This view returns no rows if you are querying on an RMF source node. It returns all the registered services in the topology if you are querying on a target node

| Column        | Datatype       | NULL     | Description                                                                                                                                     |
|---------------|----------------|----------|-------------------------------------------------------------------------------------------------------------------------------------------------|
| TOPOLOGY_NAME | VARCHAR2 (128) | NOT NULL | Topology name for the service                                                                                                                   |
| NODE_ID       | NUMBER         | NOT NULL | Node ID of the node providing the service                                                                                                       |
| SERVICE_ID    | VARCHAR2 (7)   |          | Service Identifier. Possible values: <ul style="list-style-type: none"><li>• 1: Automatic Workload Repository</li><li>• 2: SQL Tuning</li></ul> |

## 7.82 DBA\_UMF\_TOPOLOGY

DBA\_UMF\_TOPOLOGY displays information about the registered topologies in the Remote Management Framework (RMF).

This view returns no rows if you are querying on an RMF source node. It returns one row per registered topology if you are querying on a target node.

| Column           | Datatype       | NULL     | Description                                                                                                                                                                       |
|------------------|----------------|----------|-----------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|
| TOPOLOGY_NAME    | VARCHAR2 (128) | NOT NULL | Unique topology name                                                                                                                                                              |
| TARGET_ID        | NUMBER         |          | Node ID of the target node                                                                                                                                                        |
| TOPOLOGY_VERSION | NUMBER         | NOT NULL | Topology version number                                                                                                                                                           |
| TOPOLOGY_STATE   | VARCHAR2 (8)   |          | Possible values: <ul style="list-style-type: none"><li>• ACTIVE: Topology can be used for RMF operations</li><li>• INACTIVE: Topology cannot be used for RMF operations</li></ul> |

## 7.83 DBA\_UNDO\_EXTENTS

DBA\_UNDO\_EXTENTS describes the extents comprising the segments in all undo tablespaces in the database.

### Note:

The status of the undo space distribution reported by DBA\_UNDO\_EXTENTS is correct for the undo tablespace that is active on the instance on which DBA\_UNDO\_EXTENTS is queried. However, due to the use of in-memory information that is different on each instance, there can be a discrepancy in the status of the undo space distribution of undo tablespaces active on other instances when queried from one instance. This does not affect undo functionality and is only a reporting discrepancy for other instances' undo tablespace space distribution status. As a best practice, query the space distribution for an undo tablespace from the instance on which it is active.

| Column          | Datatype      | NULL     | Description                                                                                                                                    |
|-----------------|---------------|----------|------------------------------------------------------------------------------------------------------------------------------------------------|
| OWNER           | CHAR(3)       |          | Owner of the undo tablespace                                                                                                                   |
| SEGMENT_NAME    | VARCHAR2(128) | NOT NULL | Name of the undo segment                                                                                                                       |
| TABLESPACE_NAME | VARCHAR2(128) | NOT NULL | Name of the undo tablespace                                                                                                                    |
| EXTENT_ID       | NUMBER        |          | ID of the extent                                                                                                                               |
| FILE_ID         | NUMBER        | NOT NULL | Absolute file number of the data file containing the extent                                                                                    |
| BLOCK_ID        | NUMBER        |          | Start block number of the extent                                                                                                               |
| BYTES           | NUMBER        |          | Size of the extent (in bytes)                                                                                                                  |
| BLOCKS          | NUMBER        |          | Size of the extent (in blocks)                                                                                                                 |
| RELATIVE_FNO    | NUMBER        |          | Relative number of the file containing the segment header                                                                                      |
| COMMIT_JTIME    | NUMBER        |          | Commit time of the undo in the extent expressed as Julian time. This column is deprecated, but retained for backward compatibility reasons.    |
| COMMIT_WTIME    | VARCHAR2(20)  |          | Commit time of the undo in the extent expressed as Wallclock time. This column is deprecated, but retained for backward compatibility reasons. |
| STATUS          | VARCHAR2(9)   |          | Transaction Status of the undo in the extent: <ul style="list-style-type: none"><li>• ACTIVE</li><li>• EXPIRED</li><li>• UNEXPIRED</li></ul>   |

## 7.84 DBA\_UNUSED\_COL\_TABS

DBA\_UNUSED\_COL\_TABS describes all tables in the database containing unused columns. Its columns are the same as those in ALL\_UNUSED\_COL\_TABS.

## 7.85 DBA\_UNUSED\_GRANTS

DBA\_UNUSED\_GRANTS shows all the grants that are not used during the privilege capture.

| Column       | Datatype       | NULL | Description                                                               |
|--------------|----------------|------|---------------------------------------------------------------------------|
| CAPTURE      | VARCHAR2 (128) |      | Name of the privilege analysis policy                                     |
| RUN_NAME     | VARCHAR2 (128) |      | Name of the run of the privilege analysis policy                          |
| GRANTEE      | VARCHAR2 (128) |      | Name of the user who is granted with the privilege or role                |
| ROLENAM      | VARCHAR2 (128) |      | Name of the role that is granted to the grantee                           |
| SYS_PRIV     | VARCHAR2 (40)  |      | Name of the system privilege that is granted to the grantee               |
| SCH_PRIV     | VARCHAR2 (40)  |      | Name of the schema privilege that is granted to the grantee               |
| OBJ_PRIV     | VARCHAR2 (40)  |      | Name of the object privilege that is granted to the grantee               |
| USER_PRIV    | VARCHAR2 (25)  |      | Name of the user privilege that is granted to the grantee                 |
| OBJECT_OWNER | VARCHAR2 (128) |      | Name of the owner of the object for which the object privilege is granted |
| OBJECT_NAME  | VARCHAR2 (128) |      | Name of the object for which the object privilege is granted              |
| OBJECT_TYPE  | VARCHAR2 (23)  |      | Type of the object for which the object privilege is granted              |
| COLUMN_NAME  | VARCHAR2 (128) |      | Name of the column in the table for which the object privilege is granted |
| OPTION\$     | NUMBER         |      | Whether the grant option of the privilege is granted                      |

## 7.86 DBA\_UNUSED\_OBJPRIVS

DBA\_UNUSED\_OBJPRIVS lists the object privileges (without privilege grant paths) that are not used for the privilege analysis policies reported by the DBMS\_PRIVILEGE\_CAPTURE.GENERATE\_RESULT procedure.

This view provides access to analyzed privilege records in SYS tables.

You must have the CAPTURE\_ADMIN role to access this view.

| Column       | Datatype       | NULL     | Description                                                                                                                                                                                                                                                      |
|--------------|----------------|----------|------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|
| CAPTURE      | VARCHAR2 (128) | NOT NULL | Name of the privilege analysis policy                                                                                                                                                                                                                            |
| USERNAME     | VARCHAR2 (128) |          | Name of the user whose privileges are reported                                                                                                                                                                                                                   |
| ROLENAME     | VARCHAR2 (128) |          | Name of the role whose unused privileges are reported (for ROLE type privilege analysis or ROLE AND CONTEXT privilege analysis)                                                                                                                                  |
| OBJ_PRIV     | VARCHAR2 (40)  |          | Unused object privilege                                                                                                                                                                                                                                          |
| OBJECT_OWNER | VARCHAR2 (128) |          | Object owner                                                                                                                                                                                                                                                     |
| OBJECT_NAME  | VARCHAR2 (128) |          | Name of the object that USERNAME has OBJ_PRIV on                                                                                                                                                                                                                 |
| OBJECT_TYPE  | VARCHAR2 (23)  |          | Type of the object USERNAME has OBJ_PRIV on                                                                                                                                                                                                                      |
| COLUMN_NAME  | VARCHAR2 (128) |          | Name of the column that USERNAME has OBJ_PRIV on                                                                                                                                                                                                                 |
| GRANT_OPTION | NUMBER         |          | Indicates whether the privilege is granted with the GRANT option: <ul style="list-style-type: none"><li>0 - Indicates that the privilege is granted without the GRANT option</li><li>1 - Indicates that the privilege is granted with the GRANT option</li></ul> |
| RUN_NAME     | VARCHAR2 (128) |          | The name of the run during which the privilege was reported                                                                                                                                                                                                      |

## 7.88 DBA\_UNUSED\_PRIVS

`DBA_UNUSED_PRIVS` lists the privileges that are not used for the privilege analysis policies reported by the `DBMS_PRIVILEGE_CAPTURE.GENERATE_RESULT` procedure.

This view provides access to analyzed privilege records in `SYS` tables.

You must have the `CAPTURE_ADMIN` role to access this view.

| Column   | Datatype       | NULL     | Description                                           |
|----------|----------------|----------|-------------------------------------------------------|
| CAPTURE  | VARCHAR2 (128) | NOT NULL | Name of the privilege analysis policy                 |
| USERNAME | VARCHAR2 (128) |          | Name of the user whose unused privileges are reported |

| Column       | Datatype       | NULL | Description                                                                                                                                                                                                                                                                                                                                                                                           |
|--------------|----------------|------|-------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|

## 7.89 DBA\_UNUSED\_SCHEMA\_PRIVS

`DBA_UNUSED_SCHEMA_PRIVS` lists the schema privileges (without privilege grant paths) that are not used for the privilege analysis policies reported by the `DBMS_PRIVILEGE_CAPTURE.GENERATE_RESULT` procedure.

This view provides access to analyzed privilege records in `SYS` tables.

You must have the `CAPTURE_ADMIN` role to access this view.

| Column   | Datatype       | NULL     | Description                                    |
|----------|----------------|----------|------------------------------------------------|
| CAPTURE  | VARCHAR2 (128) | NOT NULL | Name of a privilege analysis policy            |
| USERNAME | VARCHAR2 (128) |          | Name of the user whose privileges are reported |

## 7.90 DBA\_UNUSED\_SCHEMA\_PRIVS\_PATH

`DBA_UNUSED_SCHEMA_PRIVS_PATH` lists the schema privileges that are not used for the privilege analysis policies reported by the `DBMS_PRIVILEGE_CAPTURE.GENERATE_RESULT` procedure.

This view provides access to analyzed privilege records in `SYS` tables.

You must have the `CAPTURE_ADMIN` role to access this view.

| Column   | Datatype       | NULL     | Description                                                                                                                                               |

## 7.94 DBA\_UNUSED\_USERPRIVS\_PATH

DBA\_UNUSED\_USERPRIVS\_PATH lists the user privileges that are not used for the privilege analysis policies reported by the DBMS\_PRIVILEGE\_CAPTURE.GENERATE\_RESULT procedure.

This view provides access to analyzed privilege records in SYS tables.

You must have the CAPTURE\_ADMIN role to access this view.

| Column       | Datatype       | NULL     | Description                                                                                                                                                                                                                                                      |

## 7.96 DBA\_USED\_OBJPRIVS

DBA\_USED\_OBJPRIVS lists the object privileges (without privilege grant paths) that are used for the privilege analysis policies reported by the DBMS\_PRIVILEGE\_CAPTURE.GENERATE\_RESULT procedure.

This view provides access to analyzed privilege records in SYS tables.

You must have the CAPTURE\_ADMIN role to access this view.

| Column       | Datatype       | NULL     | Description                                                                                                                                                                                            |

## 7.98 DBA\_USED\_PRIVS

`DBA_USED_PRIVS` lists the privileges that are used for the privilege analysis policies reported by the `DBMS_PRIVILEGE_CAPTURE.GENERATE_RESULT` procedure.

This view provides access to analyzed privilege records in `SYS` tables.

You must have the `CAPTURE_ADMIN` role to access this view.

| Column   | Datatype       | NULL     | Description                                                                               |

## 7.99 DBA\_USED\_PUBPRIVS

DBA\_USED\_PUBPRIVS lists the privileges that are used from the PUBLIC role for the privilege analysis policies reported by the DBMS\_PRIVILEGE\_CAPTURE.GENERATE\_RESULT procedure.

This view provides access to analyzed privilege records in SYS tables.

You must have the CAPTURE\_ADMIN role to access this view.

| Column  | Datatype       | NULL     | Description                         |
|---------|----------------|----------|-------------------------------------|
| CAPTURE | VARCHAR2 (128) | NOT NULL | Name of a privilege analysis policy |

| Column       | Datatype       | NULL     | Description                                                                                                                                                                                                                                               |
|--------------|----------------|----------|-----------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|
| SEQUENCE     | NUMBER         | NOT NULL | The sequence number of the privilege analysis run during which the privilege was reported                                                                                                                                                                 |
| OS_USER      | VARCHAR2 (128) |          | Operating system login username                                                                                                                                                                                                                           |
| USERHOST     | VARCHAR2 (128) |          | Client host machine name                                                                                                                                                                                                                                  |
| MODULE       | VARCHAR2 (64)  |          | Module name                                                                                                                                                                                                                                               |
| USERNAME     | VARCHAR2 (128) | NOT NULL | Name of the user who used the privilege from the PUBLIC role                                                                                                                                                                                              |
| SYS_PRIV     | VARCHAR2 (40)  |          | Used system privilege                                                                                                                                                                                                                                     |
| SCH_PRIV     | VARCHAR2 (40)  |          | Used schema privilege                                                                                                                                                                                                                                     |
| OBJ_PRIV     | VARCHAR2 (40)  |          | Used object privilege                                                                                                                                                                                                                                     |
| OBJECT_OWNER | VARCHAR2 (128) |          | Object owner                                                                                                                                                                                                                                              |
| OBJECT_NAME  | VARCHAR2 (128) |          | Name of the object that OBJ_PRIV is used to access                                                                                                                                                                                                        |
| OBJECT_TYPE  | VARCHAR2 (23)  |          | Type of the object that OBJ_PRIV is used to access                                                                                                                                                                                                        |
| OPTION\$     | NUMBER         |          | Indicates whether the GRANT option or the ADMIN option was used: <ul style="list-style-type: none"> <li>0 - Indicates that the GRANT option or ADMIN option was not used</li> <li>1 - Indicates that the GRANT option or ADMIN option was used</li> </ul> |
| RUN_NAME     | VARCHAR2 (128) |          | The name of the run during which the privilege was reported                                                                                                                                                                                               |

## 7.100 DBA\_USED\_SCHEMA\_PRIVS

DBA\_USED\_SCHEMA\_PRIVS lists the schema privileges (without privilege grant paths) that are used for the privilege analysis policies reported by the DBMS\_PRIVILEGE\_CAPTURE.GENERATE\_RESULT procedure.

This view provides access to analyzed privilege records in SYS tables.

You must have the CAPTURE\_ADMIN role to access this view.

| Column   | Datatype       | NULL     | Description                                                                           |
|----------|----------------|----------|---------------------------------------------------------------------------------------|
| CAPTURE  | VARCHAR2 (128) | NOT NULL | Name of a privilege analysis policy                                                   |
| SEQUENCE | NUMBER         | NOT NULL | The sequence number of the privilege analysis run during which the privilege was used |
| OS_USER  | VARCHAR2 (128) |          | Operating system login username                                                       |

| Column       | Datatype       | NULL     | Description                                                                                                                                                                                           |
|--------------|----------------|----------|-------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|
| USERHOST     | VARCHAR2 (128) |          | Client host machine name                                                                                                                                                                              |
| MODULE       | VARCHAR2 (64)  |          | Module name                                                                                                                                                                                           |

## 7.101 DBA\_USED\_SCHEMA\_PRIVS\_PATH

DBA\_USED\_SCHEMA\_PRIVS\_PATH lists the schema privileges that are used for the privilege analysis policies reported by the `DBMS_PRIVILEGE_CAPTURE.GENERATE_RESULT` procedure.

This view provides access to analyzed privilege records in SYS tables.

You must have the `CAPTURE_ADMIN` role to access this view.

| Column   | Datatype       | NULL     | Description                                                                               |
|----------|----------------|----------|-------------------------------------------------------------------------------------------|
| CAPTURE  | VARCHAR2 (128) | NOT NULL | Name of a privilege analysis policy                                                       |
| SEQUENCE | NUMBER         | NOT NULL | The sequence number of the privilege analysis run during which the privilege was reported |
| OS_USER  | VARCHAR2 (128) |          | Operating system login username                                                           |
| USERHOST | VARCHAR2 (128) |          | Client host machine name                                                                  |
| MODULE   | VARCHAR2 (64)  |          | Module name                                                                               |
| USERNAME | VARCHAR2 (128) | NOT NULL | Name of the user whose privilege was reported                                             |

| Column       | Datatype       | NULL | Description                                                                                                                                                                                            |

## 7.103 DBA\_USED\_SYSPRIVS\_PATH

DBA\_USED\_SYSPRIVS\_PATH lists the system privileges that are used for the privilege analysis policies reported by the `DBMS_PRIVILEGE_CAPTURE.GENERATE_RESULT` procedure.

This view provides access to analyzed privilege records in SYS tables.

You must have the `CAPTURE_ADMIN` role to access this view.

| Column       | Datatype       | NULL     | Description                                                                                                                                                                                           |
|--------------|----------------|----------|-------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|

## 7.104 DBA\_USED\_USERPRIVS

`DBA_USED_USERPRIVS` lists the user privileges (without privilege grant paths) that are used for the privilege analysis policies reported by the `DBMS_PRIVILEGE_CAPTURE.GENERATE_RESULT` procedure.

This view provides access to analyzed privilege records in `SYS` tables.

You must have the `CAPTURE_ADMIN` role to access this view.

| Column       | Datatype       | NULL     | Description                                                                                                                                                                                                                                                                                                 |

| EXTERNAL_NAME               | VARCHAR2 (4000) |          | User external name. For centrally managed users, if the database user mapping is an exclusive mapping, then this will be the directory service DN for the user. If this database user is a shared schema, it will be the DN of a group.                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                        |
| PASSWORD_VERSIONS           | VARCHAR2 (12)   |          | <p>Shows the list of versions of the password hashes (also known as "verifiers") existing for the account. The values for this column can include:</p> <ul style="list-style-type: none"> <li>11G: If a SHA-1 hash exists</li> <li>12C: If a de-optimized PBKDF2-based hash exists</li> <li>HTTP: If an MD5 hash (for HTTP Digest authentication) exists</li> </ul> <p>For more information about the 12C verifier, see <i>Oracle Database Concepts</i>.</p> <p>Note that any combination of these verifiers can exist for any given account.</p>                                                                                                                                                                                                                                                                                                                                                                                              |
| EDITIONS_ENABLED            | VARCHAR2 (1)    |          | Indicates whether editions have been enabled for the corresponding user (Y) or not (N)                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                         |

| Column              | Datatype                     | NULL | Description                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                          |
|---------------------|------------------------------|------|------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|
| AUTHENTICATION_TYPE | VARCHAR2 (8)                 |      | <p>Indicates the authentication mechanism for the user:</p> <ul style="list-style-type: none"> <li>NONE - The user has not been configured for an authentication method</li> <li>EXTERNAL - CREATE USER <i>user1</i> IDENTIFIED EXTERNALLY;</li> <li>GLOBAL - CREATE USER <i>user2</i> IDENTIFIED GLOBALLY;</li> <li>PASSWORD - CREATE USER <i>user3</i> IDENTIFIED BY <i>password</i>;</li> </ul>                                                                                                                                                   |
| PROXY_ONLY_CONNECT  | VARCHAR2 (1)                 |      | <p>Indicates whether a user can connect directly (N) or whether the account can only be proxied (Y) by users who have proxy privileges for this account (that is, by users who have been granted the "connect through" privilege for this account).</p> <p><b>Note:</b> Setting PROXY_ONLY_CONNECT for users is deprecated in this release, and may be desupported in a future release. Oracle recommends that you instead use schema-only accounts. For more information about schema-only accounts, see <i>Oracle Database Security Guide</i>.</p> |
| COMMON              | VARCHAR2 (3)                 |      | <p>Indicates whether a given user is common. Possible values</p> <ul style="list-style-type: none"> <li>YES if a user is common</li> <li>NO if a user is local (not common)</li> </ul>                                                                                                                                                                                                                                                                                                                                                               |
| LAST_LOGIN          | TIMESTAMP (9) WITH TIME ZONE |      | <p>The time of the last user login</p> <p>This column is not populated when a user connects to the database with administrative privileges, that is, AS { SYSASM   SYSBACKUP   SYSDBA   SYSDG   SYSOPER   SYSRAC   SYSKM }.</p>                                                                                                                                                                                                                                                                                                                      |
| ORACLE_MAINTAINED   | VARCHAR2 (1)                 |      | <p>Denotes whether the user was created, and is maintained, by Oracle-supplied scripts (such as catalog.sql or catproc.sql). A user for which this column has the value Y must not be changed in any way except by running an Oracle-supplied script.</p>                                                                                                                                                                                                                                                                                            |
| INHERITED           | VARCHAR2 (3)                 |      | <p>Indicates whether the user definition was inherited from another container (YES) or not (NO)</p>                                                                                                                                                                                                                                                                                                                                                                                                                                                  |
| DEFAULT_COLLATION   | VARCHAR2 (100)               |      | <p>Default collation for the user's schema</p>                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                       |
| IMPLICIT            | VARCHAR2 (3)                 |      | <p>Indicates whether this user is a common user created by an implicit application (YES) or not (NO)</p>                                                                                                                                                                                                                                                                                                                                                                                                                                             |
| ALL_SHARD           | VARCHAR2 (3)                 |      | <p>In a sharded database, the value in this column indicates whether the user was created with shard DDL enabled. The possible values are:</p> <ul style="list-style-type: none"> <li>YES: The user was created with shard DDL enabled. The user exists on all shards and the shard catalog.</li> <li>NO: The user was created without shard DDL enabled. The user exists only in the database in which the user was created.</li> </ul> <p>In a non-sharded database, the value in this column is always NO.</p>                                    |

| Column                      | Datatype     | NULL | Description                                                                                                                                                                                                                               |
|-----------------------------|--------------|------|-------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|
| EXTERNAL_SHARD              | VARCHAR2 (3) |      | In a federated sharded database, the value in this column indicates whether the user is an external shard user (YES) or not (NO).<br><br>In other types of databases, the value in this column is always NO.                              |
| PASSWORD_CHANGE_DATE        | DATE         |      | Date on which the user's password was last set<br><br>This column is populated only when the value of the AUTHENTICATION_TYPE column is PASSWORD. Otherwise, this column is null.                                                         |
| MANDATORY_PROFILE_VIOLATION | VARCHAR2 (3) |      | If the value in this column is YES, then the user account password violates the mandatory profile password complexity requirements and must be changed before the grace period expires.<br><br>Otherwise, the value in this column is NO. |
| PROTECTED                   | VARCHAR2 (3) |      | Indicates whether the user is a protected user (YES) or not (NO)<br><br>A protected user can be managed only by another protected user or a common user.                                                                                  |
| READ_ONLY                   | VARCHAR2 (3) |      | Indicates whether write privileges for the user are disabled (YES) or enabled (NO)                                                                                                                                                        |
| DICTIONARY_PROTECTED        | VARCHAR2 (3) |      | Indicates whether the user's schema is dictionary protected (YES) or not (NO)<br><br><b>See Also:</b> <i>Oracle Database Security Guide</i> for more information about dictionary-protected schemas                                       |

## 7.107 DBA\_USERS\_WITH\_DEFPWD

DBA\_USERS\_WITH\_DEFPWD displays all users in the database that are still using their default passwords.

| Column   | Datatype        | NULL     | Description                             |
|----------|-----------------|----------|-----------------------------------------|
| USERNAME | VARCHAR2 (128)  | NOT NULL | Name of the user                        |
| PRODUCT  | VARCHAR2 (4000) |          | Name of the product the user belongs to |

**Note:**

In a CDB, when `DBA_USERS_WITH_DEFPWD` is queried from a PDB, information about local users who are using their default passwords is displayed. To display information about common users, query `DBA_USERS_WITH_DEFPWD` from the root.

**See Also:**

*Oracle Multitenant Administrator's Guide* for an introduction to local and common users in a CDB

## 7.108 DBA\_USTATS

`DBA_USTATS` describes the user-defined statistics collected on all tables and indexes in the database. Its columns are the same as those in `ALL_USTATS`.

**See Also:**

["ALL\\_USTATS"](#)

## 7.109 DBA\_VARRAYS

`DBA_VARRAYS` describes all varrays in the database. Its columns are the same as those in `ALL_VARRAYS`.

**See Also:**

["ALL\\_VARRAYS"](#)

## 7.110 DBA\_VIEWS

`DBA_VIEWS` describes all views in the database. Its columns are the same as those in `ALL_VIEWS`.

**See Also:**

["ALL\\_VIEWS"](#)

## 7.111 DBA\_VIEWS\_AE

DBA\_VIEWS\_AE describes all views (across all editions) in the database. Its columns are the same as those in ALL\_VIEWS\_AE.

**See Also:**

"ALL\_VIEWS\_AE"

## 7.112 DBA\_WAITERS

DBA\_WAITERS shows all the sessions that are waiting for a lock. In an Oracle RAC environment, this only applies if the waiter is on the same instance.

| Column          | Datatype      | NULL | Description                                       |
|-----------------|---------------|------|---------------------------------------------------|
| WAITING_SESSION | NUMBER        |      | The waiting session                               |
| WAITING_CON_ID  | NUMBER        |      | The container ID (CON_ID) of the waiting session  |
| HOLDING_SESSION | NUMBER        |      | The holding session                               |
| HOLDING_CON_ID  | NUMBER        |      | The container ID (CON_ID) of the holding session. |
| LOCK_TYPE       | VARCHAR2 (26) |      | The lock type                                     |
| MODE_HELD       | VARCHAR2 (40) |      | The mode held                                     |
| MODE_REQUESTED  | VARCHAR2 (40) |      | The mode requested                                |
| LOCK_ID1        | NUMBER        |      | Lock ID 1                                         |
| LOCK_ID2        | NUMBER        |      | Lock ID 2                                         |

## 7.113 DBA\_WALLET\_ACES

DBA\_WALLET\_ACES describes access control entries defined in wallet access control lists.

### Related View

USER\_WALLET\_ACES describes the status of access control entries for the current user to access wallets through PL/SQL network utility packages. This view does not display the ACE\_ORDER, START\_DATE, END\_DATE, GRANT\_TYPE, INVERTED\_PRINCIPAL, PRINCIPAL, or PRINCIPAL\_TYPE columns.

| Column             | Datatype        | NULL     | Description                                                               |
|--------------------|-----------------|----------|---------------------------------------------------------------------------|
| WALLET_PATH        | VARCHAR2 (1000) | NOT NULL | Wallet path                                                               |
| ACE_ORDER          | NUMBER          | NOT NULL | Order number of the access control entry                                  |
| START_DATE         | TIMESTAMP (6)   |          | Start date of the access control entry                                    |
| END_DATE           | TIMESTAMP (6)   |          | End date of the access control entry                                      |
| GRANT_TYPE         | VARCHAR2 (5)    |          | Indicates whether the access control entry grants or denies the privilege |
| INVERTED_PRINCIPAL | VARCHAR2 (3)    |          | Indicates whether the principal is inverted or not                        |

| Column         | Datatype       | NULL | Description                           |
|----------------|----------------|------|---------------------------------------|
| PRINCIPAL      | VARCHAR2 (128) |      | Principal the privilege is applied to |
| PRINCIPAL_TYPE | VARCHAR2 (16)  |      | Type of the principal                 |
| PRIVILEGE      | VARCHAR2 (128) |      | Privilege                             |

**See Also:**

"USER\_WALLET\_ACES"

## 7.114 DBA\_WALLET\_ACLS

DBA\_WALLET\_ACLS displays the access control lists assigned to restrict access to wallets through PL/SQL network utility packages.

| Column      | Datatype        | NULL     | Description                          |
|-------------|-----------------|----------|--------------------------------------|
| WALLET_PATH | VARCHAR2 (1000) | NOT NULL | Wallet path                          |
| ACL         | VARCHAR2 (4000) |          | Path of the access control list      |
| ACLID       | RAW (8)         |          | Object ID of the access control list |
| ACL_OWNER   | VARCHAR2 (128)  |          | Owner of the access control list     |

## 7.115 DBA\_WARNING\_SETTINGS

DBA\_WARNING\_SETTINGS displays information about the warning parameter settings for all objects in the database. Its columns are the same as those in ALL\_WARNING\_SETTINGS.

**See Also:**

"ALL\_WARNING\_SETTINGS"

## 7.116 DBA\_WI\_CAPTURE\_FILES

Each row in DBA\_WI\_CAPTURE\_FILES represents a capture file that belongs to the workload analyzed in the current Workload Intelligence job.

| Column    | Datatype        | NULL     | Description                                                                       |
|-----------|-----------------|----------|-----------------------------------------------------------------------------------|
| JOB_ID    | NUMBER          | NOT NULL | The identifier of the job in the workload to which the given capture file belongs |
| FILE_ID   | NUMBER          | NOT NULL | The identifier of the current capture file                                        |
| FILE_PATH | VARCHAR2 (4000) | NOT NULL | The path of the current capture file                                              |

## 7.117 DBA\_WI\_JOBS

Each row in `DBA_WI_JOBS` describes a Workload Intelligence job, that is, a task that applies the algorithms of Workload Intelligence on a given capture directory.

| Column            | Datatype        | NULL     | Description                                                                                                                                                                                                                                                                                   |
|-------------------|-----------------|----------|-----------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|
| JOB_ID            | NUMBER          | NOT NULL | The job identifier                                                                                                                                                                                                                                                                            |
| JOB_NAME          | VARCHAR2 (128)  | NOT NULL | A name that uniquely identifies the given job                                                                                                                                                                                                                                                 |
| CAPTURE_DIRECTORY | VARCHAR2 (4000) | NOT NULL | Path to the capture directory on which the given job has been applied                                                                                                                                                                                                                         |
| MODEL_ORDER       | NUMBER          |          | The order of the markov model that describes the workload associated with the current job. If <code>NULL</code> , the corresponding order has not been calculated yet.                                                                                                                        |
| THRESHOLD         | NUMBER          |          | A number in the range [0, 1] that represents the threshold that the user has given as an input parameter to the current job of Workload Intelligence for the identification of significant patterns. If <code>NULL</code> , the process of pattern identification has not been initiated yet. |

## 7.118 DBA\_WI\_OBJECTS

Each row in `DBA_WI_OBJECTS` represents a database object (table) that is accessed by the given template in the given Workload Intelligence job.

| Column      | Datatype     | NULL     | Description                                                                                                                                                                                                                                                                                                                                                                          |
|-------------|--------------|----------|--------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|
| JOB_ID      | NUMBER       | NOT NULL | The identifier of the job in the workload of which the given object has been accessed                                                                                                                                                                                                                                                                                                |
| TEMPLATE_ID | NUMBER       | NOT NULL | The identifier of the template in the given job by which the current object has been accessed                                                                                                                                                                                                                                                                                        |
| OBJECT_ID   | NUMBER       | NOT NULL | The identifier of the current object                                                                                                                                                                                                                                                                                                                                                 |
| ACCESS_TYPE | VARCHAR2 (2) | NOT NULL | Possible values: <ul style="list-style-type: none"> <li>R - Indicates that the current object has been accessed for reading by the given template</li> <li>W - Indicates that the current object has been accessed for writing by the given template</li> <li>RW - Indicates that the current object has been accessed for both reading and writing by the given template</li> </ul> |

## 7.119 DBA\_WI\_PATTERN\_ITEMS

Each row in `DBA_WI_PATTERN_ITEMS` represents a template that participates in a significant pattern that has been found by the given Workload Intelligence job.

| Column | Datatype | NULL     | Description                                                                           |
|--------|----------|----------|---------------------------------------------------------------------------------------|
| JOB_ID | NUMBER   | NOT NULL | The identifier of the job in the workload of which the current pattern has been found |

| Column           | Datatype | NULL     | Description                                                                                                                                |
|------------------|----------|----------|--------------------------------------------------------------------------------------------------------------------------------------------|
| PATTERN_ID       | NUMBER   | NOT NULL | The identifier of the pattern to which the current item (template) belongs                                                                 |
| SEQUENCE_NUMBER  | NUMBER   | NOT NULL | Number that indicates the position of the current item in the given pattern                                                                |
| TEMPLATE_ID      | NUMBER   | NOT NULL | The identifier of the template that participates in the given position of the current pattern                                              |
| IS_FIRST_IN_LOOP | CHAR(1)  | NOT NULL | A flag that indicates whether or not the current item marks the beginning of a loop in the given pattern. The possible values are Y and N. |
| IS_LAST_IN_LOOP  | CHAR(1)  | NOT NULL | A flag that indicates whether or not the current item marks the end of a loop in the given pattern. The possible values are Y and N.       |

## 7.120 DBA\_WI\_PATTERNS

Each row in `DBA_WI_PATTERNS` represents a pattern that has been identified by Workload Intelligence as significant in the workload associated with the given job. Such a pattern consists of one or more templates.

These templates that comprise the given pattern are described in the related view `DBA_WI_PATTERN_ITEMS`.

| Column               | Datatype | NULL     | Description                                                                                                       |
|----------------------|----------|----------|-------------------------------------------------------------------------------------------------------------------|
| JOB_ID               | NUMBER   | NOT NULL | The identifier of the job in the workload of which the current pattern has been found                             |
| PATTERN_ID           | NUMBER   | NOT NULL | The identifier of the current pattern                                                                             |
| LENGTH               | NUMBER   | NOT NULL | The length of the pattern, that is, the number of items (templates) it consists of                                |
| NUMBER_OF_EXECUTIONS | NUMBER   | NOT NULL | The number of times the current pattern has been executed in the given workload                                   |
| DB_TIME              | NUMBER   | NOT NULL | The total time consumed in the database server by all the executions of the current pattern in the given workload |

**See Also:**

["DBA\\_WI\\_PATTERN\\_ITEMS"](#)

## 7.121 DBA\_WI\_STATEMENTS

Each row in `DBA_WI_STATEMENTS` describes a statement (SQL or PL/SQL) that is part of the template with identifier `TEMPLATE_ID`, which has been found in the workload that is related to the Workload Intelligence job whose identifier is equal to `JOB_ID`.

A template may consist of multiple statements, for example, if it represents a transaction. In this case, there is one row in this view for every one of these statements. These statements

are ordered, based on the order defined by the corresponding transaction. Column `SEQUENCE_NUMBER` is used to describe this order.

| Column          | Datatype | NULL     | Description                                                                                                                                                                                                                                                                                            |
|-----------------|----------|----------|--------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|
| JOB_ID          | NUMBER   | NOT NULL | The identifier of the job in the workload of which the given statement has been found                                                                                                                                                                                                                  |
| TEMPLATE_ID     | NUMBER   | NOT NULL | The identifier of the template in the given job to which the current statement belongs                                                                                                                                                                                                                 |
| SEQUENCE_NUMBER | NUMBER   | NOT NULL | A number that indicates the order of the current statement in the given template                                                                                                                                                                                                                       |
| SQL_TEXT        | CLOB     | NOT NULL | The SQL text associated with the current statement. Note that although multiple SQL statements can be classified to the same template, only one row is stored that represents them all. This row corresponds to the first instance of the given template that is found during parsing of the workload. |

## 7.122 DBA\_WI\_TEMPLATE\_EXECUTIONS

Each row in `DBA_WI_TEMPLATE_EXECUTIONS` represents an execution of a template in a capture that belongs to the workload that is associated with the current Workload Intelligence job.

| Column          | Datatype | NULL     | Description                                                                                            |
|-----------------|----------|----------|--------------------------------------------------------------------------------------------------------|
| JOB_ID          | NUMBER   | NOT NULL | The identifier of the job in the workload of which the current execution of the given template belongs |
| CAPTURE_FILE_ID | NUMBER   | NOT NULL | The identifier of the capture file in which the current execution of the given template was found      |
| SEQUENCE_NUMBER | NUMBER   | NOT NULL | A number that indicates the order of the current execution in the given capture file                   |
| TEMPLATE_ID     | NUMBER   | NOT NULL | The identifier of the template that was executed in the execution represented by the current row       |
| DB_TIME         | NUMBER   | NOT NULL | The time that the current execution consumed on the database server                                    |

## 7.123 DBA\_WI\_TEMPLATES

Each row in `DBA_WI_TEMPLATES` describes a template that has been found in the workload that is related to the Workload Intelligence job whose identifier is equal to `JOB_ID`.

A template can represent either a simple query, or an entire transaction. Two queries in the given workload belong to the same template, if they exhibit trivial differences, for example, if they contain different literal values, different bind variable names, different comments, or different white spaces.

| Column      | Datatype | NULL     | Description                                                                          |
|-------------|----------|----------|--------------------------------------------------------------------------------------|
| JOB_ID      | NUMBER   | NOT NULL | The identifier of the job in the workload of which the given template has been found |
| TEMPLATE_ID | NUMBER   | NOT NULL | The identifier of a template in a given job                                          |

| Column         | Datatype | NULL     | Description                                                                                                                                                                                                                                                               |
|----------------|----------|----------|---------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|
| IS_TRANSACTION | CHAR(1)  | NOT NULL | Flag that indicates whether the given template represents a transaction: <ul style="list-style-type: none"> <li>Y - indicates that the given template represents a transaction</li> <li>N - indicates that the given template does not represent a transaction</li> </ul> |

## 7.124 DBA\_WORKLOAD\_ACTIVE\_USER\_MAP

DBA\_WORKLOAD\_ACTIVE\_USER\_MAP contains the mappings that are going to be valid for the next replay or are valid for the current replay.

| Column          | Datatype       | NULL     | Description                                                           |
|-----------------|----------------|----------|-----------------------------------------------------------------------|
| SCHEDULE_CAP_ID | NUMBER         |          | The ID of a capture in the schedule                                   |
| CAPTURE_USER    | VARCHAR2(4000) | NOT NULL | The user name during the time of the workload capture                 |
| REPLAY_USER     | VARCHAR2(4000) |          | The user name to which captured user should be remapped during replay |

## 7.125 DBA\_WORKLOAD\_CAPTURE\_SQLTEXT

DBA\_WORKLOAD\_CAPTURE\_SQLTEXT displays all the SQL statements that have been recorded in a workload capture. For those SQL statements whose length exceeds 1000 characters, the full statements can be loaded to the DBA\_WORKLOAD\_LONG\_SQLTEXT view using the DBMS\_WORKLOAD\_REPLAY.LOAD\_LONG\_SQLTEXT procedure.

| Column            | Datatype       | NULL     | Description                                                                                                                                                                                                                                                                                                          |
|-------------------|----------------|----------|----------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|
| CAPTURE_ID        | NUMBER(38)     | NOT NULL | Internal key for the workload capture                                                                                                                                                                                                                                                                                |
| SQL_ID            | VARCHAR2(13)   | NOT NULL | SQL identifier of the parent cursor in the library cache                                                                                                                                                                                                                                                             |
| SQL_TYPE          | VARCHAR2(64)   |          | Type of the SQL statement, which can include values such as INSERT, SELECT, and CREATE INDEX                                                                                                                                                                                                                         |
| SQL_TEXT          | VARCHAR2(1000) |          | First thousand characters of the SQL text for the current cursor                                                                                                                                                                                                                                                     |
| SQL_LENGTH        | NUMBER(38)     |          | The length of the SQL statement                                                                                                                                                                                                                                                                                      |
| SQL_TEXT_COMPLETE | CHAR(1)        |          | Indicates whether the SQL_TEXT column includes the full text of the SQL statement. Possible values: <ul style="list-style-type: none"> <li>Y: The column SQL_TEXT includes the full text of the SQL statement</li> <li>N: The column SQL_TEXT contains only the first thousand characters of the SQL text</li> </ul> |

## 7.126 DBA\_WORKLOAD\_CAPTURES

DBA\_WORKLOAD\_CAPTURES displays all the workload captures that have been performed in the current database.

It also lists captures on which DBMS\_WORKLOAD\_CAPTURE.GET\_CAPTURE\_INFO() or DBMS\_WORKLOAD\_REPLAY.GET\_REPLAY\_INFO() have been called. Each row contains information about one workload capture.

| Column        | Datatype       | NULL     | Description                                                                                                                                                                                                                                                                                |
|---------------|----------------|----------|--------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|
| ID            | NUMBER         | NOT NULL | Internal key for the workload capture                                                                                                                                                                                                                                                      |
| NAME          | VARCHAR2 (128) | NOT NULL | Name for the workload capture                                                                                                                                                                                                                                                              |
| DBID          | NUMBER         | NOT NULL | ID of the database in which the workload was captured                                                                                                                                                                                                                                      |
| DBNAME        | VARCHAR2 (128) | NOT NULL | Name of the database in which the workload was captured                                                                                                                                                                                                                                    |
| DBVERSION     | VARCHAR2 (17)  | NOT NULL | Version of the database in which the workload was captured                                                                                                                                                                                                                                 |
| PARALLEL      | VARCHAR2 (3)   |          | Indicates whether the database in which the workload was captured is an Oracle RAC database (YES) or a single instance database (NO)                                                                                                                                                       |
| DIRECTORY     | VARCHAR2 (128) | NOT NULL | Name of the directory object for workload capture                                                                                                                                                                                                                                          |
| STATUS        | VARCHAR2 (40)  | NOT NULL | Current status of the workload capture: <ul style="list-style-type: none"> <li>• IN PROGRESS - Workload capture is in progress</li> <li>• COMPLETED - Workload capture has completed successfully</li> <li>• FAILED - Workload capture was terminated due to errors encountered</li> </ul> |
| START_TIME    | DATE           | NOT NULL | Datetime when the capture began                                                                                                                                                                                                                                                            |
| END_TIME      | DATE           |          | Datetime when the capture completed or failed; NULL if the capture is still in progress                                                                                                                                                                                                    |
| DURATION_SECS | NUMBER         |          | Duration of the workload capture (in seconds)                                                                                                                                                                                                                                              |
| START_SCN     | NUMBER         | NOT NULL | Start SCN value for this capture                                                                                                                                                                                                                                                           |
| END_SCN       | NUMBER         |          | End SCN value for this capture; NULL if the capture is still in progress                                                                                                                                                                                                                   |

| Column                  | Datatype      | NULL     | Description                                                                                                                                                                                                                                                                                                                                             |

| FILTERS_USED            | NUMBER        |          | Number of filters that were used for this capture                                                                                                                                                                                                                                                                                                       |
| CAPTURE_SIZE            | NUMBER        |          | Total size of workload capture                                                                                                                                                                                                                                                                                                                          |
| DBTIME                  | NUMBER        |          | Total amount of database time (in microseconds) that has been recorded in this workload capture                                                                                                                                                                                                                                                         |
| DBTIME_TOTAL            | NUMBER        |          | Total amount of database time (in microseconds) across the entire database during the workload capture, including the part of the workload that was not captured.                                                                                                                                                                                       |
| USER_CALLS              | NUMBER        |          | Total number of user calls that have been recorded in this workload capture                                                                                                                                                                                                                                                                             |
| USER_CALLS_TOTAL        | NUMBER        |          | Total number of user calls across the entire database during the workload capture, including the part of the workload that was not captured.                                                                                                                                                                                                            |
| USER_CALLS_UNREPLAYABLE | NUMBER        |          | Total number of user calls that will not be replayed in a subsequent replay of this workload capture                                                                                                                                                                                                                                                    |
| PLSQL_SUBCALL_SIZE      | NUMBER        |          | Total size of workload capture for SQL executed from PL/SQL                                                                                                                                                                                                                                                                                             |
| PLSQL_CALLS             | NUMBER        |          | Total number of PL/SQL calls recorded in the workload capture                                                                                                                                                                                                                                                                                           |
| PLSQL_SUBCALLS          | NUMBER        |          | Total number of calls recorded in the workload capture for SQL executed from PL/SQL                                                                                                                                                                                                                                                                     |
| PLSQL_DBTIME            | NUMBER        |          | Total amount of database time (in microseconds) from PL/SQL calls that have been recorded in the workload capture                                                                                                                                                                                                                                       |
| TRANSACTIONS            | NUMBER        |          | Total number of transactions that have been recorded in this workload capture                                                                                                                                                                                                                                                                           |
| TRANSACTIONS_TOTAL      | NUMBER        |          | Total number of transactions across the entire database during the workload capture, including the part of the workload that was not captured.                                                                                                                                                                                                          |
| CONNECTS                | NUMBER        |          | Total number of session connects that have been recorded in this workload capture                                                                                                                                                                                                                                                                       |
| CONNECTS_TOTAL          | NUMBER        |          | Total number of session connects across the entire database during the workload capture, including the part of the workload that was not captured                                                                                                                                                                                                       |
| ERRORS                  | NUMBER        |          | Total number of errors that have been recorded in this workload capture                                                                                                                                                                                                                                                                                 |
| AWR_DBID                | NUMBER        |          | Database ID of the AWR snapshots that correspond to this workload capture. For captures that were performed in the current database, this value is equal to the current database's DBID. For captures that were performed in other databases, this value will either be NULL or will be populated by<br>DBMS_WORKLOAD_CAPTURE.IMPORT_AWR().             |

| Column                 | Datatype        | NULL     | Description                                                                                                                                                                                                                                                                                                                                                                          |
|------------------------|-----------------|----------|--------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|
| AWR_BEGIN_SNAP         | NUMBER          |          | Begin snapshot ID of the AWR snapshots that correspond to this workload capture                                                                                                                                                                                                                                                                                                      |
| AWR_END_SNAP           | NUMBER          |          | End snapshot ID of the AWR snapshots that correspond to this workload capture                                                                                                                                                                                                                                                                                                        |
| AWR_EXPORTED           | VARCHAR2 (12)   |          | Indicates whether the AWR snapshots that correspond to this workload capture have been exported using <code>DBMS_WORKLOAD_CAPTURE.EXPORT_AWR()</code> (YES) or not (NO), or whether AWR snapshots cannot be exported because the capture is still in progress, has run to completion successfully, or was done in a different database from which it was not exported (NOT POSSIBLE) |
| ERROR_CODE             | NUMBER          |          | Error code for this workload capture                                                                                                                                                                                                                                                                                                                                                 |
| ERROR_MESSAGE          | VARCHAR2 (512)  |          | Error message for this workload capture                                                                                                                                                                                                                                                                                                                                              |
| DIR_PATH               | VARCHAR2 (4000) | NOT NULL | Full directory path for the workload capture directory object                                                                                                                                                                                                                                                                                                                        |
| DIR_PATH_SHARED        | VARCHAR2 (10)   | NOT NULL | Indicates whether the workload capture directory is shared by all the instances of the recording database (applicable only for Oracle RAC databases)                                                                                                                                                                                                                                 |
| LAST_PROCESSED_VERSION | VARCHAR2 (128)  |          | Database version in which this capture was preprocessed using <code>DBMS_WORKLOAD_REPLAY.PROCESS_CAPTURE()</code> last; NULL if the capture has never been preprocessed                                                                                                                                                                                                              |
| SQLSET_OWNER           | VARCHAR2 (128)  |          | User name of the SQL tuning set owner                                                                                                                                                                                                                                                                                                                                                |
| SQLSET_NAME            | VARCHAR2 (128)  |          | Name of the SQL tuning set for this workload capture                                                                                                                                                                                                                                                                                                                                 |
| PLSQL_MODE             | VARCHAR2 (12)   |          | Capture options for PL/SQL calls. Possible values: <ul style="list-style-type: none"> <li>• TOP_LEVEL: Top-level PL/SQL only</li> <li>• EXTENDED: Both top-level PL/SQL and SQL executed from PL/SQL</li> </ul>                                                                                                                                                                      |
| ENCRYPTION             | VARCHAR2 (128)  |          | Indicates the encryption standard used for the given capture: <ul style="list-style-type: none"> <li>• NULL - Capture files are not encrypted</li> <li>• AES128 – Capture files are encrypted using AES128</li> <li>• AES192 – Capture files are encrypted using AES192</li> <li>• AES256 – Capture files are encrypted using AES256</li> </ul>                                      |
| ENCRYPTION_VERIFIER    | RAW (512)       |          | Data used internally for creating an encrypted capture                                                                                                                                                                                                                                                                                                                               |
| PATCH_NAME             | VARCHAR2 (128)  |          | Database workload capture and replay patch name<br>This column is populated only for backports to Oracle Database 12c Release 1 (12.1) and earlier releases.                                                                                                                                                                                                                         |
| STORAGE_TYPE           | NUMBER (38)     |          | Describes where the captured workload is stored                                                                                                                                                                                                                                                                                                                                      |

## 7.127 DBA\_WORKLOAD\_CONNECTION\_MAP

DBA\_WORKLOAD\_CONNECTION\_MAP displays the connection mapping information for workload replay. Each row defines one connection mapping for a particular workload replay.

| Column          | Datatype        | NULL     | Description                                                                         |
|-----------------|-----------------|----------|-------------------------------------------------------------------------------------|
| REPLAY_ID       | NUMBER          | NOT NULL | ID of the replay (corresponds to DBA_WORKLOAD_REPLAYS.ID)                           |
| CONN_ID         | NUMBER          | NOT NULL | Key (ID) of the connection mapping table                                            |
| SCHEDULE_CAP_ID | NUMBER          |          | Schedule capture ID (corresponds to DBA_WORKLOAD_SCHEDULE_CAPTURES.SCHEDULE_CAP_ID) |
| CAPTURE_CONN    | VARCHAR2 (4000) | NOT NULL | Connection string that was used during capture                                      |
| REPLAY_CONN     | VARCHAR2 (4000) |          | Connection string that should be used during replay                                 |

## 7.128 DBA\_WORKLOAD\_DIV\_SUMMARY

DBA\_WORKLOAD\_DIV\_SUMMARY displays a summary of the replay divergence information in the DBA\_WORKLOAD\_REPLAY\_DIVERGENCE view. DBA\_WORKLOAD\_REPLAY\_DIVERGENCE may have duplicate entries, while DBA\_WORKLOAD\_DIV\_SUMMARY keeps only one entry and tracks the number of occurrences of each duplicate entry.

