_TASK:</b> A standard automatic optimizer statistics collection task, which is executed automatically in an Oracle Scheduler window, known as maintenance window</li> <li><b>HIGH_FREQ_AUTO_TASK:</b> A high-frequency automatic optimizer statistics collection task, which is executed at frequent intervals and complements the standard automatic optimizer statistics collection tasks</li> </ul> |
| STATUS      | VARCHAR2 (49)                |      | Status of the execution of the task. Possible values: <ul style="list-style-type: none"> <li><b>IN PROGRESS:</b> The operation is currently running</li> <li><b>COMPLETED:</b> The operation has completed successfully</li> <li><b>FAILED:</b> The operation has failed</li> <li><b>TIMED OUT:</b> The operation timed out because the time allocated for the maintenance window was not sufficient for the operation to complete</li> </ul>                                                              |
| START_TIME  | TIMESTAMP (6) WITH TIME ZONE |      | Start time for the execution of the task                                                                                                                                                                                                                                                                                                                                                                                                                                                                   |
| END_TIME    | TIMESTAMP (6) WITH TIME ZONE |      | End time for the execution of the task                                                                                                                                                                                                                                                                                                                                                                                                                                                                     |
| COMPLETED   | NUMBER                       |      | Number of objects for which statistics collection was completed during the execution of the task                                                                                                                                                                                                                                                                                                                                                                                                           |
| FAILED      | NUMBER                       |      | Number of objects for which statistics collection failed during the execution of the task                                                                                                                                                                                                                                                                                                                                                                                                                  |
| TIMED_OUT   | NUMBER                       |      | Number of objects for which statistics collection timed out during the execution of the task                                                                                                                                                                                                                                                                                                                                                                                                               |
| IN_PROGRESS | NUMBER                       |      | Number of objects for which statistics collection is in progress during the execution of the task                                                                                                                                                                                                                                                                                                                                                                                                          |

## 5.200 DBA\_AUTO\_ZONEMAP\_CONFIG

DBA\_AUTO\_ZONEMAP\_CONFIG describes the current settings for automatic zone map configuration parameters.

| Column          | Datatype        | NULL     | Description                                        |
|-----------------|-----------------|----------|----------------------------------------------------|
| PARAMETER_NAME  | VARCHAR2 (128)  | NOT NULL | Parameter name                                     |
| PARAMETER_VALUE | VARCHAR2 (4000) |          | Parameter value                                    |
| LAST_UPDATED    | TIMESTAMP (6)   |          | Time at which the parameter value was last updated |
| UPDATED_BY      | VARCHAR2 (128)  |          | User who last updated the parameter value          |
| DESCRIPTION     | VARCHAR2 (71)   |          | Brief description of the parameter                 |

## 5.201 DBA\_AUTOTASK\_CLIENT

DBA\_AUTOTASK\_CLIENT displays statistical data for each automated maintenance task over 7-day and 30-day periods.

| Column                       | Datatype                          | NULL | Description                                                                                                                                                     |
|------------------------------|-----------------------------------|------|-----------------------------------------------------------------------------------------------------------------------------------------------------------------|
| CLIENT_NAME                  | VARCHAR2 (64)                     |      | Name of the client                                                                                                                                              |
| STATUS                       | VARCHAR2 (8)                      |      | Job status: <ul style="list-style-type: none"> <li>• ENABLED</li> <li>• DISABLED</li> </ul>                                                                     |
| CONSUMER_GROUP               | VARCHAR2 (128)                    |      | Consumer group used for normal priority jobs for this client                                                                                                    |
| CLIENT_TAG                   | VARCHAR2 (2)                      |      | Tag used to identify jobs for this client                                                                                                                       |
| PRIORITY_OVERRIDE            | VARCHAR2 (7)                      |      | User-specified priority at which the task executes: <ul style="list-style-type: none"> <li>• URGENT</li> <li>• HIGH</li> <li>• MEDIUM</li> <li>• LOW</li> </ul> |
| ATTRIBUTES                   | VARCHAR2 (4000)                   |      | Attributes of the client                                                                                                                                        |
| WINDOW_GROUP                 | VARCHAR2 (64)                     |      | Window group used to schedule jobs                                                                                                                              |
| SERVICE_NAME                 | VARCHAR2 (64)                     |      | Name of the service on which jobs will execute for the client                                                                                                   |
| RESOURCE_PERCENTAGE          | NUMBER                            |      | Percentage of maintenance resources for high priority maintenance tasks for this client                                                                         |
| USE_RESOURCE_ESTIMATES       | VARCHAR2 (5)                      |      | Indicates whether resource estimates are used for this client (TRUE) or not (FALSE)                                                                             |
| MEAN_JOB_DURATION            | INTERVAL DAY (9)<br>TO SECOND (9) |      | Average elapsed time for a job for this client (in seconds)                                                                                                     |
| MEAN_JOB_CPU                 | INTERVAL DAY (9)<br>TO SECOND (9) |      | Average CPU time for a job submitted by this client (in seconds)                                                                                                |
| MEAN_JOB_ATTEMPTS            | NUMBER                            |      | Average number of attempts it takes to complete a task                                                                                                          |
| MEAN_INCOMING_TASKS_7_DAYS   | NUMBER                            |      | Average number of incoming tasks at the Maintenance Window Start over the last 7 days                                                                           |
| MEAN_INCOMING_TASKS_30_DAYS  | NUMBER                            |      | Average number of incoming tasks at the Maintenance Window Start over the last 30 days                                                                          |
| TOTAL_CPU_LAST_7_DAYS        | INTERVAL DAY (9)<br>TO SECOND (9) |      | Cumulative CPU time used by the jobs for this client over the last 7 days (in seconds)                                                                          |
| TOTAL_CPU_LAST_30_DAYS       | INTERVAL DAY (9)<br>TO SECOND (9) |      | Cumulative CPU time used by the jobs for this client over the last 30 days (in seconds)                                                                         |
| MAX_DURATION_LAST_7_DAYS     | INTERVAL DAY (3)<br>TO SECOND (0) |      | Maximum elapsed time for a job over the last 7 days (in seconds)                                                                                                |
| MAX_DURATION_LAST_30_DAYS    | INTERVAL DAY (3)<br>TO SECOND (0) |      | Maximum elapsed time for a job over the last 30 days (in seconds)                                                                                               |
| WINDOW_DURATION_LAST_7_DAYS  | INTERVAL DAY (9)<br>TO SECOND (9) |      | Total time during which the client was active during the last 7 days                                                                                            |
| WINDOW_DURATION_LAST_30_DAYS | INTERVAL DAY (9)<br>TO SECOND (9) |      | Total time during which the client was active during the last 30 days                                                                                           |
| LAST_CHANGE                  | TIMESTAMP (6) WITH<br>TIME ZONE   |      | Timestamp of last configuration change for the client                                                                                                           |

| Column          | Datatype     | NULL | Description                                                                                                                                        |
|-----------------|--------------|------|----------------------------------------------------------------------------------------------------------------------------------------------------|
| AUTOTASK_STATUS | VARCHAR2 (8) |      | Status of the automated maintenance task subsystem: <ul style="list-style-type: none"><li>• ENABLED</li><li>• DISABLED</li><li>• ALLOWED</li></ul> |

## 5.202 DBA\_AUTOTASK\_CLIENT\_HISTORY

DBA\_AUTOTASK\_CLIENT\_HISTORY displays per-window history of job execution counts for each automated maintenance task.

This information is viewable in the Job History page of Enterprise Manager.

| Column            | Datatype                       | NULL | Description                                                                                 |
|-------------------|--------------------------------|------|---------------------------------------------------------------------------------------------|
| CLIENT_NAME       | VARCHAR2 (64)                  |      | Name of the client                                                                          |
| WINDOW_NAME       | VARCHAR2 (261)                 |      | Name of the maintenance window                                                              |
| WINDOW_START_TIME | TIMESTAMP (6) WITH TIME ZONE   |      | Maintenance window start time                                                               |
| WINDOW_DURATION   | INTERVAL DAY (9) TO SECOND (6) |      | Window duration (NULL for currently open window)                                            |
| JOBS_CREATED      | NUMBER                         |      | Number of jobs created on behalf of the client in this window                               |
| JOBS_STARTED      | NUMBER                         |      | Number of jobs started on behalf of the client during the maintenance window                |
| JOBS_COMPLETED    | NUMBER                         |      | Number of jobs successfully completed on behalf of the client during the maintenance window |
| WINDOW_END_TIME   | TIMESTAMP (6) WITH TIME ZONE   |      | Window end time                                                                             |

## 5.203 DBA\_AUTOTASK\_CLIENT\_JOB

DBA\_AUTOTASK\_CLIENT\_JOB displays information about currently running Scheduler jobs created for automated maintenance tasks.

DBA\_AUTOTASK\_CLIENT\_JOB provides information about some objects targeted by those jobs, as well as some additional statistics from previous instantiations of the same task. Some of this additional data is taken from generic Scheduler views.

| Column      | Datatype      | NULL | Description        |
|-------------|---------------|------|--------------------|
| CLIENT_NAME | VARCHAR2 (64) |      | Name of the client |
| JOB_NAME    | VARCHAR2 (65) |      | Name of the job    |

| Column               | Datatype       | NULL     | Description                                                                                                                                                                                                                                                                 |
|----------------------|----------------|----------|-----------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|
| JOB_SCHEDULER_STATUS | VARCHAR2 (15)  |          | <b>Job status:</b> <ul style="list-style-type: none"> <li>• DISABLED</li> <li>• RETRY SCHEDULED</li> <li>• SCHEDULED</li> <li>• RUNNING</li> <li>• COMPLETED</li> <li>• BROKEN</li> <li>• FAILED</li> <li>• REMOTE</li> <li>• SUCCEEDED</li> <li>• CHAIN_STALLED</li> </ul> |
| TASK_NAME            | VARCHAR2 (64)  |          | Name of the task being performed                                                                                                                                                                                                                                            |
| TASK_TARGET_TYPE     | VARCHAR2 (64)  |          | Type of the target being processed                                                                                                                                                                                                                                          |
| TASK_TARGET_NAME     | VARCHAR2 (513) | NOT NULL | Name of the target                                                                                                                                                                                                                                                          |
| TASK_PRIORITY        | VARCHAR2 (7)   |          | <b>Priority of the task:</b> <ul style="list-style-type: none"> <li>• URGENT</li> <li>• HIGH</li> <li>• MEDIUM</li> <li>• LOW</li> </ul>                                                                                                                                    |
| TASK_OPERATION       | VARCHAR2 (64)  |          | Operation performed on the object                                                                                                                                                                                                                                           |

## 5.204 DBA\_AUTOTASK\_JOB\_HISTORY

DBA\_AUTOTASK\_JOB\_HISTORY displays the history of automated maintenance task job runs. Jobs are added to this view after they finish executing.

| Column            | Datatype                       | NULL | Description                              |
|-------------------|--------------------------------|------|------------------------------------------|
| CLIENT_NAME       | VARCHAR2 (64)                  |      | Name of the automated maintenance client |
| WINDOW_NAME       | VARCHAR2 (261)                 |      | Name of the maintenance window           |
| WINDOW_START_TIME | TIMESTAMP (6) WITH TIME ZONE   |      | Start time of the maintenance window     |
| WINDOW_DURATION   | INTERVAL DAY (9) TO SECOND (6) |      | Duration of the maintenance window       |
| JOB_NAME          | VARCHAR2 (261)                 |      | Name of the maintenance job              |
| JOB_STATUS        | VARCHAR2 (30)                  |      | Status of the maintenance job            |
| JOB_START_TIME    | TIMESTAMP (6) WITH TIME ZONE   |      | Start time of the maintenance job        |
| JOB_DURATION      | INTERVAL DAY (3) TO SECOND (0) |      | Duration of the maintenance job          |
| JOB_ERROR         | NUMBER                         |      | Error code for the job (if any)          |
| JOB_INFO          | VARCHAR2 (4000)                |      | Additional information about the job     |

## 5.205 DBA\_AUTOTASK\_OPERATION

DBA\_AUTOTASK\_OPERATION displays all automated maintenance task operations for each client.

| Column                 | Datatype                     | NULL | Description                                                                                                                                                |
|------------------------|------------------------------|------|------------------------------------------------------------------------------------------------------------------------------------------------------------|
| CLIENT_NAME            | VARCHAR2 (64)                |      | Name of the client                                                                                                                                         |
| OPERATION_NAME         | VARCHAR2 (64)                |      | Name of the operation                                                                                                                                      |
| OPERATION_TAG          | VARCHAR2 (3)                 |      | Tag for the operation                                                                                                                                      |
| PRIORITY_OVERRIDE      | VARCHAR2 (7)                 |      | User-specified priority at which the task executes: <ul style="list-style-type: none"><li>• URGENT</li><li>• HIGH</li><li>• MEDIUM</li><li>• LOW</li></ul> |
| ATTRIBUTES             | VARCHAR2 (4000)              |      | Attributes of the operation                                                                                                                                |
| USE_RESOURCE_ESTIMATES | VARCHAR2 (5)                 |      | Indicates whether resource usage estimates are used for the operation (TRUE) or not (FALSE)                                                                |
| STATUS                 | VARCHAR2 (8)                 |      | Job status: <ul style="list-style-type: none"><li>• ENABLED</li><li>• DISABLED</li></ul>                                                                   |
| LAST_CHANGE            | TIMESTAMP (6) WITH TIME ZONE |      | Timestamp of the last change                                                                                                                               |

## 5.206 DBA\_AUTOTASK\_SCHEDULE

DBA\_AUTOTASK\_SCHEDULE displays the schedule of maintenance windows for the next 32 days for each client.

| Column      | Datatype                       | NULL | Description                                                                   |
|-------------|--------------------------------|------|-------------------------------------------------------------------------------|
| WINDOW_NAME | VARCHAR2 (128)                 |      | Name of the maintenance window                                                |
| START_TIME  | TIMESTAMP (6) WITH TIME ZONE   |      | Projected start time of the window                                            |
| DURATION    | INTERVAL DAY (3) TO SECOND (0) |      | Currently defined duration of the window (NULL for the currently open window) |

## 5.207 DBA\_AUTOTASK\_SCHEDULE\_CONTROL

DBA\_AUTOTASK\_SCHEDULE\_CONTROL displays the status of automated tasks.

| Column          | Datatype      | NULL     | Description                                 |
|-----------------|---------------|----------|---------------------------------------------|
| DBID            | NUMBER        | NOT NULL | Identifier of the database used by the task |
| TASK_ID         | NUMBER        | NOT NULL | Identifier of the task                      |
| INSTANCE_NUMBER | NUMBER        | NOT NULL | Instance number for the task                |
| TASK_NAME       | VARCHAR2 (64) |          | Name of the task                            |

| Column             | Datatype                     | NULL | Description                                                                                                                                                                                             |
|--------------------|------------------------------|------|---------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|
| STATUS             | VARCHAR2 (10)                |      | Status of the task<br>Possible values: <ul style="list-style-type: none"> <li>• FAILED</li> <li>• RUNNING</li> <li>• SCHEDULED</li> <li>• SKIPPED</li> <li>• SUCCEEDED</li> <li>• TERMINATED</li> </ul> |
| ELAPSED_TIME       | NUMBER                       |      | Elapsed time of the last execution (in seconds)                                                                                                                                                         |
| LAST_SCHEDULE_TIME | TIMESTAMP (3) WITH TIME ZONE |      | Last time the task was scheduled to execute                                                                                                                                                             |
| LAST_EXEC_INSTNUM  | NUMBER                       |      | Oracle RAC instance number for the database instance used for the last execution of the task                                                                                                            |

## 5.208 DBA\_AUTOTASK\_SETTINGS

DBA\_AUTOTASK\_SETTINGS displays the settings for automated tasks.