Starting with Oracle Database 12.2.0.1, the replay report is generated from DBA\_WORKLOAD\_DIV\_SUMMARY instead of from DBA\_WORKLOAD\_REPLAY\_DIVERGENCE, which results in faster generation of the replay report.

| Column                   | Datatype     | NULL     | Description                                                                                                                     |
|--------------------------|--------------|----------|---------------------------------------------------------------------------------------------------------------------------------|
| REPLAY_ID                | NUMBER       | NOT NULL | ID (key) for the workload replay                                                                                                |
| DIVERGENCE_TYPE          | NUMBER       | NOT NULL | Reserved for future use                                                                                                         |
| IS_QUERY_DATA_DIVERGENCE | VARCHAR2 (1) |          | Indicates whether the data divergence is from the number of rows fetched by SELECT queries (Y) or not (N)                       |
| IS_DML_DATA_DIVERGENCE   | VARCHAR2 (1) |          | Indicates whether the divergence is from the number of rows affected by INSERT, UPDATE, or DELETE SQL statements (Y) or not (N) |
| IS_ERROR_DIVERGENCE      | VARCHAR2 (1) |          | Indicates whether the divergence is from errors seen during capture or replay (Y) or not (N)                                    |
| IS_THREAD_FAILURE        | VARCHAR2 (1) |          | Indicates whether the divergence is from sessions that failed during replay (Y) or not (N)                                      |

| Column                 | Datatype        | NULL     | Description                                                                                                                                                                                                                                                                                                                                                                                                                              |
|------------------------|-----------------|----------|------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|
| IS_DATA_MASKED         | VARCHAR2 (1)    |          | Indicates whether the SQL call contains masked bind data (Y) or not (N).<br><br>If data masking technology is used at the replay database, the workload capture files need to be masked. Otherwise, SQL statements generated from capture files that contain sensitive bind data will not match the database. When the replay client sends masked bind data to the server, it turns on the IS_DATA_MASKED flag for the current SQL call. |
| IS_CLIENT_FAILURE      | VARCHAR2 (1)    |          | Indicates whether the workload replay client failed during replay (Y) or not (N)                                                                                                                                                                                                                                                                                                                                                         |
| STREAM_ID              | NUMBER          | NOT NULL | Stream ID of the session that reported the divergence                                                                                                                                                                                                                                                                                                                                                                                    |
| SQL_ID                 | VARCHAR2 (13)   |          | SQL ID of the SQL that reported the divergence                                                                                                                                                                                                                                                                                                                                                                                           |
| EXPECTED_ERROR#        | NUMBER          |          | Error number that was seen during capture (0 if the capture ran successfully)                                                                                                                                                                                                                                                                                                                                                            |
| EXPECTED_ERROR_MESSAGE | VARCHAR2 (4000) |          | Text of the error message whose number appears in the EXPECTED_ERROR# column                                                                                                                                                                                                                                                                                                                                                             |
| OBSERVED_ERROR#        | NUMBER          |          | Actual error number seen during replay (0 if the replay ran successfully, 15566 (corresponding to ORA-15566) if the captured call could not be replayed)                                                                                                                                                                                                                                                                                 |
| OBSERVED_ERROR_MESSAGE | VARCHAR2 (4000) |          | Text of the error message whose number appears in the OBSERVED_ERROR# column                                                                                                                                                                                                                                                                                                                                                             |
| SERVICE                | VARCHAR2 (64)   |          | Service name of the session that reported the divergence                                                                                                                                                                                                                                                                                                                                                                                 |
| MODULE                 | VARCHAR2 (64)   |          | Module name of the session that reported the divergence                                                                                                                                                                                                                                                                                                                                                                                  |
| INSTANCE_NUMBER        | NUMBER          |          | The number of the instance that reported the divergence                                                                                                                                                                                                                                                                                                                                                                                  |
| WRC_ID                 | NUMBER          |          | The identifier of the workload replay client                                                                                                                                                                                                                                                                                                                                                                                             |
| OCCURRENCES            | NUMBER          |          | Number of times the divergence occurred during replay                                                                                                                                                                                                                                                                                                                                                                                    |

### Example

The following query prints the top 3 SQL statements that got error divergence during replay. This query shows the captured error number and the actual error number seen during replay.

```
SQL> SELECT * FROM
 (SELECT occurrences, sql_id, expected_error#, observed_error#
 FROM dba_workload_div_summary
 WHERE replay_id = 123
 AND is_error_divergence = 'Y'
 ORDER BY occurrences DESC)
 WHERE ROWNUM <= 3;
```

| OCCURRENCES | SQL_ID        | EXPECTED_ERROR# | OBSERVED_ERROR# |
|-------------|---------------|-----------------|-----------------|
| 8           | 0xrm2wjdv17m  | 0               | 1               |
| 4           | 8bzwdnnznspjd | 1422            | 0               |
| 3           | 6d8rwrac8dsk7 | 1               | 1400            |

```
SQL>
```

## 7.129 DBA\_WORKLOAD\_FILTERS

DBA\_WORKLOAD\_FILTERS displays all the workload filters that have been defined in the current database.

In Oracle Database 11g, only workload filters of type `CAPTURE` are supported. Starting with Oracle Database 11gR2, filters of type `REPLAY` are supported.

| Column    | Datatype        | NULL | Description                                                                                                                                                                                                                                                                                                                                                                                                                                                  |
|-----------|-----------------|------|--------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|
| TYPE      | VARCHAR2 (30)   |      | Type of the workload filter ( <code>CAPTURE</code> or <code>REPLAY</code> )                                                                                                                                                                                                                                                                                                                                                                                  |
| ID        | VARCHAR2 (40)   |      | Sequence number of the workload filter                                                                                                                                                                                                                                                                                                                                                                                                                       |
| STATUS    | VARCHAR2 (6)    |      | Status of the workload filter: <ul style="list-style-type: none"> <li><code>NEW</code> - This filter will be used by the next subsequent operation such as the next workload capture.</li> <li><code>IN USE</code> - This filter is currently being used by an operation that is in progress such as an active workload capture.</li> <li><code>USED</code> - This filter was used in the past by some operation such as a past workload capture.</li> </ul> |
| SET_NAME  | VARCHAR2 (1000) |      | Name of the filter set to which the filter belongs                                                                                                                                                                                                                                                                                                                                                                                                           |
| NAME      | VARCHAR2 (128)  |      | Name of the workload filter                                                                                                                                                                                                                                                                                                                                                                                                                                  |
| ATTRIBUTE | VARCHAR2 (128)  |      | Name of the attribute on which the filter is defined                                                                                                                                                                                                                                                                                                                                                                                                         |
| VALUE     | VARCHAR2 (4000) |      | Value of the attribute on which the filter is defined. Wildcards such as % and _ are supported if the attribute is of string type.                                                                                                                                                                                                                                                                                                                           |

## 7.130 DBA\_WORKLOAD\_GROUP\_ASSIGNMENTS

DBA\_WORKLOAD\_GROUP\_ASSIGNMENTS displays all the workload capture groups and their assigned instances. A workload capture group is a subset of the captured workload. Each group accesses its own set of recorded database objects.

| Column            | Datatype    | NULL     | Description                                                                                                                                              |
|-------------------|-------------|----------|----------------------------------------------------------------------------------------------------------------------------------------------------------|
| REPLAY_DIR_NUMBER | NUMBER (38) | NOT NULL | The value that is associated with the subdirectory under the replay directory. See <code>REPLAY_DIR_NUMBER</code> in <code>DBA_WORKLOAD_REPLAYS</code> . |
| GROUP_ID          | NUMBER (38) | NOT NULL | The identifier of a workload capture group                                                                                                               |
| INSTANCE_NUMBER   | NUMBER (38) | NOT NULL | The instance a given group is assigned to                                                                                                                |

**See Also:**["DBA\\_WORKLOAD\\_REPLAYS"](#)

## 7.131 DBA\_WORKLOAD\_LONG\_SQLTEXT

DBA\_WORKLOAD\_LONG\_SQLTEXT displays the captured SQL statements that are longer than 1000 characters. You can load SQL statements longer than 1000 characters to the DBA\_WORKLOAD\_LONG\_SQLTEXT view using the DBMS\_WORKLOAD\_REPLAY.LOAD\_LONG\_SQLTEXT procedure.

| Column       | Datatype     | NULL     | Description                                              |
|--------------|--------------|----------|----------------------------------------------------------|
| CAPTURE_ID   | NUMBER(38)   | NOT NULL | Internal key for the workload capture                    |
| SQL_ID       | VARCHAR2(13) | NOT NULL | SQL identifier of the parent cursor in the library cache |
| SQL_FULLTEXT | CLOB         |          | Full text for the SQL statement exposed as a CLOB column |

- *Oracle Database PL/SQL Packages and Types Reference* for information about the DBMS\_WORKLOAD\_REPLAY package

## 7.132 DBA\_WORKLOAD\_REPLAY\_CLIENTS

DBA\_WORKLOAD\_REPLAY\_CLIENTS displays all workload replay clients and their assigned instances.

| Column          | Datatype   | NULL     | Description                                                                                            |
|-----------------|------------|----------|--------------------------------------------------------------------------------------------------------|
| WRC_ID          | NUMBER(38) | NOT NULL | The identifier of a workload replay client                                                             |
| SCHEDULE_CAP_ID | NUMBER(38) | NOT NULL | A unique identifier for a workload capture added to a replay schedule. 0 for a non-consolidated replay |
| INSTANCE_NUMBER | NUMBER(38) | NOT NULL | The instance that the replay client connects to                                                        |

## 7.133 DBA\_WORKLOAD\_REPLAY\_DIVERGENCE

DBA\_WORKLOAD\_REPLAY\_DIVERGENCE displays information about data/error divergence for a user call that has been replayed.

DBA\_WORKLOAD\_DIV\_SUMMARY displays a summary of the replay divergence information in the DBA\_WORKLOAD\_REPLAY\_DIVERGENCE view. DBA\_WORKLOAD\_REPLAY\_DIVERGENCE may have duplicate entries, while DBA\_WORKLOAD\_DIV\_SUMMARY keeps only one entry and tracks the number of occurrences of each duplicate entry.

| Column                   | Datatype                     | NULL     | Description                                                                                                                                                                                                                                                                                                                                                                                                                                 |
|--------------------------|------------------------------|----------|---------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|

## 7.134 DBA\_WORKLOAD\_REPLAY\_SCHEDULES

DBA\_WORKLOAD\_REPLAY\_SCHEDULES displays the names of replay schedules for the current replay directory.

A replay schedule defines one or multiple workload captures, and the order to start their replays. The current replay directory is set by

DBMS\_WORKLOAD\_REPLAY.SET\_REPLAY\_DIRECTORY('replay\_dir'). Each row in the view contains information about one replay schedule.

| Column        | Datatype       | NULL     | Description                                                                                                                |
|---------------|----------------|----------|----------------------------------------------------------------------------------------------------------------------------|
| SCHEDULE_NAME | VARCHAR2 (128) | NOT NULL | The name of a schedule to be replayed. It defines one or multiple workload captures, and the order to start their replays. |
| DIRECTORY     | VARCHAR2 (128) | NOT NULL | Directory object name for the replay schedule name                                                                         |
| STATUS        | VARCHAR2 (128) |          | NEW if the schedule is being created, CURRENT if the schedule is currently being used by a replay, otherwise NULL          |

## 7.135 DBA\_WORKLOAD\_REPLAYS

DBA\_WORKLOAD\_REPLAYS displays all the workload replays that have been performed in the current database.

It also lists replays on which DBMS\_WORKLOAD\_REPLAY.GET\_REPLAY\_INFO() has been called. Each row contains information about one workload replay.

| Column           | Datatype       | NULL     | Description                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                          |

| DIR_PATH                  | VARCHAR2 (4000) | NOT NULL | Full directory path for the replay directory object                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                         |
| REPLAY_DIR_NUMBER         | NUMBER          |          | A hash value computed based on the values of other columns in this view, such as the NAME, DBID, DBNAME, PREPARE_TIME, START_TIME, and END_TIME columns. It should be fairly unique for any replay. The value is used to create a subdirectory under the replay directory.                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                  |
| SQLESET_OWNER             | VARCHAR2 (128)  |          | User name of the SQL tuning set owner                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                       |
| SQLESET_NAME              | VARCHAR2 (128)  |          | Name of the SQL tuning set for this workload replay                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                         |
| SCHEDULE_NAME             | VARCHAR2 (128)  |          | <p>The name of a schedule to be replayed. It defines one or multiple workload captures, and the order to start their replays.</p> <p>If SCHEDULE_NAME is NULL, the replay is a regular replay introduced since Oracle Database 11g, done with existing APIs from DBMS_WORKLOAD_REPLAY: INITIALIZE_REPLAY, PREPARE_REPLAY, and START_REPLAY.</p> <p>If SCHEDULE_NAME is not NULL, the replay is a new consolidated replay introduced in Oracle Database 12c. That is, it is a replay of one or more workload captures done with new APIs at DBMS_WORKLOAD_REPLAY: INITIALIZE_CONSOLIDATED_REPLAY, PREPARE_CONSOLIDATED_REPLAY, and START_CONSOLIDATED_REPLAY.</p> <p><b>See Also:</b> DBMS_WORKLOAD_REPLAY in <i>Oracle Database PL/SQL Packages and Types Reference</i></p> |
| DIVERGENCE_LOAD_STATUS    | VARCHAR2 (5)    |          | Indicates whether replay divergence data have been loaded (TRUE) or not (FALSE)                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                             |
| PLSQL_MODE                | VARCHAR2 (12)   |          | <p>Replay options for PL/SQL calls. Possible values:</p> <ul style="list-style-type: none"> <li>• TOP_LEVEL: Top-level PL/SQL only</li> <li>• EXTENDED: SQL executed from PL/SQL or top-level PL/SQL if there is no SQL recorded inside the PL/SQL</li> </ul>                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                               |
| CONNECT_TIME_AUTO_CORRECT | VARCHAR2 (12)   |          | <p>Indicates whether the waiting time for a new session to be connected is automatically reduced when the replay proceeds faster than its capture. The reduced amount is determined by the elapsed-time difference between the replay and the capture of the slowest session. The default value is true.</p> <p>There is no impact when the replay proceeds slower than the capture.</p>                                                                                                                                                                                                                                                                                                                                                                                    |

| Column              | Datatype       | NULL | Description                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                               |
|---------------------|----------------|------|-------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|
| RAC_MODE            | VARCHAR2 (19)  |      | Replay options in an Oracle RAC environment: <ul style="list-style-type: none"> <li>• GLOBAL_SYNC: Synchronization is across all instances. This is the default.<br/>Database connections from workload replay client (wrc) are done based on connection remapping.</li> <li>• PER_INSTANCE_CLIENT: Synchronization is across all instances.<br/>All database connections from one wrc are connected to only one instance.</li> <li>• PER_INSTANCE_SYNC: Synchronization is within one instance.<br/>All database connections from one wrc are connected to only one instance.</li> </ul> |
| QUERY_ONLY          | VARCHAR2 (1)   |      | Indicates whether only the query-only workload from the current workload capture will be replayed, skipping all the DML/DDDL that might update the database (Y) or not (N)                                                                                                                                                                                                                                                                                                                                                                                                                |
| PDB_LEVEL           | VARCHAR2 (1)   |      | Indicates whether the replay is a PDB-level replay (Y) or not (N)                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                         |
| NUM_CLIENTS_ABORTED | NUMBER         |      | Number of workload replay clients terminated during the replay                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                            |
| PATCH_NAME          | VARCHAR2 (128) |      | Database workload capture and replay patch name<br>This column is only populated for backports to Oracle Database 12c Release 1 (12.1) and earlier releases.                                                                                                                                                                                                                                                                                                                                                                                                                              |
| DURATION_LIMIT      | NUMBER (38)    |      | Replay duration limit (in seconds)<br>If the replay duration limit has not been set, then the value of this column is null.                                                                                                                                                                                                                                                                                                                                                                                                                                                               |
| STATUS_DETAILS      | VARCHAR2 (128) |      | Provides additional details about the replay status<br>If additional details are not available, then the value of this column is null.                                                                                                                                                                                                                                                                                                                                                                                                                                                    |

## 7.136 DBA\_WORKLOAD\_SCHEDULE\_CAPTURES

DBA\_WORKLOAD\_SCHEDULE\_CAPTURES displays the workload captures used by replay schedules.

Each row in the view contains information about one workload capture.

| Column        | Datatype       | NULL     | Description                           |
|---------------|----------------|----------|---------------------------------------|
| SCHEDULE_NAME | VARCHAR2 (128) | NOT NULL | The name of a schedule to be replayed |

| Column                  | Datatype        | NULL     | Description                                                                                                                                                                                                                                                           |
|-------------------------|-----------------|----------|-----------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|
| SCHEDULE_CAP_ID         | NUMBER          | NOT NULL | Identifies a workload capture added to a replay schedule. It starts with 1. If the same capture is added multiple times to a schedule, there will be multiple rows with different SCHEDULE_CAP_ID columns and identical CAPTURE_ID columns.                           |
| CAPTURE_ID              | NUMBER          | NOT NULL | Points to the capture ID from DBA_WORKLOAD_CAPTURES.                                                                                                                                                                                                                  |
| CAPTURE_DIR             | VARCHAR2 (128)  | NOT NULL | Name of the directory object for workload capture                                                                                                                                                                                                                     |
| OS_SUBDIR               | VARCHAR2 (4000) | NOT NULL | Name of the subdirectory under the replay directory for this workload capture                                                                                                                                                                                         |
| MAX_CONCURRENT_SESSIONS | NUMBER          |          | The maximal number of concurrent sessions that was seen in this workload capture                                                                                                                                                                                      |
| NUM_CLIENTS_ASSIGNED    | NUMBER          |          | Number of clients assigned to this workload capture before replay starts                                                                                                                                                                                              |
| NUM_CLIENTS             | NUMBER          |          | Number of clients that are running for this workload capture during replay                                                                                                                                                                                            |
| NUM_CLIENTS_DONE        | NUMBER          |          | Number of clients that have finished the replay of this workload capture                                                                                                                                                                                              |
| STOP_REPLAY             | VARCHAR2 (1)    | NOT NULL | Indicates whether the whole replay will stop once the replay of this workload capture is done (Y) or not (N)                                                                                                                                                          |
| TAKE_BEGIN_SNAPSHOT     | VARCHAR2 (1)    | NOT NULL | Indicates whether an AWR snapshot will be taken when the replay of this capture starts (Y) or not (N)                                                                                                                                                                 |
| TAKE_END_SNAPSHOT       | VARCHAR2 (1)    | NOT NULL | Indicates whether an AWR snapshot will be taken when the replay of this capture finishes (Y) or not (N)                                                                                                                                                               |
| QUERY_ONLY              | VARCHAR2 (1)    | NOT NULL | Indicates whether only the query-only workload from the current workload capture will be replayed, skipping all the DML/DDl that might update the database (Y) or not (N)                                                                                             |
| START_DELAY_SECS        | NUMBER          |          | Displays the wait time (in seconds) when the replay of a workload capture is ready to start. "Ready to start" means the capture does not wait for any other capture, or all the captures for which it should wait have already been replayed. The default value is 0. |
| START_TIME              | DATE            |          | Start time for the replay of this capture                                                                                                                                                                                                                             |
| END_TIME                | DATE            |          | Finish time for the replay of this capture                                                                                                                                                                                                                            |
| AWR_DBID                | NUMBER          |          | AWR database ID of the replay                                                                                                                                                                                                                                         |
| AWR_BEGIN_SNAP          | NUMBER          |          | AWR snapshot ID when the replay starts                                                                                                                                                                                                                                |
| AWR_END_SNAP            | NUMBER          |          | AWR snapshot ID when the replay finishes                                                                                                                                                                                                                              |
| NUM_CLIENTS_ABORTED     | NUMBER          |          | Number of workload replay clients terminated during the replay                                                                                                                                                                                                        |

## 7.137 DBA\_WORKLOAD\_SCHEDULE\_ORDERING

DBA\_WORKLOAD\_SCHEDULE\_ORDERING displays the start ordering between workload captures in the replay schedule.

Each row in the view defines one start ordering between two workload captures in the same replay schedule.

| Column          | Datatype       | NULL     | Description                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                   |
|-----------------|----------------|----------|-----------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|
| SCHEDULE_NAME   | VARCHAR2 (128) | NOT NULL | Name of a schedule to be replayed                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                             |
| SCHEDULE_CAP_ID | NUMBER         | NOT NULL | Identifies the workload capture that will wait                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                |
| WAITFOR_CAP_ID  | NUMBER         | NOT NULL | Identifies the workload capture for which the workload capture identified by SCHEDULE_CAP_ID needs to wait. The replay of capture SCHEDULE_CAP_ID will not start until capture WAITFOR_CAP_ID finishes its replay.<br><br>If the view has multiple rows with the same SCHEDULE_CAP_ID but different WAITFOR_CAP_ID, it defines a schedule so that the replay of a capture specified by SCHEDULE_CAP_ID will not start unless all the replays of the waited captures run into completion.<br><br>If the view has multiple rows with the same WAITFOR_CAP_ID but different SCHEDULE_CAP_ID, it defines a schedule so that the replay of multiple captures will not start unless the replay of the capture specified by WAITFOR_CAP_ID finishes. |

## 7.138 DBA\_WORKLOAD\_SQL\_MAP

DBA\_WORKLOAD\_SQL\_MAP contains the mapping information for skipping or replacing a SQL statement based on its sql\_id during workload replay.

| Column               | Datatype        | NULL     | Description                                                                                                                                                                    |
|----------------------|-----------------|----------|--------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|
| REPLAY_ID            | NUMBER (38)     | NOT NULL | A foreign key to the ID column in the DBA_WORKLOAD_REPLAYs view                                                                                                                |
| SCHEDULE_CAP_ID      | NUMBER (38)     | NOT NULL | The ID of a capture in the schedule                                                                                                                                            |
| SQL_ID               | VARCHAR2 (13)   | NOT NULL | SQL identifier of the SQL statement at the time of capture                                                                                                                     |
| OPERATION            | VARCHAR2 (7)    |          | SKIP or REPLACE                                                                                                                                                                |
| SQL_ID_NUMBER        | NUMBER          |          | Internal representation of SQL_ID                                                                                                                                              |
| REPLACEMENT_SQL_TEXT | VARCHAR2 (4000) |          | When the value in the OPERATION column is SKIP, this column is NULL.<br><br>When the value in the OPERATION column is REPLACE, this column shows the SQL statement to be used. |

## 7.139 DBA\_WORKLOAD\_TRACKED\_COMMITS

DBA\_WORKLOAD\_TRACKED\_COMMITS displays the commits tracked every second during a database replay.

| Column            | Datatype    | NULL     | Description                                                                                                                                   |
|-------------------|-------------|----------|-----------------------------------------------------------------------------------------------------------------------------------------------|
| REPLAY_DIR_NUMBER | NUMBER      | NOT NULL | The numerical value that is associated with the subdirectory under the replay directory.<br><br>See REPLAY_DIR_NUMBER in DBA_WORKLOAD_REPLAYS |
| INSTANCE_NUMBER   | NUMBER (38) |          | The instance where the commit is executed                                                                                                     |
| FILE_ID           | NUMBER (38) | NOT NULL | The file ID                                                                                                                                   |

| Column                     | Datatype   | NULL     | Description                                                                                 |
|----------------------------|------------|----------|---------------------------------------------------------------------------------------------|
| CALL_CTR                   | NUMBER(38) | NOT NULL | The call counter of the commit                                                              |
| COMMIT_SCN                 | NUMBER(38) |          | The recorded commit SCN value                                                               |
| PREV_GLOBAL_COMMIT_FILE_ID | NUMBER(38) |          | The file ID of the latest commit across all sessions                                        |
| PREV_GLOBAL_COMMIT_SCN     | NUMBER(38) |          | The recorded SCN of the latest commit across all sessions                                   |
| PREV_LOCAL_COMMIT_CALL_CTR | NUMBER(38) |          | The call counter of the latest commit in the same session                                   |
| CAPTURE_COMMIT_TIME        | NUMBER(38) |          | The time in seconds since the capture started                                               |
| CAPTURE_COMMIT_TIME_DELTA  | NUMBER(38) |          | The elapsed time in seconds since the previous commit across all sessions during capture    |
| REPLAY_COMMIT_TIME         | NUMBER(38) |          | The time in seconds since the replay started                                                |
| REPLAY_COMMIT_TIME_DELTA   | NUMBER(38) |          | The elapsed time in seconds since the previous commit across all sessions during the replay |

## 7.140 DBA\_WORKLOAD\_USER\_MAP

DBA\_WORKLOAD\_USER\_MAP contains all the mappings ever done until they are removed at some point.

The mappings are stored in a table made public through this view.

To remove old mappings, execute this statement:

```
SQL> delete * from DBA_WORKLOAD_USER_MAP;
```

| Column          | Datatype       | NULL     | Description                                                                                                                                                                               |
|-----------------|----------------|----------|-------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|
| REPLAY_ID       | NUMBER         |          | This is a foreign key to the ID column in the DBA_WORKLOAD_REPLAYS view                                                                                                                   |
| SCHEDULE_CAP_ID | NUMBER         |          | The ID of a capture in the schedule                                                                                                                                                       |
| CAPTURE_USER    | VARCHAR2(4000) | NOT NULL | The user name during the time of the workload capture                                                                                                                                     |
| REPLAY_USER     | VARCHAR2(4000) |          | The user name to which the captured user should be remapped during replay. If the REPLAY_USER is null, the CAPTURE_USER is used during replay. In other words, the original user is used. |

**See Also:**["DBA\\_WORKLOAD\\_REPLAYS"](#)

## 7.141 DBA\_XML\_INDEXES

DBA\_XML\_INDEXES describes all XML indexes in the database. Its columns are the same as those in ALL\_XML\_INDEXES.

**See Also:**

["ALL\\_XML\\_INDEXES"](#)

## 7.142 DBA\_XML\_NESTED\_TABLES

DBA\_XML\_NESTED\_TABLES describes all the tables and their corresponding nested tables. Its columns are the same as those in ALL\_XML\_NESTED\_TABLES.

**See Also:**

["ALL\\_XML\\_NESTED\\_TABLES"](#)

## 7.143 DBA\_XML\_OUT\_OF\_LINE\_TABLES

DBA\_XML\_OUT\_OF\_LINE\_TABLES describes all the out of line tables connected to a given root table for the same schema. Its columns are the same as those in ALL\_XML\_OUT\_OF\_LINE\_TABLES.

**See Also:**

["ALL\\_XML\\_OUT\\_OF\\_LINE\\_TABLES"](#)

## 7.144 DBA\_XML\_SCHEMA\_ATTRIBUTES

DBA\_XML\_SCHEMA\_ATTRIBUTES describes all the attributes and their properties. Its columns are the same as those in ALL\_XML\_SCHEMA\_ATTRIBUTES.

**See Also:**

["ALL\\_XML\\_SCHEMA\\_ATTRIBUTES"](#)

## 7.145 DBA\_XML\_SCHEMA\_COMPLEX\_TYPES

DBA\_XML\_SCHEMA\_COMPLEX\_TYPES describes all complex types in the database. Its columns are the same as those in ALL\_XML\_SCHEMA\_COMPLEX\_TYPES.

**See Also:**

["ALL\\_XML\\_SCHEMA\\_COMPLEX\\_TYPES"](#)

## 7.146 DBA\_XML\_SCHEMA\_ELEMENTS

DBA\_XML\_SCHEMA\_ELEMENTS describes all the elements and their properties. Its columns are the same as those in ALL\_XML\_SCHEMA\_ELEMENTS.

**See Also:**

["ALL\\_XML\\_SCHEMA\\_ELEMENTS"](#)

## 7.147 DBA\_XML\_SCHEMA\_NAMESPACES

DBA\_XML\_SCHEMA\_NAMESPACES describes all the available namespaces. Its columns are the same as those in ALL\_XML\_SCHEMA\_NAMESPACES.

**See Also:**

["ALL\\_XML\\_SCHEMA\\_NAMESPACES"](#)

## 7.148 DBA\_XML\_SCHEMA\_SIMPLE\_TYPES

DBA\_XML\_SCHEMA\_SIMPLE\_TYPES describes all simple types. Its columns are the same as those in ALL\_XML\_SCHEMA\_SIMPLE\_TYPES.

**See Also:**

["ALL\\_XML\\_SCHEMA\\_SIMPLE\\_TYPES"](#)

## 7.149 DBA\_XML\_SCHEMA\_SUBSTGRP\_HEAD

DBA\_XML\_SCHEMA\_SUBSTGRP\_HEAD describes the heads of substitution groups. Its columns are the same as those in ALL\_XML\_SCHEMA\_SUBSTGRP\_HEAD.

**See Also:**

["ALL\\_XML\\_SCHEMA\\_SUBSTGRP\\_HEAD"](#)

## 7.150 DBA\_XML\_SCHEMA\_SUBSTGRP\_MBRS

DBA\_XML\_SCHEMA\_SUBSTGRP\_MBRS describes all members of substitution groups. Its columns are the same as those in ALL\_XML\_SCHEMA\_SUBSTGRP\_MBRS.

**See Also:**

["ALL\\_XML\\_SCHEMA\\_SUBSTGRP\\_MBRS"](#)

## 7.151 DBA\_XML\_SCHEMAS

DBA\_XML\_SCHEMAS describes all registered XML schemas in the database. Its columns are the same as those in ALL\_XML\_SCHEMAS.

**See Also:**

["ALL\\_XML\\_SCHEMAS"](#)

## 7.152 DBA\_XML\_TAB\_COLS

DBA\_XML\_TAB\_COLS describes the columns of all XML tables in the database. Its columns are the same as those in ALL\_XML\_TAB\_COLS.

**See Also:**

["ALL\\_XML\\_TAB\\_COLS"](#)

## 7.153 DBA\_XML\_TABLES

DBA\_XML\_TABLES describes all XML tables in the database. Its columns are the same as those in ALL\_XML\_TABLES.

**See Also:**

["ALL\\_XML\\_TABLES"](#)

## 7.154 DBA\_XML\_VIEW\_COLS

DBA\_XML\_VIEW\_COLS describes the columns of all XML views in the database. Its columns are the same as those in ALL\_XML\_VIEW\_COLS.

**See Also:**

["ALL\\_XML\\_VIEW\\_COLS"](#)

## 7.155 DBA\_XML\_VIEWS

DBA\_XML\_VIEWS describes all XML views in the database. Its columns are the same as those in ALL\_XML\_VIEWS.

**See Also:**

["ALL\\_XML\\_VIEWS"](#)

## 7.156 DBA\_XS\_AUDIT\_POLICY\_OPTIONS

DBA\_XS\_AUDIT\_POLICY\_OPTIONS describes auditing options defined under all audit policies specific to Oracle Database Real Application Security.

| Column             | Datatype        | NULL | Description                                                                                                                 |
|--------------------|-----------------|------|-----------------------------------------------------------------------------------------------------------------------------|
| POLICY_NAME        | VARCHAR2 (128)  |      | Name of the audit policy                                                                                                    |
| AUDIT_CONDITION    | VARCHAR2 (4000) |      | Condition associated with the audit policy                                                                                  |
| AUDIT_OPTION       | VARCHAR2 (128)  |      | Auditing option defined in the audit policy                                                                                 |
| CONDITION_EVAL_OPT | VARCHAR2 (9)    |      | Evaluation option associated with the audit policy's condition. The possible values are STATEMENT, SESSION, INSTANCE, NONE. |

| Column | Datatype     | NULL | Description                                                                                                     |
|--------|--------------|------|-----------------------------------------------------------------------------------------------------------------|
| COMMON | VARCHAR2 (3) |      | Indicates whether the audit policy is a common audit policy (YES) or local (NO). The value is NULL in non-CDBs. |

### See Also:

## 7.157 DBA\_XS\_AUDIT\_TRAIL

DBA\_XS\_AUDIT\_TRAIL describes all audit records specific to Oracle Database Real Application Security.

| Column                   | Datatype       | NULL | Description                                                                                                                                                                                        |
|--------------------------|----------------|------|----------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|
| USERID                   | VARCHAR2 (128) |      | Name of the database user whose actions were audited                                                                                                                                               |
| ACTION                   | NUMBER         |      | Numeric audit trail action type code. The corresponding name of the action type is in the ACTION_NAME column.                                                                                      |
| ACTION_NAME              | VARCHAR2 (64)  |      | Name of the action type corresponding to the numeric code in the ACTION column                                                                                                                     |
| OBJ_OWNER                | VARCHAR2 (128) |      | Owner of the object affected by the action                                                                                                                                                         |
| OBJ_NAME                 | VARCHAR2 (128) |      | Name of the object affected by the action                                                                                                                                                          |
| RETURN_CODE              | NUMBER         |      | Oracle error code generated by the action                                                                                                                                                          |
| XS_USER_NAME             | VARCHAR2 (128) |      | Name of the Real Application Security user                                                                                                                                                         |
| XS_SESSIONID             | RAW (33)       |      | Identifier of the Real Application Security session                                                                                                                                                |
| XS_INACTIVITY_TIMEOUT    | NUMBER         |      | Inactivity timeout of the Real Application Security session                                                                                                                                        |
| XS_ENTITY_TYPE           | VARCHAR2 (32)  |      | Type of the Real Application Security entity. Possible values are USER, ROLE, ROLESSET, SECURITYCLASS, ACL, DATASEcurity, and NSTEMPLATE.                                                          |
| XS_TARGET_PRINCIPAL_NAME | VARCHAR2 (128) |      | Target principal name in Real Application Security operations. Possible operations are set verifier, set password, add proxy, remove proxy, switch user, assign user, create session, grant roles. |
| XS_PROXY_USER_NAME       | VARCHAR2 (128) |      | Name of the Real Application Security proxy user.                                                                                                                                                  |
| XS_DATASEC_POLICY_NAME   | VARCHAR2 (128) |      | Name of the Real Application Security data security policy enabled or disabled                                                                                                                     |
| XS_SCHEMA_NAME           | VARCHAR2 (128) |      | Name of the schema in enable, disable data security policy and global callback operation                                                                                                           |
| XS_CALLBACK_EVENT_TYPE   | VARCHAR2 (32)  |      | Real Application Security global callback event type                                                                                                                                               |
| XS_PACKAGE_NAME          | VARCHAR2 (128) |      | Real Application Security callback package name for the global callback                                                                                                                            |

| Column                  | Datatype                     | NULL | Description                                                                |
|-------------------------|------------------------------|------|----------------------------------------------------------------------------|
| XS_PROCEDURE_NAME       | VARCHAR2 (128)               |      | Real Application Security callback procedure name for the global callback  |
| XS_ENABLED_ROLE         | VARCHAR2 (128)               |      | The role that is enabled                                                   |
| XS_COOKIE               | VARCHAR2 (1024)              |      | Real Application Security session cookie                                   |
| XS_NS_NAME              | VARCHAR2 (128)               |      | Name of the Real Application Security session namespace                    |
| XS_NS_ATTRIBUTE         | VARCHAR2 (4000)              |      | Name of the Real Application Security session namespace attribute          |
| XS_NS_ATTRIBUTE_OLD_VAL | VARCHAR2 (4000)              |      | The old value of the Real Application Security session namespace attribute |
| XS_NS_ATTRIBUTE_NEW_VAL | VARCHAR2 (4000)              |      | The new value of the Real Application Security session namespace attribute |
| EVENT_TIMESTAMP         | TIMESTAMP (6) WITH TIME ZONE |      | Timestamp of audit record                                                  |

## 7.158 DBA\_XS\_ENABLED\_AUDIT\_POLICIES

DBA\_XS\_ENABLED\_AUDIT\_POLICIES describes all the audit policies specific to Oracle Database Real Application Security that are enabled to users.

**Note:**

This view was known as DBA\_XS\_ENB\_AUDIT\_POLICIES in Oracle Database 12c Release 1. It was renamed to DBA\_XS\_ENABLED\_AUDIT\_POLICIES in Oracle Database 12c Release 2 (12.2.0.1).

| Column         | Datatype       | NULL | Description                                                                                                                                                                                                                                                                                                                                            |
|----------------|----------------|------|--------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|
| POLICY_NAME    | VARCHAR2 (128) |      | Name of the audit policy                                                                                                                                                                                                                                                                                                                               |
| ENABLED_OPTION | VARCHAR2 (15)  |      | Enabled option of the audit policy. Possible values: <ul style="list-style-type: none"> <li>• BY USER: For policies that are enabled on users</li> <li>• EXCEPT USERS: For policies that are enabled on users</li> <li>• BY GRANTED ROLE: For policies that are enabled on roles</li> <li>• INVALID: For policies that are enabled on roles</li> </ul> |
| ENTITY_NAME    | VARCHAR2 (128) |      | Database entity (user name or role name) on which the audit policy is enabled                                                                                                                                                                                                                                                                          |

| Column      | Datatype     | NULL | Description                                                                                                                                                                                                                      |
|-------------|--------------|------|----------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|
| ENTITY_TYPE | VARCHAR2 (7) |      | Database entity type. Possible values: <ul style="list-style-type: none"><li>• USER: Indicates that the policy is enabled on a user or users.</li><li>• ROLE: Indicates that the policy is enabled on a role or roles.</li></ul> |
| SUCCESS     | VARCHAR2 (3) |      | Indicates whether the audit policy is enabled for auditing successful events (YES) or not (NO)                                                                                                                                   |
| FAILURE     | VARCHAR2 (3) |      | Indicates whether the audit policy is enabled for auditing unsuccessful events (YES) or not (NO)                                                                                                                                 |

## 7.159 DBA\_XS\_ENB\_AUDIT\_POLICIES

DBA\_XS\_ENB\_AUDIT\_POLICIES is a synonym for the DBA\_XS\_ENABLED\_AUDIT\_POLICIES view.

**See Also:**

- "DBA\_XS\_ENABLED\_AUDIT\_POLICIES"
- *Oracle Database Security Guide* for more information about auditing
- *Oracle Database Security Guide* for more information about auditing

## 7.160 DBA\_XSTREAM\_ADMINISTRATOR

DBA\_XSTREAM\_ADMINISTRATOR displays information about the users who have been granted privileges to be XStream administrators by procedures in the DBMS\_XSTREAM\_AUTH package. Its columns are the same as those in ALL\_XSTREAM\_ADMINISTRATOR.

**See Also:**

"ALL\_XSTREAM\_ADMINISTRATOR"

## 7.161 DBA\_XSTREAM\_INBOUND

DBA\_XSTREAM\_INBOUND displays information about all XStream inbound servers in the database. Its columns are the same as those in ALL\_XSTREAM\_INBOUND.

**See Also:**

["ALL\\_XSTREAM\\_INBOUND"](#)

## 7.162 DBA\_XSTREAM\_INBOUND\_PROGRESS

DBA\_XSTREAM\_INBOUND\_PROGRESS displays information about the progress made by all XStream inbound servers in the database. Its columns are the same as those in ALL\_XSTREAM\_INBOUND\_PROGRESS.

**See Also:**

["ALL\\_XSTREAM\\_INBOUND\\_PROGRESS"](#)

## 7.163 DBA\_XSTREAM\_OUT\_SUPPORT\_MODE

DBA\_XSTREAM\_OUT\_SUPPORT\_MODE displays information about the level of XStream capture process support for the tables in the database. Its columns are the same as those in ALL\_XSTREAM\_OUT\_SUPPORT\_MODE.

**See Also:**

["ALL\\_XSTREAM\\_OUT\\_SUPPORT\\_MODE"](#)

## 7.164 DBA\_XSTREAM\_OUTBOUND

DBA\_XSTREAM\_OUTBOUND displays information about all XStream outbound servers in the database. Its columns are the same as those in ALL\_XSTREAM\_OUTBOUND.

**See Also:**

["ALL\\_XSTREAM\\_OUTBOUND"](#)

## 7.165 DBA\_XSTREAM\_OUTBOUND\_PROGRESS

DBA\_XSTREAM\_OUTBOUND\_PROGRESS displays information about the progress made by all XStream outbound servers in the database. Its columns are the same as those in ALL\_XSTREAM\_OUTBOUND\_PROGRESS.

### See Also:

"ALL\_XSTREAM\_OUTBOUND\_PROGRESS"

## 7.166 DBA\_XSTREAM\_RULES

DBA\_XSTREAM\_RULES displays information about all XStream rules in the database. Its columns are the same as those in ALL\_XSTREAM\_RULES.

### See Also:

"ALL\_XSTREAM\_RULES"

## 7.167 DBA\_XSTREAM\_SPLIT\_MERGE

DBA\_XSTREAM\_SPLIT\_MERGE displays information about XStream current automatic split and merge operations.

| Column                  | Datatype       | NULL     | Description                                                                                                                                                                       |
|-------------------------|----------------|----------|-----------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|
| ORIGINAL_CAPTURE_NAME   | VARCHAR2 (128) | NOT NULL | Name of the original capture process                                                                                                                                              |
| CLONED_CAPTURE_NAME     | VARCHAR2 (128) |          | Name of the cloned capture process                                                                                                                                                |
| ORIGINAL_CAPTURE_STATUS | VARCHAR2 (8)   |          | Status of the original capture process: <ul style="list-style-type: none"><li>• DISABLED</li><li>• ENABLED</li><li>• ABORTED</li></ul>                                            |
| CLONED_CAPTURE_STATUS   | VARCHAR2 (8)   |          | Status of the cloned capture process: <ul style="list-style-type: none"><li>• DISABLED</li><li>• ENABLED</li><li>• ABORTED</li></ul>                                              |
| ORIGINAL_XSTREAM_NAME   | VARCHAR2 (128) |          | Name of the original XStream component that receives database changes directly from the original capture process. The component is either a propagation or a local apply process. |
| CLONED_XSTREAM_NAME     | VARCHAR2 (128) |          | Name of the cloned XStream component that receives database changes directly from the cloned capture process. The component is either a propagation or a local apply process.     |

| Column                | Datatype       | NULL | Description                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                  |
|-----------------------|----------------|------|----------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|

| ACTION_TYPE           | VARCHAR2 (7)    |      | type of action performed by the script: <ul style="list-style-type: none"> <li>• SPLIT</li> <li>• MERGE</li> <li>• MONITOR</li> </ul>                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                        |
| ACTION_THRESHOLD      | VARCHAR2 (40)   |      | For SPLIT actions, the threshold set by the split_threshold capture process parameter. For MERGE actions, the threshold set by the merge_threshold capture process parameter.                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                |
| STATUS                | VARCHAR2 (16)   |      | Status of the action: <ul style="list-style-type: none"> <li>• NOTHING TO SPLIT - Not ready to split or does not need to split</li> <li>• ABOUT TO SPLIT</li> <li>• SPLITTING - A split is in progress</li> <li>• SPLIT DONE - A split is done</li> <li>• NOTHING TO MERGE - Not ready to merge</li> <li>• ABOUT TO MERGE</li> <li>• MERGING - A merge is in progress</li> <li>• MERGE DONE - A merge is done</li> <li>• ERROR - An error was returned during a split or merge</li> <li>• NONSPLITTABLE - The original capture is not splittable either because it is disabled, it has more than one publisher to its queue, or it has only one destination for captured messages</li> </ul> |
| STATUS_UPDATE_TIME    | TIMESTAMP (6)   |      | Time when status was last updated                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                            |
| CREATION_TIME         | TIMESTAMP (6)   |      | Time when the action started                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                 |
| LAG                   | NUMBER          |      | Time (in seconds) that the cloned capture process lags behind the original capture process                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                   |
| JOB_OWNER             | VARCHAR2 (128)  |      | Owner of the job that performs the split or merge operation                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                  |
| JOB_NAME              | VARCHAR2 (128)  |      | Name of the job that performs the split or merge operation                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                   |
| ERROR_NUMBER          | NUMBER          |      | Error number if the capture process was terminated                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                           |
| ERROR_MESSAGE         | VARCHAR2 (4000) |      | Error message if the capture process was terminated                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                          |

## 7.169 DBA\_XSTREAM\_STMT\_HANDLERS

DBA\_XSTREAM\_STMT\_HANDLERS displays information about all XStream statement DML handlers in the database.

| Column            | Datatype        | NULL     | Description                       |
|-------------------|-----------------|----------|-----------------------------------|
| HANDLER_NAME      | VARCHAR2 (128)  | NOT NULL | Name of the statement handler     |
| HANDLER_COMMENT   | VARCHAR2 (4000) |          | Comment of the statement handler  |
| CREATION_TIME     | TIMESTAMP (6)   |          | Timestamp for script creation     |
| MODIFICATION_TIME | TIMESTAMP (6)   |          | Timestamp for script modification |

## 7.170 DBA\_XSTREAM\_STMTS

DBA\_XSTREAM\_STMTS displays information about the statements in all XStream statement DML handlers in the database.

| Column             | Datatype       | NULL     | Description                          |
|--------------------|----------------|----------|--------------------------------------|
| HANDLER_NAME       | VARCHAR2 (128) | NOT NULL | Name of the statement handler        |
| EXECUTION_SEQUENCE | NUMBER         | NOT NULL | Execution sequence of the statement  |
| STATEMENT          | CLOB           |          | Text of the SQL statement            |
| CREATION_TIME      | TIMESTAMP (6)  |          | Timestamp for statement creation     |
| MODIFICATION_TIME  | TIMESTAMP (6)  |          | Timestamp for statement modification |

## 7.171 DBA\_XSTREAM\_TRANSFORMATIONS

DBA\_XSTREAM\_TRANSFORMATIONS displays information about all XStream transformations available on a system, in order of execution. Its columns are the same as those in ALL\_XSTREAM\_TRANSFORMATIONS.

**See Also:**

["ALL\\_XSTREAM\\_TRANSFORMATIONS"](#)

## 7.172 DBA\_XTERNAL\_LOC\_PARTITIONS

DBA\_XTERNAL\_LOC\_PARTITIONS describes partition-level locations in the database. Its columns are the same as those in ALL\_XTERNAL\_LOC\_PARTITIONS.

**See Also:**

["ALL\\_XTERNAL\\_LOC\\_PARTITIONS"](#)

## 7.173 DBA\_XTERNAL\_LOC\_SUBPARTITIONS

DBA\_XTERNAL\_LOC\_SUBPARTITIONS describes subpartition-level locations in the database. Its columns are the same as those in ALL\_XTERNAL\_LOC\_SUBPARTITIONS.

**See Also:**

["ALL\\_XTERNAL\\_LOC\\_SUBPARTITIONS"](#)

## 7.174 DBA\_XTERNAL\_PART\_TABLES

DBA\_XTERNAL\_PART\_TABLES describes object-level information for partitioned external tables in the database. Its columns are the same as those in ALL\_XTERNAL\_PART\_TABLES.

**See Also:**

["ALL\\_XTERNAL\\_PART\\_TABLES"](#)

## 7.175 DBA\_XTERNAL\_TAB\_PARTITIONS

DBA\_XTERNAL\_TAB\_PARTITIONS describes partition-level information for partitioned external tables in the database. Its columns are the same as those in ALL\_XTERNAL\_TAB\_PARTITIONS.

**See Also:**

["ALL\\_XTERNAL\\_TAB\\_PARTITIONS"](#)

## 7.176 DBA\_XTERNAL\_TAB\_SUBPARTITIONS

DBA\_XTERNAL\_TAB\_SUBPARTITIONS describes subpartition-level information for partitioned external tables in the database. Its columns are the same as those in ALL\_XTERNAL\_TAB\_SUBPARTITIONS.

**See Also:**

["ALL\\_XTERNAL\\_TAB\\_SUBPARTITIONS"](#)

## 7.177 DBA\_ZONEMAP\_AUTO\_ACTIONS

DBA\_ZONEMAP\_AUTO\_ACTIONS provides information about automatic zone map tasks and executions.

| Column     | Datatype        | NULL     | Description                 |
|------------|-----------------|----------|-----------------------------|
| TASK_ID    | NUMBER          | NOT NULL | Zone map task identifier    |
| MSG_ID     | NUMBER          | NOT NULL | Zone map message identifier |
| EXEC_NAME  | VARCHAR2 (128)  |          | Zone map execution name     |
| ACTION_MSG | VARCHAR2 (4000) |          | Execution message text      |
| TIME_STAMP | TIMESTAMP (9)   |          | Execution timestamp         |

The TASK\_ID, MSG\_ID, and EXEC\_NAME columns in this view correspond to the same columns in the DBA\_ZONEMAP\_AUTO\_FINDINGS view. This allows you to correlate the actions in DBA\_ZONEMAP\_AUTO\_ACTIONS with their corresponding findings in DBA\_ZONEMAP\_AUTO\_FINDINGS.

**See Also:**

"DBA\_ZONEMAP\_AUTO\_FINDINGS"

## 7.178 DBA\_ZONEMAP\_AUTO\_FINDINGS

DBA\_ZONEMAP\_AUTO\_FINDINGS provides information about automatic zone map findings.

| Column         | Datatype        | NULL     | Description                                                                                                                                                                                                                                                                                                                                                                                                             |
|----------------|-----------------|----------|-------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|
| TASK_ID        | NUMBER          | NOT NULL | Zone map task identifier                                                                                                                                                                                                                                                                                                                                                                                                |
| MSG_ID         | NUMBER          | NOT NULL | Zone map message identifier                                                                                                                                                                                                                                                                                                                                                                                             |
| EXEC_NAME      | VARCHAR2 (128)  |          | Zone map execution name                                                                                                                                                                                                                                                                                                                                                                                                 |
| MESSAGE        | VARCHAR2 (4000) |          | Execution message text                                                                                                                                                                                                                                                                                                                                                                                                  |
| TIME_STAMP     | TIMESTAMP (9)   |          | Finding timestamp                                                                                                                                                                                                                                                                                                                                                                                                       |
| OBJECT_NAME    | VARCHAR2 (128)  | NOT NULL | Name of the object for which the finding was observed, typically a table name or a zone map name                                                                                                                                                                                                                                                                                                                        |
| FINDING_REASON | VARCHAR2 (9)    |          | Finding reason code                                                                                                                                                                                                                                                                                                                                                                                                     |
| FINDING_TYPE   | VARCHAR2 (9)    |          | Finding type. Possible values: <ul style="list-style-type: none"><li>• <b>BLACKLIST</b>: The table is no longer a candidate for automatic zone maps</li><li>• <b>ERROR</b>: An error occurred</li><li>• <b>EVICT</b>: The table does not meet automatic zone map creation criteria</li><li>• <b>OTHER</b></li></ul> Refer to the MESSAGE column for additional information about the reasoning behind the finding type. |

Automatic zone map findings contain information that the database learned when performing automatic zone map executions. The database uses these findings to optimize subsequent automatic zone maps executions, which saves on execution time and resources.

The `TASK_ID`, `MSG_ID`, and `EXEC_NAME` columns in this view correspond to the same columns in the `DBA_ZONEMAP_AUTO_ACTIONS` view. This allows you to correlate the findings in `DBA_ZONEMAP_AUTO_FINDINGS` with their corresponding actions in `DBA_ZONEMAP_AUTO_ACTIONS`.

## 7.179 DBA\_ZONEMAP\_MEASURES

`DBA_ZONEMAP_MEASURES` describes the measures for all the zone maps in the database. Its columns are the same as those in `ALL_ZONEMAP_MEASURES`.

**Note:**

This view is intended for use with Oracle Exadata release 12.1.2.1.1 or later.

**See Also:**

- ["ALL\\_ZONEMAP\\_MEASURES"](#)
- *Oracle Database Data Warehousing Guide* for more information about zone maps

## 7.180 DBA\_ZONEMAPS

`DBA_ZONEMAPS` describes all the zone maps in the database. Its columns are the same as those in `ALL_ZONEMAPS`.

**Note:**

This view is intended for use with Oracle Exadata release 12.1.2.1.1 or later.

**See Also:**

- ["ALL\\_ZONEMAPS"](#)
- *Oracle Database Data Warehousing Guide* for more information about zone maps

## 7.181 DBFS\_CONTENT

DBFS\_CONTENT displays all the path items from all available content stores in the system.

| Column                | Datatype        | NULL | Description                                                                                                                                                                                                                                                          |
|-----------------------|-----------------|------|----------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|
| STORE                 | VARCHAR2 (256)  |      | Name of store                                                                                                                                                                                                                                                        |
| MOUNT                 | VARCHAR2 (256)  |      | Location at which instance of store is mounted                                                                                                                                                                                                                       |
| PATHNAME              | VARCHAR2 (1024) |      | Name of path to item                                                                                                                                                                                                                                                 |
| PATHTYPE              | VARCHAR2 (32)   |      | Type of path item (see DBMS_DBFS_CONTENT Constants - Path Name Types)                                                                                                                                                                                                |
| FILEDATA              | BLOB            |      | BLOB locator that can be used to access data in the path item                                                                                                                                                                                                        |
| STD_ACCESS_TIME       | TIMESTAMP (6)   |      | Time of last access of a path name's contents                                                                                                                                                                                                                        |
| STD_ACL               | VARCHAR2 (1024) |      | Access Control List (in standard ACL syntax)                                                                                                                                                                                                                         |
| STD_CHANGE_TIME       | TIMESTAMP (6)   |      | Time of last change to the path name                                                                                                                                                                                                                                 |
| STD_CHILDREN          | NUMBER          |      | Number of child directories/folders a directory/folder path has (this property should be available in providers that support the FEATURE_FOLDERS feature)                                                                                                            |
| STD_CONTENT_TYPE      | VARCHAR2 (1024) |      | One or more client-supplied mime-types (in standard RFC syntax) describing the path name which is typically of TYPE_FILE. The content type is not necessarily interpreted by the store.                                                                              |
| STD_CREATION_TIME     | TIMESTAMP (6)   |      | Time at which the item was created. Once set, this value remains the same for the lifetime of the path name.                                                                                                                                                         |
| STD_DELETED           | NUMBER          |      | Set to a nonzero number if the path name has been soft-deleted but not yet purged (see DBMS_DBFS_CONTENT Constants - Store Features)                                                                                                                                 |
| STD_GUID              | NUMBER          |      | Store-specific unique identifier for a path name. Clients must not depend on the GUID being unique across different stores, but a given (store-name, store-specific-path name) has a stable and unique GUID for its lifetime.                                        |
| STD_MODIFICATION_TIME | TIMESTAMP (6)   |      | Time of last change to the data associated with a path name. Changes to the content of a TYPE_FILE or TYPE_REFERENCE path, the referent of the TYPE_LINK path, and addition or deletion of immediate children in a TYPE_DIRECTORY path, all constitute data changes. |
| STD_OWNER             | VARCHAR2 (32)   |      | Client-supplied (or implicit) owner name for the path name                                                                                                                                                                                                           |

| Column           | Datatype        | NULL | Description                                                                                                                                                                                                                                                                                                                                                                                            |
|------------------|-----------------|------|--------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|
| STD_PARENT_GUID  | NUMBER          |      | Store-specific unique identifier for the parent of a path name. Clients must not depend on the GUID being unique across different stores, but a given (store-name, store-specific-path name) has a stable and unique GUID for its lifetime.                                                                                                                                                            |
| STD_REFERENT     | VARCHAR2 (1024) |      | The GUID of the parent of this path name (that is that <code>std_parent_guid(pathname) == std_guid(parent(pathname))</code> ).<br><br>Content of the symbolic link of a <code>TYPE_LINK</code> path, otherwise NULL. The <code>STD_REFERENT</code> can be an arbitrary string and must not necessarily be interpreted as path name by clients (or such interpretation should be done with great care). |
| OPT_HASH_TYPE    | VARCHAR2 (32)   |      | Type of hash provided in the <code>OPT_HASH_VALUE</code> property (see <code>DBMS_CRYPTO</code> for possible options)                                                                                                                                                                                                                                                                                  |
| OPT_HASH_VALUE   | VARCHAR2 (128)  |      | Hash value of type <code>OPT_HASH_TYPE</code> describing the content of the path name                                                                                                                                                                                                                                                                                                                  |
| OPT_LOCK_COUNT   | NUMBER          |      | Number of compatible locks placed on a path name. If different principals are allowed to place compatible (read) locks on a path, the <code>OPT_LOCKER</code> must specify all lockers with repeats so that lock counts can be correctly maintained.                                                                                                                                                   |
| OPT_LOCK_DATA    | VARCHAR2 (128)  |      | Client-supplied user-data associated with a user-lock, uninterpreted by the store                                                                                                                                                                                                                                                                                                                      |
| OPT_LOCKER       | VARCHAR2 (128)  |      | One or more implicit or client-specified principals that applied a user-lock on a path name                                                                                                                                                                                                                                                                                                            |
| OPT_LOCK_STATUS  | NUMBER          |      | One of the ( <code>LOCK_READ_ONLY</code> , <code>LOCK_WRITE_ONLY</code> , <code>LOCK_READ_WRITE</code> ) values describing the type of lock currently applied on a path name                                                                                                                                                                                                                           |
| OPT_VERSION      | NUMBER          |      | Sequence number for linear versioning of a path name                                                                                                                                                                                                                                                                                                                                                   |
| OPT_VERSION_PATH | VARCHAR2 (1024) |      | Version path name for hierarchical versioning of a path name                                                                                                                                                                                                                                                                                                                                           |
| OPT_CONTENT_ID   | RAW (128)       |      | A provider-generated store-specific unique contentID in the form of a string for a file element (that may optionally not be associated with a path (see <code>FEATURE_CONTENT_ID</code> and <code>FEATURE_LAZY_PATH</code> in <code>DBMS_DBFS_CONTENT</code> Constants - Store Features)                                                                                                               |

## 7.182 DBFS\_CONTENT\_PROPERTIES

DBFS\_CONTENT\_PROPERTIES displays all the property/value pairs for all path items in all content stores in the system.

| Column         | Datatype        | NULL | Description                                    |
|----------------|-----------------|------|------------------------------------------------|
| STORE          | VARCHAR2 (256)  |      | Name of store                                  |
| MOUNT          | VARCHAR2 (256)  |      | Location at which instance of store is mounted |
| PATHNAME       | VARCHAR2 (1024) |      | Name of path to item                           |
| PROPERTY_NAME  | VARCHAR2 (32)   |      | Name of the property                           |
| PROPERTY_VALUE | VARCHAR2 (1024) |      | Value of the property                          |
| PROPERTY_TYPE  | NUMBER          |      | PL/SQL typecode for the property value         |

## 7.183 DBMS\_ALERT\_INFO

DBMS\_ALERT\_INFO describes registered alerts.

| Column  | Datatype        | NULL     | Description                                                                               |
|---------|-----------------|----------|-------------------------------------------------------------------------------------------|
| NAME    | VARCHAR2 (30)   | NOT NULL | Name of the alert                                                                         |
| SID     | VARCHAR2 (30)   | NOT NULL | Session ID of a session waiting for this alert                                            |
| CHANGED | VARCHAR2 (1)    |          | Boolean flag to indicate that an alert has been signaled. Y: alert signaled, N: no alert. |
| MESSAGE | VARCHAR2 (1800) |          | Optional message passed by signaler                                                       |

## 7.184 DBMS\_KAFKA\_APPLICATIONS

DBMS\_KAFKA\_APPLICATIONS describes all Oracle SQL Access to Kafka (OSAK) applications in the database.

The role OSAK\_ADMIN\_ROLE allows users with no administrative privileges to query this table.

| Column              | Datatype       | NULL     | Description                                                                   |
|---------------------|----------------|----------|-------------------------------------------------------------------------------|
| OWNER               | VARCHAR2 (128) | NOT NULL | Owner of the application                                                      |
| CLUSTER_ID          | VARCHAR2 (40)  | NOT NULL | ID of the OSAK cluster associated with the application                        |
| APPLICATION_NAME    | VARCHAR2 (30)  | NOT NULL | Application name (also used as the Kafka group name)                          |
| TOPIC_NAME          | VARCHAR2 (249) | NOT NULL | Name of the Kafka topic associated with the application                       |
| NUM_VIEWS           | NUMBER (38)    | NOT NULL | Number of OSAK views for the application                                      |
| NUM_PARTITIONS      | NUMBER (38)    | NOT NULL | Number of Kafka partitions associated with the OSAK views for the application |
| NUM_VIEWS_REQUESTED | NUMBER (38)    | NOT NULL | Number of OSAK views requested for the application                            |

| Column                 | Datatype       | NULL     | Description                                                                                                            |
|------------------------|----------------|----------|------------------------------------------------------------------------------------------------------------------------|
| APPLICATION_TYPE       | VARCHAR2 (30)  | NOT NULL | Type of application: <ul style="list-style-type: none"> <li>• LOAD</li> <li>• SEEKABLE</li> <li>• STREAMING</li> </ul> |
| OPTIONS                | BLOB           | NOT NULL | User-supplied options (excluding AVRO-related schemas)                                                                 |
| AVRO_SCHEMA            | BLOB           |          | User-supplied AVRO schema for the Kafka topic value data                                                               |
| KEY_AVRO_SCHEMA        | BLOB           |          | Reserved for future use                                                                                                |
| EXT_TABLE_NAME         | VARCHAR2 (128) |          | Name of the external table created for the application                                                                 |
| EXT_TABLE_SCHEMA       | VARCHAR2 (128) |          | Schema of the external table created for the application                                                               |
| PARTITION_TABLE_NAME   | VARCHAR2 (128) |          | Name of the PARTITIONS table created for the application                                                               |
| PARTITION_TABLE_SCHEMA | VARCHAR2 (128) |          | Schema of the PARTITIONS table created for the application                                                             |
| PARTITION_VIEW_NAME    | VARCHAR2 (128) |          | Name of the PARTITIONS view created for the application                                                                |
| PARTITION_VIEW_SCHEMA  | VARCHAR2 (128) |          | Schema of the PARTITIONS view created for the application                                                              |

## 7.185 DBMS\_KAFKA\_CLUSTERS

DBMS\_KAFKA\_CLUSTERS describes all registered Oracle SQL Access to Kafka (OSAK) clusters in the database.

The role OSAK\_ADMIN\_ROLE allows users with no administrative privileges to query this table.

| Column     | Datatype       | NULL     | Description                                                     |
|------------|----------------|----------|-----------------------------------------------------------------|
| OWNER      | VARCHAR2 (128) | NOT NULL | Owner of the cluster<br>The value of this column is always SYS. |
| CLUSTER_ID | VARCHAR2 (40)  | NOT NULL | System-generated unique cluster ID                              |

| Column                   | Datatype       | NULL     | Description                                                                                                                                                                           |
|--------------------------|----------------|----------|---------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|
| STATE                    | NUMBER(38)     | NOT NULL | Current state of the cluster: <ul style="list-style-type: none"> <li>0 - CONNECTED</li> <li>1 - MAINTENANCE</li> <li>2 - BROKEN</li> <li>3 - DEREGISTERED</li> </ul>                  |
| CLUSTER_NAME             | VARCHAR2(30)   | NOT NULL | User-supplied name of the cluster                                                                                                                                                     |
| BOOTSTRAP_SERVERS        | VARCHAR2(4000) | NOT NULL | Comma-separated list of bootstrap servers for the cluster<br>Each bootstrap server is represented in the following form: <i>hostname:port</i>                                         |
| CLUSTER_ACCESS_DIRECTORY | VARCHAR2(128)  | NOT NULL | Name of the directory object associated with the cluster<br>Users with <code>READ</code> access to this directory object are allowed to access the cluster.                           |
| KAFKA_PROVIDER           | VARCHAR2(128)  | NOT NULL | Provider of the Kafka cluster software: <ul style="list-style-type: none"> <li>APACHE - Apache Kafka</li> <li>OSS - Oracle Cloud Infrastructure Streaming Service</li> </ul>          |
| CREDENTIAL_NAME          | VARCHAR2(128)  |          | If <code>KAFKA_PROVIDER = OSS</code> , the name of the database credential for the Oracle Cloud Infrastructure Streaming Service connection                                           |
| CREDENTIAL_SCHEMA        | VARCHAR2(128)  |          | If <code>KAFKA_PROVIDER = OSS</code> , the schema of <code>CREDENTIAL_NAME</code>                                                                                                     |
| CLUSTER_CONFIG_DIRECTORY | VARCHAR2(128)  |          | If <code>KAFKA_PROVIDER = APACHE</code> , the directory object that references the operating system directory containing the <code>osakafka.properties</code> file for the cluster    |
| CLUSTER_DESCRIPTION      | VARCHAR2(4000) |          | Optional user-supplied description of the Oracle SQL access to the cluster                                                                                                            |
| CONNECTION_TS            | TIMESTAMP(6)   |          | Timestamp of the last known successful connection to the cluster<br>The value of this column is NULL if a disconnect occurred or if there has never been a connection to the cluster. |
| OPTIONS                  | BLOB           |          | Optional user-supplied options for the cluster                                                                                                                                        |

## 7.186 DBMS\_KAFKA\_LOAD\_METRICS

DBMS\_KAFKA\_LOAD\_METRICS displays metrics for DBMS\_KAFKA.EXECUTE\_LOAD\_APP operations on all tables in the database.

The role OSAK\_ADMIN\_ROLE allows users with no administrative privileges to query this table.

| Column              | Datatype                     | NULL     | Description                                                                |
|---------------------|------------------------------|----------|----------------------------------------------------------------------------|
| OWNER               | VARCHAR2 (128)               | NOT NULL | Owner of the table into which the Kafka data was loaded (TARGET_TABLE)     |
| CLUSTER_ID          | VARCHAR2 (40)                | NOT NULL | ID of the OSAK cluster associated with the EXECUTE_LOAD_APP operation      |
| APPLICATION_NAME    | VARCHAR2 (30)                |          | Application name (also used as the Kafka group name)                       |
| TARGET_TABLE        | VARCHAR2 (128)               | NOT NULL | Name of the table into which the Kafka data was loaded                     |
| TARGET_TABLE_SCHEMA | VARCHAR2 (128)               | NOT NULL | Schema of the table into which the Kafka data was loaded                   |
| INSERTED_ROWS       | NUMBER (38)                  |          | Total number of rows inserted into the table by the load operation         |
| KAFKA_RECORDS       | NUMBER (38)                  |          | Total number of Kafka records fetched for the load operation               |
| STARTED_TIME        | TIMESTAMP (6) WITH TIME ZONE |          | Date and time at which the Kafka data started being loaded into the table  |
| FINISHED_TIME       | TIMESTAMP (6) WITH TIME ZONE |          | Date and time at which the Kafka data finished being loaded into the table |

## 7.187 DBMS\_KAFKA\_MESSAGES

DBMS\_KAFKA\_MESSAGES displays messages logged by all Oracle SQL Access to Kafka (OSAK) applications in the database.

The role OSAK\_ADMIN\_ROLE allows users with no administrative privileges to query this table.

| Column           | Datatype        | NULL     | Description                                              |
|------------------|-----------------|----------|----------------------------------------------------------|
| OWNER            | VARCHAR2 (128)  | NOT NULL | Owner of the application                                 |
| CLUSTER_ID       | VARCHAR2 (40)   | NOT NULL | ID of the OSAK cluster associated with the application   |
| CLUSTER_NAME     | VARCHAR2 (30)   | NOT NULL | Name of the OSAK cluster associated with the application |
| APPLICATION_NAME | VARCHAR2 (30)   |          | Application name (also used as the Kafka group name)     |
| VIEW_NAME        | VARCHAR2 (128)  |          | Name of the view associated with the application         |
| VIEW_SCHEMA      | VARCHAR2 (128)  |          | Schema of the view associated with the application       |
| MESSAGE_TYPE     | VARCHAR2 (20)   |          | Message type                                             |
| MESSAGE_TS       | TIMESTAMP (6)   |          | Timestamp for when the message was logged                |
| MESSAGE          | VARCHAR2 (4000) |          | Message text                                             |

## 7.188 DBMS\_KAFKA\_OPS

DBMS\_KAFKA\_OPS describes operations for all Oracle SQL Access to Kafka (OSAK) views in the database.

The role OSAK\_ADMIN\_ROLE allows users with no administrative privileges to query this table.

| Column           | Datatype       | NULL     | Description                                                                                    |
|------------------|----------------|----------|------------------------------------------------------------------------------------------------|
| OWNER            | VARCHAR2 (128) | NOT NULL | Owner of the OSAK view                                                                         |
| OP_KEY           | VARCHAR2 (30)  | NOT NULL | Unique operation key (replacement for the location file)                                       |
| OP_TYPE          | VARCHAR2 (30)  | NOT NULL | Generic operation type                                                                         |
| OP               | VARCHAR2 (30)  | NOT NULL | Specific type of operation within OP_TYPE                                                      |
| CLUSTER_ID       | VARCHAR2 (40)  | NOT NULL | ID of the OSAK cluster associated with the operation                                           |
| APPLICATION_NAME | VARCHAR2 (30)  |          | Name of the OSAK application associated with the operation (also used as the Kafka group name) |
| TOPIC_NAME       | VARCHAR2 (249) |          | Name of the Kafka topic associated with the operation                                          |
| PARTITION_ID     | NUMBER (38)    |          | Partition ID of the Kafka topic associated with the operation                                  |
| OFFSET           | NUMBER (38)    |          | Next offset from which an SEQ operation will start reading                                     |

| Column                  | Datatype    | NULL | Description                                                                                                                                                                                                                        |
|-------------------------|-------------|------|------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|
| RELATIVE_OFFSET         | NUMBER(38)  |      | Number of offsets, including the watermark, from which an SEQ operation will start reading                                                                                                                                         |
| WATERMARK               | VARCHAR2(5) |      | Basis for the start read offset for an SEQ operation (WMH or WML)                                                                                                                                                                  |
| START_OFFSET_EPOCH_TIME | NUMBER(38)  |      | Timestamp (in milliseconds) that determines the next offset from which the operation will start reading<br>This value is used by the <code>DBMS_KAFKA.INIT_OFFSET_TS</code> and <code>DBMS_KAFKA.SEEK_OFFSET_TS</code> procedures. |
| END_OFFSET_EPOCH_TIME   | NUMBER(38)  |      | Timestamp (in milliseconds) that determines the end offset at which the operation will stop reading<br>This value is used by the <code>DBMS_KAFKA.SEEK_OFFSET_TS</code> procedure.                                                 |
| OPTIONS                 | BLOB        |      | Options associated with the operation                                                                                                                                                                                              |

## 7.189 DBMS\_KAFKA\_OPS\_RESULTS

`DBMS_KAFKA_OPS` displays the results of operations for all Oracle SQL Access to Kafka (OSAK) views in the database.

The role `OSAK_ADMIN_ROLE` allows users with no administrative privileges to query this table.

| Column      | Datatype      | NULL     | Description                                                |
|-------------|---------------|----------|------------------------------------------------------------|
| OWNER       | VARCHAR2(128) | NOT NULL | Owner of OSAK view                                         |
| OP_KEY      | VARCHAR2(30)  |          | Unique operation key (replacement for the location file)   |
| ROWS_READ   | NUMBER(38)    |          | Number of Kafka records read and returned by the operation |
| LAST_OFFSET | NUMBER(38)    |          | Kafka offset of the last record read by the operation      |
| OPTIONS     | BLOB          |          | Options associated with the operation results              |

**Note:**

This view is available starting with Oracle Database 23ai.

## 7.190 DBMS\_KAFKA\_PARTITIONS

DBMS\_KAFKA\_PARTITIONS describes partitions for Kafka topics associated with all Oracle SQL Access to Kafka (OSAK) views in the database.

The role OSAK\_ADMIN\_ROLE allows users with no administrative privileges to query this table.

| Column            | Datatype       | NULL     | Description                                                                                                                                                                                                                                                                                                                                      |
|-------------------|----------------|----------|--------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|
| OWNER             | VARCHAR2 (128) | NOT NULL | Owner of the OSAK view                                                                                                                                                                                                                                                                                                                           |
| CLUSTER_ID        | VARCHAR2 (40)  | NOT NULL | ID of the OSAK cluster associated with the topic/partition                                                                                                                                                                                                                                                                                       |
| APPLICATION_NAME  | VARCHAR2 (30)  | NOT NULL | Application name (also used as the Kafka group name)                                                                                                                                                                                                                                                                                             |
| TOPIC_NAME        | VARCHAR2 (249) | NOT NULL | Kafka topic name associated with the topic/partition                                                                                                                                                                                                                                                                                             |
| PARTITION_ID      | NUMBER (38)    | NOT NULL | Partition ID of the Kafka topic                                                                                                                                                                                                                                                                                                                  |
| VIEW_ID           | NUMBER (38)    | NOT NULL | ID of the OSAK view associated with the topic/partition                                                                                                                                                                                                                                                                                          |

## 7.191 DBMS\_KAFKA\_SEC\_ALLOWED\_PROPERTIES

DBMS\_KAFKA\_SEC\_ALLOWED\_PROPERTIES displays valid Oracle SQL Access to Kafka (OSAK) security properties.

DBMS\_KAFKA\_SEC\_ALLOWED\_PROPERTIES is a system table that is created and populated during database installation. It displays the properties that are allowed in the `osakafka.properties` file, which contains security configuration properties as required by the `librdkafka` library.

Immediately after installation, DBMS\_KAFKA\_SEC\_ALLOWED\_PROPERTIES displays the initial Oracle SQL Access to Kafka (OSAK) security properties listed in [Table 7-1](#). Subsequently, a user with the role `OSAK_ADMIN_ROLE` can view DBMS\_KAFKA\_SEC\_ALLOWED\_PROPERTIES and add additional properties to this table, as required or suggested by Oracle Support. Only the properties displayed in the DBMS\_KAFKA\_SEC\_ALLOWED\_PROPERTIES table are read from the `osakafka.properties` file.

| Column        | Datatype        | NULL     | Description                          |
|---------------|-----------------|----------|--------------------------------------|
| PROPERTY_NAME | VARCHAR2 (200)  | NOT NULL | Name of the security property        |
| DESCRIPTION   | VARCHAR2 (4000) |          | Description of the security property |

**Table 7-1 Initial Oracle SQL Access to Kafka (OSAK) Security Properties**

| Property Name                            | Description                                                                                                                                                                                                                                                                      |
|------------------------------------------|----------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|
| <code>debug</code>                       | Enables <code>rdkafka</code> client debug output. The debug information is logged in Oracle trace files. The only allowed value is <code>all</code> .                                                                                                                            |
| <code>max.partition.fetch.bytes</code>   | Maximum number of bytes a Kafka server can return in a poll of a single partition. This is a positive integer value. Oracle Cloud Infrastructure (OCI) Streaming service Kafka recommends limiting the request size to 1 MB per partition.                                       |
| <code>osak.kgmps.max.message.size</code> | Maximum number of bytes a Kafka client can fetch in a poll of a single partition. This is a positive integer value with a default of 1 MB. This parameter, along with <code>max.partition.fetch.bytes</code> , allows for the retrieval of single Kafka records larger the 1 MB. |
| <code>sasl.kerberos.ccname</code>        | File name of the Kerberos credentials (ticket) cache ( <code>KRB5CCNAME</code> ) of the Kafka cluster                                                                                                                                                                            |
| <code>sasl.kerberos.config</code>        | File name of the Kerberos configuration file ( <code>krb5.conf</code> ) of the Kafka cluster                                                                                                                                                                                     |
| <code>sasl.kerberos.principal</code>     | Kafka client Kerberos principal name                                                                                                                                                                                                                                             |

Table 7-1 (Cont.) Initial Oracle SQL Access to Kafka (OSAK) Security Properties

| Property Name                                      | Description                                                                                                                                                                                                                                                                                                                                                                                                                                                      |
|----------------------------------------------------|------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|
| <code>sasl.kerberos.service.name</code>            | Primary name of the Kerberos principal, as specified in the Kafka Broker JAAS configuration file<br>For example:<br>The format of a typical Kerberos V5 principal is: <i>primary/instance@REALM</i> .<br>Therefore, if the following is specified in the Kafka Broker JAAS configuration file:<br><code>principal="kafka/example.hostname.com@EXAMPLEREALM.COM"</code><br>Then the value of <code>sasl.kerberos.service.name</code> will be <code>kafka</code> . |
| <code>sasl.mechanism</code>                        | Simple Authentication and Security Layer (SASL) mechanism to use for authentication. This is an alias for the <code>sasl.mechanisms</code> property. The allowed values are GSSAPI, PLAIN, SCRAM-SHA-256, and SCRAM-SHA-512. Only one value is allowed. The default value is GSSAPI.                                                                                                                                                                             |
| <code>sasl.mechanisms</code>                       | SASL mechanism to use for authentication. The allowed values are GSSAPI, PLAIN, SCRAM-SHA-256, and SCRAM-SHA-512. Only one value is allowed. The default value is GSSAPI.                                                                                                                                                                                                                                                                                        |
| <code>sasl.username</code>                         | User name for SASL authentication                                                                                                                                                                                                                                                                                                                                                                                                                                |
| <code>security.protocol</code>                     | Protocol used to communicate with Kafka brokers. The allowed values are <code>plaintext</code> , <code>ssl</code> , <code>sasl_plaintext</code> , and <code>sasl_ssl</code> . Only one value is allowed.                                                                                                                                                                                                                                                         |
| <code>ssl.ca.location</code>                       | File name of the Certificate Authority (CA) file for verifying the Kafka broker key                                                                                                                                                                                                                                                                                                                                                                              |
| <code>ssl.certificate.location</code>              | File name of the Kafka client certificate in Privacy-Enhanced Mail (PEM) format                                                                                                                                                                                                                                                                                                                                                                                  |
| <code>ssl.endpoint.identification.algorithm</code> | Endpoint identification algorithm to validate the Kafka broker host name using a Kafka broker certificate. The allowed values are <code>https</code> and <code>none</code> . The default value is <code>none</code> .                                                                                                                                                                                                                                            |
| <code>ssl.key.location</code>                      | File name of the Kafka client private key                                                                                                                                                                                                                                                                                                                                                                                                                        |

## 7.192 DBMS\_LOCK\_ALLOCATED

DBMS\_LOCK\_ALLOCATED describes user-allocated locks.

| Column | Datatype       | NULL     | Description            |
|--------|----------------|----------|------------------------|
| NAME   | VARCHAR2 (128) | NOT NULL | Name of the lock       |
| LOCKID | NUMBER (38)    |          | Lock identifier number |

| Column     | Datatype | NULL | Description                                                                     |
|------------|----------|------|---------------------------------------------------------------------------------|
| EXPIRATION | DATE     |      | Planned lock expiration date (updates whenever the allocation procedure is run) |

## 7.193 DBMS\_METADATA\_PARSE\_ITEMS

DBMS\_METADATA\_PARSE\_ITEMS documents the valid parse items.

| Column         | Datatype        | NULL     | Description                                       |
|----------------|-----------------|----------|---------------------------------------------------|
| OBJECT_TYPE    | VARCHAR2 (128)  | NOT NULL | Object type name                                  |
| PARSE_ITEM     | VARCHAR2 (124)  |          | Parse item name                                   |
| ALTER_XML      | VARCHAR2 (1)    |          | Y: Can be used when generating ALTER_XML document |
| FETCH_XML_CLOB | VARCHAR2 (1)    |          | Y: Can be returned by FETCH_XML_CLOB              |
| CONVERT        | VARCHAR2 (1)    |          | Y: Can be returned by CONVERT or FETCH_DDL        |
| DESCRIPTION    | VARCHAR2 (4000) |          | Description of the parse item                     |

## 7.194 DBMS\_METADATA\_TRANSFORM\_PARAMS

DBMS\_METADATA\_TRANSFORM\_PARAMS documents the valid transform parameters for each transform.

| Column      | Datatype        | NULL     | Description                                                                                   |
|-------------|-----------------|----------|-----------------------------------------------------------------------------------------------|
| OBJECT_TYPE | VARCHAR2 (128)  | NOT NULL | Object type name                                                                              |
| TRANSFORM   | VARCHAR2 (128)  | NOT NULL | Transform name                                                                                |
| PARAM       | VARCHAR2 (128)  | NOT NULL | Parameter name                                                                                |
| DATATYPE    | VARCHAR2 (11)   |          | BOOLEAN, TEXT, NUMBER or UNSPECIFIED                                                          |
| DEFAULT_VAL | VARCHAR2 (2000) |          | Default value of the transform parameter                                                      |
| CLIENT      | VARCHAR2 (1)    |          | Indicates whether the transform parameter is available to the Data Pump client (Y) or not (N) |
| API         | VARCHAR2 (1)    |          | Indicates whether the transform parameter is available to the Data Pump API (Y) or not (N)    |
| DESCRIPTION | VARCHAR2 (4000) |          | Description of the transform parameter                                                        |

## 7.195 DBMS\_METADATA\_TRANSFORMS

DBMS\_METADATA\_TRANSFORMS documents the valid Oracle-supplied transforms.

| Column      | Datatype       | NULL     | Description                  |
|-------------|----------------|----------|------------------------------|
| OBJECT_TYPE | VARCHAR2 (128) | NOT NULL | Object type name             |
| TRANSFORM   | VARCHAR2 (128) | NOT NULL | Transform name               |
| INPUT_TYPE  | VARCHAR2 (24)  |          | Type of input document       |
| OUTPUT_TYPE | VARCHAR2 (24)  |          | Type of output document      |
| DESCRIPTION | VARCHAR2 (71)  |          | Description of the transform |

**See Also:**

## 7.196 DEPTREE

This view, created by `utldtree.sql`, contains information on the object dependency tree.

For user `SYS`, this view displays shared cursors (and only shared cursors) that depend on the object. For all other users, it displays objects other than shared cursors. Other users can access `SYS.DEPTREE` for information on shared cursors.

| Column       | Datatype        | NULL | Description                                                                                                       |
|--------------|-----------------|------|-------------------------------------------------------------------------------------------------------------------|
| NESTED_LEVEL | NUMBER          |      | Nesting level in the dependency tree                                                                              |
| TYPE         | VARCHAR2 (23)   |      | Object type                                                                                                       |
| SCHEMA       | VARCHAR2 (128)  |      | Object schema                                                                                                     |
| NAME         | VARCHAR2 (1002) |      | Object name                                                                                                       |
| SEQ#         | NUMBER          |      | Sequence number in the dependency tree. Used for ordering queries.<br><b>See Also:</b> <a href="#">"IDEPTREE"</a> |

## 7.197 DICT

DICT is a synonym for DICTIONARY.