| Column       | Datatype      | NULL     | Description                                                             |
|--------------|---------------|----------|-------------------------------------------------------------------------|
| DBID         | NUMBER        | NOT NULL | Identifier of the database used by the task                             |
| TASK_ID      | NUMBER        | NOT NULL | Identifier of the task                                                  |
| TASK_NAME    | VARCHAR2 (64) |          | Name of the task                                                        |
| INTERVAL     | NUMBER        |          | The time interval between task invocations (in seconds)                 |
| MAX_RUN_TIME | NUMBER        |          | Maximum run time allowed for the task before it is stopped (in seconds) |
| ENABLED      | VARCHAR2 (5)  |          | Indicates whether the task is enabled (TRUE) or not (FALSE)             |

## 5.209 DBA\_AUTOTASK\_STATUS

DBA\_AUTOTASK\_STATUS displays status information for automated maintenance.

| Column      | Datatype                     | NULL | Description                                                                                                                                                                           |
|-------------|------------------------------|------|---------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|
| STATUS      | VARCHAR2 (8)                 |      | Shows the status of automated maintenance. Possible values are: <ul style="list-style-type: none"> <li>• ENABLED</li> <li>• DISABLED</li> <li>• ALLOWED</li> <li>• INVALID</li> </ul> |
| LAST_CHANGE | TIMESTAMP (6) WITH TIME ZONE |      | Timestamp of last status change                                                                                                                                                       |

## 5.210 DBA\_AUTOTASK\_TASK

DBA\_AUTOTASK\_TASK displays information about current and past automated maintenance tasks.

| Column               | Datatype        | NULL     | Description                                                                                                                                                                                                                                                          |
|----------------------|-----------------|----------|----------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|
| CLIENT_NAME          | VARCHAR2 (64)   |          | Name of the client                                                                                                                                                                                                                                                   |
| TASK_NAME            | VARCHAR2 (64)   |          | Name of the task being performed                                                                                                                                                                                                                                     |
| TASK_TARGET_TYPE     | VARCHAR2 (64)   |          | Target type of the task                                                                                                                                                                                                                                              |
| TASK_TARGET_NAME     | VARCHAR2 (513)  | NOT NULL | Name of the target                                                                                                                                                                                                                                                   |

| LAST_GOOD_CONCURRENCY | NUMBER                       |      | Concurrency wait time (in seconds) of the last successful attempt to perform this task                                                                                                                                                                                      |
| LAST_GOOD_CONTENTION  | NUMBER                       |      | Contention wait time (in seconds) of the last successful attempt to perform this task                                                                                                                                                                                       |
| NEXT_TRY_DATE         | TIMESTAMP (6) WITH TIME ZONE |      | Next projected start time for the deferred maintenance window                                                                                                                                                                                                               |
| LAST_TRY_DATE         | TIMESTAMP (6) WITH TIME ZONE |      | Time at which the task was last attempted                                                                                                                                                                                                                                   |
| LAST_TRY_PRIORITY     | NUMBER                       |      | Task priority at the time of the last attempt                                                                                                                                                                                                                               |
| LAST_TRY_RESULT       | VARCHAR2 (36)                |      | Result code of the last execution of the task: <ul style="list-style-type: none"> <li>• SUCCEEDED</li> <li>• FAILED</li> <li>• STOPPED BY USER ACTION</li> <li>• STOPPED AT END OF MAINTENANCE WINDOW</li> <li>• STOPPED AT INSTANCE SHUTDOWN</li> <li>• STOPPED</li> </ul> |
| LAST_TRY_DURATION     | NUMBER                       |      | Elapsed time of the last run (in seconds)                                                                                                                                                                                                                                   |
| LAST_TRY_CPU_TIME     | NUMBER                       |      | CPU time during the last run (in seconds)                                                                                                                                                                                                                                   |
| LAST_TRY_TEMP         | NUMBER                       |      | Temporary space usage for the job (in KB) for the last run                                                                                                                                                                                                                  |
| LAST_TRY_DOP          | NUMBER                       |      | Peak degree of parallelism for the job during the last run                                                                                                                                                                                                                  |
| LAST_TRY_IO_RATE      | NUMBER                       |      | I/O rate during the last run (in seconds)                                                                                                                                                                                                                                   |

| Column                | Datatype        | NULL | Description                                                                                  |
|-----------------------|-----------------|------|----------------------------------------------------------------------------------------------|
| LAST_TRY_UNDO_RATE    | NUMBER          |      | UNDO generation rate during the last run (in seconds)                                        |
| LAST_TRY_CPU_WAIT     | NUMBER          |      | Time spent waiting for CPU during the last run (in seconds)                                  |
| LAST_TRY_IO_WAIT      | NUMBER          |      | Time spent waiting for I/O during the last run (in seconds)                                  |
| LAST_TRY_UNDO_WAIT    | NUMBER          |      | Time spent waiting for UNDO during the last run (in seconds)                                 |
| LAST_TRY_TEMP_WAIT    | NUMBER          |      | Time spent waiting for temporary space during the last run (in seconds)                      |
| LAST_TRY_CONCURRENCY  | NUMBER          |      | Concurrency wait time during the last run (in seconds)                                       |
| LAST_TRY_CONTENTION   | NUMBER          |      | Contention wait time during the last run (in seconds)                                        |
| MEAN_GOOD_DURATION    | NUMBER          |      | Average elapsed time for successful executions of this task (in seconds)                     |
| MEAN_GOOD_CPU_TIME    | NUMBER          |      | Average CPU time for successful executions of this task (in seconds)                         |
| MEAN_GOOD_TEMP        | NUMBER          |      | Average temporary space usage for successful executions of this task (in KB)                 |
| MEAN_GOOD_DOP         | NUMBER          |      | Average peak degree of parallelism for successful executions of this task                    |
| MEAN_GOOD_IO          | NUMBER          |      | Average I/O utilization for successful executions of this task (in KB per second)            |
| MEAN_GOOD_UNDO        | NUMBER          |      | Average UNDO generation rate for this task (in KB per second)                                |
| MEAN_GOOD_CPU_WAIT    | NUMBER          |      | Average time waiting for CPU for successful executions of this task (in seconds)             |
| MEAN_GOOD_IO_WAIT     | NUMBER          |      | Average time waiting for I/O for successful executions of this task (in seconds)             |
| MEAN_GOOD_UNDO_WAIT   | NUMBER          |      | Average time waiting for UNDO for successful executions of this task (in seconds)            |
| MEAN_GOOD_TEMP_WAIT   | NUMBER          |      | Average time waiting for temporary space for successful executions of this task (in seconds) |
| MEAN_GOOD_CONCURRENCY | NUMBER          |      | Average concurrency wait time for successful executions of this task (in seconds)            |
| MEAN_GOOD_CONTENTION  | NUMBER          |      | Average contention wait time for successful executions of this task (in seconds)             |
| INFO_FIELD_1          | VARCHAR2 (4000) |      | Client-interpreted information                                                               |
| INFO_FIELD_2          | CLOB            |      | Client-interpreted information                                                               |
| INFO_FIELD_3          | NUMBER          |      | Client-interpreted information                                                               |
| INFO_FIELD_4          | NUMBER          |      | Client-interpreted information                                                               |

## 5.211 DBA\_AUTOTASK\_WINDOW\_CLIENTS

DBA\_AUTOTASK\_WINDOW\_CLIENTS displays the windows that belong to MAINTENANCE\_WINDOW\_GROUP, along with the Enabled or Disabled status for the window for each maintenance task.

DBA\_AUTOTASK\_WINDOW\_CLIENTS is primarily used by Enterprise Manager.

| Column           | Datatype                     | NULL     | Description                                                                                                                      |
|------------------|------------------------------|----------|----------------------------------------------------------------------------------------------------------------------------------|
| WINDOW_NAME      | VARCHAR2 (128)               | NOT NULL | Name of the maintenance window                                                                                                   |
| WINDOW_NEXT_TIME | TIMESTAMP (6) WITH TIME ZONE |          | Next scheduled window open time unless the window is disabled                                                                    |
| WINDOW_ACTIVE    | VARCHAR2 (5)                 |          | Indicates whether the window is currently active (open) (TRUE) or not (FALSE)                                                    |
| AUTOTASK_STATUS  | VARCHAR2 (8)                 |          | Status of the automated maintenance task subsystem: <ul style="list-style-type: none"><li>• ENABLED</li><li>• DISABLED</li></ul> |
| OPTIMIZER_STATS  | VARCHAR2 (8)                 |          | Status of optimizer statistics gathering: <ul style="list-style-type: none"><li>• ENABLED</li><li>• DISABLED</li></ul>           |
| SEGMENT_ADVISOR  | VARCHAR2 (8)                 |          | Status of Segment Advisor: <ul style="list-style-type: none"><li>• ENABLED</li><li>• DISABLED</li></ul>                          |
| SQL_TUNE_ADVISOR | VARCHAR2 (8)                 |          | Status of SQL Tuning Advisor: <ul style="list-style-type: none"><li>• ENABLED</li><li>• DISABLED</li></ul>                       |

## 5.212 DBA\_AUTOTASK\_WINDOW\_HISTORY

DBA\_AUTOTASK\_WINDOW\_HISTORY displays historical information for automated maintenance task windows.

| Column            | Datatype                     | NULL | Description                    |
|-------------------|------------------------------|------|--------------------------------|
| WINDOW_NAME       | VARCHAR2 (261)               |      | Name of the maintenance window |
| WINDOW_START_TIME | TIMESTAMP (6) WITH TIME ZONE |      | Window start time              |
| WINDOW_END_TIME   | TIMESTAMP (6) WITH TIME ZONE |      | Window end time                |

## 5.213 DBA\_AW\_PS

DBA\_AW\_PS describes the page spaces in all analytic workspaces in the database. Its columns are the same as those in ALL\_AW\_PS.

**See Also:**

"ALL\_AW\_PS"

## 5.214 DBA\_AWS

DBA\_AWS describes all analytic workspaces in the database. Its columns are the same as those in ALL\_AWS.

### See Also:

"ALL\_AWS"

## 5.215 DBA\_BASE\_TABLE\_MVIEWS

DBA\_BASE\_TABLE\_MVIEWS describes all materialized views using materialized view logs in the database. Its columns are the same as those in ALL\_BASE\_TABLE\_MVIEWS.

### See Also:

"ALL\_BASE\_TABLE\_MVIEWS"

## 5.216 DBA\_BLOCKCHAIN\_ROW\_VERSION\_COLS

DBA\_BLOCKCHAIN\_ROW\_VERSION\_COLS displays information about row versioned columns in all blockchain tables in the database. Its columns are the same as those in ALL\_BLOCKCHAIN\_ROW\_VERSION\_COLS.

### Note:

This view is available starting with Oracle Database 23ai.

### See Also:

"ALL\_BLOCKCHAIN\_ROW\_VERSION\_COLS"

## 5.217 DBA\_BLOCKCHAIN\_ROW\_VERSION\_HISTORY

DBA\_BLOCKCHAIN\_ROW\_VERSION\_HISTORY provides a history of row versions in all blockchain tables in the database. Its columns are the same as those in ALL\_BLOCKCHAIN\_ROW\_VERSION\_HISTORY.

**Note:**

This view is available starting with Oracle Database 23ai.

**See Also:**

"ALL\_BLOCKCHAIN\_ROW\_VERSION\_HISTORY"

## 5.218 DBA\_BLOCKCHAIN\_TABLE\_CHAINS

DBA\_BLOCKCHAIN\_TABLE\_CHAINS displays system chain information for all blockchain tables in the database. Its columns are the same as those in ALL\_BLOCKCHAIN\_TABLE\_CHAINS.

**Note:**

This view is available starting with Oracle Database 23ai.

**See Also:**

"ALL\_BLOCKCHAIN\_TABLE\_CHAINS"

## 5.219 DBA\_BLOCKCHAIN\_TABLE\_EPOCHS

DBA\_BLOCKCHAIN\_TABLE\_EPOCHS displays epoch information for all blockchain tables in the database. Its columns are the same as those in ALL\_BLOCKCHAIN\_TABLE\_EPOCHS.

**Note:**

This view is available starting with Oracle Database 23ai.

**See Also:**["ALL\\_BLOCKCHAIN\\_TABLE\\_EPOCHS"](#)

## 5.220 DBA\_BLOCKCHAIN\_TABLE\_HASH\_COL\_ORDER

DBA\_BLOCKCHAIN\_TABLE\_HASH\_COL\_ORDER displays information about columns used to compute the cryptographic hash in all blockchain tables in the database. Its columns are the same as those in ALL\_BLOCKCHAIN\_TABLE\_HASH\_COL\_ORDER.

**Note:**

This view is available starting with Oracle Database 23ai.

**See Also:**["ALL\\_BLOCKCHAIN\\_TABLE\\_HASH\\_COL\\_ORDER"](#)

## 5.221 DBA\_BLOCKCHAIN\_TABLES

DBA\_BLOCKCHAIN\_TABLES describes all blockchain tables in the database. Its columns are the same as those in ALL\_BLOCKCHAIN\_TABLES.

**See Also:**["ALL\\_BLOCKCHAIN\\_TABLES"](#)

## 5.222 DBA\_BLOCKER\_RESOLVER\_PARAMETERS

DBA\_BLOCKER\_RESOLVER\_PARAMETERS shows the available user-tunable Blocker Resolver parameters and their values.

| Column         | Datatype      | NULL     | Description                                           |
|----------------|---------------|----------|-------------------------------------------------------|
| NAME           | VARCHAR2 (40) | NOT NULL | String representation of the parameter name           |
| CURRENT_VALUE  | VARCHAR2 (20) |          | String representation of the current parameter value  |
| CURRENT_TIME   | DATE          |          | Time at which the current value was set               |
| PREVIOUS_VALUE | VARCHAR2 (20) |          | String representation of the previous parameter value |
| PREVIOUS_TIME  | DATE          |          | Time at which the previous value was set              |

**Note:**

This view is available starting with Oracle Database 23ai.

## 5.223 DBA\_BLOCKERS

DBA\_BLOCKERS displays a session if it is not waiting for a locked object but is holding a lock on an object for which another session is waiting.

In an Oracle RAC environment, this only applies if the blocker is on the same instance.

| Column          | Datatype | NULL | Description                                                                                                                                                                                                                                                                                                                                                                                                                                                                     |
|-----------------|----------|------|---------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|
| HOLDING_SESSION | NUMBER   |      | Session holding a lock                                                                                                                                                                                                                                                                                                                                                                                                                                                          |
| CON_ID          | NUMBER   |      | The ID of the container to which the data pertains.<br>Possible values include: <ul style="list-style-type: none"><li>0: This value is used for rows containing data that pertain to the entire multitenant container database (CDB). This value is also used for rows in non-CDBs.</li><li>1: This value is used for rows containing data that pertain to only the root</li><li><i>n</i>: Where <i>n</i> is the applicable container ID for the rows containing data</li></ul> |

## 5.224 DBA\_CAPTURE

DBA\_CAPTURE displays information about all capture processes in the database. Its columns are the same as those in ALL\_CAPTURE.

**See Also:**

"ALL\_CAPTURE"

## 5.225 DBA\_CAPTURE\_EXTRA\_ATTRIBUTES

DBA\_CAPTURE\_EXTRA\_ATTRIBUTES displays information about the extra attributes for all capture processes in the database. Its columns are the same as those in ALL\_CAPTURE\_EXTRA\_ATTRIBUTES.

**See Also:**

"ALL\_CAPTURE\_EXTRA\_ATTRIBUTES"

## 5.226 DBA\_CAPTURE\_PARAMETERS

DBA\_CAPTURE\_PARAMETERS displays information about the parameters for all capture processes in the database. Its columns are the same as those in ALL\_CAPTURE\_PARAMETERS.

**See Also:**

"ALL\_CAPTURE\_PARAMETERS"

## 5.227 DBA\_CAPTURE\_PREPARED\_DATABASE

DBA\_CAPTURE\_PREPARED\_DATABASE displays information about when the local database was prepared for instantiation. Its columns are the same as those in ALL\_CAPTURE\_PREPARED\_DATABASE.