**See Also:**

"DICTIONARY"

## 7.198 DICT\_COLUMNS

DICT\_COLUMNS contains descriptions of columns in data dictionary tables and views.

| Column      | Datatype        | NULL | Description                                 |
|-------------|-----------------|------|---------------------------------------------|
| TABLE_NAME  | VARCHAR2 (128)  |      | Name of the object that contains the column |
| COLUMN_NAME | VARCHAR2 (128)  |      | Name of the column                          |
| COMMENTS    | VARCHAR2 (4000) |      | Text comment on the column                  |

## 7.199 DICTIONARY

DICTIONARY contains descriptions of data dictionary tables and views.

| Column     | Datatype        | NULL | Description                |
|------------|-----------------|------|----------------------------|
| TABLE_NAME | VARCHAR2 (128)  |      | Name of the object         |
| COMMENTS   | VARCHAR2 (4000) |      | Text comment on the object |

## 7.200 DICTIONARY\_CREDENTIALS\_ENCRYPT

DICTIONARY\_CREDENTIALS\_ENCRYPT indicates whether encryption of dictionary credentials is enforced or not. You can encrypt sensitive credential information, such as passwords that are stored in the data dictionary.

| Column      | Datatype     | NULL | Description                                                                                                                                                                                                                                                    |
|-------------|--------------|------|----------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|
| ENFORCEMENT | VARCHAR2 (8) |      | Enforcement status for encryption of dictionary credentials. Possible values: <ul style="list-style-type: none"><li>ENABLED: Encryption of dictionary credentials is enforced</li><li>DISABLED: Encryption of dictionary credentials is not enforced</li></ul> |

**See Also:**

*Oracle Database Security Guide* for information about encrypting sensitive credential information in the data dictionary

## 7.201 DM\_USER\_MODELS

DM\_USER\_MODELS displays information about the models in the user's schema.

| Column        | Datatype       | NULL     | Description                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                    |
|---------------|----------------|----------|------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|
| NAME          | VARCHAR2 (128) | NOT NULL | Name of the model                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                              |
| FUNCTION_NAME | VARCHAR2 (30)  |          | <p>Model function:</p> <ul style="list-style-type: none"><li>• <code>association</code> - Association is a descriptive mining function. An association model identifies relationships and the probability of their occurrence within a data set.</li><li>• <code>attribute_importance</code> - Attribute Importance is a predictive mining function. An attribute importance model identifies the relative importance of an attribute in predicting a given outcome.</li><li>• <code>classification</code> - Classification is a predictive mining function. A classification model uses historical data to predict new discrete or categorical data.<br/><br/>The <code>classification</code> function can also be used for anomaly detection. In this case, the SVM algorithm with a null target is used (One-Class SVM).</li><li>• <code>clustering</code> - Clustering is a descriptive mining function. A clustering model identifies natural groupings within a data set.</li><li>• <code>feature_extraction</code> - Feature Extraction is a descriptive mining function. A feature extraction model creates an optimized data set on which to base a model.</li><li>• <code>regression</code> - Regression is a predictive mining function. A regression model uses historical data to predict new continuous, numeric data.</li></ul> |

| Column           | Datatype       | NULL     | Description                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                       |
|------------------|----------------|----------|-----------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|
| ALGORITHM_NAME   | VARCHAR2 (30)  |          | Algorithm used by the model: <ul style="list-style-type: none"> <li>• <code>algo_name</code> - Setting that specifies the algorithm used by the model.</li> <li>• <code>asso_max_rule_length</code> - Setting that specifies the maximum length of a rule used by an association model.</li> <li>• <code>asso_min_confidence</code> - Setting that specifies the minimum confidence for an association model.</li> <li>• <code>asso_min_support</code> - Setting that specifies the minimum support for an association model.</li> <li>• <code>clas_cost_table_name</code> - Setting that specifies the name of the cost matrix table for a classification model.</li> <li>• <code>clas_priors_table_name</code> - Setting that specifies the name of the prior probability table for NB and ABN models. Decision Tree is the only classification algorithm that does not use priors. For SVM classification models, this setting specifies the name of a table of weights.</li> <li>• <code>clus_num_clusters</code> - Setting that specifies the number of clusters for a clustering model.</li> <li>• <code>feat_num_features</code> - Setting that specifies the number of features for a feature selection model.</li> </ul> |
| CREATION_DATE    | DATE           | NOT NULL | Date on which the model was created                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                               |
| BUILD_DURATION   | NUMBER         |          | Duration of the model build process                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                               |
| TARGET_ATTRIBUTE | VARCHAR2 (128) |          | Attribute designated as the target of a classification model                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                      |
| MODEL_SIZE       | NUMBER         |          | Size of the model (in megabytes)                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                  |

## 7.202 DOCUMENT\_LINKS

`DOCUMENT_LINKS` provides system information about Oracle XML DB document links in Oracle XML DB Repository documents.

When an XML document that includes XLink or XInclude links is added to the repository, these links can be mapped to document links, which are tracked using view `DOCUMENT_LINKS`.

| Column      | Datatype        | NULL | Description                                                            |
|-------------|-----------------|------|------------------------------------------------------------------------|
| SOURCE_ID   | RAW (16)        |      | The source resource OID                                                |
| TARGET_ID   | RAW (16)        |      | The target resource OID                                                |
| TARGET_PATH | VARCHAR2 (4000) |      | This column is always NULL. It is reserved for future use.             |
| LINK_TYPE   | VARCHAR2 (8)    |      | The document link type: Hard or Weak                                   |
| LINK_FORM   | VARCHAR2 (8)    |      | Whether the original link was of form XLink or XInclude                |
| SOURCE_TYPE | VARCHAR2 (17)   |      | Whether the link is contained in Resource Content or Resource Metadata |

**Note:**

Oracle XML DB Repository is deprecated in Oracle Database 23ai. Oracle recommends that you replace any functionality used in Oracle XML DB Repository with alternative technologies.

**See Also:**

*Oracle XML DB Developer's Guide* for information about using this view

## 7.203 ERROR\_SIZE

ERROR\_SIZE is accessed to create DBA\_OBJECT\_SIZE and USER\_OBJECT\_SIZE.

**See Also:**

- "DBA\_OBJECT\_SIZE"
- "USER\_OBJECT\_SIZE"

## 7.204 EXCEPTIONS

EXCEPTIONS contains information on violations of integrity constraints. This table is created by the utlexcpt.sql script.

| Column     | Datatype       | NULL | Description                            |
|------------|----------------|------|----------------------------------------|
| ROW_ID     | ROWID          |      | Row that caused the violation          |
| OWNER      | VARCHAR2 (128) |      | Owner of the table                     |
| TABLE_NAME | VARCHAR2 (128) |      | Name of the table                      |
| CONSTRAINT | VARCHAR2 (128) |      | Integrity constraint that was violated |

## 7.205 FLASHBACK\_TRANSACTION\_QUERY

FLASHBACK\_TRANSACTION\_QUERY displays information about all flashback transaction queries in the database.

The database must have at least minimal supplemental logging enabled to avoid unpredictable behavior.

| Column    | Datatype | NULL | Description                                  |
|-----------|----------|------|----------------------------------------------|
| XID       | RAW (8)  |      | Transaction identifier                       |
| START_SCN | NUMBER   |      | Transaction start system change number (SCN) |

| Column           | Datatype        | NULL | Description                                                                                                                                                                                          |
|------------------|-----------------|------|------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|
| START_TIMESTAMP  | DATE            |      | Transaction start timestamp                                                                                                                                                                          |
| COMMIT_SCN       | NUMBER          |      | Transaction commit system change number; NULL for active transactions                                                                                                                                |
| COMMIT_TIMESTAMP | DATE            |      | Transaction commit timestamp; NULL for active transactions                                                                                                                                           |
| LOGON_USER       | VARCHAR2 (128)  |      | Logon user for the transaction                                                                                                                                                                       |
| UNDO_CHANGE#     | NUMBER          |      | Undo system change number (1 or higher)                                                                                                                                                              |
| OPERATION        | VARCHAR2 (32)   |      | Forward-going DML operation performed by the transaction: <ul style="list-style-type: none"> <li>• D - Delete</li> <li>• I - Insert</li> <li>• U - Update</li> <li>• B</li> <li>• UNKNOWN</li> </ul> |
| TABLE_NAME       | VARCHAR2 (256)  |      | Name of the table to which the DML applies                                                                                                                                                           |
| TABLE_OWNER      | VARCHAR2 (386)  |      | Owner of the table to which the DML applies                                                                                                                                                          |
| ROW_ID           | VARCHAR2 (19)   |      | Rowid of the row that was modified by the DML                                                                                                                                                        |
| UNDO_SQL         | VARCHAR2 (4000) |      | SQL to undo the DML indicated by OPERATION                                                                                                                                                           |

## 7.206 GLOBAL\_CONTEXT

GLOBAL\_CONTEXT displays the values of global context attributes, which are accessible for the current session, based on the CLIENT\_IDENTIFIER value.

GLOBAL\_CONTEXT is similar to SESSION\_CONTEXT, which lists the values of session (or local) context attributes set under the current session.

| Column            | Datatype        | NULL | Description                                                        |
|-------------------|-----------------|------|--------------------------------------------------------------------|
| NAMESPACE         | VARCHAR2 (31)   |      | Namespace of the globally accessible context                       |
| ATTRIBUTE         | VARCHAR2 (31)   |      | Attribute of the globally accessible context                       |
| VALUE             | VARCHAR2 (4000) |      | Value of the attribute of the globally accessible context          |
| USERNAME          | VARCHAR2 (31)   |      | Username for which globally accessible context value is applicable |
| CLIENT_IDENTIFIER | VARCHAR2 (65)   |      | Client identifier of the globally accessible context               |

**See Also:**

## 7.207 GLOBAL\_NAME

GLOBAL\_NAME contains one row that displays the global name of the current database.

| Column      | Datatype        | NULL | Description                 |
|-------------|-----------------|------|-----------------------------|
| GLOBAL_NAME | VARCHAR2 (4000) |      | Global name of the database |

## 7.208 HS\_ALL\_CAPS

HS\_ALL\_CAPS contains information about all of the capabilities (that is, features) associated with non-Oracle (FDS) data stores.

| Column          | Datatype       | NULL | Description                                              |
|-----------------|----------------|------|----------------------------------------------------------|
| CAP_NUMBER      | NUMBER         |      | Capability number                                        |
| CONTEXT         | NUMBER         |      | Context in which this capability is applicable           |
| TRANSLATION     | VARCHAR2 (255) |      | Valid for functions; contains translation to FDS dialect |
| ADDITIONAL_INFO | NUMBER         |      | Flag for internal use                                    |
| FDS_CLASS_NAME  | VARCHAR2 (30)  |      | Name of the FDS Class                                    |
| FDS_INST_NAME   | VARCHAR2 (30)  |      | Name of the FDS instance                                 |

## 7.209 HS\_ALL\_DD

HS\_ALL\_DD contains data dictionary information about non-Oracle (FDS) data stores.

| Column           | Datatype        | NULL | Description                                     |
|------------------|-----------------|------|-------------------------------------------------|
| DD_TABLE_NAME    | VARCHAR2 (128)  |      | Data dictionary table name                      |
| TRANSLATION_TYPE | CHAR (1)        |      | T = Translation, M = Mimic                      |
| TRANSLATION_TEXT | VARCHAR2 (4000) |      | SQL statement containing the mapping            |
| FDS_CLASS_NAME   | VARCHAR2 (30)   |      | Name of the FDS Class                           |
| FDS_INST_NAME    | VARCHAR2 (30)   |      | Name of the FDS instance                        |
| DD_TABLE_DESC    | VARCHAR2 (255)  |      | Description of the Oracle data dictionary table |

## 7.210 HS\_ALL\_INITS

HS\_ALL\_INITS contains initialization parameter information about non-Oracle (FDS) data stores.

| Column          | Datatype       | NULL | Description                                                                                                           |
|-----------------|----------------|------|-----------------------------------------------------------------------------------------------------------------------|
| INIT_VALUE_NAME | VARCHAR2 (64)  |      | Name of the initialization parameter                                                                                  |
| INIT_VALUE      | VARCHAR2 (255) |      | Value of the initialization parameter                                                                                 |
| INIT_VALUE_TYPE | VARCHAR2 (1)   |      | Environment variable (T or F). T means this is an environment variable; F means do not set as an environment variable |
| FDS_CLASS_NAME  | VARCHAR2 (30)  |      | Name of the FDS Class                                                                                                 |
| FDS_INST_NAME   | VARCHAR2 (30)  |      | Name of the FDS instance                                                                                              |

## 7.211 HS\_BASE\_CAPS

HS\_BASE\_CAPS contains information about base capability (that is, base features) of the non-Oracle (FDS) data store.

| Column          | Datatype       | NULL     | Description                   |
|-----------------|----------------|----------|-------------------------------|
| CAP_NUMBER      | NUMBER         | NOT NULL | Capability number             |
| CAP_DESCRIPTION | VARCHAR2 (255) |          | Description of the capability |

## 7.212 HS\_BASE\_DD

HS\_BASE\_DD displays information from the base data dictionary translation table.

| Column        | Datatype       | NULL     | Description                                                                      |
|---------------|----------------|----------|----------------------------------------------------------------------------------|
| DD_TABLE_NAME | VARCHAR2 (128) | NOT NULL | Name of the Oracle data dictionary table                                         |
| DD_TABLE_DESC | VARCHAR2 (255) |          | Description of the Oracle data dictionary table                                  |
| DD_TABLE_ID   | NUMBER         | NOT NULL | Sequence: a counter that is incremented for every row inserted (used internally) |

## 7.213 HS\_CLASS\_CAPS

HS\_CLASS\_CAPS contains information about the class-specific (driver) capabilities belonging to the non-Oracle (FDS) data store.

| Column          | Datatype       | NULL     | Description                                                                      |
|-----------------|----------------|----------|----------------------------------------------------------------------------------|
| CAP_NUMBER      | NUMBER         | NOT NULL | Capability number                                                                |
| CAP_DESCRIPTION | VARCHAR2 (255) |          | Capability description                                                           |
| CONTEXT         | NUMBER         |          | Flag indicating the context in which the capability is enabled                   |
| TRANSLATION     | VARCHAR2 (255) |          | Valid for functions; contains translation to FDS dialect                         |
| ADDITIONAL_INFO | NUMBER         |          | Additional flags for internal use                                                |
| FDS_CLASS_NAME  | VARCHAR2 (30)  | NOT NULL | Name of the FDS Class                                                            |
| FDS_CLASS_ID    | NUMBER         | NOT NULL | Sequence: a counter that is incremented for every row inserted (used internally) |

## 7.214 HS\_CLASS\_DD

HS\_CLASS\_DD displays information from the non-Oracle data store (FDS) class-specific data dictionary translations.

| Column           | Datatype        | NULL     | Description                                                                      |
|------------------|-----------------|----------|----------------------------------------------------------------------------------|
| DD_TABLE_NAME    | VARCHAR2 (128)  | NOT NULL | Name of the Oracle data dictionary table                                         |
| DD_TABLE_DESC    | VARCHAR2 (255)  |          | Description of the Oracle data dictionary table                                  |
| TRANSLATION_TYPE | CHAR (1)        | NOT NULL | T = Translation, M = Mimic                                                       |
| TRANSLATION_TEXT | VARCHAR2 (4000) |          | SQL statement containing the mapping                                             |
| FDS_CLASS_NAME   | VARCHAR2 (30)   | NOT NULL | Name of the FDS Class                                                            |
| DD_TABLE_ID      | NUMBER          | NOT NULL | Sequence: a counter that is incremented for every row inserted (used internally) |
| FDS_CLASS_ID     | NUMBER          | NOT NULL | Sequence: a counter that is incremented for every row inserted (used internally) |

## 7.215 HS\_CLASS\_INIT

HS\_CLASS\_INIT displays information about the non-Oracle (FDS) class-specific initialization parameters.

| Column            | Datatype       | NULL     | Description                                                                                                           |
|-------------------|----------------|----------|-----------------------------------------------------------------------------------------------------------------------|
| INIT_VALUE_NAME   | VARCHAR2 (64)  | NOT NULL | Name of the initialization parameter                                                                                  |
| INIT_VALUE        | VARCHAR2 (255) | NOT NULL | Value of the initialization parameter                                                                                 |
| INIT_VALUE_TYPE   | VARCHAR2 (1)   | NOT NULL | Environment variable (T or F). T means this is an environment variable; F means do not set as an environment variable |
| FDS_CLASS_NAME    | VARCHAR2 (30)  | NOT NULL | Name of the FDS Class                                                                                                 |
| FDS_CLASS_INIT_ID | NUMBER         | NOT NULL | Sequence: a counter that is incremented for every row inserted (used internally)                                      |
| FDS_CLASS_ID      | NUMBER         | NOT NULL | Sequence: a counter that is incremented for every row inserted (used internally)                                      |

## 7.216 HS\_FDS\_CLASS

HS\_FDS\_CLASS contains information about legal non-Oracle (FDS) classes.

| Column             | Datatype       | NULL     | Description                                                                      |
|--------------------|----------------|----------|----------------------------------------------------------------------------------|
| FDS_CLASS_NAME     | VARCHAR2 (30)  | NOT NULL | Name of the FDS class (for example, ODBC, DB2)                                   |
| FDS_CLASS_COMMENTS | VARCHAR2 (255) |          | Text description of the non-Oracle class                                         |
| FDS_CLASS_ID       | NUMBER         | NOT NULL | Sequence: a counter that is incremented for every row inserted (used internally) |

## 7.217 HS\_FDS\_INST

HS\_FDS\_INST contains information about non-Oracle (FDS) instances.

| Column            | Datatype       | NULL     | Description                                                                      |
|-------------------|----------------|----------|----------------------------------------------------------------------------------|
| FDS_INST_NAME     | VARCHAR2 (30)  | NOT NULL | Name of the FDS instance                                                         |
| FDS_INST_COMMENTS | VARCHAR2 (255) |          | Text description of the non-Oracle instance                                      |
| FDS_CLASS_NAME    | VARCHAR2 (30)  | NOT NULL | Name of the FDS class                                                            |
| FDS_INST_ID       | NUMBER         | NOT NULL | Sequence: a counter that is incremented for every row inserted (used internally) |
| FDS_CLASS_ID      | NUMBER         | NOT NULL | Sequence: a counter that is incremented for every row inserted (used internally) |

## 7.218 HS\_INST\_CAPS

HS\_INST\_CAPS contains information about instance-specific capabilities (that is, features).

| Column          | Datatype       | NULL     | Description                                                                      |
|-----------------|----------------|----------|----------------------------------------------------------------------------------|
| CAP_NUMBER      | NUMBER         | NOT NULL | Capability number                                                                |
| CAP_DESCRIPTION | VARCHAR2 (255) |          | Capability description                                                           |
| CONTEXT         | NUMBER         |          | Context in which this capability is applicable                                   |
| TRANSLATION     | VARCHAR2 (255) |          | Valid for functions; contains translation to FDS dialect                         |
| ADDITIONAL_INFO | NUMBER         |          | Additional flags for internal use                                                |
| FDS_CLASS_NAME  | VARCHAR2 (30)  | NOT NULL | Name of the FDS class (for example, ODBC, DB2)                                   |
| FDS_INST_NAME   | VARCHAR2 (30)  | NOT NULL | Name of the FDS instance                                                         |
| FDS_CLASS_ID    | NUMBER         | NOT NULL | Sequence: a counter that is incremented for every row inserted (used internally) |
| FDS_INST_ID     | NUMBER         | NOT NULL | Sequence: a counter that is incremented for every row inserted (used internally) |

## 7.219 HS\_INST\_DD

HS\_INST\_DD displays information from the non-Oracle (FDS) instance-specific data dictionary translations.

| Column           | Datatype        | NULL     | Description                                                                      |
|------------------|-----------------|----------|----------------------------------------------------------------------------------|
| DD_TABLE_NAME    | VARCHAR2 (128)  | NOT NULL | Name of the Oracle data dictionary table                                         |
| DD_TABLE_DESC    | VARCHAR2 (255)  |          | Description of the Oracle data dictionary table                                  |
| TRANSLATION_TYPE | CHAR (1)        | NOT NULL | T = Translation, M = Mimic                                                       |
| TRANSLATION_TEXT | VARCHAR2 (4000) |          | SQL statement containing the mapping                                             |
| FDS_CLASS_NAME   | VARCHAR2 (30)   | NOT NULL | Name of the FDS class (for example, ODBC, DB2)                                   |
| FDS_INST_NAME    | VARCHAR2 (30)   | NOT NULL | Name of the FDS instance                                                         |
| DD_TABLE_ID      | NUMBER          | NOT NULL | Sequence: a counter that is incremented for every row inserted (used internally) |

| Column       | Datatype | NULL     | Description                                                                      |
|--------------|----------|----------|----------------------------------------------------------------------------------|
| FDS_CLASS_ID | NUMBER   | NOT NULL | Sequence: a counter that is incremented for every row inserted (used internally) |
| FDS_INST_ID  | NUMBER   | NOT NULL | Sequence: a counter that is incremented for every row inserted (used internally) |

## 7.220 HS\_INST\_INIT

HS\_INST\_INIT contains information about the non-Oracle (FDS) instance-specific initialization parameters.

| Column           | Datatype       | NULL     | Description                                                                                                           |
|------------------|----------------|----------|-----------------------------------------------------------------------------------------------------------------------|
| INIT_VALUE_NAME  | VARCHAR2 (64)  | NOT NULL | Name of the initialization parameter                                                                                  |
| INIT_VALUE       | VARCHAR2 (255) | NOT NULL | Value of the initialization parameter                                                                                 |
| INIT_VALUE_TYPE  | VARCHAR2 (1)   | NOT NULL | Environment variable (T or F). T means this is an environment variable; F means do not set as an environment variable |
| FDS_CLASS_NAME   | VARCHAR2 (30)  | NOT NULL | Name of the FDS class (for example: ODBC, DB2)                                                                        |
| FDS_INST_NAME    | VARCHAR2 (30)  | NOT NULL | Name of the FDS instance                                                                                              |
| FDS_INST_INIT_ID | NUMBER         | NOT NULL | Sequence: a counter that is incremented for every row inserted (used internally)                                      |
| FDS_CLASS_ID     | NUMBER         | NOT NULL | Sequence: a counter that is incremented for every row inserted (used internally)                                      |
| FDS_INST_ID      | NUMBER         | NOT NULL | Sequence: a counter that is incremented for every row inserted (used internally)                                      |

## 7.221 IDEPTREE

This view, created by `utldtree.sql`, lists the indented dependency tree. It is a pre-sorted, pretty-print version of DEPTREE.

| Column       | Datatype        | NULL | Description                          |
|--------------|-----------------|------|--------------------------------------|
| NESTED_LEVEL | NUMBER          |      | Nesting level in the dependency tree |
| TYPE         | VARCHAR2 (23)   |      | Object type                          |
| OWNER        | VARCHAR2 (28)   |      | Object schema                        |
| NAME         | VARCHAR2 (1002) |      | Object name                          |

## 7.222 IND

IND is a synonym for USER\_INDEXES.

**See Also:**

"USER\_INDEXES"

## 7.223 INDEX\_HISTOGRAM

INDEX\_HISTOGRAM contains information from the ANALYZE INDEX ... VALIDATE STRUCTURE statement.

**Note:**

The ANALYZE INDEX ... VALIDATE STRUCTURE OFFLINE statement must be used to collect statistics.

| Column                 | Datatype | NULL | Description                                                          |
|------------------------|----------|------|----------------------------------------------------------------------|
| REPEAT_COUNT           | NUMBER   |      | Number of times that one or more index keys is repeated in the table |
| KEYS_WITH_REPEAT_COUNT | NUMBER   |      | Number of index keys that are repeated that many times               |

## 7.224 INDEX\_STATS

INDEX\_STATS stores information from the last ANALYZE INDEX ... VALIDATE STRUCTURE statement.

**Note:**

The ANALYZE INDEX ... VALIDATE STRUCTURE OFFLINE statement must be used in order to collect statistics

| Column         | Datatype       | NULL     | Description                                                                                               |
|----------------|----------------|----------|-----------------------------------------------------------------------------------------------------------|
| HEIGHT         | NUMBER         |          | Height of the B-Tree                                                                                      |
| BLOCKS         | NUMBER         | NOT NULL | Blocks allocated to the segment                                                                           |
| NAME           | VARCHAR2 (128) | NOT NULL | Name of the index                                                                                         |
| PARTITION_NAME | VARCHAR2 (128) |          | Name of the partition of the index which was analyzed. If the index is not partitioned, NULL is returned. |
| LF_ROWS        | NUMBER         |          | Number of leaf rows (values in the index)                                                                 |
| LF_BLKS        | NUMBER         |          | Number of leaf blocks in the B-Tree                                                                       |
| LF_ROWS_LEN    | NUMBER         |          | Sum of the lengths of all the leaf rows                                                                   |
| LF_BLK_LEN     | NUMBER         |          | Usable space in a leaf block                                                                              |
| BR_ROWS        | NUMBER         |          | Number of branch rows in the B-Tree                                                                       |
| BR_BLKS        | NUMBER         |          | Number of branch blocks in the B-Tree                                                                     |
| BR_ROWS_LEN    | NUMBER         |          | Sum of the lengths of all the branch blocks in the B-Tree                                                 |
| BR_BLK_LEN     | NUMBER         |          | Usable space in a branch block                                                                            |
| DEL_LF_ROWS    | NUMBER         |          | Number of deleted leaf rows in the index                                                                  |

| Column                | Datatype | NULL | Description                                                                                                                                                                                                     |
|-----------------------|----------|------|-----------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|
| DEL_LF_ROWS_LEN       | NUMBER   |      | Total length of all deleted rows in the index                                                                                                                                                                   |
| DISTINCT_KEYS         | NUMBER   |      | Number of distinct keys in the index (may include rows that have been deleted)                                                                                                                                  |
| MOST_REPEATED_KEY     | NUMBER   |      | How many times the most repeated key is repeated (may include rows that have been deleted)                                                                                                                      |
| BTREE_SPACE           | NUMBER   |      | Total space currently allocated in the B-Tree                                                                                                                                                                   |
| USED_SPACE            | NUMBER   |      | Total space that is currently being used in the B-Tree                                                                                                                                                          |
| PCT_USED              | NUMBER   |      | Percent of space allocated in the B-Tree that is being used                                                                                                                                                     |
| ROWS_PER_KEY          | NUMBER   |      | Average number of rows per distinct key (this figure is calculated without consideration of deleted rows)                                                                                                       |
| BLKS_GETS_PER_ACCESS  | NUMBER   |      | Expected number of consistent mode block reads per row, assuming that a randomly chosen row is accessed using the index. Used to calculate the number of consistent reads that will occur during an index scan. |
| PRE_ROWS              | NUMBER   |      | Number of prefix rows (values in the index)                                                                                                                                                                     |
| PRE_ROWS_LEN          | NUMBER   |      | Sum of lengths of all prefix rows                                                                                                                                                                               |
| OPT_CMPR_COUNT        | NUMBER   |      | Optimal index compression length                                                                                                                                                                                |
| OPT_CMPR_PCTSAVE      | NUMBER   |      | Corresponding space savings after an <code>ANALYZE</code>                                                                                                                                                       |
| DEL_LF_CMP_ROWS       | NUMBER   |      | Number of deleted rows that are within a compression unit (CU)                                                                                                                                                  |
| PRG_LF_CMP_ROWS       | NUMBER   |      | Number of purged rows that are within a CU                                                                                                                                                                      |
| LF_CMP_ROWS           | NUMBER   |      | Number of rows that are in a CU or prefix compressed                                                                                                                                                            |
| LF_CMP_ROWS_LEN       | NUMBER   |      | Sum of lengths of all prefix rows and CUs                                                                                                                                                                       |
| LF_UNCMP_ROWS         | NUMBER   |      | Number of rows that are neither in a CU nor prefix compressed                                                                                                                                                   |
| LF_UNCMP_ROWS_LEN     | NUMBER   |      | Sum of lengths of rows that are neither in a CU nor prefix compressed                                                                                                                                           |
| LF_SUF_ROWS_LEN       | NUMBER   |      | Sum of lengths of suffix rows                                                                                                                                                                                   |
| LF_CMP_ROWS_UNCMP_LEN | NUMBER   |      | Sum of the uncompressed lengths of rows that are in a CU or prefix compressed                                                                                                                                   |
| LF_CMP_RECMP_COUNT    | NUMBER   |      | Sum of CU recompression counts                                                                                                                                                                                  |
| LF_CMP_LOCK_VEC_LEN   | NUMBER   |      | Sum of CU lock vector lengths                                                                                                                                                                                   |
| LF_CMP_BLKs           | NUMBER   |      | Number of blocks that have a CU or nonzero prefix column count                                                                                                                                                  |
| LF_UNCMP_BLKs         | NUMBER   |      | Number of blocks that do not have a CU and have a zero prefix column count                                                                                                                                      |
| LF_CMP_ADVLO_BLKs     | NUMBER   |      | Number of blocks that are enabled for <code>COMPRESS ADVANCED LOW</code>                                                                                                                                        |
| LF_CMP_ADVHI_BLKs     | NUMBER   |      | Number of blocks that are enabled for <code>COMPRESS ADVANCED HIGH</code>                                                                                                                                       |

## 7.225 LOGSTDBY\_UNSUPPORTED\_TABLES

LOGSTDBY\_UNSUPPORTED\_TABLES is a synonym for DBA\_LOGSTDBY\_UNSUPPORTED\_TABLE.

### See Also:

"DBA\_LOGSTDBY\_UNSUPPORTED\_TABLE"

## 7.226 MAP\_OBJECT

MAP\_OBJECT is a global temporary table that displays the hierarchical arrangement of storage containers for objects. Each row in the table represents a level in the hierarchy.

| Column        | Datatype        | NULL | Description                                                                                                                                                                                        |
|---------------|-----------------|------|----------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|
| OBJECT_NAME   | VARCHAR2 (2000) |      | Name of the object                                                                                                                                                                                 |
| OBJECT_OWNER  | VARCHAR2 (2000) |      | Owner of the object                                                                                                                                                                                |
| OBJECT_TYPE   | VARCHAR2 (2000) |      | Object type                                                                                                                                                                                        |
| FILE_MAP_IDX  | NUMBER          |      | File index (corresponds to FILE_MAP_IDX in V\$MAP_FILE)                                                                                                                                            |
| DEPTH         | NUMBER          |      | Element depth within the I/O stack                                                                                                                                                                 |
| ELEM_IDX      | NUMBER          |      | Index corresponding to the element                                                                                                                                                                 |
| CU_SIZE       | NUMBER          |      | Contiguous set of logical blocks of the file (in HKB units) that is resident contiguously on the element                                                                                           |
| STRIDE        | NUMBER          |      | Number of HKB between contiguous units (CU) in the file that are contiguous on this element. Used in RAID5 and striped files.                                                                      |
| NUM_CU        | NUMBER          |      | Number of contiguous units that are adjacent to each other on this element that are separated by STRIDE HKB in the file. In RAID5, the number of contiguous units also include the parity stripes. |
| ELEM_OFFSET   | NUMBER          |      | Element offset (in HKB units)                                                                                                                                                                      |
| FILE_OFFSET   | NUMBER          |      | Offset (in HKB units) from the start of the file to the first byte of the contiguous units                                                                                                         |
| DATA_TYPE     | VARCHAR2 (2000) |      | Data type (DATA, PARITY, or DATA AND PARITY)                                                                                                                                                       |
| PARITY_POS    | NUMBER          |      | Position of the parity. Only for RAID5. This field is needed to distinguish the parity from the data part.                                                                                         |
| PARITY_PERIOD | NUMBER          |      | Parity period. Only for RAID5.                                                                                                                                                                     |

## 7.227 NLS\_DATABASE\_PARAMETERS

NLS\_DATABASE\_PARAMETERS lists permanent NLS parameters of the database.

| Column    | Datatype       | NULL | Description    |
|-----------|----------------|------|----------------|
| PARAMETER | VARCHAR2 (128) |      | Parameter name |

| Column | Datatype      | NULL | Description     |
|--------|---------------|------|-----------------|
| VALUE  | VARCHAR2 (64) |      | Parameter value |

## 7.228 NLS\_INSTANCE\_PARAMETERS

NLS\_INSTANCE\_PARAMETERS lists NLS parameters of the instance.

| Column    | Datatype      | NULL | Description     |
|-----------|---------------|------|-----------------|
| PARAMETER | VARCHAR2 (30) |      | Parameter name  |
| VALUE     | VARCHAR2 (64) |      | Parameter value |

## 7.229 NLS\_SESSION\_PARAMETERS

NLS\_SESSION\_PARAMETERS lists NLS parameters of the user session.

| Column    | Datatype      | NULL | Description     |
|-----------|---------------|------|-----------------|
| PARAMETER | VARCHAR2 (30) |      | Parameter name  |
| VALUE     | VARCHAR2 (64) |      | Parameter value |

## 7.230 OBJ

OBJ is a synonym for USER\_OBJECTS.

**See Also:**

"USER\_OBJECTS"

## 7.231 PATH\_VIEW

PATH\_VIEW contains one row for each unique path to access a resource in Oracle XML DB Repository.

| Column | Datatype                                                                             | NULL | Description                                   |
|--------|--------------------------------------------------------------------------------------|------|-----------------------------------------------|
| PATH   | VARCHAR2 (1024)                                                                      |      | An (absolute) path to repository resource RES |
| RES    | XMLTYPE(XMLSchema "http://xmlns.oracle.com/xdbr/XDBResource.xsd" Element "Resource") |      | The resource referred to by the PATH column   |
| LINK   | XMLTYPE                                                                              |      | Link property                                 |
| RESID  | RAW (16)                                                                             |      | Resource OID                                  |

**Note:**

Oracle XML DB Repository is deprecated in Oracle Database 23ai. Oracle recommends that you replace any functionality used in Oracle XML DB Repository with alternative technologies.

*Oracle XML DB Developer's Guide* for information about using this view

## 7.232 PDB\_ALERTS

PDB\_ALERTS contains descriptions of reasons for PDB alerts.

| Column   | Datatype        | NULL     | Description                                             |
|----------|-----------------|----------|---------------------------------------------------------|
| TIME     | TIMESTAMP (6)   | NOT NULL | Time when the violation happened                        |
| NAME     | VARCHAR2 (128)  | NOT NULL | A name of a PDB or non-CDB to which this record applies |
| CAUSE_NO | NUMBER          | NOT NULL | Number identifying a specific reason for a PDB alert    |
| TYPE_NO  | NUMBER          | NOT NULL | Type of the violation                                   |
| ERROR    | NUMBER          |          | Oracle error, if any, for this violation                |
| LINE     | NUMBER          | NOT NULL | Line number for the violation message                   |
| MESSAGE  | VARCHAR2 (4000) | NOT NULL | Description of the violation                            |
| STATUS   | NUMBER          |          | Status of the violation                                 |
| ACTION   | VARCHAR2 (4000) |          | Actions to take to resolve the violations               |

## 7.233 PDB\_PLUG\_IN\_VIOLATIONS

PDB\_PLUG\_IN\_VIOLATIONS displays information about incompatibilities between a PDB and the CDB to which it belongs.

This view is also used to display information generated by executing  
DBMS\_PDB.CHECK\_PLUG\_COMPATIBILITY.

| Column | Datatype       | NULL     | Description                                                                                                                                 |
|--------|----------------|----------|---------------------------------------------------------------------------------------------------------------------------------------------|
| TIME   | TIMESTAMP (6)  | NOT NULL | Time when a violation described by this row was discovered                                                                                  |
| NAME   | VARCHAR2 (128) | NOT NULL | The name of an existing PDB or a PDB intended to be created (if a row was entered as a result of running DBMS_PDB.CHECK_PLUG_COMPATIBILITY) |
| CAUSE  | VARCHAR2 (64)  | NOT NULL | Attribute which was being checked                                                                                                           |
| TYPE   | VARCHAR2 (9)   | NOT NULL | ERROR or WARNING                                                                                                                            |

| Column       | Datatype        | NULL     | Description                                                                                                                                                                                                                                                                                                                                                                                                                                                                 |
|--------------|-----------------|----------|-----------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|
| ERROR_NUMBER | NUMBER          |          | Oracle error number, if any, encountered during a check                                                                                                                                                                                                                                                                                                                                                                                                                     |
| LINE         | NUMBER          | NOT NULL | Used to differentiate between violations which share a cause                                                                                                                                                                                                                                                                                                                                                                                                                |
| MESSAGE      | VARCHAR2 (4000) | NOT NULL | Description of a violation                                                                                                                                                                                                                                                                                                                                                                                                                                                  |
| STATUS       | VARCHAR2 (9)    |          | PENDING, RESOLVED, or IGNORE                                                                                                                                                                                                                                                                                                                                                                                                                                                |
| ACTION       | VARCHAR2 (4000) |          | Description of an action to take to correct the violation                                                                                                                                                                                                                                                                                                                                                                                                                   |
| CON_ID       | NUMBER          |          | The ID of the container to which the data pertains.<br>Possible values: <ul style="list-style-type: none"> <li>0: This value is used for rows containing data that pertain to the entire multitenant container database (CDB). This value is also used for rows in non-CDBs.</li> <li>1: This value is used for rows containing data that pertain to only the root</li> <li><i>n</i>: Where <i>n</i> is the applicable container ID for the rows containing data</li> </ul> |

## 7.234 PLAN\_TABLE

`PLAN_TABLE` is automatically created as a global temporary table to hold the output of an `EXPLAIN PLAN` statement for all users.

`PLAN_TABLE` is the default sample output table into which the `EXPLAIN PLAN` statement inserts rows describing execution plans.

While a `PLAN_TABLE` table is automatically set up for each user, you can use the SQL script `utlxplan.sql` to manually create a local `PLAN_TABLE` in your schema.

| Column       | Datatype      | NULL | Description                                                                                                    |
|--------------|---------------|------|----------------------------------------------------------------------------------------------------------------|
| STATEMENT_ID | VARCHAR2 (30) |      | Value of the optional <code>STATEMENT_ID</code> parameter specified in the <code>EXPLAIN PLAN</code> statement |
| PLAN_ID      | NUMBER        |      | Unique identifier of a plan in the database                                                                    |
| TIMESTAMP    | DATE          |      | Date and time when the <code>EXPLAIN PLAN</code> statement was generated                                       |

| Column          | Datatype        | NULL | Description                                                                                                                                                                                                                                                                                                                                                                        |
|-----------------|-----------------|------|------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|
| REMARKS         | VARCHAR2 (4000) |      | Any comment (of up to 4000 bytes) you want to associate with each step of the explained plan. This column is used to indicate whether an outline or SQL Profile was used for the query.<br><br>If you need to add or change a remark on any row of the <code>PLAN_TABLE</code> , then use the <code>UPDATE</code> statement to modify the rows of the <code>PLAN_TABLE</code> .    |
| OPERATION       | VARCHAR2 (30)   |      | Name of the internal operation performed in this step. In the first row generated for a statement, the column contains one of the following values: <ul style="list-style-type: none"> <li>• <code>DELETE STATEMENT</code></li> <li>• <code>INSERT STATEMENT</code></li> <li>• <code>SELECT STATEMENT</code></li> <li>• <code>UPDATE STATEMENT</code></li> </ul>                   |
| OPTIONS         | VARCHAR2 (255)  |      | A variation on the operation described in the <code>OPERATION</code> column                                                                                                                                                                                                                                                                                                        |
| OBJECT_NODE     | VARCHAR2 (128)  |      | Name of the database link used to reference the object (a table name or view name). For local queries using parallel execution, this column describes the order in which output from operations is consumed.                                                                                                                                                                       |
| OBJECT_OWNER    | VARCHAR2 (128)  |      | Owner of the table or index                                                                                                                                                                                                                                                                                                                                                        |
| OBJECT_NAME     | VARCHAR2 (128)  |      | Name of the table or index                                                                                                                                                                                                                                                                                                                                                         |
| OBJECT_ALIAS    | VARCHAR2 (261)  |      | Unique alias of a table or view in a SQL statement. For indexes, it is the object alias of the underlying table.                                                                                                                                                                                                                                                                   |
| OBJECT_INSTANCE | NUMBER (38)     |      | Number corresponding to the ordinal position of the object as it appears in the original statement. The numbering proceeds from left to right, outer to inner with respect to the original statement text. View expansion results in unpredictable numbers.                                                                                                                        |
| OBJECT_TYPE     | VARCHAR2 (30)   |      | Modifier that provides descriptive information about the object; for example, <code>NON-UNIQUE</code> for indexes                                                                                                                                                                                                                                                                  |
| OPTIMIZER       | VARCHAR2 (255)  |      | Current mode of the optimizer                                                                                                                                                                                                                                                                                                                                                      |
| SEARCH_COLUMNS  | NUMBER          |      | Not currently used                                                                                                                                                                                                                                                                                                                                                                 |
| ID              | NUMBER (38)     |      | A number assigned to each step in the execution plan                                                                                                                                                                                                                                                                                                                               |
| PARENT_ID       | NUMBER (38)     |      | ID of the next execution step that operates on the output of the <code>ID</code> step                                                                                                                                                                                                                                                                                              |
| DEPTH           | NUMBER (38)     |      | Depth of the operation in the row source tree that the plan represents. The value can be used for indenting the rows in a plan table report.                                                                                                                                                                                                                                       |
| POSITION        | NUMBER (38)     |      | For the first row of output, this indicates the optimizer's estimated cost of executing the statement. For the other rows, it indicates the position relative to the other children of the same parent.                                                                                                                                                                            |
| COST            | NUMBER (38)     |      | Cost of the operation as estimated by the optimizer's query approach. Cost is not determined for table access operations. The value of this column does not have any particular unit of measurement; it is merely a weighted value used to compare costs of execution plans. The value of this column is a function of the <code>CPU_COST</code> and <code>IO_COST</code> columns. |

| Column          | Datatype       | NULL | Description                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                    |
|-----------------|----------------|------|----------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|
| CARDINALITY     | NUMBER (38)    |      | Estimate by the query optimization approach of the number of rows accessed by the operation                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                    |
| BYTES           | NUMBER (38)    |      | Estimate by the query optimization approach of the number of bytes accessed by the operation                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                   |
| OTHER_TAG       | VARCHAR2 (255) |      | <p>Describes the contents of the <code>OTHER</code> column:</p> <ul style="list-style-type: none"> <li><code>SERIAL</code> - Serial execution. Currently, SQL is not loaded in the <code>OTHER</code> column for this case.</li> <li><code>SERIAL_FROM_REMOTE</code> - Serial execution at a remote site.</li> <li><code>PARALLEL_FROM_SERIAL</code> - Serial execution. Output of step is partitioned or broadcast to parallel execution servers.</li> <li><code>PARALLEL_TO_SERIAL</code> - Parallel execution. Output of step is returned to serial query coordinator (QC) process.</li> <li><code>PARALLEL_TO_PARALLEL</code> - Parallel execution. Output of step is repartitioned to second set of parallel execution servers.</li> <li><code>PARALLEL_COMBINED_WITH_PARENT</code> - Parallel execution; Output of step goes to next step in same parallel process. No interprocess communication to parent.</li> <li><code>PARALLEL_COMBINED_WITH_CHILD</code> - Parallel execution. Input of step comes from prior step in same parallel process. No interprocess communication from child.</li> </ul> |
| PARTITION_START | VARCHAR2 (255) |      | <p>Start partition of a range of accessed partitions:</p> <ul style="list-style-type: none"> <li><i>number</i> - Start partition has been identified by the SQL compiler, and its partition number is given by <i>number</i></li> <li><code>KEY</code> - Start partition will be identified at run time from partitioning key values</li> <li><code>ROW LOCATION</code> - Start partition (same as the stop partition) will be computed at run time from the location of each record being retrieved. The record location is obtained from a user-specified ROWID or from a global index.</li> <li><code>INVALID</code> - Range of accessed partitions is empty</li> </ul>                                                                                                                                                                                                                                                                                                                                                                                                                                     |
| PARTITION_STOP  | VARCHAR2 (255) |      | <p>Stop partition of a range of accessed partitions:</p> <ul style="list-style-type: none"> <li><i>number</i> - Stop partition has been identified by the SQL compiler, and its partition number is given by <i>number</i></li> <li><code>KEY</code> - Stop partition will be identified at run time from partitioning key values</li> <li><code>ROW LOCATION</code> - Stop partition (same as the start partition) will be computed at run time from the location of each record being retrieved. The record location is obtained from a user-specified ROWID or from a global index.</li> <li><code>INVALID</code> - Range of accessed partitions is empty</li> </ul>                                                                                                                                                                                                                                                                                                                                                                                                                                        |
| PARTITION_ID    | NUMBER (38)    |      | Step that has computed the pair of values of the <code>PARTITION_START</code> and <code>PARTITION_STOP</code> columns                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                          |

| Column            | Datatype        | NULL | Description                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                |

| OTHER             | LONG            |      | Other information that is specific to the execution step that a user might find useful (see the <code>OTHER_TAG</code> column)                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                             |
| OTHER_XML         | CLOB            |      | Provides extra information specific to an execution step of the execution plan. The content of this column is structured using XML, which allows multiple pieces of information to be stored, including the following: <ul style="list-style-type: none"> <li>• Name of the schema against which the query was parsed</li> <li>• Release number of the Oracle Database that produced the explain plan</li> <li>• Hash value associated with the execution plan</li> <li>• Name (if any) of the outline or the SQL profile used to build the execution plan</li> <li>• Indication of whether or not dynamic statistics were used to produce the plan</li> <li>• The outline data, a set of optimizer hints that can be used to regenerate the same plan</li> <li>• Additional data that describes the relationship between rows in the plan table and subplans of adaptive plans</li> </ul> |
| DISTRIBUTION      | VARCHAR2 (30)   |      | Method used to distribute rows from producer query servers to consumer query servers                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                       |
| CPU_COST          | NUMBER (38)     |      | CPU cost of the operation as estimated by the query optimizer's approach. The value of this column is proportional to the number of machine cycles required for the operation. For statements that use the rule-based approach, this column is NULL.                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                       |
| IO_COST           | NUMBER (38)     |      | I/O cost of the operation as estimated by the query optimizer's approach. The value of this column is proportional to the number of data blocks read by the operation. For statements that use the rule-based approach, this column is NULL.                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                               |
| TEMP_SPACE        | NUMBER (38)     |      | Temporary space (in bytes) used by the operation as estimated by the query optimizer's approach. For statements that use the rule-based approach, or for operations that do not use any temporary space, this column is NULL.                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                              |
| ACCESS_PREDICATES | VARCHAR2 (4000) |      | Predicates used to locate rows in an access structure. For example, start or stop predicates for an index range scan.                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                      |
| FILTER_PREDICATES | VARCHAR2 (4000) |      | Predicates used to filter rows before producing them                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                       |
| PROJECTION        | VARCHAR2 (4000) |      | Expressions produced by the operation                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                      |
| TIME              | NUMBER (38)     |      | Elapsed time (in seconds) of the operation as estimated by query optimization. For statements that use the rule-based approach, this column is NULL.                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                       |
| QBLOCK_NAME       | VARCHAR2 (128)  |      | Name of the query block (either system-generated or defined by the user with the <code>QB_NAME</code> hint)                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                |

## 7.235 PLUGGABLE\_SET\_CHECK

PLUGGABLE\_SET\_CHECK contains pluggable set checks.

| Column          | Datatype       | NULL | Description                          |
|-----------------|----------------|------|--------------------------------------|
| OBJ1_OWNER      | VARCHAR2 (128) |      | Owner of the object                  |
| OBJ1_NAME       | VARCHAR2 (128) |      | Object 1                             |
| OBJ1_SUBNAME    | VARCHAR2 (128) |      | SubObject1Name                       |
| OBJ1_TYPE       | VARCHAR2 (18)  |      | Object Type                          |
| TS1_NAME        | VARCHAR2 (30)  |      | Tablespace containing Object 1       |
| OBJ2_NAME       | VARCHAR2 (128) |      | Object Name                          |
| OBJ2_SUBNAME    | VARCHAR2 (128) |      | SubObject2Name                       |
| OBJ2_TYPE       | VARCHAR2 (18)  |      | Object Type                          |
| OBJ2_OWNER      | VARCHAR2 (128) |      | Object owner of second object        |
| TS2_NAME        | VARCHAR2 (30)  |      | Tablespace containing Object 1       |
| CONSTRAINT_NAME | VARCHAR2 (128) |      | Name of dependent constraint         |
| REASON          | VARCHAR2 (86)  |      | Reason for Pluggable check violation |
| MESG_ID         | NUMBER         |      | The message ID                       |

## 7.236 PRODUCT\_COMPONENT\_VERSION

PRODUCT\_COMPONENT\_VERSION contains version and status information for component products.

| Column       | Datatype       | NULL | Description                                                                                                                                                                                                                  |
|--------------|----------------|------|------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|
| PRODUCT      | VARCHAR2 (80)  |      | Product name                                                                                                                                                                                                                 |
| VERSION      | VARCHAR2 (80)  |      | Version number                                                                                                                                                                                                               |
| VERSION_FULL | VARCHAR2 (160) |      | The version number with the new Oracle Database version scheme introduced in Oracle Database 18c. The version number is displayed only for the database component. All other components return a null value for this column. |
| STATUS       | VARCHAR2 (80)  |      | Status of release                                                                                                                                                                                                            |

## 7.237 PROXY\_USERS

PROXY\_USERS describes the list of proxy users and the clients on whose behalf they can act.

| Column         | Datatype       | NULL     | Description                                                                                                                                                                                                                                                                                         |
|----------------|----------------|----------|-----------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|
| PROXY          | VARCHAR2 (128) | NOT NULL | Name of a proxy user                                                                                                                                                                                                                                                                                |
| CLIENT         | VARCHAR2 (128) | NOT NULL | Name of the client user who the proxy user can act as                                                                                                                                                                                                                                               |
| AUTHENTICATION | VARCHAR2 (3)   |          | Indicates whether the proxy is required to supply the client's authentication credentials (YES) or not (NO)                                                                                                                                                                                         |
| FLAGS          | VARCHAR2 (35)  |          | Flags associated with the proxy/client pair: <ul style="list-style-type: none"><li>• PROXY MAY ACTIVATE ALL CLIENT ROLES</li><li>• NO CLIENT ROLES MAY BE ACTIVATED</li><li>• PROXY MAY ACTIVATE ROLE</li><li>• PROXY MAY ACTIVATE ALL CLIENT ROLES</li><li>• PROXY MAY NOT ACTIVATE ROLE</li></ul> |

## 7.238 PSTUBTBL

This table contains information on stubs generated by the PSTUB utility so that an Oracle Forms 3.0 client can call stored procedures in Oracle Database.