**See Also:**

"ALL\_CAPTURE\_PREPARED\_DATABASE"

## 5.228 DBA\_CAPTURE\_PREPARED\_SCHEMAS

DBA\_CAPTURE\_PREPARED\_SCHEMAS displays information about all schemas prepared for instantiation at the local database. Its columns are the same as those in ALL\_CAPTURE\_PREPARED\_SCHEMAS.

**See Also:**

"ALL\_CAPTURE\_PREPARED\_SCHEMAS"

## 5.229 DBA\_CAPTURE\_PREPARED\_TABLES

DBA\_CAPTURE\_PREPARED\_TABLES displays information about all tables prepared for instantiation at the local database. Its columns are the same as those in ALL\_CAPTURE\_PREPARED\_TABLES.

**See Also:**

"ALL\_CAPTURE\_PREPARED\_TABLES"

## 5.230 DBA\_CATALOG

DBA\_CATALOG lists all tables, views, clusters, synonyms, and sequences in the database. Its columns are the same as those in ALL\_CATALOG.

### See Also:

"ALL\_CATALOG"

## 5.231 DBA\_CDB\_RSRC\_PLAN\_DIRECTIVES

DBA\_CDB\_RSRC\_PLAN\_DIRECTIVES provides information about all the CDB resource plan directives.

### Note:

ORA\$DEFAULT\_PDB\_DIRECTIVE is the default directive for PDBs. For more information about ORA\$DEFAULT\_PDB\_DIRECTIVE, see *Oracle Multitenant Administrator's Guide*.

| Column                | Datatype       | NULL | Description                                                                                                                                                                                                                                                                                                          |
|-----------------------|----------------|------|----------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|
| PLAN                  | VARCHAR2 (128) |      | Name of the CDB resource plan to which this directive belongs                                                                                                                                                                                                                                                        |
| PLUGGABLE_DATABASE    | VARCHAR2 (128) |      | Name of the PDB referred to. NULL for profile directives                                                                                                                                                                                                                                                             |

| DIRECTIVE_TYPE        | VARCHAR2 (30)  |      | For internal use only                                                                                                                                                                                                                                                                                                |
| SHARES                | NUMBER         |      | Resource allocation, expressed in shares                                                                                                                                                                                                                                                                             |
| UTILIZATION_LIMIT     | NUMBER         |      | Maximum resource utilization allowed, expressed in percentage                                                                                                                                                                                                                                                        |
| PARALLEL_SERVER_LIMIT | NUMBER         |      | Maximum percentage of the parallel target used before queueing subsequent parallel queries                                                                                                                                                                                                                           |
| MEMORY_MIN            | NUMBER         |      | The percentage of Exadata Smart Flash Cache and Exadata PMEM cache that is guaranteed to the PDB<br>This percentage is based on the total amount of space allocated to the CDB for Exadata Smart Flash Cache and Exadata PMEM cache.<br>See <i>Oracle Exadata System Software User's Guide</i> for more information. |

| Column       | Datatype        | NULL | Description                                                                                                                                                                                                                                                                                                                 |
|--------------|-----------------|------|-----------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|
| MEMORY_LIMIT | NUMBER          |      | The maximum percentage of Exadata Smart Flash Cache and Exadata PMEM cache that the PDB can use<br><br>This percentage is based on the total amount of space allocated to the CDB for Exadata Smart Flash Cache and Exadata PMEM cache.<br><br>See <i>Oracle Exadata System Software User's Guide</i> for more information. |
| COMMENTS     | VARCHAR2 (2000) |      | Text comment on the resource plan directive                                                                                                                                                                                                                                                                                 |
| STATUS       | VARCHAR2 (128)  |      | PENDING if it is part of the pending area, NULL otherwise                                                                                                                                                                                                                                                                   |
| MANDATORY    | VARCHAR2 (3)    |      | Whether the resource plan directive is mandatory. Mandatory plans cannot be deleted.                                                                                                                                                                                                                                        |

**Note:**

Oracle recommends that you do not use the `parallel_server_limit` directive in a CDB resource plan.

## 5.232 DBA\_CDB\_RSRC\_PLANS

DBA\_CDB\_RSRC\_PLANS provides information about all the CDB resource plans.

| Column    | Datatype        | NULL     | Description                                                                |
|-----------|-----------------|----------|----------------------------------------------------------------------------|
| PLAN_ID   | NUMBER          | NOT NULL | CDB resource plan ID                                                       |
| PLAN      | VARCHAR2 (128)  |          | CDB resource plan name                                                     |
| COMMENTS  | VARCHAR2 (2000) |          | Text comment on the CDB resource plan                                      |
| STATUS    | VARCHAR2 (128)  |          | PENDING if it is part of the pending area, NULL otherwise                  |
| MANDATORY | VARCHAR2 (3)    |          | Whether the resource plan is mandatory. Mandatory plans cannot be deleted. |

## 5.233 DBA\_CERTIFICATES

DBA\_CERTIFICATES displays all certificates in the database which are used for signature verification for blockchain tables. Its columns are the same as those in ALL\_CERTIFICATES.

**See Also:**

"ALL\_CERTIFICATES"

## 5.234 DBA\_CHANGE\_NOTIFICATION\_REGS

DBA\_CHANGE\_NOTIFICATION\_REGS describes all change notification registrations in the database.

### Related View

USER\_CHANGE\_NOTIFICATION\_REGS describes the change notification registrations owned by the current user. This view does not display the USERNAME column.

| Column            | Datatype       | NULL | Description                                                                                                                 |
|-------------------|----------------|------|-----------------------------------------------------------------------------------------------------------------------------|
| USERNAME          | VARCHAR2 (31)  |      | For invoker's rights units, the user creating the registration<br>For definer's rights units, the owner of the registration |
| REGID             | NUMBER         |      | Internal registration ID                                                                                                    |
| REGFLAGS          | NUMBER         |      | Registration flags                                                                                                          |
| CALLBACK          | VARCHAR2 (256) |      | Notification callback                                                                                                       |
| OPERATIONS_FILTER | NUMBER         |      | Operations filter (if specified)                                                                                            |
| CHANGELAG         | NUMBER         |      | Transaction lag between notifications (if specified)                                                                        |
| TIMEOUT           | NUMBER         |      | Registration timeout (if specified)                                                                                         |
| TABLE_NAME        | VARCHAR2 (63)  |      | Name of the registered table                                                                                                |

**See Also:**

"USER\_CHANGE\_NOTIFICATION\_REGS"

## 5.235 DBA\_CHECKED\_ROLES

DBA\_CHECKED\_ROLES lists the roles (without role grant paths) that are used for the role analysis policies reported by the DBMS\_CAPTURE.GENERATE\_RESULT procedure.

This view provides access to analyzed role records in SYS tables.

You must have the CAPTURE\_ADMIN role to access this view.

| Column       | Datatype       | NULL     | Description                                                                     |
|--------------|----------------|----------|---------------------------------------------------------------------------------|
| CAPTURE      | VARCHAR2 (128) | NOT NULL | Name of a role analysis policy                                                  |
| SEQUENCE     | NUMBER         | NOT NULL | The sequence number of the role analysis run during which the role was reported |
| OS_USER      | VARCHAR2 (128) |          | Operating system login username                                                 |
| USERHOST     | VARCHAR2 (128) |          | Client host machine name                                                        |
| MODULE       | VARCHAR2 (64)  |          | Module name                                                                     |
| USERNAME     | VARCHAR2 (128) | NOT NULL | Name of the user whose role was reported                                        |
| CHECKED_ROLE | VARCHAR2 (128) |          | Checked role                                                                    |
| RUN_NAME     | VARCHAR2 (128) |          | The name of the run during which the role was reported                          |

**See Also:**["DBA\\_CHECKED\\_ROLES\\_PATH"](#)

## 5.236 DBA\_CHECKED\_ROLES\_PATH

DBA\_CHECKED\_ROLES\_PATH lists the roles that are used for the role analysis policies reported by the DBMS\_PRIVILEGE\_CAPTURE.GENERATE\_RESULT procedure.