### Note:

The contents of this table are intended only for use by the PSTUB utility.

| Column   | Datatype        | NULL | Description                                                    |
|----------|-----------------|------|----------------------------------------------------------------|
| USERNAME | VARCHAR2 (128)  |      | Schema part of the identifier of a stored procedure            |
| DBNAME   | VARCHAR2 (128)  |      | Database link part of the identifier of a stored procedure     |
| LUN      | VARCHAR2 (128)  |      | Library unit name part of the identifier of a stored procedure |
| LUTYPE   | VARCHAR2 (3)    |      | Type of the stored procedure                                   |
| LINENO   | NUMBER          |      | Line number of the stub                                        |
| LINE     | VARCHAR2 (1800) |      | Text of the stub                                               |

## 7.239 PUBLIC\_DEPENDENCY

PUBLIC\_DEPENDENCY lists dependencies to and from objects, by object number.

| Column               | Datatype | NULL     | Description                           |
|----------------------|----------|----------|---------------------------------------|
| OBJECT_ID            | NUMBER   | NOT NULL | Object number                         |
| REFERENCED_OBJECT_ID | NUMBER   | NOT NULL | Referenced object (the parent object) |

## 7.240 PUBLICSYN

PUBLICSYN contains information on public synonyms.

| Column   | Datatype       | NULL | Description                         |
|----------|----------------|------|-------------------------------------|
| SNAME    | VARCHAR2 (128) |      | Name of the synonym                 |
| CREATOR  | VARCHAR2 (128) |      | Owner of the synonym                |
| TNAME    | VARCHAR2 (128) |      | Table of which this is a synonym    |
| DATABASE | VARCHAR2 (128) |      | Database in which the table resides |
| TABTYPE  | VARCHAR2 (10)  |      | Type of table                       |

## 7.241 QUEUE\_PRIVILEGES

QUEUE\_PRIVILEGES shows all Advanced Queuing object privileges granted to the session.

| Column            | Datatype       | NULL     | Description                                         |
|-------------------|----------------|----------|-----------------------------------------------------|
| GRANTEE           | VARCHAR2 (128) | NOT NULL | Name of the user or role to whom access was granted |
| OWNER             | VARCHAR2 (128) | NOT NULL | Owner of the object                                 |
| NAME              | VARCHAR2 (128) | NOT NULL | Name of the object                                  |
| GRANTOR           | VARCHAR2 (128) | NOT NULL | Name of the user who performed the grant            |
| ENQUEUE_PRIVILEGE | NUMBER         |          | Permission to ENQUEUE to the queue                  |
| DEQUEUE_PRIVILEGE | NUMBER         |          | Permission to DEQUEUE from the queue                |

## 7.242 RECYCLEBIN

RECYCLEBIN is a synonym for USER\_RECYCLEBIN.

**See Also:**

"USER\_RECYCLEBIN"

## 7.243 REDACTION\_COLUMNS

REDACTION\_COLUMNS describes all redacted columns in the database, giving the owner of the table or view within which the column resides, the object name, the column name, the type of redaction function, the parameters to the redaction function (if any), and an optional user-provided description of the redaction function that is performed on the column.

| Column                 | Datatype        | NULL     | Description                                                                                                                                                                                                                        |
|------------------------|-----------------|----------|------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|
| OBJECT_OWNER           | VARCHAR2 (128)  | NOT NULL | Owner of the object that is redacted                                                                                                                                                                                               |
| OBJECT_NAME            | VARCHAR2 (128)  | NOT NULL | Name of the object that is redacted                                                                                                                                                                                                |
| COLUMN_NAME            | VARCHAR2 (128)  | NOT NULL | Name of the column that is redacted                                                                                                                                                                                                |
| FUNCTION_TYPE          | VARCHAR2 (27)   |          | Redaction function for this column                                                                                                                                                                                                 |
| FUNCTION_PARAMETERS    | VARCHAR2 (1000) |          | Redaction function_parameters for this column                                                                                                                                                                                      |
| REGEXP_PATTERN         | VARCHAR2 (512)  |          | Regular expression pattern to search for                                                                                                                                                                                           |
| REGEXP_REPLACE_STRING  | VARCHAR2 (4000) |          | Replacement string (up to 4000 characters in length) with up to 500 back-references to subexpressions in the form \n, (where n is a number from 1 to 9)                                                                            |
| REGEXP_POSITION        | NUMBER          |          | Integer counting from 1, giving the position where the search should begin                                                                                                                                                         |
| REGEXP_OCCURRENCE      | NUMBER          |          | Either 0 (to replace all occurrences of the match), or a positive integer n (to replace the nth occurrence of the match)                                                                                                           |
| REGEXP_MATCH_PARAMETER | VARCHAR2 (10)   |          | To change the default matching behavior, possible values are a combination of i, c, n, m, and x. See the documentation of the match_parameter in the REGEXP_REPLACE section of the <i>Oracle Database SQL Language Reference</i> . |

| Column             | Datatype        | NULL | Description                                                                                                                                                                                              |
|--------------------|-----------------|------|----------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|
| COLUMN_DESCRIPTION | VARCHAR2 (4000) |      | User-provided description of the redaction function that is performed on the column. For example, for a Social Security Number column, the description might be: "redact SSN to XXX-XX-(last 4 digits)". |

**See Also:**

*Oracle Database Data Redaction Guide* for more information about Oracle Data Redaction

## 7.244 REDACTION\_EXPRESSIONS

REDACTION\_EXPRESSIONS shows all the Data Redaction named Policy Expressions in the database.

| Column                        | Datatype        | NULL | Description                                                                      |
|-------------------------------|-----------------|------|----------------------------------------------------------------------------------|
| POLICY_EXPRESSION_NAME        | VARCHAR2 (256)  |      | Customer-specified name of the named Policy Expression                           |
| EXPRESSION                    | VARCHAR2 (4000) |      | The SQL expression defined for this Data Redaction named Policy Expression       |
| OBJECT_OWNER                  | VARCHAR2 (128)  |      | Owner of the table or view which this named Policy Expression is associated with |
| OBJECT_NAME                   | VARCHAR2 (128)  |      | Name of the table or view which this named Policy Expression is associated with  |
| COLUMN_NAME                   | VARCHAR2 (128)  |      | Name of the column which this named Policy Expression is associated with         |
| POLICY_EXPRESSION_DESCRIPTION | VARCHAR2 (4000) |      | Description of this named Policy Expression                                      |

**See Also:**

*Oracle Database Data Redaction Guide* for more information about Oracle Data Redaction

## 7.245 REDACTION\_POLICIES

REDACTION\_POLICIES displays all redaction policies in the database.

| Column       | Datatype       | NULL     | Description                         |
|--------------|----------------|----------|-------------------------------------|
| OBJECT_OWNER | VARCHAR2 (128) | NOT NULL | Owner of the object with the policy |
| OBJECT_NAME  | VARCHAR2 (128) | NOT NULL | Name of the object with the policy  |
| POLICY_NAME  | VARCHAR2 (128) | NOT NULL | Name of the policy                  |

| Column             | Datatype        | NULL     | Description                                               |
|--------------------|-----------------|----------|-----------------------------------------------------------|
| EXPRESSION         | VARCHAR2 (4000) | NOT NULL | Expression for this policy                                |
| ENABLE             | VARCHAR2 (7)    |          | Indicates whether the policy is enabled (YES) or not (NO) |
| POLICY_DESCRIPTION | VARCHAR2 (4000) |          | Description of the policy                                 |

#### See Also:

*Oracle Database Data Redaction Guide* for more information about Oracle Data Redaction

## 7.246 REDACTION\_VALUES\_FOR\_TYPE\_FULL

REDACTION\_VALUES\_FOR\_TYPE\_FULL shows all of the current values for full redaction.

For example, if a redaction policy is applied to a column of type `BINARY_DOUBLE` and the redaction type is full redaction, that column will be redacted with the value shown in the `BINARY_DOUBLE_VALUE` column of this view.

| Column                         | Datatype                     | NULL     | Description                                                             |
|--------------------------------|------------------------------|----------|-------------------------------------------------------------------------|
| NUMBER_VALUE                   | NUMBER                       | NOT NULL | Redaction result for full redaction on NUMBER columns                   |
| BINARY_FLOAT_VALUE             | BINARY_FLOAT                 | NOT NULL | Redaction result for full redaction on BINARY_FLOAT columns             |
| BINARY_DOUBLE_VALUE            | BINARY_DOUBLE                | NOT NULL | Redaction result for full redaction on BINARY_DOUBLE columns            |
| CHAR_VALUE                     | VARCHAR2 (1)                 |          | Redaction result for full redaction on CHAR columns                     |
| VARCHAR_VALUE                  | VARCHAR2 (1)                 |          | Redaction result for full redaction on VARCHAR2 columns                 |
| NCHAR_VALUE                    | NCHAR (1)                    |          | Redaction result for full redaction on NCHAR columns                    |
| NVARCHAR_VALUE                 | NVARCHAR2 (1)                |          | Redaction result for full redaction on NVARCHAR2 columns                |
| DATE_VALUE                     | DATE                         | NOT NULL | Redaction result for full redaction on DATE columns                     |
| TIMESTAMP_VALUE                | TIMESTAMP (6)                | NOT NULL | Redaction result for full redaction on TIMESTAMP columns                |
| TIMESTAMP_WITH_TIME_ZONE_VALUE | TIMESTAMP (6) WITH TIME ZONE | NOT NULL | Redaction result for full redaction on TIMESTAMP WITH TIME ZONE columns |
| BLOB_VALUE                     | BLOB                         |          | Redaction result for full redaction on BLOB columns                     |
| CLOB_VALUE                     | CLOB                         |          | Redaction result for full redaction on CLOB columns                     |
| NCLOB_VALUE                    | NCLOB                        |          | Redaction result for full redaction on NCLOB columns                    |

## 7.247 REPORT\_COMPONENTS

REPORT\_COMPONENTS displays metadata about different database components offering reports in XML, HTML, or Text formats.

Reports are first generated in XML and can then be translated into HTML or Text formats, for supported report types. Each component generates one or more reports containing different types of content. You can request reports using the component's own PL/SQL interface (for example, DBMS\_SQLTUNE for SQL Tuning Advisor).

| Column                | Datatype       | NULL     | Description                                                                                                   |
|-----------------------|----------------|----------|---------------------------------------------------------------------------------------------------------------|
| COMPONENT_ID          | NUMBER         | NOT NULL | ID number of the database component building the report                                                       |
| COMPONENT_NAME        | VARCHAR2 (128) | NOT NULL | Name of the database component building the report (for example, <code>sqltune</code> for SQL Tuning Advisor) |
| COMPONENT_DESCRIPTION | VARCHAR2 (256) |          | Component description                                                                                         |
| REPORT_ID             | NUMBER         | NOT NULL | ID number of the report type                                                                                  |
| REPORT_NAME           | VARCHAR2 (128) | NOT NULL | Name of the report type                                                                                       |
| REPORT_DESCRIPTION    | VARCHAR2 (256) |          | Description of the report type                                                                                |
| SCHEMA_FILENAME       | VARCHAR2 (500) |          | Filename of the XML schema for the report (optional)                                                          |
| SCHEMA_DATA           | XMLTYPE        |          | XML schema for this report (optional)                                                                         |

## 7.248 REPORT\_FILES

REPORT\_FILES displays data for all of the XML schema and XSLT files associated with reports for a given component.

| Column   | Datatype       | NULL     | Description                      |
|----------|----------------|----------|----------------------------------|
| FILENAME | VARCHAR2 (500) | NOT NULL | Name of the XSLT/XML schema file |
| DATA     | XMLTYPE        |          | XSLT/XML schema data             |

## 7.249 REPORT\_FORMATS

REPORT\_FORMATS displays metadata about the different output formats supported for reports.

Some reports are generated in XML only, in which case no data will appear in this view. When reports support HTML or Text formats (for example, the SQL Performance Analyzer reports), metadata about the format will appear in this view.

| Column         | Datatype       | NULL     | Description                                                                                                                                                                                                                                                                                                                                                                                                                                                                                     |
|----------------|----------------|----------|-------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|
| COMPONENT_ID   | NUMBER         | NOT NULL | ID number of the database component building the report                                                                                                                                                                                                                                                                                                                                                                                                                                         |
| COMPONENT_NAME | VARCHAR2 (128) | NOT NULL | Name of the database component building the report (for example, <code>sqltune</code> for SQL Tuning Advisor)                                                                                                                                                                                                                                                                                                                                                                                   |
| REPORT_ID      | NUMBER         | NOT NULL | ID number of the report type                                                                                                                                                                                                                                                                                                                                                                                                                                                                    |
| REPORT_NAME    | VARCHAR2 (128) | NOT NULL | Name of the report type                                                                                                                                                                                                                                                                                                                                                                                                                                                                         |
| FORMAT_NAME    | VARCHAR2 (128) | NOT NULL | Name of the report format                                                                                                                                                                                                                                                                                                                                                                                                                                                                       |
| DESCRIPTION    | VARCHAR2 (256) |          | Description of the report format                                                                                                                                                                                                                                                                                                                                                                                                                                                                |
| TYPE           | VARCHAR2 (6)   |          | Format type: <ul style="list-style-type: none"><li>• <code>XSLT</code> - Reports generated by applying an XSLT style sheet to XML data (for example, HTML reports)</li><li>• <code>Text</code> - Reports generated by first applying an XSLT style sheet to convert XML data to HTML, and then converting the HTML to formatted Text using the internal report HTML-to-text translation engine.</li><li>• <code>Custom</code> - Custom formats implemented natively by report clients</li></ul> |
| XSLT_FILENAME  | VARCHAR2 (500) |          | Name of the XSLT used for this format ( <code>XSLT</code> and <code>Text</code> format types only)                                                                                                                                                                                                                                                                                                                                                                                              |
| XSLT_DATA      | XMLTYPE        |          | XSLT data ( <code>XSLT</code> and <code>Text</code> format types only)                                                                                                                                                                                                                                                                                                                                                                                                                          |
| TEXT_LINESIZE  | NUMBER         |          | Maximum line size of the formatted text report ( <code>Text</code> format types only)                                                                                                                                                                                                                                                                                                                                                                                                           |

## 7.250 RESOURCE\_COST

RESOURCE\_COST lists the cost for each resource.

| Column        | Datatype      | NULL     | Description          |
|---------------|---------------|----------|----------------------|
| RESOURCE_NAME | VARCHAR2 (32) | NOT NULL | Name of the resource |
| UNIT_COST     | NUMBER        | NOT NULL | Cost of the resource |

## 7.251 RESOURCE\_MAP

RESOURCE\_MAP describes resources. This table can be used to map resource names to resource numbers.

| Column    | Datatype      | NULL     | Description           |
|-----------|---------------|----------|-----------------------|
| RESOURCE# | NUMBER        | NOT NULL | Numeric resource code |
| TYPE#     | NUMBER        | NOT NULL | Numeric type code     |
| NAME      | VARCHAR2 (32) | NOT NULL | Name of the resource  |

## 7.252 RESOURCE\_VIEW

RESOURCE\_VIEW contains one row for each resource in Oracle XML DB Repository.

| Column   | Datatype                                                                                          | NULL | Description                                            |
|----------|---------------------------------------------------------------------------------------------------|------|--------------------------------------------------------|
| RES      | XMLTYPE(XMLSchema "http://xmlns.oracle.com/xd<br>b/<br>XDBResource.xsd"<br>Element<br>"Resource") |      | A resource in the repository                           |
| ANY_PATH | VARCHAR2 (4000)                                                                                   |      | An (absolute) path to the resource                     |
| RESID    | RAW (16)                                                                                          |      | Resource OID, which is a unique handle to the resource |

### Note:

Oracle XML DB Repository is deprecated in Oracle Database 23ai. Oracle recommends that you replace any functionality used in Oracle XML DB Repository with alternative technologies.

## 7.253 ROLE\_ROLE\_PRIVS

ROLE\_ROLE\_PRIVS describes the roles granted to other roles.

Information is provided only about roles to which the user has access.

| Column       | Datatype       | NULL | Description                                           |
|--------------|----------------|------|-------------------------------------------------------|
| ROLE         | VARCHAR2 (128) |      | Name of the role                                      |
| GRANTED_ROLE | VARCHAR2 (128) |      | Role that was granted                                 |
| ADMIN_OPTION | VARCHAR2 (3)   |      | Signifies that the role was granted with ADMIN option |

| Column    | Datatype     | NULL | Description                                                                                                                                                                                                                                 |
|-----------|--------------|------|---------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|
| COMMON    | VARCHAR2 (3) |      | Indicates how the grant was made. Possible values: <ul style="list-style-type: none"> <li>YES if the role was granted commonly (CONTAINER=ALL was used)</li> <li>NO if the role was granted locally (CONTAINER=ALL was not used)</li> </ul> |
| INHERITED | VARCHAR2 (3) |      | Indicates whether the role grant was inherited from another container (YES) or not (NO)                                                                                                                                                     |

## 7.254 ROLE\_SCHEMA\_PRIVS

ROLE\_SCHEMA\_PRIVS describes schema privileges granted to roles.

Information is provided only about roles to which the user has access.

| Column       | Datatype       | NULL | Description                                                                                                                                                                                                                                           |
|--------------|----------------|------|-------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|
| ROLE         | VARCHAR2 (128) |      | Name of the role                                                                                                                                                                                                                                      |
| PRIVILEGE    | VARCHAR2 (40)  |      | Schema privilege granted to the role                                                                                                                                                                                                                  |
| SCHEMA       | VARCHAR2 (128) |      | Schema on which the privilege was granted                                                                                                                                                                                                             |
| ADMIN_OPTION | VARCHAR2 (3)   |      | Indicates whether the grant was with the ADMIN option (YES) or not (NO)                                                                                                                                                                               |
| COMMON       | VARCHAR2 (3)   |      | Indicates how the grant was made. Possible values: <ul style="list-style-type: none"> <li>YES if the privilege was granted commonly (CONTAINER=ALL was used)</li> <li>NO if the privilege was granted locally (CONTAINER=ALL was not used)</li> </ul> |
| INHERITED    | VARCHAR2 (3)   |      | Indicates whether the role grant was inherited from another container (YES) or not (NO)                                                                                                                                                               |

## 7.255 ROLE\_SYS\_PRIVS

ROLE\_SYS\_PRIVS describes system privileges granted to roles.

Information is provided only about roles to which the user has access.

| Column       | Datatype       | NULL | Description                                                             |
|--------------|----------------|------|-------------------------------------------------------------------------|
| ROLE         | VARCHAR2 (128) |      | Name of the role                                                        |
| PRIVILEGE    | VARCHAR2 (40)  |      | System privilege granted to the role                                    |
| ADMIN_OPTION | VARCHAR2 (3)   |      | Indicates whether the grant was with the ADMIN option (YES) or not (NO) |

| Column    | Datatype     | NULL | Description                                                                                                                                                                                                                                               |
|-----------|--------------|------|-----------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|
| COMMON    | VARCHAR2 (3) |      | Indicates how the grant was made. Possible values: <ul style="list-style-type: none"> <li>• YES if the privilege was granted commonly (CONTAINER=ALL was used)</li> <li>• NO if the privilege was granted locally (CONTAINER=ALL was not used)</li> </ul> |
| INHERITED | VARCHAR2 (3) |      | Indicates whether the role grant was inherited from another container (YES) or not (NO)                                                                                                                                                                   |

## 7.256 ROLE\_SYS\_PRIVS\_ALL

ROLE\_SYS\_PRIVS\_ALL describes system privileges and schema privileges granted to roles.

Information is provided only about roles to which the user has access.

| Column       | Datatype       | NULL | Description                                                                                                                                                                                                                                               |
|--------------|----------------|------|-----------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|
| ROLE         | VARCHAR2 (128) |      | Name of the role                                                                                                                                                                                                                                          |
| PRIVILEGE    | VARCHAR2 (40)  |      | Privilege granted to the role                                                                                                                                                                                                                             |
| SCHEMA       | VARCHAR2 (128) |      | Schema on which the privilege was granted<br>For system privileges, the value of this column is null.                                                                                                                                                     |
| ADMIN_OPTION | VARCHAR2 (3)   |      | Indicates whether the grant was with the ADMIN option (YES) or not (NO)                                                                                                                                                                                   |
| COMMON       | VARCHAR2 (3)   |      | Indicates how the grant was made. Possible values: <ul style="list-style-type: none"> <li>• YES if the privilege was granted commonly (CONTAINER=ALL was used)</li> <li>• NO if the privilege was granted locally (CONTAINER=ALL was not used)</li> </ul> |
| INHERITED    | VARCHAR2 (3)   |      | Indicates whether the role grant was inherited from another container (YES) or not (NO)                                                                                                                                                                   |

### Note:

## 7.257 ROLE\_TAB\_PRIVS

ROLE\_TAB\_PRIVS describes table privileges granted to roles. Information is provided only about roles to which the user has access.

| Column      | Datatype       | NULL | Description                       |
|-------------|----------------|------|-----------------------------------|
| ROLE        | VARCHAR2 (128) |      | Name of the role                  |
| OWNER       | VARCHAR2 (128) |      | Owner of the object               |
| TABLE_NAME  | VARCHAR2 (128) |      | Name of the object                |
| COLUMN_NAME | VARCHAR2 (128) |      | Name of the column, if applicable |

| Column    | Datatype      | NULL | Description                                                                                                                                                                                                                                           |
|-----------|---------------|------|-------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|
| PRIVILEGE | VARCHAR2 (40) |      | Object privilege granted to the role                                                                                                                                                                                                                  |
| GRANTABLE | VARCHAR2 (3)  |      | YES if the role was granted with ADMIN OPTION; otherwise NO                                                                                                                                                                                           |
| COMMON    | VARCHAR2 (3)  |      | Indicates how the grant was made. Possible values: <ul style="list-style-type: none"> <li>YES if the privilege was granted commonly (CONTAINER=ALL was used)</li> <li>NO if the privilege was granted locally (CONTAINER=ALL was not used)</li> </ul> |
| INHERITED | VARCHAR2 (3)  |      | Indicates whether the role grant was inherited from another container (YES) or not (NO)                                                                                                                                                               |

## 7.258 SCHEDULER\_BATCH\_ERRORS

SCHEDULER\_BATCH\_ERRORS displays the errors caused by each call in the batch after a Scheduler batch call (when the COMMIT\_SEMANTICS argument has been set to ABSORB\_ERRORS).

| Column          | Datatype        | NULL | Description                                                                                                  |
|-----------------|-----------------|------|--------------------------------------------------------------------------------------------------------------|
| ARRAY_INDEX     | NUMBER          |      | Index of the job in the batch                                                                                |
| OBJECT_TYPE     | VARCHAR2 (30)   |      | Object type: <ul style="list-style-type: none"> <li>JOB</li> <li>LIGHTWEIGHT JOB</li> <li>UNKNOWN</li> </ul> |
| OBJECT_NAME     | VARCHAR2 (100)  |      | Full name of the object (including schema)                                                                   |
| ATTR_NAME       | VARCHAR2 (30)   |      | Name of the attribute being set (if this is a batch set attribute call); NULL otherwise                      |
| ERROR_CODE      | NUMBER          |      | Top level error code                                                                                         |
| ERROR_MESSAGE   | VARCHAR2 (4000) |      | Complete error stack                                                                                         |
| ADDITIONAL_INFO | VARCHAR2 (4000) |      | Additional information (currently unused)                                                                    |

## 7.259 SCHEMA\_EXPORT\_OBJECTS

SCHEMA\_EXPORT\_OBJECTS lists simple path names for some of the object types belonging to a Data Pump schema export, which is invoked using the SCHEMAS parameter on the expdp command.

Users of the Data Pump Export and Import utilities can query this view to determine valid values for the EXCLUDE and INCLUDE parameters.

| Column      | Datatype        | NULL     | Description                                                                                                                                       |
|-------------|-----------------|----------|---------------------------------------------------------------------------------------------------------------------------------------------------|
| OBJECT_PATH | VARCHAR2 (200)  | NOT NULL | Simple path name for the object type                                                                                                              |
| COMMENTS    | VARCHAR2 (2000) |          | Comment on the object type                                                                                                                        |
| NAMED       | CHAR (1)        |          | Do objects of this type have names? If yes (Y), then the name can be specified in the optional name_clause on the EXCLUDE and INCLUDE parameters. |

**See Also:**

- "DATABASE\_EXPORT\_OBJECTS"
- "TABLE\_EXPORT\_OBJECTS"
- *Oracle Database Utilities* for more information on performing a full Data Pump export using the `expdp` command

## 7.260 SEQ

SEQ is a synonym for USER\_SEQUENCES.

**See Also:**

"USER\_SEQUENCES"

## 7.261 SESSION\_CONTEXT

SESSION\_CONTEXT describes the context attributes and their values set for the current session.

| Column    | Datatype        | NULL | Description                               |
|-----------|-----------------|------|-------------------------------------------|
| NAMESPACE | VARCHAR2 (128)  |      | Namespace that the active attribute is in |
| ATTRIBUTE | VARCHAR2 (128)  |      | Name of the active attribute              |
| VALUE     | VARCHAR2 (4000) |      | Value of the active attribute             |

## 7.262 SESSION\_PRIVS

SESSION\_PRIVS describes the system privileges that are currently available to the user.

| Column    | Datatype      | NULL     | Description           |
|-----------|---------------|----------|-----------------------|
| PRIVILEGE | VARCHAR2 (40) | NOT NULL | Name of the privilege |

## 7.263 SESSION\_PRIVS\_ALL

SESSION\_PRIVS\_ALL describes the system privileges and schema privileges that are currently available to the user.

| Column    | Datatype       | NULL | Description                                                                                           |
|-----------|----------------|------|-------------------------------------------------------------------------------------------------------|
| PRIVILEGE | VARCHAR2 (40)  |      | Name of the privilege                                                                                 |
| SCHEMA    | VARCHAR2 (128) |      | Schema on which the privilege was granted<br>For system privileges, the value of this column is null. |

**Note:**

This view is available starting with Oracle Database 23ai.

## 7.264 SESSION\_SCHEMA\_PRIVS

SESSION\_SCHEMA\_PRIVS describes the schema privileges that are currently available to the user.

| Column    | Datatype       | NULL     | Description                               |
|-----------|----------------|----------|-------------------------------------------|
| PRIVILEGE | VARCHAR2 (40)  | NOT NULL | Schema privilege                          |
| SCHEMA    | VARCHAR2 (128) | NOT NULL | Schema on which the privilege was granted |

**Note:**

This view is available starting with Oracle Database 23ai.

## 7.265 SESSION\_ROLES

SESSION\_ROLES describes the roles that are currently enabled to the user.

| Column | Datatype       | NULL     | Description      |
|--------|----------------|----------|------------------|
| ROLE   | VARCHAR2 (128) | NOT NULL | Name of the role |

## 7.266 SHARD\_RAFT\_PARAMETERS

SHARD\_RAFT\_PARAMETERS displays Oracle Globally Distributed Database Raft replication parameters and their values.

This view displays the parameters that are set at the replication unit level on each shard.

| Column       | Datatype        | NULL     | Description                      |
|--------------|-----------------|----------|----------------------------------|
| ORA_SHARD_ID | NUMBER          |          | Shard identifier                 |
| RU_ID        | NUMBER          |          | Replication unit (RU) identifier |
| NAME         | VARCHAR2 (128)  | NOT NULL | Parameter name                   |
| VALUE        | VARCHAR2 (4000) |          | Parameter value                  |

**Note:**

This view is available starting with Oracle Database 23ai.

**See Also:**

*Oracle Globally Distributed Database Guide* for more information about Raft replication parameters

## 7.267 SOURCE\_SIZE

Oracle accesses this view to create views about object size.

**See Also:**

"[DBA\\_OBJECT\\_SIZE](#)" and "[USER\\_OBJECT\\_SIZE](#)"

## 7.268 STMT\_AUDIT\_OPTION\_MAP

STMT\_AUDIT\_OPTION\_MAP describes auditing option type codes. This table can be used to map auditing option type numbers to type names.

**Note:**

This view is populated in any Oracle Database where auditing is enabled, regardless of whether pre-Oracle Database 12c auditing or unified auditing is enabled for the database.

- See *Oracle Database Security Guide* for more information about unified auditing.
- See *Oracle Database Upgrade Guide* for more information about migrating to unified auditing.

**Note:**

The mapping explained in this view is valid for audit configuration from the `DBA_STMT_AUDIT_OPTS` view only, and such audit configurations can be made when unified auditing is not enabled.

| Column   | Datatype      | NULL     | Description                          |
|----------|---------------|----------|--------------------------------------|
| OPTION#  | NUMBER        | NOT NULL | Numeric auditing option type code    |
| NAME     | VARCHAR2 (40) | NOT NULL | Name of the type of auditing option  |
| PROPERTY | NUMBER        | NOT NULL | Property flag of the auditing option |

**See Also:**["DBA\\_STMT\\_AUDIT\\_OPTS"](#)

## 7.269 SYN

SYN is a synonym for USER\_SYNONYMS.

**See Also:**["ALL\\_SYNONYMS"](#)

## 7.270 SYNONYMS

SYNONYMS is included for compatibility. Oracle recommends that you do not use this view.

## 7.271 SYS\_OBJECTS

SYS\_OBJECTS maps object IDs to object types and segment data block addresses.

| Column          | Datatype      | NULL | Description                                                                           |
|-----------------|---------------|------|---------------------------------------------------------------------------------------|
| OBJECT_TYPE     | VARCHAR2 (18) |      | Type of the object                                                                    |
| OBJECT_TYPE_ID  | NUMBER        |      | Type ID of the object                                                                 |
| SEGMENT_TYPE_ID | NUMBER        |      | Type of segment: TABLE, CLUSTER, INDEX, ROLLBACK, DEFERRED ROLLBACK, TEMPORARY, CACHE |
| OBJECT_ID       | NUMBER        |      | Object identifier                                                                     |
| HEADER_FILE     | NUMBER        |      | ID of the file containing the segment header                                          |
| HEADER_BLOCK    | NUMBER        |      | ID of the block containing the segment header                                         |
| TS_NUMBER       | NUMBER        |      | The tablespace number                                                                 |

## 7.272 SYSCATALOG

SYSCATALOG is included for compatibility.

Oracle recommends that you do not use this view.

## 7.273 SYSFILES

SYSFILES is included for compatibility.

Oracle recommends that you do not use this view.

## 7.274 SYSSEGOBJ

SYSSEGOBJ is included for compatibility.

Oracle recommends that you do not use this view.

## 7.275 SYSTEM\_PRIVILEGE\_MAP

SYSTEM\_PRIVILEGE\_MAP describes privilege (auditing option) type codes.

This table can be used to map privilege (auditing option) type numbers to type names.

| Column    | Datatype      | NULL     | Description                                                                                                                                                                                                                                                  |
|-----------|---------------|----------|--------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|
| PRIVILEGE | NUMBER        | NOT NULL | Numeric privilege (auditing option) type code                                                                                                                                                                                                                |
| NAME      | VARCHAR2 (40) | NOT NULL | Name of the type of privilege (auditing option).<br>See <i>Oracle Database SQL Language Reference</i> for a list of valid system privileges.                                                                                                                 |
| PROPERTY  | NUMBER        | NOT NULL | Property flag of the privilege (auditing option): <ul style="list-style-type: none"><li>0 - Indicates a privilege that can be granted with a SQL GRANT statement</li><li>1 - Indicates a privilege that can only be granted using a PL/SQL package</li></ul> |

## 7.276 TAB

TAB is included for compatibility.

Oracle recommends that you do not use this view.

## 7.277 TABLE\_EXPORT\_OBJECTS

TABLE\_EXPORT\_OBJECTS lists simple path names for some of the object types belonging to a Data Pump schema export, which is invoked using the TABLES parameter on the expdp command.

Users of the Data Pump Export and Import utilities can query this view to determine valid values for the EXCLUDE and INCLUDE parameters.

| Column      | Datatype        | NULL     | Description                                                                                                                                       |
|-------------|-----------------|----------|---------------------------------------------------------------------------------------------------------------------------------------------------|
| OBJECT_PATH | VARCHAR2 (200)  | NOT NULL | Simple path name for the object type                                                                                                              |
| COMMENTS    | VARCHAR2 (2000) |          | Comment on the object type                                                                                                                        |
| NAMED       | CHAR (1)        |          | Do objects of this type have names? If yes (Y), then the name can be specified in the optional name_clause on the EXCLUDE and INCLUDE parameters. |

**See Also:**

- ["DATABASE\\_EXPORT\\_OBJECTS"](#)
- ["SCHEMA\\_EXPORT\\_OBJECTS"](#)
- *Oracle Database Utilities* for more information on performing a full Data Pump export using the `expdp` command

## 7.278 TABLE\_PRIVILEGE\_MAP

TABLE\_PRIVILEGE\_MAP describes privilege (auditing option) type codes.

This table can be used to map privilege (auditing option) type numbers to type names.

| Column    | Datatype      | NULL     | Description                                     |
|-----------|---------------|----------|-------------------------------------------------|
| PRIVILEGE | NUMBER        | NOT NULL | Numeric privilege (auditing option) type code   |
| NAME      | VARCHAR2 (40) | NOT NULL | Name of the type of privilege (auditing option) |

## 7.279 TABQUOTAS

TABQUOTAS is included for compatibility.

Oracle recommends that you do not use this view.

## 7.280 TABS

TABS is a synonym for USER\_TABLES.

**See Also:**

- ["USER\\_TABLES"](#)

## 7.281 TRUSTED\_SERVERS

TRUSTED\_SERVERS displays whether a server is trusted or untrusted.

### Note:

Enterprise User Security (EUS) is deprecated with Oracle Database 23ai.

Oracle recommends that you migrate to using Centrally Managed Users (CMU). This feature enables you to directly connect with Microsoft Active Directory without an intervening directory service for enterprise user authentication and authorization to the database. If your Oracle Database is in the cloud, you can also choose to move to one of the newer integrations with a cloud identity provider.

| Column | Datatype       | NULL | Description                                                                                                                                     |
|--------|----------------|------|-------------------------------------------------------------------------------------------------------------------------------------------------|
| TRUST  | VARCHAR2 (9)   |      | Trustedness of the server listed. Values can be TRUSTED or UNTRUSTED servers which are not listed in the NAME column have opposite trustedness. |
| NAME   | VARCHAR2 (128) |      | Server name. Can be a specific server name or ALL for all servers.                                                                              |

Table 7-2 shows examples of the values returned depending on the status of the servers.

**Table 7-2 TRUSTED\_SERVERS Values**

| Condition (If . . . )                    | TRUSTED column | NAME column |
|------------------------------------------|----------------|-------------|
| ... all servers are trusted              | Trusted        | ALL         |
| ... no servers are trusted               | Untrusted      | ALL         |
| ... all servers except DB1 are trusted   | Untrusted      | DB1         |
| ... all servers except DB1 are untrusted | Trusted        | DB1         |

## 7.282 TS\_PITR\_CHECK

This view, created by `catpitr.sql`, provides information on any dependencies or restrictions that might prevent tablespace point-in-time recovery from proceeding.

This view applies only to the tablespace point-in-time recovery feature.

| Column          | Datatype       | NULL | Description                                                                                                                                      |
|-----------------|----------------|------|--------------------------------------------------------------------------------------------------------------------------------------------------|
| OBJ1_OWNER      | VARCHAR2 (128) |      | The owner of the object preventing tablespace point-in-time recovery. See the <code>REASON</code> column for details.                            |
| OBJ1_NAME       | VARCHAR2 (128) |      | The name of the object preventing tablespace point-in-time recovery                                                                              |
| OBJ1_SUBNAME    | VARCHAR2 (128) |      | Subordinate to <code>OBJ1_NAME</code>                                                                                                            |
| OBJ1_TYPE       | VARCHAR2 (16)  |      | The object type for the object preventing tablespace point-in-time recovery                                                                      |
| TS1_NAME        | VARCHAR2 (30)  |      | Name of the tablespace containing the object preventing tablespace point-in-time recovery                                                        |
| OBJ2_NAME       | VARCHAR2 (128) |      | The name of a second object which may be preventing tablespace point-in-time recovery. If NULL, object 1 is the only object preventing recovery. |
| OBJ2_SUBNAME    | VARCHAR2 (128) |      | Subordinate to <code>OBJ2_NAME</code>                                                                                                            |
| OBJ2_TYPE       | VARCHAR2 (15)  |      | The object type for the second object (will be NULL if <code>OBJ2_NAME</code> is NULL)                                                           |
| OBJ2_OWNER      | VARCHAR2 (128) |      | The owner of the second object (will be NULL if <code>OBJ2_NAME</code> is NULL)                                                                  |
| TS2_NAME        | VARCHAR2 (30)  |      | Name of the tablespace containing second object which may be preventing tablespace point-in-time recovery (-1 indicates not applicable)          |
| CONSTRAINT_NAME | VARCHAR2 (128) |      | Name of the constraint                                                                                                                           |
| REASON          | VARCHAR2 (81)  |      | Reason why tablespace point-in-time recovery cannot proceed                                                                                      |

**See Also:**

*Oracle Database Backup and Recovery User's Guide* for more information about tablespace point-in-time recovery

## 7.283 TS\_PITR\_OBJECTS\_TO\_BE\_DROPPED

`TS_PITR_OBJECTS_TO_BE_DROPPED` lists all objects lost as a result of performing tablespace point-in-time recovery.

This view applies only to the tablespace point-in-time recovery feature.

| Column          | Datatype       | NULL     | Description                                                                                          |
|-----------------|----------------|----------|------------------------------------------------------------------------------------------------------|
| OWNER           | VARCHAR2 (128) | NOT NULL | The owner of the object                                                                              |
| NAME            | VARCHAR2 (128) | NOT NULL | The name of the object that will be lost as a result of undergoing tablespace point-in-time recovery |
| CREATION_TIME   | DATE           | NOT NULL | Creation timestamp of the object                                                                     |
| TABLESPACE_NAME | VARCHAR2 (30)  |          | Name of the tablespace containing the object                                                         |

**See Also:**

*Oracle Database Backup and Recovery User's Guide* for more information about tablespace point-in-time recovery

## 7.284 UNI\_PLUGGABLE\_SET\_CHECK

UNI\_PLUGGABLE\_SET\_CHECK contains pluggable check information.

| Column          | Datatype       | NULL | Description                          |
|-----------------|----------------|------|--------------------------------------|
| OBJ1_OWNER      | VARCHAR2 (128) |      | Owner of object                      |
| OBJ1_NAME       | VARCHAR2 (128) |      | Object 1                             |
| OBJ1_SUBNAME    | VARCHAR2 (128) |      | SubObject1Name                       |
| OBJ1_TYPE       | VARCHAR2 (18)  |      | Object Type                          |
| TS1_NAME        | VARCHAR2 (30)  |      | Tablespace containing Object 1       |
| OBJ2_NAME       | VARCHAR2 (128) |      | Object Name                          |
| OBJ2_SUBNAME    | VARCHAR2 (128) |      | SubObject2Name                       |
| OBJ2_TYPE       | VARCHAR2 (18)  |      | Object Type                          |
| OBJ2_OWNER      | VARCHAR2 (128) |      | Object owner of second object        |
| TS2_NAME        | VARCHAR2 (30)  |      | Tablespace containing Object 1       |
| CONSTRAINT_NAME | VARCHAR2 (128) |      | Name of dependent constraint         |
| REASON          | VARCHAR2 (86)  |      | Reason for Pluggable check violation |
| MESG_ID         | NUMBER         |      | The message ID                       |

## 7.285 UNIFIED\_AUDIT\_TRAIL

When unified auditing is enabled in Oracle Database, the audit records are populated in this new audit trail.

This view displays audit records in tabular form by retrieving the audit records from the audit trail.

**Note:**

This view is populated only in an Oracle Database where unified auditing is enabled.

- See *Oracle Database Security Guide* for more information about unified auditing.
- See *Oracle Database Upgrade Guide* for more information about migrating to unified auditing.

| Column              | Datatype        | NULL | Description                                                                                                                                                                                                                                                                                                         |
|---------------------|-----------------|------|---------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|
| AUDIT_TYPE          | VARCHAR2 (64)   |      | Type of auditing: <ul style="list-style-type: none"> <li>• Database Vault</li> <li>• Datapump</li> <li>• Direct path API</li> <li>• FineGrainedAudit</li> <li>• KACL_AUDIT</li> <li>• Label Security</li> <li>• Protocol</li> <li>• RMAN_AUDIT</li> <li>• SQL Firewall</li> <li>• Standard</li> <li>• XS</li> </ul> |
| SESSIONID           | NUMBER          |      | Audit session identifier                                                                                                                                                                                                                                                                                            |
| PROXY_SESSIONID     | NUMBER          |      | Audit session identifier of proxying session                                                                                                                                                                                                                                                                        |
| OS_USERNAME         | VARCHAR2 (128)  |      | Name of the operating system user for the database session                                                                                                                                                                                                                                                          |
| USERHOST            | VARCHAR2 (128)  |      | Name of the host machine from which the session was spawned                                                                                                                                                                                                                                                         |
| TERMINAL            | VARCHAR2 (30)   |      | The operating system terminal of the user session                                                                                                                                                                                                                                                                   |
| INSTANCE_ID         | NUMBER          |      | Instance number as specified in the initialization parameter file, init.ora                                                                                                                                                                                                                                         |
| DBID                | NUMBER          |      | Database identifier of the audited database                                                                                                                                                                                                                                                                         |
| AUTHENTICATION_TYPE | VARCHAR2 (1024) |      | Authentication information for the session user<br><b>See: "<a href="#">AUTHENTICATION_TYPE Description</a>"</b>                                                                                                                                                                                                    |
| DBUSERNAME          | VARCHAR2 (128)  |      | Database user name of the user whose actions were audited                                                                                                                                                                                                                                                           |
| DBPROXY_USERNAME    | VARCHAR2 (128)  |      | Proxying user name, in the case of proxy authentication                                                                                                                                                                                                                                                             |
| EXTERNAL_USERID     | VARCHAR2 (1024) |      | External user name, in the case of network or external authentication                                                                                                                                                                                                                                               |
| GLOBAL_USERID       | VARCHAR2 (32)   |      | Global user identifier for the user, for a user logged in as an enterprise user                                                                                                                                                                                                                                     |
| CLIENT_PROGRAM_NAME | VARCHAR2 (84)   |      | Name of the program used for the database session                                                                                                                                                                                                                                                                   |
| DBLINK_INFO         | VARCHAR2 (4000) |      | Value of SYS_CONTEXT ('USERENV', 'DBLINK_INFO'). Valid if the connection was via a database link.                                                                                                                                                                                                                   |
| XS_USER_NAME        | VARCHAR2 (128)  |      | Name of the Real Application Security user                                                                                                                                                                                                                                                                          |
| XS_SESSIONID        | RAW (33)        |      | Identifier of the Real Application Security session                                                                                                                                                                                                                                                                 |
| ENTRY_ID            | NUMBER          |      | Numeric ID for each audit trail entry in the session                                                                                                                                                                                                                                                                |
| STATEMENT_ID        | NUMBER          |      | Numeric ID for each statement run (a statement may cause many actions)                                                                                                                                                                                                                                              |
| EVENT_TIMESTAMP     | TIMESTAMP (6)   |      | Timestamp of the creation of the audit trail entry in the local time zone                                                                                                                                                                                                                                           |
| EVENT_TIMESTAMP_UTC | TIMESTAMP (6)   |      | Timestamp of the creation of the audit trail entry in UTC (Coordinated Universal Time)                                                                                                                                                                                                                              |
| ACTION_NAME         | VARCHAR2 (64)   |      | Name of the action executed by the user. The name should be read in conjunction with the AUDIT_TYPE to understand the real action.                                                                                                                                                                                  |

| Column                | Datatype        | NULL | Description                                                                                                                                   |
|-----------------------|-----------------|------|-----------------------------------------------------------------------------------------------------------------------------------------------|
| RETURN_CODE           | NUMBER          |      | Oracle error code generated by the action. Zero if the action succeeded                                                                       |
| OS_PROCESS            | VARCHAR2 (16)   |      | Operating system process identifier of the Oracle database process                                                                            |
| TRANSACTION_ID        | RAW (8)         |      | Transaction identifier of the transaction in which the object is modified                                                                     |
| SCN                   | NUMBER          |      | System change number (SCN) of the creation of the audit trail entry                                                                           |
| EXECUTION_ID          | VARCHAR2 (64)   |      | Execution context identifier for each action                                                                                                  |
| OBJECT_SCHEMA         | VARCHAR2 (128)  |      | Schema name of object affected by the action                                                                                                  |
| OBJECT_NAME           | VARCHAR2 (128)  |      | Name of the object affected by the action                                                                                                     |
| SQL_TEXT              | CLOB            |      | SQL associated with the event                                                                                                                 |
| SQL_BINDS             | CLOB            |      | List of bind variables, if any, associated with <code>SQL_TEXT</code>                                                                         |
| APPLICATION_CONTEXTS  | VARCHAR2 (4000) |      | Semicolon-separated list of Application Context Namespace, Attribute, Value information in (APPCTX_NAMESPACE,APPCTX_ATTRIBUTE=<value>) format |
| CLIENT_IDENTIFIER     | VARCHAR2 (64)   |      | Client identifier in each Oracle session                                                                                                      |
| NEW_SCHEMA            | VARCHAR2 (128)  |      | The schema of the object named in the <code>NEW_NAME</code> column                                                                            |
| NEW_NAME              | VARCHAR2 (128)  |      | New name of object after RENAME, or name of underlying object (for example, CREATE INDEX owner.obj_name ON new_owner.new_name)                |
| OBJECT_EDITION        | VARCHAR2 (128)  |      | Name of the edition containing the audited object                                                                                             |
| SYSTEM_PRIVILEGE_USED | VARCHAR2 (1024) |      | Comma-separated list of system privileges used to execute the action                                                                          |
| SYSTEM_PRIVILEGE      | VARCHAR2 (40)   |      | System privilege granted/revoked by a GRANT/ REVOKE statement                                                                                 |
| AUDIT_OPTION          | VARCHAR2 (40)   |      | AUDIT/NOAUDIT SQL command                                                                                                                     |
| OBJECT_PRIVILEGES     | VARCHAR2 (37)   |      | Object privileges granted/revoked by a GRANT/ REVOKE statement                                                                                |
| ROLE                  | VARCHAR2 (128)  |      | Roles granted or revoked or set by GRANT/ REVOKE/SET ROLE command                                                                             |
| TARGET_USER           | VARCHAR2 (128)  |      | User on whom the GRANT/REVOKE/AUDIT/NOAUDIT statement was executed                                                                            |
| EXCLUDED_USER         | VARCHAR2 (128)  |      | User who was excluded when the AUDIT/NOAUDIT statement was executed                                                                           |
| EXCLUDED_SCHEMA       | VARCHAR2 (128)  |      | Displays the schema of the excluded objects                                                                                                   |
| EXCLUDED_OBJECT       | VARCHAR2 (128)  |      | Displays object excluded from the action                                                                                                      |
| CURRENT_USER          | VARCHAR2 (128)  |      | Effective user for the statement execution                                                                                                    |
| ADDITIONAL_INFO       | VARCHAR2 (4000) |      | Text comment on the audit trail entry, if any                                                                                                 |

| Column                   | Datatype        | NULL | Description                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                 |
|--------------------------|-----------------|------|-------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|
| UNIFIED_AUDIT_POLICIES   | VARCHAR2 (4000) |      | Lists the audit policies that caused the current audit record. For example, if <code>SELECT ON SCOTT.EMP</code> was configured from policy <code>SCOTT_EMP_POL</code> , for the <code>SELECT</code> event this column will display <code>SCOTT_EMP_POL</code> .<br><br>If more than one policy was configured, the list of policies that caused the event to be recorded in the audit trail are displayed in a comma-separated list.<br><br>This column has a NULL value for mandatory audit records. See <i>Oracle Database Security Guide</i> for information on activities that are mandatorily audited. |
| FGA_POLICY_NAME          | VARCHAR2 (128)  |      | Fine-grained auditing (FGA) policy name that generated this FGA audit record                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                |
| XS_INACTIVITY_TIMEOUT    | NUMBER          |      | Inactivity timeout of the Real Application Security session                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                 |
| XS_ENTITY_TYPE           | VARCHAR2 (32)   |      | Type of the Real Application Security entity. Possible values are <code>USER</code> , <code>ROLE</code> , <code>ROLESET</code> , <code>SECURITYCLASS</code> , <code>ACL</code> , <code>DATASECURITY</code> , and <code>NSTEMPLATE</code> .                                                                                                                                                                                                                                                                                                                                                                  |
| XS_TARGET_PRINCIPAL_NAME | VARCHAR2 (128)  |      | Target principal name in Real Application Security operations. Possible operations are set verifier, set password, add proxy, remove proxy, switch user, assign user, create session, and grant roles.                                                                                                                                                                                                                                                                                                                                                                                                      |
| XS_PROXY_USER_NAME       | VARCHAR2 (128)  |      | Name of the Real Application Security proxy user                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                            |
| XS_DATASEC_POLICY_NAME   | VARCHAR2 (128)  |      | Name of the Real Application Security data security policy enabled or disabled                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                              |
| XS_SCHEMA_NAME           | VARCHAR2 (128)  |      | Name of the schema in enable, disable data security policy and global callback operation                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                    |
| XS_CALLBACK_EVENT_TYPE   | VARCHAR2 (32)   |      | Real Application Security global callback event type                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                        |
| XS_PACKAGE_NAME          | VARCHAR2 (128)  |      | Real Application Security callback package name for the global callback                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                     |

| DV_ACTION_OBJECT_NAME    | VARCHAR2 (128)  |      | The unique name of the Database Vault object that was modified                                                                                                                                                                                                                                                                                                                                                                           |
| DV_RULE_SET_NAME         | VARCHAR2 (128)  |      | The unique name of the rule set that was executing and caused the audit event to trigger                                                                                                                                                                                                                                                                                                                                                 |
| DV_COMMENT               | VARCHAR2 (4000) |      | Text comment on the audit trail entry, providing more information about the statement audited                                                                                                                                                                                                                                                                                                                                            |
| DV_FACTOR_CONTEXT        | VARCHAR2 (4000) |      | An XML document that contains all of the factor identifiers for the current session at the point when the audit event was triggered                                                                                                                                                                                                                                                                                                      |
| DV_OBJECT_STATUS         | VARCHAR2 (1)    |      | Indicates whether a particular Database Vault object is enabled or disabled. For example, if a Database Vault administrator enables or disables a realm, then this event will be audited and the DV_OBJECT_STATUS value will show the status of the realm after the event occurred. Possible values for this column are: <ul style="list-style-type: none"> <li>Y - The object is enabled</li> <li>N - The object is disabled</li> </ul> |
| OLS_POLICY_NAME          | VARCHAR2 (128)  |      | Name of the Oracle Label Security (OLS) policy for which this audit record is generated                                                                                                                                                                                                                                                                                                                                                  |
| OLS GRANTEE              | VARCHAR2 (1024) |      | Name of the user whose OLS authorization was modified                                                                                                                                                                                                                                                                                                                                                                                    |
| OLS_MAX_READ_LABEL       | VARCHAR2 (4000) |      | Maximum read label assigned to a user                                                                                                                                                                                                                                                                                                                                                                                                    |
| OLS_MAX_WRITE_LABEL      | VARCHAR2 (4000) |      | Maximum write label assigned to a user                                                                                                                                                                                                                                                                                                                                                                                                   |
| OLS_MIN_WRITE_LABEL      | VARCHAR2 (4000) |      | Minimum write label assigned to a user                                                                                                                                                                                                                                                                                                                                                                                                   |
| OLS_PRIVILEGES_GRANTED   | VARCHAR2 (128)  |      | OLS privileges assigned to a user or a trusted stored procedure                                                                                                                                                                                                                                                                                                                                                                          |
| OLS_PROGRAM_UNIT_NAME    | VARCHAR2 (128)  |      | Name of the trusted stored procedure whose authorization was modified or was executed                                                                                                                                                                                                                                                                                                                                                    |
| OLS_PRIVILEGES_USED      | VARCHAR2 (128)  |      | OLS privileges used for an event                                                                                                                                                                                                                                                                                                                                                                                                         |
| OLS_STRING_LABEL         | VARCHAR2 (4000) |      | String representation of the OLS label                                                                                                                                                                                                                                                                                                                                                                                                   |
| OLS_LABEL_COMPONENT_TYPE | VARCHAR2 (12)   |      | Type of the OLS label component                                                                                                                                                                                                                                                                                                                                                                                                          |
| OLS_LABEL_COMPONENT_NAME | VARCHAR2 (30)   |      | Name of the OLS label component                                                                                                                                                                                                                                                                                                                                                                                                          |
| OLS_PARENT_GROUP_NAME    | VARCHAR2 (30)   |      | Name of the parent of the OLS group                                                                                                                                                                                                                                                                                                                                                                                                      |
| OLS_OLD_VALUE            | VARCHAR2 (4000) |      | Old value for OLS ALTER events                                                                                                                                                                                                                                                                                                                                                                                                           |
| OLS_NEW_VALUE            | VARCHAR2 (4000) |      | New value for OLS ALTER events                                                                                                                                                                                                                                                                                                                                                                                                           |
| RMAN_SESSION_RECID       | NUMBER          |      | RMAN session identifier. Together with RMAN_SESSION_STAMP uniquely identifies an RMAN job (note that this is not same as user session ID; the value is a recid in controlfile that identifies RMAN job)                                                                                                                                                                                                                                  |
| RMAN_SESSION_STAMP       | NUMBER          |      | Timestamp for the session                                                                                                                                                                                                                                                                                                                                                                                                                |
| RMAN_OPERATION           | VARCHAR2 (20)   |      | The RMAN operation executed by the job. One row will be added for each distinct operation within an RMAN session. For example, a backup job would contain BACKUP in the RMAN_OPERATION column.                                                                                                                                                                                                                                           |

| Column              | Datatype       | NULL | Description                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                |
|---------------------|----------------|------|----------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|
| RMAN_OBJECT_TYPE    | VARCHAR2 (20)  |      | <p>Type of objects involved for backup or restore/recover or change/delete/crosscheck commands.</p> <p>It contains one of the following values. If RMAN command does not satisfy one of them, then preference is given in order, from top to bottom of the list:</p> <ul style="list-style-type: none"><li>• DB FULL</li><li>• RECVR AREA</li><li>• DB INCR</li><li>• DATAFILE FULL</li><li>• DATAFILE INCR</li><li>• ARCHIVELOG</li><li>• CONTROLFILE</li><li>• SPFILE</li></ul>                                                                                          |
| RMAN_DEVICE_TYPE    | VARCHAR2 (5)   |      | <p>Device involved in the RMAN job. It may be <code>DISK</code> or <code>SBT_TAPE</code> or <code>*</code> (An <code>*</code> indicates that more than one location is involved).</p> <p>For a backup job, it will be the output device type. For other commands (such as restore or crosscheck), it will be the input device type.</p>                                                                                                                                                                                                                                    |
| DP_TEXT_PARAMETERS1 | VARCHAR2 (512) |      | <p>Parameters during a Data Pump operation that have a text/string value. This may contain the values for:</p> <ul style="list-style-type: none"><li>• ACCESS METHOD</li><li>• DATA OPTIONS</li><li>• DUMPER DIRECTORY</li><li>• JOB_TYPE</li><li>• JOB VERSION</li><li>• MASTER TABLE</li><li>• METADATA_JOB_MODE</li><li>• PARTITION OPTIONS</li><li>• REMOTE LINK</li><li>• SCHEMA</li><li>• TABLE EXISTS</li></ul> <p>For descriptions and more information about the settings that can appear for these Data Pump text parameters, see <a href="#">Table 7-3</a>.</p> |

| Column                         | Datatype       | NULL | Description                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                  |
|--------------------------------|----------------|------|----------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|
| DP_BOOLEAN_PARAMETERS1         | VARCHAR2 (512) |      | <p>Parameters during a Data Pump operation that have a boolean value. This may contain the values for:</p> <ul style="list-style-type: none"> <li>• <code>DATA_ONLY</code> - Boolean value for whether or not the operation processed data only (as opposed to metadata only, or metadata and data combined)</li> <li>• <code>DUMPFIL_PRESENT</code> - Denotes whether a dump file exists. Typically, it indicates whether a network export in which no dumpfile is required.</li> <li>• <code>ENCRYPTED</code> - Boolean value for whether or not encryption was used for the operation</li> <li>• <code>JOB_RESTARTED</code> - Boolean that indicates if the export or import job had to be restarted</li> <li>• <code>MASTER_ONLY</code> - Indicates whether the import job imported only the control job table and then stopped the job so that the contents of the control job table can be examined</li> <li>• <code>METADATA_ONLY</code> - Boolean value for whether or not the operation processed metadata only (as opposed to data only, or metadata and data combined)</li> </ul> |
| DP_WARNINGS1                   | VARCHAR2 (512) |      | <p>Contains warnings issued during a Data Pump operation</p> <p>If no warnings were issued, this column contains<br/><code>WARNING(S) ISSUED: No warnings issued.</code></p>                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                 |
| DIRECT_PATH_NUM_COLUMNS_LOADED | NUMBER         |      | Shows the number of columns that were loaded using the SQL*Loader direct path load method                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                    |
| RLS_INFO                       | CLOB           |      | <p>Stores virtual private database (VPD), Oracle Label Security (OLS), Real Application Security (RAS), and redaction policy names and predicates separated by a delimiter. In the case of redaction policies, the policy expression is displayed in place of the predicate.</p> <p>To format the output into individual rows, use the <code>DBMS_AUDIT_UTIL.DECODE_RLS_INFO_ATRAIL_UNI</code> function.</p>                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                 |

| DB_UNIQUE_NAME       | VARCHAR2 (257)  |      | Unique database name of the audited database, which is defined by the DB_UNIQUE_NAME initialization parameter. This value is useful for differentiating between the primary and standby databases in an Oracle Data Guard configuration.                                                                                                                                                                                                                                                                                               |
| OBJECT_TYPE          | VARCHAR2 (23)   |      | Object type of the object being audited                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                |
| FW_ACTION_NAME       | VARCHAR2 (30)   |      | For SQL Firewall audit actions, the name of the action                                                                                                                                                                                                                                                                                                                                                                                                                                                                                 |
| FW_RETURN_CODE       | NUMBER          |      | For SQL Firewall audit actions, return code of the SQL execution                                                                                                                                                                                                                                                                                                                                                                                                                                                                       |
| SOURCE               | VARCHAR2 (8)    |      | <p>Source of the audit record:</p> <ul style="list-style-type: none"> <li>• FILE - Refers to records from the operating system spillover files in each database instance</li> <li>• DATABASE - Refers to records from the AUDSYS.AUD\$UNIFIED table</li> </ul>                                                                                                                                                                                                                                                                         |
| SCHEMA               | VARCHAR2 (4000) |      | <p>Schema name</p> <ul style="list-style-type: none"> <li>• If a schema privilege was used to execute the action, this column displays the schema and the SYSTEM_PRIVILEGE_USED column displays the privilege granted on the schema.</li> <li>• If a schema privilege was granted or revoked by a GRANT or REVOKE statement, this column displays the schema and the SYSTEM_PRIVILEGE column displays the privilege that was granted to or revoked from the schema.</li> <li>• Otherwise, the value of this column is null.</li> </ul> |
| DP_CLOB_PARAMETERS1  | CLOB            |      | Parameters used by Data Pump export or import, in JSON format                                                                                                                                                                                                                                                                                                                                                                                                                                                                          |

**Table 7-3 Data Pump Text Parameter Descriptions**

| Parameter         | Description                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                |
|-------------------|----------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|
| ACCESS_METHOD     | <p>The method used to load the data. Settings can be:</p> <ul style="list-style-type: none"> <li><code>AUTOMATIC</code>: Enables Oracle Data Pump to determine the optimal load method</li> <li><code>DIRECT_PATH</code>: Uses the direct path API to pass the data to be loaded.</li> <li><code>EXTERNAL_TABLE</code>: Loads data using the external tables option.</li> <li><code>CONVENTIONAL</code>: Loads the data using SQL <code>INSERT</code> statements</li> </ul>                                                                                                                                                                                                                                                                                                                                                |
| DATA_OPTIONS      | <p>Indicates how certain types of data were handled during import operations. Settings are in bit-mask format, which are as follows:</p> <ul style="list-style-type: none"> <li><code>1 (SKIP_CONSTRAINT_ERRORS)</code>: Specifies that the import operation proceeded even if non-deferred constraint violations were encountered.</li> <li><code>8 (DISABLE_APPEND_HINT)</code>: The import operation did not use the <code>APPEND</code> hint while loading a data object.</li> <li><code>16 (REJECT_ROWS_WITH_REPL_CHAR)</code>: Warnings are issued when the replacement character may be used and an option was added to reject data rows where the replacement character was used during a Data Pump import. This situation can occur if different character sets are used for the export/import process</li> </ul> |
| DUMPER_DIRECTORY  | Not in use                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                 |
| JOB_TYPE          | Is either <code>EXPORT</code> or <code>IMPORT</code>                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                       |
| JOB_VERSION       | Specifies the version of database objects that were imported                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                               |
| MASTER_TABLE      | <p>Indicates the name of the control job table. By default, it appears as follows for export operations:</p> <p><i>schema_name</i>.SYS_EXPORT_TABLE_<i>n</i></p> <p>For import operations, it appears as follows:</p> <p><i>schema_name</i>.SYS_IMPORT_TABLE_<i>n</i></p> <p>The <i>n</i> represents a numeric value of 01. If 01 is in use, the number is incremented with 02, 03, and so on.</p>                                                                                                                                                                                                                                                                                                                                                                                                                         |
| METADATA_JOB_MODE | Type of export or import operation. For example a table export would be <code>TABLE_EXPORT</code>                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                          |
| PARTITION_OPTIONS | <p>Indicates how table partitions were created during an import operation. Settings can be:</p> <ul style="list-style-type: none"> <li><code>NONE</code>: The tables were created as they existed on the system from which the export operation was performed.</li> <li><code>DEPARTITION</code>: Each partition or subpartition was promoted to a new individual table.</li> <li><code>MERGE</code>: All partitions and subpartitions were merged into one table</li> </ul>                                                                                                                                                                                                                                                                                                                                               |
| REMOTE_LINK       | Indicates that the export was performed from a (source) database identified by a valid database link. The data from the source database instance was written to a dump file set on the connected database instance.                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                        |
| SCHEMA            | Indicates the schema containing the data that was exported or imported                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                     |
| TABLE_EXISTS      | <p>Indicates the action that was taken on an import operation when the target table already existed. The values are as follows:</p> <ul style="list-style-type: none"> <li><code>REPLACE</code></li> <li><code>TRUNCATE</code></li> <li><code>SKIP</code></li> <li><code>APPEND</code></li> </ul>                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                          |

## AUTHENTICATION\_TYPE Description

The `AUTHENTICATION_TYPE` column of `UNIFIED_AUDIT_TRAIL` displays authentication information for the session user.

The value of this column is a string with the following syntax:

```
(TYPE=(auth_string));(CLIENT_ADDRESS=((PROTOCOL=protocol)
(HOST=client_ip_address)(PORT=client_port_number)));
[(LOGON_INFO=((VERIFIER=%s-%s)(CLIENT_CAPABILITIES=%s));]
```

- `(TYPE=(auth_string));`

Indicates the type of authentication for the session user.

Possible values for *auth\_string*:

- `DATABASE` - Username/password authentication
- `DIRECTORY PASSWORD` - Directory-based user authentication
- `NETWORK SERVICE` - Authentication was performed by Oracle Net Services or strong authentication
- `OS` - Operating system external user authentication
- `PROXY` - OCI proxy connection authentication

- `(CLIENT_ADDRESS=((PROTOCOL=protocol)(HOST=client_ip_address)
(PORT=client_port_number)));`

Displays the protocol used by the client, such as `ipc`, `sdp`, `tcp`, or `tcps`, the client IP address, and the client port number.

- `(LOGON_INFO=((VERIFIER=version-rollover_state)
(CLIENT_CAPABILITIES=capability_list)));`

This syntax is displayed only if authentication was completed during gradual database password rollover.

The value of `VERIFIER` comprises the following two values, separated by a hyphen:

- *version* - Indicates the password version (11G or 12C)
- *rollover\_state* - Indicates whether the user was authenticated with the `OLD` password or the `NEW` password

For `CLIENT_CAPABILITIES`, the value of *capability\_list* is a comma-separated list of one or more of the following client capabilities: `O5L_NP`, `O7L_MR`, or `O8L_LI`. See *Oracle Database Net Services Reference* for more information about client capabilities.

### See Also:

- *Oracle Database PL/SQL Packages and Types Reference* for more information about the `DBMS_AUDIT_UTIL.DECODE_RLS_INFO_ATTRAIL_UNI` function

## 7.286 USABLE\_EDITIONS

USABLE\_EDITIONS describes the usable editions of the current user.

| Column              | Datatype       | NULL     | Description                                 |
|---------------------|----------------|----------|---------------------------------------------|
| EDITION_NAME        | VARCHAR2 (128) | NOT NULL | Name of the edition                         |
| PARENT_EDITION_NAME | VARCHAR2 (128) |          | Name of the parent edition for this edition |

### See Also:

*Oracle Database Development Guide* for more information about editions

## 7.287 USER\_ADDM\_FDG\_BREAKDOWN

USER\_ADDM\_FDG\_BREAKDOWN describes the contribution for each finding from the different instances owned by the current user. Its columns are the same as those in DBA\_ADDM\_FDG\_BREAKDOWN.

### See Also:

["DBA\\_ADDM\\_FDG\\_BREAKDOWN"](#)

## 7.288 USER\_ADDM\_FINDINGS

USER\_ADDM\_FINDINGS displays the ADDM findings discovered by the advisors owned by the current user.

Each row for ADDM tasks in the related USER\_ADVISOR\_FINDINGS view has a corresponding row in this view. Its columns (except for OWNER) are the same as those in DBA\_ADDM\_FINDINGS.

### See Also:

["DBA\\_ADDM\\_FINDINGS"](#)

## 7.289 USER\_ADDM\_INSTANCES

USER\_ADDM\_INSTANCES provides instance-level information for ADDM tasks that finished executing in all instances owned by the current user. Its columns are the same as those in DBA\_ADDM\_INSTANCES.

### See Also:

"DBA\_ADDM\_INSTANCES"

## 7.290 USER\_ADDM\_TASK\_DIRECTIVES

USER\_ADDM\_TASK\_DIRECTIVES displays information about ADDM task directives owned by the current user. Its columns (except for USERNAME and SEQ\_ID) are the same as those in DBA\_ADDM\_TASK\_DIRECTIVES.

### See Also:

"DBA\_ADDM\_TASK\_DIRECTIVES"

## 7.291 USER\_ADDM\_TASKS

USER\_ADDM\_TASKS displays information about the ADDM tasks owned by the current user.

The view contains one row for each row in the related USER\_ADVISOR\_TASKS view that has ADVISOR\_NAME=ADDM and STATUS=COMPLETED. Its columns (except for OWNER) are the same as those in DBA\_ADDM\_TASKS.

### See Also:

"DBA\_ADDM\_TASKS"

## 7.292 USER\_ADVISOR\_ACTIONS

USER\_ADVISOR\_ACTIONS displays information about the actions associated with the recommendations owned by the current user. Its columns (except for OWNER) are the same as those in DBA\_ADVISOR\_ACTIONS.

### See Also:

"DBA\_ADVISOR\_ACTIONS"

## 7.293 USER\_ADVISOR\_DIR\_TASK\_INST

USER\_ADVISOR\_DIR\_TASK\_INST displays information about all task directive instances owned by the current user. Its columns (except for SEQ\_ID and USERNAME) are the same as those in DBA\_ADVISOR\_DIR\_TASK\_INST.

### See Also:

["DBA\\_ADVISOR\\_DIR\\_TASK\\_INST"](#)

## 7.294 USER\_ADVISOR\_EXEC\_PARAMETERS

USER\_ADVISOR\_EXEC\_PARAMETERS displays the parameter values used for past executions of tasks owned by the current user. Its columns (except for OWNER) are the same as those in DBA\_ADVISOR\_EXEC\_PARAMETERS.

### See Also:

["DBA\\_ADVISOR\\_EXEC\\_PARAMETERS"](#)

## 7.295 USER\_ADVISOR\_EXECUTIONS

USER\_ADVISOR\_EXECUTIONS displays metadata information for tasks owned by the current user. Its columns (except for OWNER) are the same as those in DBA\_ADVISOR\_EXECUTIONS.

### See Also:

["DBA\\_ADVISOR\\_EXECUTIONS"](#)

## 7.296 USER\_ADVISOR\_FDG\_BREAKDOWN

USER\_ADVISOR\_FDG\_BREAKDOWN describes the contribution from the different instances to the findings for each ADDM task owned by the current user. Its columns are the same as those in DBA\_ADVISOR\_FDG\_BREAKDOWN.

### See Also:

["DBA\\_ADVISOR\\_FDG\\_BREAKDOWN"](#)

## 7.297 USER\_ADVISOR\_FINDINGS

USER\_ADVISOR\_FINDINGS displays the findings discovered by the advisors owned by the current user. Its columns (except for OWNER) are the same as those in DBA\_ADVISOR\_FINDINGS.

**See Also:**

"DBA\_ADVISOR\_FINDINGS"

## 7.298 USER\_ADVISOR\_JOURNAL

USER\_ADVISOR\_JOURNAL displays the journal entries for the tasks owned by the current user. Its columns (except for OWNER) are the same as those in DBA\_ADVISOR\_JOURNAL.

**See Also:**

"DBA\_ADVISOR\_JOURNAL"

## 7.299 USER\_ADVISOR\_LOG

USER\_ADVISOR\_LOG displays information about the current state of the tasks owned by the current user. Its columns (except for OWNER) are the same as those in DBA\_ADVISOR\_LOG.

**See Also:**

"DBA\_ADVISOR\_LOG"

## 7.300 USER\_ADVISOR\_OBJECTS

USER\_ADVISOR\_OBJECTS displays information about the objects currently referenced by the advisors owned by the current user. Its columns (except for OWNER, ATTR21, and ATTR22) are the same as those in DBA\_ADVISOR\_OBJECTS.

**See Also:**

"DBA\_ADVISOR\_OBJECTS"

## 7.301 USER\_ADVISOR\_PARAMETERS

USER\_ADVISOR\_PARAMETERS displays the task parameters and their current values for the tasks owned by the current user. Its columns (except for OWNER) are the same as those in DBA\_ADVISOR\_PARAMETERS.

**See Also:**

["DBA\\_ADVISOR\\_PARAMETERS"](#)

## 7.302 USER\_ADVISOR\_RATIONALE

USER\_ADVISOR\_RATIONALE displays information about the rationales for the recommendations owned by the current user. Its columns (except for OWNER) are the same as those in DBA\_ADVISOR\_RATIONALE.

**See Also:**

["DBA\\_ADVISOR\\_RATIONALE"](#)

## 7.303 USER\_ADVISOR\_RECOMMENDATIONS

USER\_ADVISOR\_RECOMMENDATIONS displays the results of an analysis of the recommendations owned by the current user. Its columns (except for OWNER) are the same as those in DBA\_ADVISOR\_RECOMMENDATIONS.

**See Also:**

["DBA\\_ADVISOR\\_RECOMMENDATIONS"](#)

## 7.304 USER\_ADVISOR\_SQLA\_REC\_SUM

USER\_ADVISOR\_SQLA\_REC\_SUM displays recommendation rollup information for the workload objects owned by the current user. Its columns (except for OWNER) are the same as those in DBA\_ADVISOR\_SQLA\_REC\_SUM.

**See Also:**

["DBA\\_ADVISOR\\_SQLA\\_REC\\_SUM"](#)

## 7.305 USER\_ADVISOR\_SQLA\_TABLES

`USER_ADVISOR_SQLA_TABLES` displays cross references between the workload statements and the tables referenced in the statement for the current user. Its columns (except for `OWNER`) are the same as those in `DBA_ADVISOR_SQLA_TABLES`.

### See Also:

["DBA\\_ADVISOR\\_SQLA\\_TABLES"](#)

## 7.306 USER\_ADVISOR\_SQLA\_WK\_MAP

`USER_ADVISOR_SQLA_WK_MAP` displays the workload references for the tasks owned by the current user. Its columns (except for `OWNER`) are the same as those in `DBA_ADVISOR_SQLA_WK_MAP`.

### See Also:

["DBA\\_ADVISOR\\_SQLA\\_WK\\_MAP"](#)

## 7.307 USER\_ADVISOR\_SQLA\_WK\_STMTS

`USER_ADVISOR_SQLA_WK_STMTS` displays information about the workload objects owned by the current user after an Access Advisor analysis operation. Its columns (except for `OWNER`) are the same as those in `DBA_ADVISOR_SQLA_WK_STMTS`.

### See Also:

["DBA\\_ADVISOR\\_SQLA\\_WK\\_STMTS"](#)

## 7.308 USER\_ADVISOR\_SQLPLANS

`USER_ADVISOR_SQLPLANS` displays the different SQL execution plans owned by the current user generated as part of an advisor analysis. Its columns are the same as those in `DBA_ADVISOR_SQLPLANS`.

### See Also:

["DBA\\_ADVISOR\\_SQLPLANS"](#)

## 7.309 USER\_ADVISOR\_SQLSTATS

USER\_ADVISOR\_SQLSTATS displays execution statistics owned by the current user for the test-execution of different SQL plans during the advisor analysis. Its columns are the same as those in DBA\_ADVISOR\_SQLSTATS.

### See Also:

["DBA\\_ADVISOR\\_SQLSTATS"](#)

## 7.310 USER\_ADVISOR\_SQLW\_JOURNAL

USER\_ADVISOR\_SQLW\_JOURNAL displays the journal entries for the workload objects owned by the current user. Its columns (except for OWNER) are the same as those in DBA\_ADVISOR\_SQLW\_JOURNAL.

### See Also:

["DBA\\_ADVISOR\\_SQLW\\_JOURNAL"](#)

## 7.311 USER\_ADVISOR\_SQLW\_PARAMETERS

USER\_ADVISOR\_SQLW\_PARAMETERS displays the workload parameters and their current values owned by the current user. Its columns (except for OWNER) are the same as those in DBA\_ADVISOR\_SQLW\_PARAMETERS.

### See Also:

["DBA\\_ADVISOR\\_SQLW\\_PARAMETERS"](#)

## 7.312 USER\_ADVISOR\_SQLW\_STMTS

USER\_ADVISOR\_SQLW\_STMTS displays rows that correspond to the statements in the workload owned by the current user. Its columns (except for OWNER) are the same as those in DBA\_ADVISOR\_SQLW\_STMTS.

### See Also:

["DBA\\_ADVISOR\\_SQLW\\_STMTS"](#)

## 7.313 USER\_ADVISOR\_SQLW\_SUM

USER\_ADVISOR\_SQLW\_SUM displays an aggregated picture of the SQLWkld workload objects owned by the current user. Its columns (except for OWNER) are the same as those in DBA\_ADVISOR\_SQLW\_SUM.

### See Also:

["DBA\\_ADVISOR\\_SQLW\\_SUM"](#)

## 7.314 USER\_ADVISOR\_SQLW\_TABLES

USER\_ADVISOR\_SQLW\_TABLES displays cross references between the workload statements and the tables referenced in the statement. Its columns (except for OWNER) are the same as those in DBA\_ADVISOR\_SQLW\_TABLES.

### See Also:

["DBA\\_ADVISOR\\_SQLW\\_TABLES"](#)

## 7.315 USER\_ADVISOR\_SQLW\_TEMPLATES

USER\_ADVISOR\_SQLW\_TEMPLATES displays an aggregated picture of the SQLWkld template objects owned by the current user. Its columns (except for OWNER) are the same as those in DBA\_ADVISOR\_SQLW\_TEMPLATES.

### See Also:

["DBA\\_ADVISOR\\_SQLW\\_TEMPLATES"](#)

## 7.316 USER\_ADVISOR\_TASKS

USER\_ADVISOR\_TASKS displays information about the tasks owned by the current user. Its columns (except for OWNER) are the same as those in DBA\_ADVISOR\_TASKS.

### See Also:

["DBA\\_ADVISOR\\_TASKS"](#)

## 7.317 USER\_ADVISOR\_TEMPLATES

USER\_ADVISOR\_TEMPLATES displays information about the templates owned by the current user. Its columns (except for OWNER) are the same as those in DBA\_ADVISOR\_TEMPLATES.

**See Also:**

"DBA\_ADVISOR\_TEMPLATES"

## 7.318 USER\_ALL\_TABLES

USER\_ALL\_TABLES describes the object tables and relational tables owned by the current user. Its columns (except for OWNER) are the same as those in ALL\_ALL\_TABLES.

**See Also:**

"ALL\_ALL\_TABLES"

## 7.319 USER\_ANALYTIC\_VIEW\_AGGR\_DIMS

USER\_ANALYTIC\_VIEW\_AGGR\_DIMS describes the aggregation function dimensions of the analytic views owned by the current user. Its columns (except for OWNER) are the same as those in ALL\_ANALYTIC\_VIEW\_AGGR\_DIMS.

**See Also:**

"ALL\_ANALYTIC\_VIEW\_AGGR\_DIMS"

## 7.320 USER\_ANALYTIC\_VIEW\_AGGR\_FNS

USER\_ANALYTIC\_VIEW\_AGGR\_FNS describes the aggregation functions of the analytic views owned by the current user. Its columns (except for OWNER and ORIGIN\_CON\_ID) are the same as those in ALL\_ANALYTIC\_VIEW\_AGGR\_FNS.

**See Also:**

"ALL\_ANALYTIC\_VIEW\_AGGR\_FNS"

## 7.321 USER\_ANALYTIC\_VIEW\_AGGR\_FNS\_AE

USER\_ANALYTIC\_VIEW\_AGGR\_FNS\_AE describes the aggregation functions of the analytic views (across all editions) owned by the current user. Its columns (except for OWNER and ORIGIN\_CON\_ID) are the same as those in ALL\_ANALYTIC\_VIEW\_AGGR\_FNS\_AE.

### See Also:

["ALL\\_ANALYTIC\\_VIEW\\_AGGR\\_FNS\\_AE"](#)

## 7.322 USER\_ANALYTIC\_VIEW\_AGR\_DIMS

USER\_ANALYTIC\_VIEW\_AGR\_DIMS describes the aggregation function dimensions of the analytic views owned by the current user. Its columns (except for OWNER) are the same as those in ALL\_ANALYTIC\_VIEW\_AGR\_DIMS.

### See Also:

["ALL\\_ANALYTIC\\_VIEW\\_AGR\\_DIMS"](#)

## 7.323 USER\_ANALYTIC\_VIEW\_AGR\_DIMS\_AE

USER\_ANALYTIC\_VIEW\_AGR\_DIMS\_AE describes the aggregation function dimensions of the analytic views (across all editions) owned by the current user. Its columns (except for OWNER) are the same as those in ALL\_ANALYTIC\_VIEW\_AGR\_DIMS\_AE.

### See Also:

["ALL\\_ANALYTIC\\_VIEW\\_AGR\\_DIMS\\_AE"](#)

## 7.324 USER\_ANALYTIC\_VIEW\_ATTR\_CLASS

USER\_ANALYTIC\_VIEW\_ATTR\_CLASS describes the attribute classifications of the analytic views owned by the current user. Its columns (except for OWNER) are the same as those in ALL\_ANALYTIC\_VIEW\_ATTR\_CLASS.

### See Also:

["ALL\\_ANALYTIC\\_VIEW\\_ATTR\\_CLASS"](#)

## 7.325 USER\_ANALYTIC\_VIEW\_ATTR\_CLS

USER\_ANALYTIC\_VIEW\_ATTR\_CLS is identical to USER\_ANALYTIC\_VIEW\_ATTR\_CLASS.

### See Also:

"USER\_ANALYTIC\_VIEW\_ATTR\_CLASS"

## 7.326 USER\_ANALYTIC\_VIEW\_ATTR\_CLS\_AE

USER\_ANALYTIC\_VIEW\_ATTR\_CLS\_AE describes the attribute classifications of the analytic views (across all editions) owned by the current user. Its columns (except for OWNER) are the same as those in ALL\_ANALYTIC\_VIEW\_ATTR\_CLS\_AE.

### See Also:

"ALL\_ANALYTIC\_VIEW\_ATTR\_CLS\_AE"

## 7.327 USER\_ANALYTIC\_VIEW\_BAS\_MEAS

USER\_ANALYTIC\_VIEW\_BAS\_MEAS is identical to USER\_ANALYTIC\_VIEW\_BASE\_MEAS.

### See Also:

"USER\_ANALYTIC\_VIEW\_BASE\_MEAS"

## 7.328 USER\_ANALYTIC\_VIEW\_BAS\_MEAS\_AE

USER\_ANALYTIC\_VIEW\_BAS\_MEAS\_AE describes the base measures in the analytic views (across all editions) owned by the current user. Its columns (except for OWNER) are the same as those in ALL\_ANALYTIC\_VIEW\_BAS\_MEAS\_AE.

### See Also:

"ALL\_ANALYTIC\_VIEW\_BAS\_MEAS\_AE"

## 7.329 USER\_ANALYTIC\_VIEW\_BASE\_MEAS

USER\_ANALYTIC\_VIEW\_BASE\_MEAS describes the base measures in the analytic views owned by the current user. Its columns (except for OWNER) are the same as those in ALL\_ANALYTIC\_VIEW\_BASE\_MEAS.

### See Also:

["ALL\\_ANALYTIC\\_VIEW\\_BASE\\_MEAS"](#)

## 7.330 USER\_ANALYTIC\_VIEW\_CALC\_MEAS

USER\_ANALYTIC\_VIEW\_CALC\_MEAS describes the calculated measures in the analytic views owned by the current user. Its columns (except for OWNER) are the same as those in ALL\_ANALYTIC\_VIEW\_CALC\_MEAS.

### See Also:

["ALL\\_ANALYTIC\\_VIEW\\_CALC\\_MEAS"](#)

## 7.331 USER\_ANALYTIC\_VIEW\_CLASS

USER\_ANALYTIC\_VIEW\_CLASS describes the classifications of the analytic views owned by the current user. Its columns (except for OWNER) are the same as those in USER\_ANALYTIC\_VIEW\_CLASS.

### See Also:

["ALL\\_ANALYTIC\\_VIEW\\_CLASS"](#)

## 7.332 USER\_ANALYTIC\_VIEW\_CLASS\_AE

USER\_ANALYTIC\_VIEW\_CLASS\_AE describes the classifications of the analytic views (across all editions) owned by the current user. Its columns (except for OWNER) are the same as those in ALL\_ANALYTIC\_VIEW\_CLASS\_AE.

### See Also:

["ALL\\_ANALYTIC\\_VIEW\\_CLASS\\_AE"](#)

## 7.333 USER\_ANALYTIC\_VIEW\_CLC\_MEAS

USER\_ANALYTIC\_VIEW\_CLC\_MEAS is identical to USER\_ANALYTIC\_VIEW\_CALC\_MEAS.

### See Also:

"USER\_ANALYTIC\_VIEW\_CALC\_MEAS"

## 7.334 USER\_ANALYTIC\_VIEW\_CLC\_MEAS\_AE

USER\_ANALYTIC\_VIEW\_CLC\_MEAS\_AE describes the calculated measures in the analytic views (across all editions) owned by the current user. Its columns (except for OWNER) are the same as those in ALL\_ANALYTIC\_VIEW\_CLC\_MEAS\_AE.

### See Also:

"ALL\_ANALYTIC\_VIEW\_CLC\_MEAS\_AE"

## 7.335 USER\_ANALYTIC\_VIEW\_COLUMNS

USER\_ANALYTIC\_VIEW\_COLUMNS describes the columns of the analytic views owned by the current user. Its columns (except for OWNER) are the same as those in ALL\_ANALYTIC\_VIEW\_COLUMNS.

### See Also:

"ALL\_ANALYTIC\_VIEW\_COLUMNS"

## 7.336 USER\_ANALYTIC\_VIEW\_COLUMNS\_AE

USER\_ANALYTIC\_VIEW\_COLUMNS\_AE describes the columns of the analytic views (across all editions) owned by the current user. Its columns (except for OWNER) are the same as those in ALL\_ANALYTIC\_VIEW\_COLUMNS\_AE.

### See Also:

"ALL\_ANALYTIC\_VIEW\_COLUMNS\_AE"

## 7.337 USER\_ANALYTIC\_VIEW\_DIM\_ATTRS

USER\_ANALYTIC\_VIEW\_DIM\_ATTRS is identical to USER\_ANALYTIC\_VIEW\_DIM\_ATTRS.

### See Also:

"USER\_ANALYTIC\_VIEW\_DIM\_ATTRS"

## 7.338 USER\_ANALYTIC\_VIEW\_DIM\_ATTRS\_AE

USER\_ANALYTIC\_VIEW\_DIM\_ATTRS\_AE describes the attributes of the attribute dimensions in the analytic views (across all editions) owned by the current user. Its columns (except for OWNER) are the same as those in ALL\_ANALYTIC\_VIEW\_DIM\_ATTRS\_AE.