This view provides access to analyzed role records in SYS tables.

You must have the CAPTURE\_ADMIN role to access this view.

| Column       | Datatype       | NULL     | Description                                                                     |
|--------------|----------------|----------|---------------------------------------------------------------------------------|
| CAPTURE      | VARCHAR2 (128) | NOT NULL | Name of a role analysis policy                                                  |
| SEQUENCE     | NUMBER         | NOT NULL | The sequence number of the role analysis run during which the role was reported |
| OS_USER      | VARCHAR2 (128) |          | Operating system login username                                                 |
| USERHOST     | VARCHAR2 (128) |          | Client host machine name                                                        |
| MODULE       | VARCHAR2 (64)  |          | Module name                                                                     |
| USERNAME     | VARCHAR2 (128) | NOT NULL | Name of the user whose role was reported                                        |
| CHECKED_ROLE | VARCHAR2 (128) |          | Checked role                                                                    |
| PATH         | GRANT_PATH     |          | Role grant paths                                                                |
| RUN_NAME     | VARCHAR2 (128) |          | The name of the run during which the role was reported                          |

**See Also:**["DBA\\_CHECKED\\_ROLES"](#)

## 5.237 DBA\_CLU\_COLUMNS

DBA\_CLU\_COLUMNS maps all table columns to related cluster columns.

### Related View

USER\_CLU\_COLUMNS maps all table columns owned by the current user to related cluster columns. This view does not display the OWNER column.

| Column          | Datatype       | NULL     | Description               |
|-----------------|----------------|----------|---------------------------|
| OWNER           | VARCHAR2 (128) | NOT NULL | Owner of the cluster      |
| CLUSTER_NAME    | VARCHAR2 (128) | NOT NULL | Name of the cluster       |
| CLU_COLUMN_NAME | VARCHAR2 (128) | NOT NULL | Key column in the cluster |
| TABLE_NAME      | VARCHAR2 (128) | NOT NULL | Clustered table name      |

| Column          | Datatype        | NULL | Description                                       |
|-----------------|-----------------|------|---------------------------------------------------|
| TAB_COLUMN_NAME | VARCHAR2 (4000) |      | Key column or attribute of the object type column |

**See Also:**

"USER\_CLU\_COLUMNS"

## 5.238 DBA\_CLUSTER\_HASH\_EXPRESSIONS

DBA\_CLUSTER\_HASH\_EXPRESSIONS lists hash functions for all hash clusters in the database. Its columns are the same as those in ALL\_CLUSTER\_HASH\_EXPRESSIONS.

**See Also:**

"ALL\_CLUSTER\_HASH\_EXPRESSIONS"

## 5.239 DBA\_CLUSTERING\_DIMENSIONS

DBA\_CLUSTERING\_DIMENSIONS describes dimension tables associated with all tables with an attribute clustering clause in the database. Its columns are the same as those in ALL\_CLUSTERING\_DIMENSIONS.

**See Also:**

- "ALL\_CLUSTERING\_DIMENSIONS"
- *Oracle Database Data Warehousing Guide* for information about attribute clustering with zone maps

## 5.240 DBA\_CLUSTERING\_JOINS

DBA\_CLUSTERING\_JOINS describes joins to the dimension tables associated with all tables with an attribute clustering clause in the database. Its columns are the same as those in ALL\_CLUSTERING\_JOINS.

**See Also:**

- "ALL\_CLUSTERING\_JOINS"
- *Oracle Database Data Warehousing Guide* for information about attribute clustering with zone maps

## 5.241 DBA\_CLUSTERING\_KEYS

DBA\_CLUSTERING\_KEYS describes clustering keys for all tables with an attribute clustering clause. Its columns are the same as those in ALL\_CLUSTERING\_KEYS.

### See Also:

- ["ALL\\_CLUSTERING\\_KEYS"](#)
- *Oracle Database Data Warehousing Guide* for information about attribute clustering with zone maps

## 5.242 DBA\_CLUSTERING\_TABLES

DBA\_CLUSTERING\_TABLES describes all the tables with an attribute clustering clause. Its columns are the same as those in ALL\_CLUSTERING\_TABLES.

### See Also:

- ["ALL\\_CLUSTERING\\_TABLES"](#)
- *Oracle Database Data Warehousing Guide* for information about attribute clustering with zone maps

## 5.243 DBA\_CLUSTERS

DBA\_CLUSTERS describes all clusters in the database. Its columns are the same as those in ALL\_CLUSTERS.

### Note:

["ALL\\_CLUSTERS"](#)

## 5.244 DBA\_CODE\_ROLE\_PRIVS

DBA\_CODE\_ROLE\_PRIVS describes all the roles that are associated with program units in the database. Its columns are the same as those in ALL\_CODE\_ROLE\_PRIVS.

### See Also:

["ALL\\_CODE\\_ROLE\\_PRIVS"](#)

## 5.245 DBA\_COL\_COMMENTS

DBA\_COL\_COMMENTS displays comments on the columns of all tables and views in the database. Its columns are the same as those in ALL\_COL\_COMMENTS.

**See Also:**

["ALL\\_COL\\_COMMENTS"](#)

## 5.246 DBA\_COL\_PENDING\_STATS

DBA\_COL\_PENDING\_STATS describes the pending statistics of all columns in the database. Its columns are the same as those in ALL\_COL\_PENDING\_STATS.

**See Also:**

["ALL\\_COL\\_PENDING\\_STATS"](#)

## 5.247 DBA\_COL\_PRIVS

DBA\_COL\_PRIVS describes all column object grants in the database.

### Related View

USER\_COL\_PRIVS describes the column object grants for which the current user is the object owner, grantor, or grantee.

| Column      | Datatype       | NULL | Description                                                                                                                                                                                                                                            |
|-------------|----------------|------|--------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|
| GRANTEE     | VARCHAR2 (128) |      | Name of the user or role to whom access was granted                                                                                                                                                                                                    |
| OWNER       | VARCHAR2 (128) |      | Owner of the object                                                                                                                                                                                                                                    |
| TABLE_NAME  | VARCHAR2 (128) |      | Name of the object                                                                                                                                                                                                                                     |
| COLUMN_NAME | VARCHAR2 (128) |      | Name of the column                                                                                                                                                                                                                                     |
| GRANTOR     | VARCHAR2 (128) |      | Name of the user who performed the grant                                                                                                                                                                                                               |
| PRIVILEGE   | VARCHAR2 (40)  |      | Privilege on the column                                                                                                                                                                                                                                |
| GRANTABLE   | VARCHAR2 (3)   |      | Indicates whether the privilege was granted with the GRANT OPTION (YES) or not (NO)                                                                                                                                                                    |
| COMMON      | VARCHAR2 (3)   |      | Indicates how the grant was made. Possible values: <ul style="list-style-type: none"><li>• YES if the privilege was granted commonly (CONTAINER=ALL was used)</li><li>• NO if the privilege was granted locally (CONTAINER=ALL was not used)</li></ul> |
| INHERITED   | VARCHAR2 (3)   |      | Indicates whether the privilege grant was inherited from another container (YES) or not (NO)                                                                                                                                                           |

**See Also:**["USER\\_COL\\_PRIVS"](#)

## 5.248 DBA\_COLL\_TYPES

DBA\_COLL\_TYPES describes all named collection types (arrays, nested tables, object tables, and so on) in the database. Its columns are the same as those in ALL\_COLL\_TYPES.

**Note:**["ALL\\_COLL\\_TYPES"](#)

## 5.249 DBA\_COMMON\_AUDIT\_TRAIL

DBA\_COMMON\_AUDIT\_TRAIL displays all standard and fine-grained audit trail entries, mandatory and SYS audit records written in XML format.