### See Also:

"ALL\_ANALYTIC\_VIEW\_DIM\_ATTRS\_AE"

## 7.339 USER\_ANALYTIC\_VIEW\_DIM\_ATTRS

USER\_ANALYTIC\_VIEW\_DIM\_ATTRS describes the attributes of the attribute dimensions in the analytic views owned by the current user. Its columns (except for OWNER) are the same as those in ALL\_ANALYTIC\_VIEW\_DIM\_ATTRS.

### See Also:

"ALL\_ANALYTIC\_VIEW\_DIM\_ATTRS"

## 7.340 USER\_ANALYTIC\_VIEW\_DIM\_CLASS

USER\_ANALYTIC\_VIEW\_DIM\_CLASS describes the classifications of the attribute dimensions in the analytic views owned by the current user. Its columns (except for OWNER) are the same as those in ALL\_ANALYTIC\_VIEW\_DIM\_CLASS.

### See Also:

"ALL\_ANALYTIC\_VIEW\_DIM\_CLASS"

## 7.341 USER\_ANALYTIC\_VIEW\_DIM\_CLS

USER\_ANALYTIC\_VIEW\_DIM\_CLS is identical to USER\_ANALYTIC\_VIEW\_DIM\_CLASS.

### See Also:

"USER\_ANALYTIC\_VIEW\_DIM\_CLASS"

## 7.342 USER\_ANALYTIC\_VIEW\_DIM\_CLS\_AE

USER\_ANALYTIC\_VIEW\_DIM\_CLS\_AE describes the classifications of the attribute dimensions in the analytic views (across all editions) owned by the current user. Its columns (except for OWNER) are the same as those in ALL\_ANALYTIC\_VIEW\_DIM\_CLS\_AE.

### See Also:

"ALL\_ANALYTIC\_VIEW\_DIM\_CLS\_AE"

## 7.343 USER\_ANALYTIC\_VIEW\_DIMENSIONS

USER\_ANALYTIC\_VIEW\_DIMENSIONS describes the attribute dimensions in the analytic views owned by the current user. Its columns (except for OWNER) are the same as those in ALL\_ANALYTIC\_VIEW\_DIMENSIONS.

### See Also:

"ALL\_ANALYTIC\_VIEW\_DIMENSIONS"

## 7.344 USER\_ANALYTIC\_VIEW\_DIMS

USER\_ANALYTIC\_VIEW\_DIMS is identical to USER\_ANALYTIC\_VIEW\_DIMENSIONS.

### See Also:

"USER\_ANALYTIC\_VIEW\_DIMENSIONS"

## 7.345 USER\_ANALYTIC\_VIEW\_DIMS\_AE

USER\_ANALYTIC\_VIEW\_DIMS\_AE describes the attribute dimensions in the analytic views (across all editions) owned by the current user. Its columns (except for OWNER) are the same as those in ALL\_ANALYTIC\_VIEW\_DIMS\_AE.

### See Also:

["ALL\\_ANALYTIC\\_VIEW\\_DIMS\\_AE"](#)

## 7.346 USER\_ANALYTIC\_VIEW\_FACT\_COLS

USER\_ANALYTIC\_VIEW\_FACT\_COLS describes the fact columns of the analytic views owned by the current user. Its columns (except for OWNER) are the same as those in ALL\_ANALYTIC\_VIEW\_FACT\_COLS.

### See Also:

["ALL\\_ANALYTIC\\_VIEW\\_FACT\\_COLS"](#)

## 7.347 USER\_ANALYTIC\_VIEW\_FCT\_COLS

USER\_ANALYTIC\_VIEW\_FCT\_COLS is identical to USER\_ANALYTIC\_VIEW\_FACT\_COLS.

### See Also:

["USER\\_ANALYTIC\\_VIEW\\_FACT\\_COLS"](#)

## 7.348 USER\_ANALYTIC\_VIEW\_FCT\_COLS\_AE

USER\_ANALYTIC\_VIEW\_FCT\_COLS\_AE describes the fact columns of the analytic views (across all editions) owned by the current user. Its columns (except for OWNER) are the same as those in ALL\_ANALYTIC\_VIEW\_FCT\_COLS\_AE.

### See Also:

["ALL\\_ANALYTIC\\_VIEW\\_FCT\\_COLS\\_AE"](#)

## 7.349 USER\_ANALYTIC\_VIEW\_HIER\_CLASS

USER\_ANALYTIC\_VIEW\_HIER\_CLASS describes the classifications of the hierarchies in the analytic views owned by the current user. Its columns (except for OWNER) are the same as those in ALL\_ANALYTIC\_VIEW\_HIER\_CLASS.

### See Also:

"ALL\_ANALYTIC\_VIEW\_HIER\_CLASS"

## 7.350 USER\_ANALYTIC\_VIEW\_HIER\_CLS

USER\_ANALYTIC\_VIEW\_HIER\_CLS is identical to USER\_ANALYTIC\_VIEW\_HIER\_CLASS.

### See Also:

"USER\_ANALYTIC\_VIEW\_HIER\_CLASS"

## 7.351 USER\_ANALYTIC\_VIEW\_HIER\_CLS\_AE

USER\_ANALYTIC\_VIEW\_HIER\_CLS\_AE describes the classifications of the hierarchies in the analytic views (across all editions) owned by the current user. Its columns (except for OWNER) are the same as those in ALL\_ANALYTIC\_VIEW\_HIER\_CLS\_AE.

### See Also:

"ALL\_ANALYTIC\_VIEW\_HIER\_CLS\_AE"

## 7.352 USER\_ANALYTIC\_VIEW\_HIERS

USER\_ANALYTIC\_VIEW\_HIERS describes the hierarchies in the analytic views owned by the current user. Its columns (except for OWNER) are the same as those in ALL\_ANALYTIC\_VIEW\_HIERS.

### See Also:

"ALL\_ANALYTIC\_VIEW\_HIERS"

## 7.353 USER\_ANALYTIC\_VIEW\_HIERS\_AE

USER\_ANALYTIC\_VIEW\_HIERS\_AE describes the hierarchies in the analytic views (across all editions) owned by the current user. Its columns (except for OWNER) are the same as those in ALL\_ANALYTIC\_VIEW\_HIERS\_AE.

### See Also:

["ALL\\_ANALYTIC\\_VIEW\\_HIERS\\_AE"](#)

## 7.354 USER\_ANALYTIC\_VIEW\_KEYS

USER\_ANALYTIC\_VIEW\_KEYS describes the key columns of the attribute dimensions in the analytic views owned by the current user. Its columns (except for OWNER) are the same as those in ALL\_ANALYTIC\_VIEW\_KEYS.

### See Also:

["ALL\\_ANALYTIC\\_VIEW\\_KEYS"](#)

## 7.355 USER\_ANALYTIC\_VIEW\_KEYS\_AE

USER\_ANALYTIC\_VIEW\_KEYS\_AE describes the key columns of the attribute dimensions in the analytic views (across all editions) owned by the current user. Its columns (except for OWNER) are the same as those in ALL\_ANALYTIC\_VIEW\_KEYS\_AE.

### See Also:

["ALL\\_ANALYTIC\\_VIEW\\_KEYS\\_AE"](#)

## 7.356 USER\_ANALYTIC\_VIEW\_LEVEL\_CLASS

USER\_ANALYTIC\_VIEW\_LEVEL\_CLASS describes the level classifications of the analytic views owned by the current user. Its columns (except for OWNER) are the same as those in ALL\_ANALYTIC\_VIEW\_LEVEL\_CLASS.

### See Also:

["ALL\\_ANALYTIC\\_VIEW\\_LEVEL\\_CLASS"](#)

## 7.357 USER\_ANALYTIC\_VIEW\_LEVELS

USER\_ANALYTIC\_VIEW\_LEVELS describes the levels in the hierarchies in the analytic views owned by the current user. Its columns (except for OWNER) are the same as those in ALL\_ANALYTIC\_VIEW\_LEVELS.

### See Also:

"ALL\_ANALYTIC\_VIEW\_LEVELS"

## 7.358 USER\_ANALYTIC\_VIEW\_LEVELS\_AE

USER\_ANALYTIC\_VIEW\_LEVELS\_AE describes the levels in the hierarchies in the analytic views (across all editions) owned by the current user. Its columns (except for OWNER) are the same as those in ALL\_ANALYTIC\_VIEW\_LEVELS\_AE.

### See Also:

"ALL\_ANALYTIC\_VIEW\_LEVELS\_AE"

## 7.359 USER\_ANALYTIC\_VIEW\_LVL\_CLS

USER\_ANALYTIC\_VIEW\_LVL\_CLS is identical to USER\_ANALYTIC\_VIEW\_LEVEL\_CLASS.

### See Also:

"USER\_ANALYTIC\_VIEW\_LEVEL\_CLASS"

## 7.360 USER\_ANALYTIC\_VIEW\_LVL\_CLS\_AE

USER\_ANALYTIC\_VIEW\_LVL\_CLS\_AE describes the level classifications of the analytic views (across all editions) owned by the current user. Its columns (except for OWNER) are the same as those in ALL\_ANALYTIC\_VIEW\_LVL\_CLS\_AE.

### See Also:

"ALL\_ANALYTIC\_VIEW\_LVL\_CLS\_AE"

## 7.361 USER\_ANALYTIC\_VIEW\_LVLGRPS

USER\_ANALYTIC\_VIEW\_LVLGRPS describes the analytic view measure and level groups of the analytic views owned by the current user. Its columns (except for OWNER) are the same as those in ALL\_ANALYTIC\_VIEW\_LVLGRPS.

### See Also:

"ALL\_ANALYTIC\_VIEW\_LVLGRPS"

## 7.362 USER\_ANALYTIC\_VIEW\_LVLGRPS\_AE

USER\_ANALYTIC\_VIEW\_LVLGRPS\_AE describes the analytic view measure and level groups of the analytic views (across all editions) owned by the current user. Its columns (except for OWNER) are the same as those in ALL\_ANALYTIC\_VIEW\_LVLGRPS\_AE.

### See Also:

"ALL\_ANALYTIC\_VIEW\_LVLGRPS\_AE"

## 7.363 USER\_ANALYTIC\_VIEW\_MEAS\_CLASS

USER\_ANALYTIC\_VIEW\_MEAS\_CLASS describes the classifications of the measures of the analytic views owned by the current user. Its columns (except for OWNER) are the same as those in ALL\_ANALYTIC\_VIEW\_MEAS\_CLASS.

### See Also:

"ALL\_ANALYTIC\_VIEW\_MEAS\_CLASS"

## 7.364 USER\_ANALYTIC\_VIEW\_MEAS\_CLS

USER\_ANALYTIC\_VIEW\_MEAS\_CLS is identical to USER\_ANALYTIC\_VIEW\_MEAS\_CLASS.

### See Also:

"USER\_ANALYTIC\_VIEW\_MEAS\_CLASS"

## 7.365 USER\_ANALYTIC\_VIEW\_MEAS\_CLS\_AE

USER\_ANALYTIC\_VIEW\_MEAS\_CLS\_AE describes the classifications of the measures of the analytic views (across all editions) owned by the current user. Its columns (except for OWNER) are the same as those in ALL\_ANALYTIC\_VIEW\_MEAS\_CLS\_AE.

### See Also:

"ALL\_ANALYTIC\_VIEW\_MEAS\_CLS\_AE"

## 7.366 USER\_ANALYTIC\_VIEWS

USER\_ANALYTIC\_VIEWS describes the analytic views owned by the current user. Its columns (except for OWNER) are the same as those in ALL\_ANALYTIC\_VIEWS.

### See Also:

"ALL\_ANALYTIC\_VIEWS"

## 7.367 USER\_ANALYTIC\_VIEWS\_AE

USER\_ANALYTIC\_VIEWS\_AE describes the analytic views (across all editions) owned by the current user. Its columns (except for OWNER) are the same as those in ALL\_ANALYTIC\_VIEWS\_AE.

### See Also:

"ALL\_ANALYTIC\_VIEWS\_AE"

## 7.368 USER\_ANNOTATION\_VALUES

USER\_ANNOTATION\_VALUES displays the values for schema annotations owned by the current user. Its columns (except for ANNOTATION\_OWNER) are the same as those in ALL\_ANNOTATION\_VALUES.

The annotation owner is the same as the owner of the annotated object.

### Note:

This view is available starting with Oracle Database 23ai.

**See Also:**

"ALL\_ANNOTATION\_VALUES"

## 7.369 USER\_ANNOTATIONS

USER\_ANNOTATIONS displays schema annotations owned by the current user. Its columns (except for ANNOTATION\_OWNER) are the same as those in ALL\_ANNOTATIONS.

The annotation owner is the same as the owner of the annotated object.

**Note:**

This view is available starting with Oracle Database 23ai.

**See Also:**

"ALL\_ANNOTATIONS"

## 7.370 USER\_ANNOTATIONS\_USAGE

USER\_ANNOTATIONS\_USAGE provides usage information about schema annotations owned by the current user. Its columns (except for ANNOTATION\_OWNER) are the same as those in ALL\_ANNOTATIONS\_USAGE.

The annotation owner is the same as the owner of the annotated object.

**Note:**

This view is available starting with Oracle Database 23ai.

**See Also:**

"ALL\_ANNOTATIONS\_USAGE"

## 7.371 USER\_APPLICATION\_ROLES

USER\_APPLICATION\_ROLES describes all the roles for the current user that have authorization policy functions defined.

Its columns are the same as those in DBA\_APPLICATION\_ROLES.

**See Also:**

["DBA\\_APPLICATION\\_ROLES"](#)

## 7.372 USER\_APPLY\_ERROR

`USER_APPLY_ERROR` displays information about the error transactions generated by apply processes visible to the current user. Its columns (except for `SOURCE_ROOT_NAME`) are the same as those in `ALL_APPLY_ERROR`.

**See Also:**

["ALL\\_APPLY\\_ERROR"](#)

## 7.373 USER\_AQ\_AGENT\_PRIVS

`USER_AQ_AGENT_PRIVS` displays information about the registered AQ agents that are mapped to the current user. Its columns (except for `DB_USERNAME`) are the same as those in `DBA_AQ_AGENT_PRIVS`.

**See Also:**

["DBA\\_AQ\\_AGENT\\_PRIVS"](#)

## 7.374 USER\_ARGUMENTS

`USER_ARGUMENTS` lists the arguments of the functions and procedures that are owned by the current user. Its columns (except for `OWNER`) are the same as those in `ALL_ARGUMENTS`.

**See Also:**

- ["ALL\\_ARGUMENTS"](#)
- ["USER\\_PROCEDURES"](#) for information about the functions and procedures that are owned by the current user

## 7.375 USER\_ASSEMBLIES

USER\_ASSEMBLIES provides information about all assemblies owned by the current user. Its columns (except for OWNER) are the same as those in ALL\_ASSEMBLIES.

**See Also:**

"ALL\_ASSEMBLIES"

## 7.376 USER\_ASSOCIATIONS

USER\_ASSOCIATIONS describes user-defined statistics associated with objects owned by the current user. Its columns are the same as those in ALL\_ASSOCIATIONS.

**See Also:**

"ALL\_ASSOCIATIONS"

## 7.377 USER\_ATTRIBUTE\_DIM\_ATTR\_CLASS

USER\_ATTRIBUTE\_DIM\_ATTR\_CLASS describes the attribute classifications of the attribute dimensions owned by the current user. Its columns (except for OWNER) are the same as those in ALL\_ATTRIBUTE\_DIM\_ATTR\_CLASS.

**See Also:**

"ALL\_ATTRIBUTE\_DIM\_ATTR\_CLASS"

## 7.378 USER\_ATTRIBUTE\_DIM\_ATTR\_CLS

USER\_ATTRIBUTE\_DIM\_ATTR\_CLS is identical to USER\_ATTRIBUTE\_DIM\_ATTR\_CLASS.

**See Also:**

"USER\_ATTRIBUTE\_DIM\_ATTR\_CLASS"

## 7.379 USER\_ATTRIBUTE\_DIM\_ATTR\_CLS\_AE

USER\_ATTRIBUTE\_DIM\_ATTR\_CLS\_AE describes the attribute classifications of the attribute dimensions (across all editions) owned by the current user. Its columns (except for OWNER) are the same as those in ALL\_ATTRIBUTE\_DIM\_ATTR\_CLS\_AE.

### See Also:

"ALL\_ATTRIBUTE\_DIM\_ATTR\_CLS\_AE"

## 7.380 USER\_ATTRIBUTE\_DIM\_ATTRS

USER\_ATTRIBUTE\_DIM\_ATTRS describes the attributes of the attribute dimensions owned by the current user. Its columns (except for OWNER) are the same as those in ALL\_ATTRIBUTE\_DIM\_ATTRS.

### See Also:

"ALL\_ATTRIBUTE\_DIM\_ATTRS"

## 7.381 USER\_ATTRIBUTE\_DIM\_ATTRS\_AE

USER\_ATTRIBUTE\_DIM\_ATTRS\_AE describes the attributes of the attribute dimensions (across all editions) owned by the current user. Its columns (except for OWNER) are the same as those in ALL\_ATTRIBUTE\_DIM\_ATTRS\_AE.

### See Also:

"ALL\_ATTRIBUTE\_DIM\_ATTRS\_AE"

## 7.382 USER\_ATTRIBUTE\_DIM\_CLASS

USER\_ATTRIBUTE\_DIM\_CLASS describes the classifications of the attribute dimensions owned by the current user. Its columns (except for OWNER) are the same as those in ALL\_ATTRIBUTE\_DIM\_CLASS.

### See Also:

"ALL\_ATTRIBUTE\_DIM\_CLASS"

## 7.383 USER\_ATTRIBUTE\_DIM\_CLASS\_AE

USER\_ATTRIBUTE\_DIM\_CLASS\_AE describes the classifications of the attribute dimensions (across all editions) owned by the current user. Its columns (except for OWNER) are the same as those in ALL\_ATTRIBUTE\_DIM\_CLASS\_AE.

### See Also:

"ALL\_ATTRIBUTE\_DIM\_CLASS\_AE"

## 7.384 USER\_ATTRIBUTE\_DIM\_JN\_PTHS

USER\_ATTRIBUTE\_DIM\_JN\_PTHS is identical to USER\_ATTRIBUTE\_DIM\_JOIN\_PATHS.

### See Also:

"USER\_ATTRIBUTE\_DIM\_JOIN\_PATHS"

## 7.385 USER\_ATTRIBUTE\_DIM\_JN\_PTHS\_AE

USER\_ATTRIBUTE\_DIM\_JN\_PTHS\_AE describes the join paths for the attribute dimensions (across all editions) owned by the current user. Its columns are the same as those in ALL\_ATTRIBUTE\_DIM\_JN\_PTHS\_AE.

### See Also:

"ALL\_ATTRIBUTE\_DIM\_JN\_PTHS\_AE"

## 7.386 USER\_ATTRIBUTE\_DIM\_JOIN\_PATHS

USER\_ATTRIBUTE\_DIM\_JOIN\_PATHS describes the join paths for the attribute dimensions owned by the current user. Its columns (except for OWNER) are the same as those in ALL\_ATTRIBUTE\_DIM\_JOIN\_PATHS.

### See Also:

"ALL\_ATTRIBUTE\_DIM\_JOIN\_PATHS"

## 7.387 USER\_ATTRIBUTE\_DIM\_KEYS

USER\_ATTRIBUTE\_DIM\_KEYS describes the keys of the attribute dimensions owned by the current user. Its columns (except for OWNER) are the same as those in ALL\_ATTRIBUTE\_DIM\_KEYS.

**See Also:**

"ALL\_ATTRIBUTE\_DIM\_KEYS"

## 7.388 USER\_ATTRIBUTE\_DIM\_KEYS\_AE

USER\_ATTRIBUTE\_DIM\_KEYS\_AE describes the keys of the attribute dimensions (across all editions) owned by the current user. Its columns (except for OWNER) are the same as those in ALL\_ATTRIBUTE\_DIM\_KEYS\_AE.

**See Also:**

"ALL\_ATTRIBUTE\_DIM\_KEYS\_AE"

## 7.389 USER\_ATTRIBUTE\_DIM\_LEVEL\_ATTRS

USER\_ATTRIBUTE\_DIM\_LEVEL\_ATTRS describes the attributes of the levels of the attribute dimensions owned by the current user. Its columns (except for OWNER) are the same as those in ALL\_ATTRIBUTE\_DIM\_LEVEL\_ATTRS.

**See Also:**

"ALL\_ATTRIBUTE\_DIM\_LEVEL\_ATTRS"

## 7.390 USER\_ATTRIBUTE\_DIM\_LEVELS

USER\_ATTRIBUTE\_DIM\_LEVELS describes the levels of the attribute dimensions owned by the current user. Its columns (except for OWNER) are the same as those in ALL\_ATTRIBUTE\_DIM\_LEVELS.

**See Also:**

"ALL\_ATTRIBUTE\_DIM\_LEVELS"

## 7.391 USER\_ATTRIBUTE\_DIM\_LEVELS\_AE

USER\_ATTRIBUTE\_DIM\_LEVELS\_AE describes the levels of the attribute dimensions (across all editions) owned by the current user. Its columns (except for OWNER) are the same as those in ALL\_ATTRIBUTE\_DIM\_LEVELS\_AE.

### See Also:

"ALL\_ATTRIBUTE\_DIM\_LEVELS\_AE"

## 7.392 USER\_ATTRIBUTE\_DIM\_LVL\_ATTRS

USER\_ATTRIBUTE\_DIM\_LVL\_ATTRS is identical to USER\_ATTRIBUTE\_DIM\_LEVEL\_ATTRS.

### See Also:

"USER\_ATTRIBUTE\_DIM\_LEVEL\_ATTRS"

## 7.393 USER\_ATTRIBUTE\_DIM\_LVL\_ATTRS\_AE

USER\_ATTRIBUTE\_DIM\_LVL\_ATTRS\_AE describes the attributes of the levels of the attribute dimensions (across all editions) owned by the current user. Its columns (except for OWNER) are the same as those in ALL\_ATTRIBUTE\_DIM\_LVL\_ATTRS\_AE.

### See Also:

"ALL\_ATTRIBUTE\_DIM\_LVL\_ATTRS\_AE"

## 7.394 USER\_ATTRIBUTE\_DIM\_LVL\_CLASS

USER\_ATTRIBUTE\_DIM\_LVL\_CLASS describes the level classifications of the attribute dimensions owned by the current user. Its columns (except for OWNER) are the same as those in ALL\_ATTRIBUTE\_DIM\_LVL\_CLASS.

### See Also:

"ALL\_ATTRIBUTE\_DIM\_LVL\_CLASS"

## 7.395 USER\_ATTRIBUTE\_DIM\_LVL\_CLS

USER\_ATTRIBUTE\_DIM\_LVL\_CLS is identical to USER\_ATTRIBUTE\_DIM\_LVL\_CLASS.

### See Also:

["USER\\_ATTRIBUTE\\_DIM\\_LVL\\_CLASS"](#)

## 7.396 USER\_ATTRIBUTE\_DIM\_LVL\_CLS\_AE

USER\_ATTRIBUTE\_DIM\_LVL\_CLS\_AE describes the level classifications of the attribute dimensions (across all editions) owned by the current user. Its columns (except for OWNER) are the same as those in ALL\_ATTRIBUTE\_DIM\_LVL\_CLS\_AE.

### See Also:

["ALL\\_ATTRIBUTE\\_DIM\\_LVL\\_CLS\\_AE"](#)

## 7.397 USER\_ATTRIBUTE\_DIM\_ORD\_ATTRS

USER\_ATTRIBUTE\_DIM\_ORD\_ATTRS is identical to USER\_ATTRIBUTE\_DIM\_ORDER\_ATTRS.

### See Also:

["USER\\_ATTRIBUTE\\_DIM\\_ORDER\\_ATTRS"](#)

## 7.398 USER\_ATTRIBUTE\_DIM\_ORD\_ATTRS\_AE

USER\_ATTRIBUTE\_DIM\_ORD\_ATTRS\_AE describes the order attributes of the attribute dimensions (across all editions) owned by the current user. Its columns (except for OWNER) are the same as those in ALL\_ATTRIBUTE\_DIM\_ORD\_ATTRS\_AE.

### See Also:

["ALL\\_ATTRIBUTE\\_DIM\\_ORD\\_ATTRS\\_AE"](#)

## 7.399 USER\_ATTRIBUTE\_DIM\_ORDER\_ATTRS

`USER_ATTRIBUTE_DIM_ORDER_ATTRS` describes the order attributes of the attribute dimensions owned by the current user. Its columns (except for `OWNER`) are the same as those in `ALL_ATTRIBUTE_DIM_ORDER_ATTRS`.

### See Also:

["ALL\\_ATTRIBUTE\\_DIM\\_ORDER\\_ATTRS"](#)

## 7.400 USER\_ATTRIBUTE\_DIM\_TABLES

`USER_ATTRIBUTE_DIM_TABLES` describes the tables used by the attribute dimensions owned by the current user. Its columns (except for `OWNER`) are the same as those in `ALL_ATTRIBUTE_DIM_TABLES`.

### See Also:

["ALL\\_ATTRIBUTE\\_DIM\\_TABLES"](#)

## 7.401 USER\_ATTRIBUTE\_DIM\_TABLES\_AE

`USER_ATTRIBUTE_DIM_TABLES_AE` describes the tables used by the attribute dimensions (across all editions) owned by the current user. Its columns (except for `OWNER`) are the same as those in `ALL_ATTRIBUTE_DIM_TABLES_AE`.

### See Also:

["ALL\\_ATTRIBUTE\\_DIM\\_TABLES\\_AE"](#)

## 7.402 USER\_ATTRIBUTE\_DIMENSIONS

`USER_ATTRIBUTE_DIMENSIONS` describes the attribute dimensions owned by the current user. Its columns (except for `OWNER`) are the same as those in `ALL_ATTRIBUTE_DIMENSIONS`.

### See Also:

["ALL\\_ATTRIBUTE\\_DIMENSIONS"](#)

## 7.403 USER\_ATTRIBUTE\_DIMENSIONS\_AE

USER\_ATTRIBUTE\_DIMENSIONS\_AE describes the attribute dimensions (across all editions) owned by the current user. Its columns (except for OWNER) are the same as those in ALL\_ATTRIBUTE\_DIMENSIONS\_AE.

### See Also:

"ALL\_ATTRIBUTE\_DIMENSIONS\_AE"

## 7.404 USER\_ATTRIBUTE\_TRANSFORMATIONS

USER\_ATTRIBUTE\_TRANSFORMATIONS describes the transformation functions for the transformations owned by the current user. Its columns (except for OWNER) are the same as those in ALL\_ATTRIBUTE\_TRANSFORMATIONS.

### See Also:

"ALL\_ATTRIBUTE\_TRANSFORMATIONS"

## 7.405 USER\_AUDIT\_OBJECT

USER\_AUDIT\_OBJECT displays audit trail records for the objects accessible to the current user. Its columns are the same as those in DBA\_AUDIT\_OBJECT.

### Note:

This view is deprecated and applies only to traditional auditing. Traditional auditing is desupported starting in Oracle Database 23ai. Though traditional auditing is desupported, any current traditional audit settings that you have will still be honored and are viewable with this view. See *Oracle Database Security Guide* for more information about how this desupport works.

## 7.406 USER\_AUDIT\_POLICIES

USER\_AUDIT\_POLICIES describes the fine-grained auditing policies on the tables and views owned by the current user. Its columns (except for OBJECT\_SCHEMA) are the same as those in ALL\_AUDIT\_POLICIES.

### Note:

This view is populated only in an Oracle Database where unified auditing is not enabled. When unified auditing is enabled in Oracle Database, the audit records are populated in the new audit trail and can be viewed from UNIFIED\_AUDIT\_TRAIL.

- See *Oracle Database Security Guide* for more information about unified auditing.
- See *Oracle Database Upgrade Guide* for more information about migrating to unified auditing.

### See Also:

"ALL\_AUDIT\_POLICIES"

## 7.407 USER\_AUDIT\_POLICY\_COLUMNS

USER\_AUDIT\_POLICY\_COLUMNS describes the fine-grained auditing policy columns on the tables and views owned by the current user. Its columns are the same as those in ALL\_AUDIT\_POLICY\_COLUMNS.

### Note:

This view is populated only in an Oracle Database where unified auditing is not enabled. When unified auditing is enabled in Oracle Database, the audit records are populated in the new audit trail and can be viewed from UNIFIED\_AUDIT\_TRAIL.

- See *Oracle Database Security Guide* for more information about unified auditing.
- See *Oracle Database Upgrade Guide* for more information about migrating to unified auditing.

### See Also:

"ALL\_AUDIT\_POLICY\_COLUMNS"

## 7.408 USER\_AUDIT\_SESSION

USER\_AUDIT\_SESSION displays the audit trail records concerning connections and disconnections of the current user. Its columns are the same as those in DBA\_AUDIT\_SESSION.

### Note:

This view is deprecated and applies only to traditional auditing. Traditional auditing is desupported starting in Oracle Database 23ai. Though traditional auditing is desupported, any current traditional audit settings that you have will still be honored and are viewable with this view. See *Oracle Database Security Guide* for more information about how this desupport works.

## 7.409 USER\_AUDIT\_STATEMENT

USER\_AUDIT\_STATEMENT displays audit trail entries for the GRANT, REVOKE, AUDIT, NOAUDIT, and ALTER SYSTEM statements issued by the current user.

Its columns are the same as those in "DBA\_AUDIT\_STATEMENT".

### Note:

This view is deprecated and applies only to traditional auditing. Traditional auditing is desupported starting in Oracle Database 23ai. Though traditional auditing is desupported, any current traditional audit settings that you have will still be honored and are viewable with this view. See *Oracle Database Security Guide* for more information about how this desupport works.

## 7.410 USER\_AUDIT\_TRAIL

USER\_AUDIT\_TRAIL displays the standard audit trail entries related to the current user.

Its columns are the same as those in "DBA\_AUDIT\_TRAIL".

The view displays audit records generated by actions performed by the user and audit records generated by actions performed on the user's schema objects.

### Note:

This view is deprecated and applies only to traditional auditing. Traditional auditing is desupported starting in Oracle Database 23ai. Though traditional auditing is desupported, any current traditional audit settings that you have will still be honored and are viewable with this view. See *Oracle Database Security Guide* for more information about how this desupport works.

## 7.411 USER\_AW\_PS

USER\_AW\_PS describes the page spaces in the analytic workspaces owned by the current user. Its columns (except for OWNER) are the same as those in ALL\_AW\_PS.

**See Also:**

"ALL\_AW\_PS"

## 7.412 USER\_AWS

USER\_AWS describes the analytic workspaces owned by the current user. Its columns (except for OWNER) are the same as those in ALL\_AWS.

**See Also:**

"ALL\_AWS"

## 7.413 USER\_BASE\_TABLE\_MVIEWS

USER\_BASE\_TABLE\_MVIEWS describes the materialized views using materialized view logs owned by the current user. Its columns are the same as those in ALL\_BASE\_TABLE\_MVIEWS.

**See Also:**

"ALL\_BASE\_TABLE\_MVIEWS"

## 7.414 USER\_BLOCKCHAIN\_ROW\_VERSION\_COLS

USER\_BLOCKCHAIN\_ROW\_VERSION\_COLS displays information about row versioned columns in the blockchain tables owned by the current user. Its columns are the same as those in ALL\_BLOCKCHAIN\_ROW\_VERSION\_COLS.

**Note:**

This view is available starting with Oracle Database 23ai.

**See Also:**

["ALL\\_BLOCKCHAIN\\_ROW\\_VERSION\\_COLS"](#)

## 7.415 USER\_BLOCKCHAIN\_ROW\_VERSION\_HISTORY

USER\_BLOCKCHAIN\_ROW\_VERSION\_HISTORY provides a history of row versions in the blockchain tables owned by the current user. Its columns (except for SCHEMA\_NAME) are the same as those in ALL\_BLOCKCHAIN\_ROW\_VERSION\_HISTORY.

**Note:**

This view is available starting with Oracle Database 23ai.

**See Also:**

["ALL\\_BLOCKCHAIN\\_ROW\\_VERSION\\_HISTORY"](#)

## 7.416 USER\_BLOCKCHAIN\_TABLE\_CHAINS

USER\_BLOCKCHAIN\_TABLE\_CHAINS displays system chain information for the blockchain tables owned by the current user. Its columns (except for SCHEMA\_NAME) are the same as those in ALL\_BLOCKCHAIN\_TABLE\_CHAINS.

**Note:**

This view is available starting with Oracle Database 23ai.

**See Also:**

["ALL\\_BLOCKCHAIN\\_TABLE\\_CHAINS"](#)

## 7.417 USER\_BLOCKCHAIN\_TABLE\_EPOCHS

USER\_BLOCKCHAIN\_TABLE\_EPOCHS displays epoch information for the blockchain tables owned by the current user. Its columns (except for SCHEMA\_NAME) are the same as those in ALL\_BLOCKCHAIN\_TABLE\_EPOCHS.

**Note:**

This view is available starting with Oracle Database 23ai.

**See Also:**

"ALL\_BLOCKCHAIN\_TABLE\_EPOCHS"

## 7.418 USER\_BLOCKCHAIN\_TABLE\_HASH\_COL\_ORDER

USER\_BLOCKCHAIN\_TABLE\_HASH\_COL\_ORDER displays information about columns used to compute the cryptographic hash in the blockchain tables owned by the current user. Its columns (except for SCHEMA\_NAME) are the same as those in ALL\_BLOCKCHAIN\_TABLE\_HASH\_COL\_ORDER.

**Note:**

This view is available starting with Oracle Database 23ai.

**See Also:**

"ALL\_BLOCKCHAIN\_TABLE\_HASH\_COL\_ORDER"

## 7.419 USER\_BLOCKCHAIN\_TABLES

USER\_BLOCKCHAIN\_TABLES describes the blockchain tables owned by the current user. Its columns (except for SCHEMA\_NAME) are the same as those in ALL\_BLOCKCHAIN\_TABLES.

**See Also:**

"ALL\_BLOCKCHAIN\_TABLES"

## 7.420 USER\_CATALOG

USER\_CATALOG lists tables, views, clusters, synonyms, and sequences owned by the current user. Its columns are the same as those in ALL\_CATALOG.

### See Also:

"ALL\_CATALOG"

## 7.421 USER\_CERTIFICATES

USER\_CERTIFICATES displays the certificates added by the current user which are used for signature verification for blockchain tables. Its columns (except USER\_NAME) are the same as those in ALL\_CERTIFICATES.

### See Also:

"ALL\_CERTIFICATES"

## 7.422 USER\_CHANGE\_NOTIFICATION\_REGS

USER\_CHANGE\_NOTIFICATION\_REGS describes the change notification registrations owned by the current user. Its columns (except for USERNAME) are the same as those in DBA\_CHANGE\_NOTIFICATION\_REGS.

### See Also:

"DBA\_CHANGE\_NOTIFICATION\_REGS"

## 7.423 USER\_CLU\_COLUMNS

USER\_CLU\_COLUMNS maps columns in the current user's tables to cluster columns. Its columns are the same as those in DBA\_CLU\_COLUMNS.

### See Also:

"DBA\_CLU\_COLUMNS"

## 7.424 USER\_CLUSTER\_HASH\_EXPRESSIONS

USER\_CLUSTER\_HASH\_EXPRESSIONS lists hash functions for the hash clusters owned by the current user. Its columns are the same as those in ALL\_CLUSTER\_HASH\_EXPRESSIONS.

### See Also:

"ALL\_CLUSTER\_HASH\_EXPRESSIONS"

## 7.425 USER\_CLUSTERING\_DIMENSIONS

USER\_CLUSTERING\_DIMENSIONS describes dimension tables associated with tables with an attribute clustering clause owned by the user. Its columns (except for OWNER) are the same as those in ALL\_CLUSTERING\_DIMENSIONS.

### See Also:

- "ALL\_CLUSTERING\_DIMENSIONS"
- *Oracle Database Data Warehousing Guide* for information about attribute clustering with zone maps

## 7.426 USER\_CLUSTERING\_JOINS

USER\_CLUSTERING\_JOINS describes joins to the dimension tables associated with tables with an attribute clustering clause owned by the user. Its columns (except for OWNER) are the same as those in ALL\_CLUSTERING\_JOINS.

### See Also:

- "ALL\_CLUSTERING\_JOINS"
- *Oracle Database Data Warehousing Guide* for information about attribute clustering with zone maps

## 7.427 USER\_CLUSTERING\_KEYS

USER\_CLUSTERING\_KEYS describes clustering keys for tables with an attribute clustering clause owned by the user. Its columns are the same as those in ALL\_CLUSTERING\_KEYS.

### See Also:

- ["ALL\\_CLUSTERING\\_KEYS"](#)
- *Oracle Database Data Warehousing Guide* for information about attribute clustering with zone maps

## 7.428 USER\_CLUSTERING\_TABLES

USER\_CLUSTERING\_TABLES describes the tables with an attribute clustering clause owned by the user. Its columns are the same as those in ALL\_CLUSTERING\_TABLES.

### See Also:

- ["ALL\\_CLUSTERING\\_TABLES"](#)
- *Oracle Database Data Warehousing Guide* for information about attribute clustering with zone maps

## 7.429 USER\_CLUSTERS

USER\_CLUSTERS describes all the clusters owned by the current user. Its columns are the same as those in ALL\_CLUSTERS.

### See Also:

- ["ALL\\_CLUSTERS"](#)

## 7.430 USER\_CODE\_ROLE\_PRIVS

USER\_CODE\_ROLE\_PRIVS describes all the roles that are associated with program units owned by current user. Its columns (except for OWNER) are the same as those in ALL\_CODE\_ROLE\_PRIVS.

### See Also:

- ["ALL\\_CODE\\_ROLE\\_PRIVS"](#)

## 7.431 USER\_COL\_COMMENTS

USER\_COL\_COMMENTS displays comments on the columns of the tables and views owned by the current user. Its columns (except for OWNER) are the same as those in ALL\_COL\_COMMENTS.

See Also:

["ALL\\_COL\\_COMMENTS"](#)

## 7.432 USER\_COL\_PENDING\_STATS

USER\_COL\_PENDING\_STATS describes the pending statistics of the columns owned by the current user. Its columns (except for OWNER) are the same as those in ALL\_COL\_PENDING\_STATS.

See Also:

["ALL\\_COL\\_PENDING\\_STATS"](#)

## 7.433 USER\_COL\_PRIVS

USER\_COL\_PRIVS describes the column object grants for which the current user is the object owner, grantor, or grantee. Its columns are the same as those in DBA\_COL\_PRIVS.

See Also:

["DBA\\_COL\\_PRIVS"](#)

## 7.434 USER\_COL\_PRIVS\_MADE

USER\_COL\_PRIVS\_MADE describes the column object grants for which the current user is the object owner. Its columns (except for OWNER) are the same as those in ALL\_COL\_PRIVS\_MADE.

See Also:

["ALL\\_COL\\_PRIVS\\_MADE"](#)

## 7.435 USER\_COL\_PRIVS\_RECD

USER\_COL\_PRIVS\_RECD describes the column object grants for which the current user is the grantee. Its columns (except for GRANTEE) are the same as those in ALL\_COL\_PRIVS\_RECD.

**See Also:**

["ALL\\_COL\\_PRIVS\\_RECD"](#)

## 7.436 USER\_COLL\_TYPES

USER\_COLL\_TYPES describes named collection types (VARRAYs, nested tables, object tables, and so on) in the current user's schema. Its columns are the same as those in ALL\_COLL\_TYPES.

**See Also:**

["ALL\\_COLL\\_TYPES"](#)

## 7.437 USER\_COMPARISON

USER\_COMPARISON displays information about the comparison objects owned by the current user. Its columns (except for OWNER) are the same as those in DBA\_COMPARISON.

**See Also:**

["DBA\\_COMPARISON"](#)

## 7.438 USER\_COMPARISON\_COLUMNS

USER\_COMPARISON\_COLUMNS displays information about the columns for the comparison objects owned by the current user. Its columns (except for OWNER) are the same as those in DBA\_COMPARISON\_COLUMNS.

**See Also:**

["DBA\\_COMPARISON\\_COLUMNS"](#)

## 7.439 USER\_COMPARISON\_ROW\_DIF

`USER_COMPARISON_ROW_DIF` displays information about the differing rows in the comparison scans owned by the current user. Its columns are the same as those in `DBA_COMPARISON_ROW_DIF`.

### See Also:

["DBA\\_COMPARISON\\_ROW\\_DIF"](#)

## 7.440 USER\_COMPARISON\_SCAN

`USER_COMPARISON_SCAN` displays information about the comparison scans owned by the current user. Its columns (except for `OWNER`) are the same as those in `DBA_COMPARISON_SCAN`.

### See Also:

["DBA\\_COMPARISON\\_SCAN"](#)

## 7.441 USER\_COMPARISON\_SCAN\_VALUES

`USER_COMPARISON_SCAN_VALUES` displays information about the values for the comparison scans owned by the current user. Its columns (except for `OWNER`) are the same as those in `DBA_COMPARISON_SCAN_VALUES`.

### See Also:

["DBA\\_COMPARISON\\_SCAN\\_VALUES"](#)

## 7.442 USER\_CONS\_COLUMNS

`USER_CONS_COLUMNS` describes columns that are owned by the current user and that are specified in constraint definitions. Its columns are the same as those in `ALL_CONS_COLUMNS`.

### See Also:

["ALL\\_CONS\\_COLUMNS"](#)

## 7.443 USER\_CONS\_OBJ\_COLUMNS

USER\_CONS\_OBJ\_COLUMNS displays information about the types that object columns (or attributes) or collection elements have been constrained to, in the tables owned by the current user. Its columns (except for OWNER) are the same as those in ALL\_CONS\_OBJ\_COLUMNS.

**See Also:**

["ALL\\_CONS\\_OBJ\\_COLUMNS"](#)

## 7.444 USER\_CONSTRAINTS

USER\_CONSTRAINTS describes all constraint definitions on tables owned by the current user. Its columns are the same as those in ALL\_CONSTRAINTS.

**See Also:**

["ALL\\_CONSTRAINTS"](#)

## 7.445 USER\_CQ\_NOTIFICATION\_QUERIES

USER\_CQ\_NOTIFICATION\_QUERIES describes the registered queries for the CQ notifications owned by the current user. Its columns (except for USERNAME) are the same as those in DBA\_CQ\_NOTIFICATION\_QUERIES.

**See Also:**

["DBA\\_CQ\\_NOTIFICATION\\_QUERIES"](#)

## 7.446 USER\_CREDENTIALS

USER\_CREDENTIALS displays credentials owned by the current user. Its columns (except for OWNER) are the same as those in ALL\_CREDENTIALS.

**See Also:**

["ALL\\_CREDENTIALS"](#)

## 7.447 USER\_CUBE\_ATTR\_VISIBILITY

USER\_CUBE\_ATTR\_VISIBILITY describes the OLAP attributes visible for the dimensions, hierarchies, and levels owned by the current user. Its columns (except for OWNER) are the same as those in ALL\_CUBE\_ATTR\_VISIBILITY.

### See Also:

"ALL\_CUBE\_ATTR\_VISIBILITY"

## 7.448 USER\_CUBE\_ATTRIBUTES

USER\_CUBE\_ATTRIBUTES describes the attributes for the OLAP cube dimensions owned by the current user. Its columns (except for OWNER) are the same as those in ALL\_CUBE\_ATTRIBUTES.

### See Also:

"ALL\_CUBE\_ATTRIBUTES"

## 7.449 USER\_CUBE\_BUILD\_PROCESSES

USER\_CUBE\_BUILD\_PROCESSES describes the OLAP build processes and maintenance scripts owned by the current user. Its columns (except for OWNER) are the same as those in ALL\_CUBE\_BUILD\_PROCESSES.

### See Also:

"ALL\_CUBE\_BUILD\_PROCESSES"

## 7.450 USER\_CUBE\_CALCULATED\_MEMBERS

USER\_CUBE\_CALCULATED\_MEMBERS describes the calculated members for the OLAP cube dimensions owned by the current user. Its columns (except for OWNER) are the same as those in ALL\_CUBE\_CALCULATED\_MEMBERS.

### See Also:

"ALL\_CUBE\_CALCULATED\_MEMBERS"

## 7.451 USER\_CUBE\_DIM\_LEVELS

USER\_CUBE\_DIM\_LEVELS describes the OLAP dimension levels owned by the current user. Its columns (except for OWNER) are the same as those in ALL\_CUBE\_DIM\_LEVELS.

**See Also:**

["ALL\\_CUBE\\_DIM\\_LEVELS"](#)

## 7.452 USER\_CUBE\_DIM\_MODELS

USER\_CUBE\_DIM\_MODELS describes the models for the OLAP dimensions owned by the current user. Its columns (except for OWNER) are the same as those in ALL\_CUBE\_DIM\_MODELS.