**Note:**

This view is deprecated and applies only to traditional auditing. Traditional auditing is desupported starting in Oracle Database 23ai. Though traditional auditing is desupported, any current traditional audit settings that you have will still be honored and are viewable with this view. See *Oracle Database Security Guide* for more information about how this desupport works.

| Column             | Datatype                     | NULL | Description                                                                                                                                                                                                                                |
|--------------------|------------------------------|------|--------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|
| AUDIT_TYPE         | VARCHAR2 (22)                |      | Audit trail type: <ul style="list-style-type: none"> <li>• Standard Audit</li> <li>• Standard XML Audit</li> <li>• Fine Grained Audit</li> <li>• Fine Grained XML Audit</li> <li>• SYS XML Audit</li> <li>• Mandatory XML Audit</li> </ul> |
| SESSION_ID         | NUMBER                       |      | Numeric ID for the Oracle session                                                                                                                                                                                                          |
| PROXY_SESSIONID    | NUMBER                       |      | Proxy session serial number, if an enterprise user has logged in through the proxy mechanism                                                                                                                                               |
| STATEMENTID        | NUMBER                       |      | Numeric ID for the statement run; a statement may cause multiple audit records                                                                                                                                                             |
| ENTRYID            | NUMBER                       |      | Numeric ID for the audit trail entry in the session                                                                                                                                                                                        |
| EXTENDED_TIMESTAMP | TIMESTAMP (6) WITH TIME ZONE |      | Timestamp of the audited operation (timestamp of user login for entries created by AUDIT SESSION) in the session's time zone                                                                                                               |

| Column          | Datatype         | NULL | Description                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                      |
|-----------------|------------------|------|------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|
| GLOBAL_UID      | VARCHAR2 (32)    |      | Global user identifier for the user, if the user has logged in as an enterprise user                                                                                                                                                                                                                                                                                                                                                                                                                             |
| DB_USER         | VARCHAR2 (128)   |      | Database user name of the user whose actions were audited                                                                                                                                                                                                                                                                                                                                                                                                                                                        |

| OBJ_PRIVILEGE | VARCHAR2 (32) |      | <p>Object privileges granted or revoked by a <code>GRANT</code> or <code>REVOKE</code> statement. The value of this column is a 32-character string of <code>Y</code> and dash (<code>-</code>) characters. Each character corresponds to a numbered privilege in the following list. The left-most character corresponds to privilege 0, the next character corresponds to privilege 1, and so on. The right-most character corresponds to privilege 31.</p> <ul style="list-style-type: none"> <li>0 - ALTER</li> <li>1 - AUDIT</li> <li>2 - COMMENT</li> <li>3 - DELETE</li> <li>4 - GRANT</li> <li>5 - INDEX</li> <li>6 - INSERT</li> <li>7 - LOCK</li> <li>8 - CREATE</li> <li>9 - SELECT</li> <li>10 - UPDATE</li> <li>11 - REFERENCES</li> <li>12 - EXECUTE</li> <li>13 - VIEW</li> <li>14 - DROP</li> <li>15 - ANALYZE</li> <li>16 - CREATE</li> <li>17 - READ</li> <li>18 - WRITE</li> <li>19 - KEEP SEQUENCE</li> <li>20 - ENQUEUE</li> <li>21 - DEQUEUE</li> <li>22 - UNDER</li> <li>23 - ON COMMIT</li> <li>24 - REWRITE</li> <li>25 - UPSERT</li> <li>26 - DEBUG</li> <li>27 - FLASHBACK</li> <li>28 - MERGE</li> <li>29 - USE</li> <li>30 - FLASHBACK ARCHIVE</li> <li>31 - DIRECTORY EXECUTE</li> </ul> <p>A <code>Y</code> indicates that the privilege was granted or revoked by the statement. A dash indicates that the privilege was not affected by the statement. For example, the following value indicates that the <code>MERGE</code> privilege was granted or revoked by the statement:</p> <p>-----Y---</p> |
| SYS_PRIVILEGE | VARCHAR2 (40) |      | System privileges granted or revoked by a <code>GRANT</code> or <code>REVOKE</code> statement                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                          |
| ADMIN_OPTION  | VARCHAR2 (1)  |      | Indicates whether the role or system privilege was granted with the <code>ADMIN</code> option                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                          |

## 5.251 DBA\_COMPARISON\_COLUMNS

DBA\_COMPARISON\_COLUMNS displays information about the columns for all comparison objects in the database.

### Related View

USER\_COMPARISON\_COLUMNS displays information about the columns for the comparison objects owned by the current user. This view does not display the OWNER column.

| Column          | Datatype       | NULL     | Description                                                    |
|-----------------|----------------|----------|----------------------------------------------------------------|
| OWNER           | VARCHAR2 (128) | NOT NULL | Owner of the comparison                                        |
| COMPARISON_NAME | VARCHAR2 (128) | NOT NULL | Name of the comparison                                         |
| COLUMN_POSITION | NUMBER         | NOT NULL | Position of the column                                         |
| COLUMN_NAME     | VARCHAR2 (128) | NOT NULL | Name of the column                                             |
| INDEX_COLUMN    | VARCHAR2 (1)   |          | Indicates whether the column is an index column (Y) or not (N) |

## 5.252 DBA\_COMPARISON\_ROW\_DIF

DBA\_COMPARISON\_ROW\_DIF displays information about the differing rows in all comparison scans in the database.

### Related View

USER\_COMPARISON\_ROW\_DIF displays information about the differing rows in the comparison scans owned by the current user. This view does not display the OWNER column.

| Column          | Datatype        | NULL     | Description                             |
|-----------------|-----------------|----------|-----------------------------------------|
| OWNER           | VARCHAR2 (128)  | NOT NULL | Owner of the comparison                 |
| COMPARISON_NAME | VARCHAR2 (128)  | NOT NULL | Name of the comparison                  |
| SCAN_ID         | NUMBER          | NOT NULL | Scan ID for the comparison scan         |
| LOCAL_ROWID     | ROWID           |          | Local rowid of the differing row        |
| REMOTE_ROWID    | ROWID           |          | Remote rowid of the differing row       |
| INDEX_VALUE     | VARCHAR2 (4000) |          | Index column value of the differing row |

| Column           | Datatype      | NULL | Description                                                                                      |
|------------------|---------------|------|--------------------------------------------------------------------------------------------------|
| STATUS           | VARCHAR2 (3)  |      | Status of the differing row: <ul style="list-style-type: none"><li>• SUC</li><li>• DIF</li></ul> |
| LAST_UPDATE_TIME | TIMESTAMP (6) |      | Time that this row was last updated                                                              |

**See Also:**["USER\\_COMPARISON\\_ROW\\_DIF"](#)

## 5.253 DBA\_COMPARISON\_SCAN

DBA\_COMPARISON\_SCAN displays information about all comparison scans in the database.

### Related View

USER\_COMPARISON\_SCAN displays information about the comparison scans owned by the current user. This view does not display the OWNER column.

| Column            | Datatype       | NULL     | Description                                                                                                                                 |
|-------------------|----------------|----------|---------------------------------------------------------------------------------------------------------------------------------------------|
| OWNER             | VARCHAR2 (128) | NOT NULL | Owner of the comparison scan                                                                                                                |
| COMPARISON_NAME   | VARCHAR2 (128) | NOT NULL | Name of the comparison scan                                                                                                                 |
| SCAN_ID           | NUMBER         | NOT NULL | Scan ID                                                                                                                                     |
| PARENT_SCAN_ID    | NUMBER         |          | Scan ID of the immediate parent scan                                                                                                        |
| ROOT_SCAN_ID      | NUMBER         |          | Scan ID of the root (top-most) parent                                                                                                       |
| STATUS            | VARCHAR2 (16)  |          | Status of the scan: <ul style="list-style-type: none"><li>• SUC</li><li>• BUCKET DIF</li><li>• FINAL BUCKET DIF</li><li>• ROW DIF</li></ul> |
| CURRENT_DIF_COUNT | NUMBER         |          | Current cumulative (including children) diff count of the scan                                                                              |
| INITIAL_DIF_COUNT | NUMBER         |          | Initial cumulative (including children) diff count of the scan                                                                              |
| COUNT_ROWS        | NUMBER         |          | Number of rows in the scan                                                                                                                  |
| SCAN_NULLS        | VARCHAR2 (1)   |          | Indicates whether NULLs are part of this scan (Y) or not (N)                                                                                |
| LAST_UPDATE_TIME  | TIMESTAMP (6)  |          | Time that this row was last updated                                                                                                         |

**See Also:**["USER\\_COMPARISON\\_SCAN"](#)

## 5.254 DBA\_COMPARISON\_SCAN\_VALUES

DBA\_COMPARISON\_SCAN\_VALUES displays information about the values for all comparison scans in the database.

### Related View

USER\_COMPARISON\_SCAN\_VALUES displays information about the values for the comparison scans owned by the current user. This view does not display the OWNER column.

| Column           | Datatype        | NULL     | Description                                   |
|------------------|-----------------|----------|-----------------------------------------------|
| OWNER            | VARCHAR2 (128)  | NOT NULL | Owner of the comparison scan                  |
| COMPARISON_SCAN  | VARCHAR2 (128)  | NOT NULL | Name of the comparison scan                   |
| SCAN_ID          | NUMBER          | NOT NULL | Scan ID                                       |
| COLUMN_POSITION  | NUMBER          | NOT NULL | Column position, as in DBA_COMPARISON_COLUMNS |
| MIN_VALUE        | VARCHAR2 (4000) |          | Minimum value of the scan                     |
| MAX_VALUE        | VARCHAR2 (4000) |          | Maximum value of the scan                     |
| LAST_UPDATE_TIME | TIMESTAMP (6)   |          | Time that this row was last updated           |

## 5.255 DBA\_CONNECT\_ROLE\_GRANTEES

DBA\_CONNECT\_ROLE\_GRANTEES displays information about users who are granted the CONNECT privilege.

| Column                       | Datatype        | NULL | Description                                                                        |
|------------------------------|-----------------|------|------------------------------------------------------------------------------------|
| GRANTEE                      | VARCHAR2 (128)  |      | User or schema to which the CONNECT role is granted                                |
| PATH_OF_CONNECT_ROLE_GRANTED | VARCHAR2 (4000) |      | The path of role inheritance through which the grantee is granted the CONNECT role |
| ADMIN_OPT                    | VARCHAR2 (3)    |      | Whether or not the grantee was granted the ADMIN option for the CONNECT role       |

## 5.256 DBA\_CONNECTION\_TESTS

DBA\_CONNECTION\_TESTS provides information about connection tests in use for CDBs and PDBs.

This view shows SQL and non-SQL connection tests.

| Column               | Datatype       | NULL | Description                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                       |
|----------------------|----------------|------|---------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|
| PREDEFINED           | VARCHAR2 (1)   |      | Indicates whether the test is predefined or custom. Possible values: <ul style="list-style-type: none"><li>Y: The test is predefined.</li><li>N: The test is added by the user.</li></ul> Predefined tests can be disabled, but not deleted.                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                      |
| CONNECTION_TEST_TYPE | VARCHAR2 (15)  |      | Indicates the test type. Possible values include: <ul style="list-style-type: none"><li>SQL_TEST: Application servers and applications use SQL tests to check the validity of a connection. Use this value for SQL based connection tests, for example (SELECT 1 FROM DUAL;)</li><li>PING_TEST: Used when you are using tests that use the ping function to test the connection, including the OCIPing, isValid, isUsable, connection.status, and PING_DATABASE connection tests.</li><li>ENDREQUEST_TEST: Used when request boundaries are received at the RDBMS. Oracle Connection Pools and all application servers using JDK9 send request boundaries to the RDBMS starting in Oracle Database 12c Release 2 (12.2.0.1).</li></ul> The test type values are the CONNECTION_TEST_TYPE parameter values that can be specified for the ENABLE_CONNECTION_TEST and DISABLE_CONNECTION_TEST procedures for the DBMS_APP_CONT_ADMIN PL/SQL package. |
| SQL_CONNECTION_TEST  | VARCHAR2 (64)  |      | SQL test. This column is null for non-SQL tests.                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                  |
| SERVICE_NAME         | VARCHAR2 (128) |      | Optional service name qualifier                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                   |
| ENABLED              | VARCHAR2 (1)   |      | Indicates whether the SQL test is enabled. Possible values: <ul style="list-style-type: none"><li>Y: The test is enabled.</li><li>N: The test is not enabled.</li></ul>                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                           |

## 5.257 DBA\_CONS\_COLUMNS

DBA\_CONS\_COLUMNS describes all columns in the database that are specified in constraints. Its columns are the same as those in ALL\_CONS\_COLUMNS.

**See Also:**

"ALL\_CONS\_COLUMNS"

## 5.258 DBA\_CONS\_OBJ\_COLUMNS

DBA\_CONS\_OBJ\_COLUMNS displays information about the types that object columns (or attributes) or collection elements have been constrained to, in all tables in the database. Its columns are the same as those in ALL\_CONS\_OBJ\_COLUMNS.

**See Also:**

"ALL\_CONS\_OBJ\_COLUMNS"

## 5.259 DBA\_CONSTRAINTS

DBA\_CONSTRAINTS describes all constraint definitions on all tables in the database. Its columns are the same as those in ALL\_CONSTRAINTS.

**See Also:**

"ALL\_CONSTRAINTS"

## 5.260 DBA\_CONTAINER\_DATA

DBA\_CONTAINER\_DATA displays default (user-level) and object-specific CONTAINER\_DATA attributes for container data objects.

Objects created with the CONTAINER\_DATA clause include CONTAINER\_DATA attributes.

| Column       | Datatype       | NULL | Description                                                  |
|--------------|----------------|------|--------------------------------------------------------------|
| USERNAME     | VARCHAR2 (128) |      | Name of the user whose attribute is described by this row    |
| DEFAULT_ATTR | CHAR2 (1)      |      | An indicator of whether the attribute is a default attribute |
| OWNER        | VARCHAR2 (128) |      | Name of the object owner if the attribute is object-specific |

| Column         | Datatype       | NULL | Description                                                                           |
|----------------|----------------|------|---------------------------------------------------------------------------------------|
| OBJECT_NAME    | VARCHAR2 (128) |      | Name of the object if the attribute is object-specific                                |
| ALL_CONTAINERS | VARCHAR2 (1)   |      | An indicator of whether this attribute applies to all containers                      |
| CONTAINER_NAME | VARCHAR2 (128) |      | Name of a container included in this attribute if it does not apply to all containers |

## 5.261 DBA\_CONTEXT

DBA\_CONTEXT provides all context namespace information in the database.

### Related View

ALL\_CONTEXT describes all context namespaces in the current session for which attributes and values have been specified using the DBMS\_SESSION.SET\_CONTEXT procedure. This view does not describe the TYPE and ORIGIN\_CON\_ID columns.

| Column        | Datatype       | NULL     | Description                                                                                                                                                                                                                                                                                                                                                                           |
|---------------|----------------|----------|---------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|
| NAMESPACE     | VARCHAR2 (128) | NOT NULL | Name of the context namespace                                                                                                                                                                                                                                                                                                                                                         |
| SCHEMA        | VARCHAR2 (128) | NOT NULL | Schema name of the designated package that can set attributes using this namespace                                                                                                                                                                                                                                                                                                    |
| PACKAGE       | VARCHAR2 (128) | NOT NULL | Package name of the designated package that can set attributes using this namespace                                                                                                                                                                                                                                                                                                   |
| TYPE          | VARCHAR2 (22)  |          | Type of the context create                                                                                                                                                                                                                                                                                                                                                            |
| ORIGIN_CON_ID | NUMBER         |          | The ID of the container where the data originates. Possible values include: <ul style="list-style-type: none"> <li>• 0: This value is used for rows in non-CDBs. This value is not used for CDBs.</li> <li>• <i>n</i>: This value is used for rows containing data that originate in the container with container ID <i>n</i> (<i>n</i> = 1 if the row originates in root)</li> </ul> |

**See Also:**["ALL\\_CONTEXT"](#)

## 5.262 DBA\_CPOOL\_INFO

DBA\_CPOOL\_INFO displays configuration information about all Database Resident Connection Pools in the database.