**See Also:**

["ALL\\_CUBE\\_DIM\\_MODELS"](#)

## 7.453 USER\_CUBE\_DIM\_VIEW\_COLUMNS

USER\_CUBE\_DIM\_VIEW\_COLUMNS describes the columns of the relational views of the OLAP cube dimensions owned by the current user. Its columns (except for OWNER) are the same as those in ALL\_CUBE\_DIM\_VIEW\_COLUMNS.

**See Also:**

["ALL\\_CUBE\\_DIM\\_VIEW\\_COLUMNS"](#)

## 7.454 USER\_CUBE\_DIM\_VIEWS

USER\_CUBE\_DIM\_VIEWS describes the relational views of the OLAP dimensions owned by the current user. Its columns (except for OWNER) are the same as those in ALL\_CUBE\_DIM\_VIEWS.

**See Also:**

["ALL\\_CUBE\\_DIM\\_VIEWS"](#)

## 7.455 USER\_CUBE\_DIMENSIONALITY

`USER_CUBE_DIMENSIONALITY` describes the dimension order for the OLAP cubes owned by the current user. Its columns (except for `OWNER`) are the same as those in `ALL_CUBE_DIMENSIONALITY`.

**See Also:**

["ALL\\_CUBE\\_DIMENSIONALITY"](#)

## 7.456 USER\_CUBE\_DIMENSIONS

`USER_CUBE_DIMENSIONS` describes the OLAP cube dimensions owned by the current user. Its columns (except for `OWNER`) are the same as those in `ALL_CUBE_DIMENSIONS`.

**See Also:**

["ALL\\_CUBE\\_DIMENSIONS"](#)

## 7.457 USER\_CUBE\_HIER\_LEVELS

`USER_CUBE_HIER_LEVELS` describes the hierarchy levels for the OLAP cube dimensions owned by the current user. Its columns (except for `OWNER`) are the same as those in `ALL_CUBE_HIER_LEVELS`.

**See Also:**

["ALL\\_CUBE\\_HIER\\_LEVELS"](#)

## 7.458 USER\_CUBE\_HIER\_VIEW\_COLUMNS

`USER_CUBE_HIER_VIEW_COLUMNS` describes the columns of the relational hierarchy views of the OLAP cube dimensions owned by the current user. Its columns (except for `OWNER`) are the same as those in `ALL_CUBE_HIER_VIEW_COLUMNS`.

**See Also:**

["ALL\\_CUBE\\_HIER\\_VIEW\\_COLUMNS"](#)

## 7.459 USER\_CUBE\_HIER\_VIEWS

USER\_CUBE\_HIER\_VIEWS describes the hierarchies for the OLAP cube dimensions owned by the current user. Its columns (except for OWNER) are the same as those in ALL\_CUBE\_HIER\_VIEWS.

**See Also:**

["ALL\\_CUBE\\_HIER\\_VIEWS"](#)

## 7.460 USER\_CUBE\_HIERARCHIES

USER\_CUBE\_HIERARCHIES describes the OLAP dimension hierarchies owned by the current user. Its columns (except for OWNER) are the same as those in ALL\_CUBE\_HIERARCHIES.

**See Also:**

["ALL\\_CUBE\\_HIERARCHIES"](#)

## 7.461 USER\_CUBE\_MEASURES

USER\_CUBE\_MEASURES describes the measures for the OLAP cubes owned by the current user. Its columns (except for OWNER) are the same as those in ALL\_CUBE\_MEASURES.

**See Also:**

["ALL\\_CUBE\\_MEASURES"](#)

## 7.462 USER\_CUBE\_NAMED\_BUILD\_SPECS

USER\_CUBE\_NAMED\_BUILD\_SPECS describes the OLAP cube named build specifications in the database that are owned by the current user. Its columns (except for OWNER) are the same as those in ALL\_CUBE\_NAMED\_BUILD\_SPECS.

**See Also:**

["ALL\\_CUBE\\_NAMED\\_BUILD\\_SPECS"](#)

## 7.463 USER\_CUBE\_SUB\_PARTITION\_LEVELS

USER\_CUBE\_SUB\_PARTITION\_LEVELS describes the OLAP secondary partition levels in the database that are owned by the current user. Its columns (except for OWNER) are the same as those in ALL\_CUBE\_SUB\_PARTITION\_LEVELS.

**See Also:**

"ALL\_CUBE\_SUB\_PARTITION\_LEVELS"

## 7.464 USER\_CUBE\_VIEW\_COLUMNS

USER\_CUBE\_VIEW\_COLUMNS describes the columns of relational views of OLAP cubes owned by the current user. Its columns (except for OWNER) are the same as those in ALL\_CUBE\_VIEW\_COLUMNS.

**See Also:**

"ALL\_CUBE\_VIEW\_COLUMNS"

## 7.465 USER\_CUBE\_VIEWS

USER\_CUBE\_VIEWS describes the relational views of the OLAP cubes owned by the current user. Its columns (except for OWNER) are the same as those in ALL\_CUBE\_VIEWS.

**See Also:**

"ALL\_CUBE\_VIEWS"

## 7.466 USER\_CUBES

USER\_CUBES describes the OLAP cubes owned by the current user. Its columns (except for OWNER) are the same as those in ALL\_CUBES.

**See Also:**

"ALL\_CUBES"

## 7.467 USER\_DATAPUMP\_JOBS

USER\_DATAPUMP\_JOBS displays the Data Pump jobs owned by the current user. Its columns (except for OWNER\_NAME) are the same as those in DBA\_DATAPUMP\_JOBS.

**See Also:**

"DBA\_DATAPUMP\_JOBS"

## 7.468 USER\_DB\_LINKS

USER\_DB\_LINKS describes the database links owned by the current user. Its columns are the same as those in ALL\_DB\_LINKS except that it does not have the OWNER column.

It also displays an additional column, PASSWORD, which is no longer used and for which nothing is returned. The PASSWORD column is maintained for backward compatibility only.

**See Also:**

"ALL\_DB\_LINKS"

## 7.469 USER\_DBFS\_HS

USER\_DBFS\_HS shows all Database File System (DBFS) hierarchical stores owned by the current user. Its columns (except for STOREOWNER) are the same as those in DBA\_DBFS\_HS.

**See Also:**

"DBA\_DBFS\_HS"

## 7.470 USER\_DBFS\_HS\_COMMANDS

USER\_DBFS\_HS\_COMMANDS shows all the registered store commands for all Database File system (DBFS) hierarchical stores owned by current user. Its columns (except for STOREOWNER) are the same as those in DBA\_DBFS\_HS\_COMMANDS.

**See Also:**

"DBA\_DBFS\_HS\_COMMANDS"

## 7.471 USER\_DBFS\_HS\_FILES

USER\_DBFS\_HS\_FILES displays files in the Database File System (DBFS) hierarchical store owned by the current user and their location on the back-end device.

| Column         | Datatype        | NULL | Description                                       |
|----------------|-----------------|------|---------------------------------------------------|
| PATH           | VARCHAR2 (1024) |      | Path name of the file                             |
| SEQUENCENUMBER | NUMBER          |      | Sequence number of this piece of the file         |
| STARTOFFSET    | NUMBER          |      | Begin offset of this piece in the tarball         |
| ENDOFFSET      | NUMBER          |      | End offset of this piece in the tarball           |
| TARBALLID      | NUMBER          |      | Tarball ID                                        |
| BACKUPFILENAME | VARCHAR2 (256)  |      | File on back end in which this tarball is located |
| TARSTARTOFFSET | NUMBER          |      | Begin offset of this tarball in the backup file   |
| TARENDOFFSET   | NUMBER          |      | End offset of this tarball in the backup file     |

## 7.472 USER\_DBFS\_HS\_FIXED\_PROPERTIES

USER\_DBFS\_HS\_FIXED\_PROPERTIES shows non-modifiable properties of all Database File System (DBFS) hierarchical stores owned by current user. Its columns (except for STORE\_OWNER) are the same as those in DBA\_DBFS\_HS\_FIXED\_PROPERTIES.

**See Also:**

"DBA\_DBFS\_HS\_FIXED\_PROPERTIES"

## 7.473 USER\_DBFS\_HS\_PROPERTIES

USER\_DBFS\_HS\_PROPERTIES shows modifiable properties of all Database File System (DBFS) hierarchical stores owned by current user. Its columns (except for STOREOWNER) are the same as those in DBA\_DBFS\_HS\_PROPERTIES.

**See Also:**

"DBA\_DBFS\_HS\_PROPERTIES"

## 7.474 USER\_DDL\_REGS

USER\_DDL\_REGS displays DDL notification registrations that apply to tables owned by the current user. Its columns (except for USERNAME) are the same as those in DBA\_DDL\_REGS.

### Note:

This view is available starting with Oracle Database 23ai.

### See Also:

"DBA\_DDL\_REGS"

## 7.475 USER\_DEPENDENCIES

USER\_DEPENDENCIES describes dependencies between procedures, packages, functions, package bodies, and triggers owned by the current user, including dependencies on views created without any database links. Its columns are the same as those in ALL\_DEPENDENCIES.

### See Also:

"ALL\_DEPENDENCIES"

## 7.476 USER\_DIM\_ATTRIBUTES

USER\_DIM\_ATTRIBUTES describes the relationship between dimension levels and functionally dependent columns in the current user's schema.

The level columns and the dependent column must be in the same table. This view's columns are the same as those in ALL\_DIM\_ATTRIBUTES.

### See Also:

"ALL\_DIM\_ATTRIBUTES"

## 7.477 USER\_DIM\_CHILD\_OF

USER\_DIM\_CHILD\_OF describes a hierarchical relationship of 1 to  $n$  between pairs of levels in dimensions owned by the current user. Its columns are the same as those in ALL\_DIM\_CHILD\_OF.

### See Also:

"ALL\_DIM\_CHILD\_OF"

## 7.478 USER\_DIM\_HIERARCHIES

USER\_DIM\_HIERARCHIES describes the dimension hierarchies owned by the current user. Its columns are the same as those in ALL\_DIM\_HIERARCHIES.

### See Also:

"ALL\_DIM\_HIERARCHIES"

## 7.479 USER\_DIM\_JOIN\_KEY

USER\_DIM\_JOIN\_KEY describes the join between two dimension tables owned by the current user. The join is always specified between a parent dimension level column and a child column. This view's columns are the same as those in ALL\_DIM\_JOIN\_KEY.

### See Also:

"ALL\_DIM\_JOIN\_KEY"

## 7.480 USER\_DIM\_LEVEL\_KEY

USER\_DIM\_LEVEL\_KEY describes columns of dimension levels owned by the current user. This view's columns are the same as those in ALL\_DIM\_LEVEL\_KEY.

### See Also:

"ALL\_DIM\_LEVEL\_KEY"

## 7.481 USER\_DIM\_LEVELS

USER\_DIM\_LEVELS describes the levels of dimensions owned by the current user. All columns of a dimension level must come from the same relation. This view's columns are the same as those in ALL\_DIM\_LEVELS.

### See Also:

"ALL\_DIM\_LEVELS"

## 7.482 USER\_DIMENSIONS

USER\_DIMENSIONS describes dimension objects in the user's schema. Its columns are the same as those in ALL\_DIMENSIONS.

### See Also:

"ALL\_DIMENSIONS"

## 7.483 USER\_DOMAIN\_COLS

USER\_DOMAIN\_COLS describes columns of the data use case domains owned by the current user. Its columns are the same as those in ALL\_DOMAIN\_COLS.

### Note:

This view is available starting with Oracle Database 23ai.

### See Also:

"ALL\_DOMAIN\_COLS"

## 7.484 USER\_DOMAIN\_CONSTRAINTS

USER\_DOMAIN\_CONSTRAINTS describes constraint definitions on the data use case domains owned by the current user. Its columns are the same as those in ALL\_DOMAIN\_CONSTRAINTS.

**Note:**

This view is available starting with Oracle Database 23ai.

**See Also:**

"ALL\_DOMAIN\_CONSTRAINTS"

## 7.485 USER\_DOMAINS

USER\_DOMAINS describes the data use case domains owned by the current user. Its columns are the same as those in ALL\_DOMAINS.

**Note:**

This view is available starting with Oracle Database 23ai.

**See Also:**

"ALL\_DOMAINS"

## 7.486 USER\_EDITED\_TYPES

USER\_EDITED\_TYPES lists the types that are editioned by default for the current user. Its columns (except for SCHEMA) are the same as those in DBA\_EDITED\_TYPES.

**See Also:**

"DBA\_EDITED\_TYPES"

## 7.487 USER\_EDITIONING\_VIEW\_COLS

`USER_EDITIONING_VIEW_COLS` describes the relationship between the columns of the editioning views owned by the current user and the table columns to which they map. Its columns (except for `OWNER`) are the same as those in `ALL_EDITIONING_VIEW_COLS`.

### See Also:

["ALL\\_EDITIONING\\_VIEW\\_COLS"](#)

## 7.488 USER\_EDITIONING\_VIEW\_COLS\_AE

`USER_EDITIONING_VIEW_COLS_AE` describes the relationship between the columns of the editioning views (across all editions) owned by the current user and the table columns to which they map. Its columns (except for `OWNER`) are the same as those in `ALL_EDITIONING_VIEW_COLS_AE`.

### See Also:

["ALL\\_EDITIONING\\_VIEW\\_COLS\\_AE"](#)

## 7.489 USER\_EDITIONING\_VIEWS

`USER_EDITIONING_VIEWS` describes the editioning views owned by the current user. Its columns (except for `OWNER`) are the same as those in `ALL_EDITIONING_VIEWS`.

### See Also:

["ALL\\_EDITIONING\\_VIEWS"](#)

## 7.490 USER\_EDITIONING\_VIEWS\_AE

`USER_EDITIONING_VIEWS_AE` describes the editioning views (across all editions) owned by the current user. Its columns (except for `OWNER`) are the same as those in `ALL_EDITIONING_VIEWS_AE`.

### See Also:

["ALL\\_EDITIONING\\_VIEWS\\_AE"](#)

## 7.491 USER\_ENCRYPTED\_COLUMNS

USER\_ENCRYPTED\_COLUMNS maintains encryption algorithm information for all encrypted columns in all tables in the user's schema. Its columns (except for OWNER) are the same as those in ALL\_ENCRYPTED\_COLUMNS.

**See Also:**

"ALL\_ENCRYPTED\_COLUMNS"

## 7.492 USER\_EPG\_DAD\_AUTHORIZATION

USER\_EPG\_DAD\_AUTHORIZATION describes the DADs that are authorized to use the user's privileges. Its columns (except for USERNAME) are the same as those in DBA\_EPG\_DAD\_AUTHORIZATION.

**See Also:**

"DBA\_EPG\_DAD\_AUTHORIZATION"

## 7.493 USER\_ERROR\_TRANSLATIONS

USER\_ERROR\_TRANSLATIONS describes all error translations owned by the user. Its columns (except for OWNER) are the same as those in ALL\_ERROR\_TRANSLATIONS.

**See Also:**

"ALL\_ERROR\_TRANSLATIONS"

## 7.494 USER\_ERRORS

USER\_ERRORS describes the current errors on the stored objects owned by the current user. Its columns (except for OWNER) are the same as those in ALL\_ERRORS.

**See Also:**

"ALL\_ERRORS"

## 7.495 USER\_ERRORS\_AE

USER\_ERRORS\_AE describes the current errors on the stored objects (across all editions) owned by the current user. Its columns (except for OWNER) are the same as those in ALL\_ERRORS\_AE.

**See Also:**

["ALL\\_ERRORS\\_AE"](#)

## 7.496 USER\_EVALUATION\_CONTEXT\_TABLES

USER\_EVALUATION\_CONTEXT\_TABLES describes the tables in the rule evaluation contexts owned by the current user. Its columns (except for EVALUATION\_CONTEXT\_OWNER) are the same as those in ALL\_EVALUATION\_CONTEXT\_TABLES.

**See Also:**

["ALL\\_EVALUATION\\_CONTEXT\\_TABLES"](#)

## 7.497 USER\_EVALUATION\_CONTEXT\_VARS

USER\_EVALUATION\_CONTEXT\_VARS describes the variables in the rule evaluation contexts owned by the current user. Its columns (except for EVALUATION\_CONTEXT\_OWNER) are the same as those in ALL\_EVALUATION\_CONTEXT\_VARS.

**See Also:**

["ALL\\_EVALUATION\\_CONTEXT\\_VARS"](#)

## 7.498 USER\_EVALUATION\_CONTEXTS

USER\_EVALUATION\_CONTEXTS describes the rule evaluation contexts owned by the current user. Its columns (except for EVALUATION\_CONTEXT\_OWNER) are the same as those in ALL\_EVALUATION\_CONTEXTS.

**See Also:**

["ALL\\_EVALUATION\\_CONTEXTS"](#)

## 7.499 USER\_EXPRESSION\_STATISTICS

`USER_EXPRESSION_STATISTICS` provides expression usage tracking statistics for tables owned by the current user. Its columns (except for `OWNER`) are the same as those in `ALL_EXPRESSION_STATISTICS`.

### See Also:

["ALL\\_EXPRESSION\\_STATISTICS"](#)

## 7.500 USER\_EXTENTS

`USER_EXTENTS` describes the extents comprising the segments owned by the current user's objects. Its columns (except for `OWNER`, `FILE_ID`, `BLOCK_ID`, and `RELATIVE_FNO`) are the same as those in `DBA_EXTENTS`.

### See Also:

["DBA\\_EXTENTS"](#)

## 7.501 USER\_EXTERNAL\_LOCATIONS

`USER_EXTERNAL_LOCATIONS` describes the locations (data sources) of the external tables owned by the current user. Its columns (except for `OWNER`) are the same as those in `ALL_EXTERNAL_LOCATIONS`.

### See Also:

["ALL\\_EXTERNAL\\_LOCATIONS"](#)

## 7.502 USER\_EXTERNAL\_TABLES

`USER_EXTERNAL_TABLES` describes the external tables owned by the current user. Its columns (except for `OWNER`) are the same as those in `ALL_EXTERNAL_TABLES`.

### See Also:

["ALL\\_EXTERNAL\\_TABLES"](#)

## 7.503 USER\_FLASHBACK\_ARCHIVE

USER\_FLASHBACK\_ARCHIVE describes flashback data archives, which consist of multiple tablespaces and historic data from all transactions against tracked tables.

The content of this view depends on the privileges of the user who queries it, as follows:

- If the user has the FLASHBACK\_ARCHIVE ADMINISTER system privilege, then USER\_FLASHBACK\_ARCHIVE describes the flashback archives for all users who have been granted the FLASHBACK\_ARCHIVE object privilege.
- If the user does not have the FLASHBACK\_ARCHIVE ADMINISTER system privilege, then USER\_FLASHBACK\_ARCHIVE describes flashback archives for which the current user has been granted the FLASHBACK\_ARCHIVE object privilege.

The columns of the USER\_FLASHBACK\_ARCHIVE view are the same as those in DBA\_FLASHBACK\_ARCHIVE.

**See Also:**

["DBA\\_FLASHBACK\\_ARCHIVE"](#)

## 7.504 USER\_FLASHBACK\_ARCHIVE\_TABLES

USER\_FLASHBACK\_ARCHIVE\_TABLES displays information about the tables owned by the current user that are enabled for Flashback Archive. Its columns are the same as those in DBA\_FLASHBACK\_ARCHIVE\_TABLES.

**See Also:**

["DBA\\_FLASHBACK\\_ARCHIVE\\_TABLES"](#)

## 7.505 USER\_FLASHBACK\_TXN\_REPORT

USER\_FLASHBACK\_TXN\_REPORT displays information about the compensating transactions owned by the current user that have been committed in the database. Its columns (except for USERNAME) are the same as those in DBA\_FLASHBACK\_TXN\_REPORT.

**See Also:**

["DBA\\_FLASHBACK\\_TXN\\_REPORT"](#)

## 7.506 USER\_FLASHBACK\_TXN\_STATE

USER\_FLASHBACK\_TXN\_STATE displays information about the compensating status of the transactions owned by the current user. Its columns (except for USERNAME) are the same as those in DBA\_FLASHBACK\_TXN\_STATE.

**See Also:**

"DBA\_FLASHBACK\_TXN\_STATE"

## 7.507 USER\_FREE\_SPACE

USER\_FREE\_SPACE describes the free extents in the tablespaces accessible to the current user. Its columns are the same as those in DBA\_FREE\_SPACE.

**See Also:**

"DBA\_FREE\_SPACE"

## 7.508 USER\_GOLDENGATE\_PRIVILEGES

USER\_GOLDENGATE\_PRIVILEGES displays details about Oracle GoldenGate privileges. Its columns (except for USERNAME) are the same as those in ALL\_GOLDENGATE\_PRIVILEGES.

**See Also:**

"ALL\_GOLDENGATE\_PRIVILEGES"

## 7.509 USER\_HEAT\_MAP\_SEG\_HISTOGRAM

USER\_HEAT\_MAP\_SEG\_HISTOGRAM displays segment access information for segments owned by the user. Its columns (except for OWNER) are the same as those in ALL\_HEAT\_MAP\_SEG\_HISTOGRAM.

**See Also:**

"ALL\_HEAT\_MAP\_SEG\_HISTOGRAM"

## 7.510 USER\_HEAT\_MAP\_SEGMENT

USER\_HEAT\_MAP\_SEGMENT displays the latest segment access time for all segments owned by the user. Its columns (except for OWNER) are the same as those in ALL\_HEAT\_MAP\_SEGMENT.

**See Also:**

["ALL\\_HEAT\\_MAP\\_SEGMENT"](#)

## 7.511 USER\_HIER\_CLASS

USER\_HIER\_CLASS describes the classifications of the hierarchies owned by the current user. Its columns (except for OWNER) are the same as those in ALL\_HIER\_CLASS.

**See Also:**

["ALL\\_HIER\\_CLASS"](#)

## 7.512 USER\_HIER\_CLASS\_AE

USER\_HIER\_CLASS\_AE describes the classifications of the hierarchies (across all editions) owned by the current user. Its columns (except for OWNER) are the same as those in ALL\_HIER\_CLASS\_AE.

**See Also:**

["ALL\\_HIER\\_CLASS\\_AE"](#)

## 7.513 USER\_HIER\_COLUMNS

USER\_HIER\_COLUMNS describes the columns of the hierarchies owned by the current user. Its columns (except for OWNER) are the same as those in ALL\_HIER\_COLUMNS.

**See Also:**

["ALL\\_HIER\\_COLUMNS"](#)

## 7.514 USER\_HIER\_COLUMNS\_AE

USER\_HIER\_COLUMNS\_AE describes the columns of the hierarchies (across all editions) owned by the current user. Its columns (except for OWNER) are the same as those in ALL\_HIER\_COLUMNS\_AE.

### See Also:

["ALL\\_HIER\\_COLUMNS\\_AE"](#)

## 7.515 USER\_HIER\_HIER\_ATTR\_CLASS

USER\_HIER\_HIER\_ATTR\_CLASS describes the classifications of the hierarchical attributes of the hierarchies owned by the current user. Its columns (except for OWNER) are the same as those in ALL\_HIER\_HIER\_ATTR\_CLASS.

### See Also:

["ALL\\_HIER\\_HIER\\_ATTR\\_CLASS"](#)

## 7.516 USER\_HIER\_HIER\_ATTR\_CLASS\_AE

USER\_HIER\_HIER\_ATTR\_CLASS\_AE describes the classifications of the hierarchical attributes of the hierarchies (across all editions) owned by the current user. Its columns (except for OWNER) are the same as those in ALL\_HIER\_HIER\_ATTR\_CLASS\_AE.

### See Also:

["ALL\\_HIER\\_HIER\\_ATTR\\_CLASS\\_AE"](#)

## 7.517 USER\_HIER\_HIER\_ATTRIBUTES

USER\_HIER\_HIER\_ATTRIBUTES describes the hierarchical attributes of the hierarchies owned by the current user. Its columns (except for OWNER) are the same as those in ALL\_HIER\_HIER\_ATTRIBUTES.

### See Also:

["ALL\\_HIER\\_HIER\\_ATTRIBUTES"](#)

## 7.518 USER\_HIER\_HIER\_ATTRIBUTES\_AE

USER\_HIER\_HIER\_ATTRIBUTES\_AE describes the hierarchical attributes of the hierarchies (across all editions) owned by the current user. Its columns (except for OWNER) are the same as those in ALL\_HIER\_HIER\_ATTRIBUTES\_AE.

### See Also:

"ALL\_HIER\_HIER\_ATTRIBUTES\_AE"

## 7.519 USER\_HIER\_JOIN\_PATHS

USER\_HIER\_JOIN\_PATHS describes the join paths for the hierarchies owned by the current user. Its columns (except for OWNER) are the same as those in ALL\_HIER\_JOIN\_PATHS.

### See Also:

"ALL\_HIER\_JOIN\_PATHS"

## 7.520 USER\_HIER\_JOIN\_PATHS\_AE

USER\_HIER\_JOIN\_PATHS\_AE describes the join paths for the hierarchies (across all editions) owned by the current user. Its columns (except for OWNER) are the same as those in ALL\_HIER\_JOIN\_PATHS\_AE.

### See Also:

"ALL\_HIER\_JOIN\_PATHS\_AE"

## 7.521 USER\_HIER\_LEVEL\_ID\_ATTRS

USER\_HIER\_LEVEL\_ID\_ATTRS describes the attributes that uniquely identify members of the levels of the hierarchies owned by the current user. Its columns (except for OWNER) are the same as those in ALL\_HIER\_LEVEL\_ID\_ATTRS.

### See Also:

"ALL\_HIER\_LEVEL\_ID\_ATTRS"

## 7.522 USER\_HIER\_LEVEL\_ID\_ATTRS\_AE

USER\_HIER\_LEVEL\_ID\_ATTRS\_AE describes the attributes that uniquely identify members of the levels of the hierarchies (across all editions) owned by the current user. Its columns (except for OWNER) are the same as those in ALL\_HIER\_LEVEL\_ID\_ATTRS\_AE.

**See Also:**

["ALL\\_HIER\\_LEVEL\\_ID\\_ATTRS\\_AE"](#)

## 7.523 USER\_HIER\_LEVELS

USER\_HIER\_LEVELS describes the levels of the hierarchies owned by the current user. Its columns (except for OWNER) are the same as those in ALL\_HIER\_LEVELS.

**See Also:**

["ALL\\_HIER\\_LEVELS"](#)

## 7.524 USER\_HIER\_LEVELS\_AE

USER\_HIER\_LEVELS\_AE describes the levels of the hierarchies (across all editions) owned by the current user. Its columns (except for OWNER) are the same as those in ALL\_HIER\_LEVELS\_AE.

**See Also:**

["ALL\\_HIER\\_LEVELS\\_AE"](#)

## 7.525 USER\_HIERARCHIES

USER\_HIERARCHIES describes the hierarchies owned by the current user. Its columns (except for OWNER) are the same as those in ALL\_HIERARCHIES.

**See Also:**

["ALL\\_HIERARCHIES"](#)

## 7.526 USER\_HIERARCHIES\_AE

USER\_HIERARCHIES\_AE describes the hierarchies (across all editions) owned by the current user. Its columns (except for OWNER) are the same as those in ALL\_HIERARCHIES\_AE.

### See Also:

"ALL\_HIERARCHIES\_AE"

## 7.527 USER\_HIST\_SAGAS

USER\_HIST\_SAGAS provides a history of the completed sagas owned by the current user. Its columns (except for OWNER) are the same as those in ALL\_HIST\_SAGAS.

This view displays sagas that were either initiated in the current PDB or joined by participants in the current PDB.

Completed sagas are retained in this view for the length of time specified by the SAGA\_HIST\_RETENTION initialization parameter. The default is 30 days.

### Note:

This view is available starting with Oracle Database 23ai.

### See Also:

- "ALL\_HIST\_SAGAS"
- "SAGA\_HIST\_RETENTION"

## 7.528 USER\_HISTOGRAMS

USER\_HISTOGRAMS is a synonym for USER\_TAB\_HISTOGRAMS.

### See Also:

"USER\_TAB\_HISTOGRAMS"

## 7.529 USER\_HIVE\_COLUMNS

USER\_HIVE\_COLUMNS describes all Hive columns owned by the current user in a Hive metastore. Its columns are the same as those in ALL\_HIVE\_COLUMNS.

**See Also:**

"ALL\_HIVE\_COLUMNS"

## 7.530 USER\_HIVE\_DATABASES

USER\_HIVE\_DATABASES describes all the Hive schemas owned by the current user in a Hadoop cluster. Its columns are the same as those in ALL\_HIVE\_DATABASES.

**See Also:**

"ALL\_HIVE\_DATABASES"

## 7.531 USER\_HIVE\_PART\_KEY\_COLUMNS

USER\_HIVE\_PART\_KEY\_COLUMNS provides information about all Hive table partition columns owned by the current user in the database. Its columns are the same as those in ALL\_HIVE\_PART\_KEY\_COLUMNS.

**See Also:**

"ALL\_HIVE\_PART\_KEY\_COLUMNS"

## 7.532 USER\_HIVE\_TAB\_PARTITIONS

USER\_HIVE\_TAB\_PARTITIONS provides information about all Hive table partitions owned by the current user in the database. Its columns are the same as those in ALL\_HIVE\_TAB\_PARTITIONS.

**See Also:**

"ALL\_HIVE\_TAB\_PARTITIONS"

## 7.533 USER\_HIVE\_TABLES

USER\_HIVE\_TABLES provides information about all the Hive tables owned by the current user in the Hive metastore. Its columns are the same as those in ALL\_HIVE\_TABLES.

### See Also:

"ALL\_HIVE\_TABLES"

## 7.534 USER\_HOST\_ACES

USER\_HOST\_ACES describes the status of access control entries for the current user to access network hosts through PL/SQL network utility packages.

Its columns (except for ACE\_ORDER, START\_DATE, END\_DATE, GRANT\_TYPE, INVERTED\_PRINCIPAL, PRINCIPAL, PRINCIPAL\_TYPE, and STATUS) are the same as those in DBA\_HOST\_ACES.

### See Also:

"DBA\_HOST\_ACES"

## 7.535 USER\_IDENTIFIERS

USER\_IDENTIFIERS displays information about the identifiers in the stored objects owned by the current user. Its columns (except for OWNER) are the same as those in ALL\_IDENTIFIERS.

### See Also:

"ALL\_IDENTIFIERS"

## 7.536 USER\_ILMDATAMOVEMENTPOLICIES

USER\_ILMDATAMOVEMENTPOLICIES contains information specific to data movement-related attributes of an Automatic Data Optimization policy for a user. Its columns are the same as those in DBA\_ILMDATAMOVEMENTPOLICIES.

### Note:

Automatic Data Optimization is supported in Oracle Database 12c Release 2 multitenant environments.

**See Also:**

"DBA\_ILMDATAMOVEMENTPOLICIES"

## 7.537 USER\_ILMEVALUATIONDETAILS

USER\_ILMEVALUATIONDETAILS displays details on evaluation of Automatic Data Optimization policies considered for Automatic Data Optimization tasks for a user.

It also shows the job name that executes the policy, in case the policy was selected for execution. If the policy was not selected for execution, this view provides a reason. Its columns are the same as those in DBA\_ILMEVALUATIONDETAILS.

**Note:**

Automatic Data Optimization is supported in Oracle Database 12c Release 2 multitenant environments.

**See Also:**

"DBA\_ILMEVALUATIONDETAILS"

## 7.538 USER\_ILMOBJECTS

USER\_ILMOBJECTS displays all the Automatic Data Optimization policies and objects for a user.

Many objects inherit policies via their parent objects or because they were created in a particular tablespace. This view provides a mapping between the policies and objects and indicates whether a policy is inherited by an object or is directly specified on it. Its columns are the same as those in DBA\_ILMOBJECTS.

**Note:**

Automatic Data Optimization is supported in Oracle Database 12c Release 2 multitenant environments.

**See Also:**

"DBA\_ILMOBJECTS"

## 7.539 USER\_ILMPOLICIES

USER\_ILMPOLICIES displays details about Automatic Data Optimization policies owned by the user.

The view contains common details relevant to all types of Automatic Data Optimization policies, not just details relevant to the data movement-related Automatic Data Optimization policies. Its columns are the same as those in DBA\_ILMPOLICIES.

**Note:**

Automatic Data Optimization is supported in Oracle Database 12c Release 2 multitenant environments.

**See Also:**

["DBA\\_ILMPOLICIES"](#)

## 7.540 USER\_ILMRESULTS

USER\_ILMRESULTS displays information on data movement-related Automatic Data Optimization jobs for tasks created by the user.

Its columns are the same as those in DBA\_ILMRESULTS.

**Note:**

Automatic Data Optimization is supported in Oracle Database 12c Release 2 multitenant environments.

**See Also:**

["DBA\\_ILMRESULTS"](#)

## 7.541 USER\_ILMTASKS

USER\_ILMTASKS displays information on Automatic Data Optimization tasks created by a user. Its columns are the same as those in DBA\_ILMTASKS.

### Note:

Automatic Data Optimization is supported in Oracle Database 12c Release 2 multitenant environments.

### See Also:

"DBA\_ILMTASKS"

## 7.542 USER\_IM\_EXPRESSIONS

USER\_IM\_EXPRESSIONS provides information about the list of expressions (SYS\_IME virtual columns) that are currently enabled for in-memory storage in schemas owned by the current user. Its columns (except for OWNER) are the same as those in DBA\_IM\_EXPRESSIONS.

Typically, you can query this view after invoking the DBMS\_INMEMORY\_ADMIN.IME\_CAPTURE\_EXPRESSIONS PL/SQL procedure to see the list of hot expressions added to tables owned by you across the database.

Based on this view, you can:

- Populate expressions on a particular table immediately
- Drop certain expressions that are marked for in-memory but not desired by you

### See Also:

"DBA\_IM\_EXPRESSIONS"

## 7.543 USER\_IMMUTABLE\_ROW\_VERSION\_COLS

USER\_IMMUTABLE\_ROW\_VERSION\_COLS displays information about row versioned columns in the immutable tables owned by the current user. Its columns are the same as those in ALL\_IMMUTABLE\_ROW\_VERSION\_COLS.

### Note:

This view is available starting with Oracle Database 23ai.

**See Also:**

["ALL\\_IMMUTABLE\\_ROW\\_VERSION\\_COLS"](#)

## 7.544 USER\_IMMUTABLE\_ROW\_VERSION\_HISTORY

USER\_IMMUTABLE\_ROW\_VERSION\_HISTORY provides a history of row versions in the immutable tables owned by the current user. Its columns (except for SCHEMA\_NAME) are the same as those in ALL\_IMMUTABLE\_ROW\_VERSION\_HISTORY.

**Note:**

This view is available starting with Oracle Database 23ai.

**See Also:**

["ALL\\_IMMUTABLE\\_ROW\\_VERSION\\_HISTORY"](#)

## 7.545 USER\_IMMUTABLE\_TABLE\_COLUMNS

USER\_IMMUTABLE\_TABLE\_COLUMNS displays information about columns valid in each epoch in the immutable tables owned by the current user. Its columns (except for SCHEMA\_NAME) are the same as those in ALL\_IMMUTABLE\_TABLE\_COLUMNS.

**Note:**

This view is available starting with Oracle Database 23ai.

**See Also:**

["ALL\\_IMMUTABLE\\_TABLE\\_COLUMNS"](#)

## 7.546 USER\_IMMUTABLE\_TABLE\_EPOCHS

USER\_IMMUTABLE\_TABLE\_EPOCHS displays epoch information for the immutable tables owned by the current user. Its columns (except for SCHEMA\_NAME) are the same as those in ALL\_IMMUTABLE\_TABLE\_EPOCHS.

**Note:**

This view is available starting with Oracle Database 23ai.

**See Also:**

"ALL\_IMMUTABLE\_TABLE\_EPOCHS"

## 7.547 USER\_IMMUTABLE\_TABLES

USER\_IMMUTABLE\_TABLES describes the immutable tables owned by the current user. Its columns (except for SCHEMA\_NAME) are the same as those in ALL\_IMMUTABLE\_TABLES.

**See Also:**

"ALL\_IMMUTABLE\_TABLES"

## 7.548 USER\_INCOMPLETE\_SAGAS

USER\_INCOMPLETE\_SAGAS describes the incomplete sagas owned by the current user. Its columns (except for OWNER) are the same as those in ALL\_INCOMPLETE\_SAGAS.

This view displays sagas that were either initiated in the current PDB or joined by participants in the current PDB.

**Note:**

This view is available starting with Oracle Database 23ai.

**See Also:**

"ALL\_INCOMPLETE\_SAGAS"

## 7.549 USER\_IND\_COLUMNS

USER\_IND\_COLUMNS describes the columns of the indexes owned by the current user and columns of indexes on tables owned by the current user.

Its columns (except for INDEX\_OWNER and TABLE\_OWNER) are the same as those in "ALL\_IND\_COLUMNS".

## 7.550 USER\_IND\_EXPRESSIONS

USER\_IND\_EXPRESSIONS describes expressions of function-based indexes on tables owned by the current user. Its columns (except for INDEX\_OWNER and TABLE\_OWNER) are the same as those in ALL\_IND\_EXPRESSIONS.

**See Also:**

"ALL\_IND\_EXPRESSIONS"

## 7.551 USER\_IND\_PARTITIONS

USER\_IND\_PARTITIONS displays, for each index partition owned by the current user, the partition-level partitioning information, the storage parameters for the partition, and various partition statistics generated by the DBMS\_STATS package. Its columns are the same as those in ALL\_IND\_PARTITIONS.

**See Also:**

"ALL\_IND\_PARTITIONS"

## 7.552 USER\_IND\_PENDING\_STATS

USER\_IND\_PENDING\_STATS describes pending statistics for all tables, partitions, and subpartitions owned by the current user and collected using the DBMS\_STATS package. Its columns (except for OWNER) are the same as those in ALL\_IND\_PENDING\_STATS.

**See Also:**

"ALL\_IND\_PENDING\_STATS"

## 7.553 USER\_IND\_STATISTICS

`USER_IND_STATISTICS` displays optimizer statistics for the indexes on the tables owned by the current user and collected using the `DBMS_STATS` package. Its columns (except for `OWNER`) are the same as those in `ALL_IND_STATISTICS`.

**See Also:**

["ALL\\_IND\\_STATISTICS"](#)

## 7.554 USER\_IND\_SUBPARTITIONS

`USER_IND_SUBPARTITIONS` displays, for each index subpartition owned by the current user, the subpartition-level partitioning information, the storage parameters for the subpartition, and various subpartition statistics generated by the `DBMS_STATS` package.

Its columns are the same as those in ["ALL\\_IND\\_SUBPARTITIONS"](#).

## 7.555 USER\_INDEXES

`USER_INDEXES` describes indexes owned by the current user. To gather statistics for this view, use the `DBMS_STATS` package. This view supports parallel partitioned index scans. Its columns (except for `OWNER`) are the same as those in `ALL_INDEXES`.

**See Also:**

["ALL\\_INDEXES"](#)

## 7.556 USER\_INDEXTYPE\_ARRAYTYPES

`USER_INDEXTYPE_ARRAYTYPES` displays information about the array types specified by the indextypes owned by the current user. Its columns are the same as those in `ALL_INDEXTYPE_ARRAYTYPES`.

**See Also:**

["ALL\\_INDEXTYPE\\_ARRAYTYPES"](#)

## 7.557 USER\_INDEXTYPE\_COMMENTS

USER\_INDEXTYPE\_COMMENTS displays comments for the user-defined indextypes owned by the current user. Its columns are the same as those in ALL\_INDEXTYPE\_COMMENTS.

**See Also:**

["ALL\\_INDEXTYPE\\_COMMENTS"](#)

## 7.558 USER\_INDEXTYPE\_OPERATORS

USER\_INDEXTYPE\_OPERATORS lists all the operators supported by indextypes owned by the current user. Its columns are the same as those in ALL\_INDEXTYPE\_OPERATORS.

**See Also:**

["ALL\\_INDEXTYPE\\_OPERATORS"](#)

## 7.559 USER\_INDEXTYPES

USER\_INDEXTYPES describes the indextypes owned by the current user. Its columns are the same as those in ALL\_INDEXTYPES.

**See Also:**

["ALL\\_INDEXTYPES"](#)

## 7.560 USER\_INTERNAL\_TRIGGERS

USER\_INTERNAL\_TRIGGERS describes the internal triggers on all tables owned by the current user. Its columns are the same as those in ALL\_INTERNAL\_TRIGGERS.

**See Also:**

["ALL\\_INTERNAL\\_TRIGGERS"](#).

## 7.561 USER\_JAVA\_ARGUMENTS

USER\_JAVA\_ARGUMENTS displays argument information about the stored Java classes owned by the current user. Its columns (except for OWNER) are the same as those in ALL\_JAVA\_ARGUMENTS.

**See Also:**

["ALL\\_JAVA\\_ARGUMENTS"](#)

## 7.562 USER\_JAVA\_CLASSES

USER\_JAVA\_CLASSES displays class level information about the stored Java classes owned by the current user. Its columns (except for OWNER) are the same as those in ALL\_JAVA\_CLASSES.

**See Also:**

["ALL\\_JAVA\\_CLASSES"](#)

## 7.563 USER\_JAVA\_COMPILER\_OPTIONS

USER\_JAVA\_COMPILER\_OPTIONS displays information about the native compiler options owned by the current user. Its columns (except for OWNER) are the same as those in ALL\_JAVA\_COMPILER\_OPTIONS.

**See Also:**

["ALL\\_JAVA\\_COMPILER\\_OPTIONS"](#)

## 7.564 USER\_JAVA\_DERIVATIONS

USER\_JAVA\_DERIVATIONS displays mapping information about Java source objects and their derived Java class objects and Java resource objects for the Java classes owned by the current user.

Its columns (except for OWNER) are the same as those in ALL\_JAVA\_DERIVATIONS.

**See Also:**

["ALL\\_JAVA\\_DERIVATIONS"](#)

## 7.565 USER\_JAVA\_FIELDS

USER\_JAVA\_FIELDS displays field information about the stored Java classes owned by the current user. Its columns (except for OWNER) are the same as those in ALL\_JAVA\_FIELDS.

**See Also:**

["ALL\\_JAVA\\_FIELDS"](#)

## 7.566 USER\_JAVA\_IMPLEMENTES

USER\_JAVA\_IMPLEMENTES describes interfaces implemented by the stored Java classes owned by the current user. Its columns (except for OWNER) are the same as those in ALL\_JAVA\_IMPLEMENTES.

**See Also:**

["ALL\\_JAVA\\_IMPLEMENTES"](#)

## 7.567 USER\_JAVA\_INNERS

USER\_JAVA\_INNERS displays information about inner classes referred to by the stored Java classes owned by the current user. Its columns (except for OWNER) are the same as those in ALL\_JAVA\_INNERS.

**See Also:**

["ALL\\_JAVA\\_INNERS"](#)

## 7.568 USER\_JAVA\_LAYOUTS

USER\_JAVA\_LAYOUTS displays class layout information about the stored Java classes owned by the current user. Its columns (except for OWNER) are the same as those in ALL\_JAVA\_LAYOUTS.

**See Also:**

["ALL\\_JAVA\\_LAYOUTS"](#)

## 7.569 USER\_JAVA\_METHODS

`USER_JAVA_METHODS` displays method information about the stored Java classes owned by the current user. Its columns (except for `OWNER`) are the same as those in `ALL_JAVA_METHODS`.

**See Also:**

["ALL\\_JAVA\\_METHODS"](#)

## 7.570 USER\_JAVA\_NCOMPS

`USER_JAVA_NCOMPS` displays `ncomp`-related information about the Java classes owned by the current user. Its columns (except for `OWNER`) are the same as those in `ALL_JAVA_NCOMPS`.

**See Also:**

["ALL\\_JAVA\\_NCOMPS"](#)

## 7.571 USER\_JAVA\_POLICY

`USER_JAVA_POLICY` describes Java security permissions for the current user. Its columns are the same as those in `DBA_JAVA_POLICY`.

**See Also:**

["DBA\\_JAVA\\_POLICY"](#)

## 7.572 USER\_JAVA\_RESOLVERS

`USER_JAVA_RESOLVERS` displays information about resolvers of the Java classes owned by the current user. Its columns (except for `OWNER`) are the same as those in `ALL_JAVA_RESOLVERS`.

**See Also:**

["ALL\\_JAVA\\_RESOLVERS"](#)

## 7.573 USER\_JAVA\_THROWS

`USER_JAVA_THROWS` displays information about exceptions thrown from methods of the Java classes owned by the current user. Its columns (except for `OWNER`) are the same as those in `ALL_JAVA_THROWS`.

**See Also:**

["ALL\\_JAVA\\_THROWS"](#)

## 7.574 USER\_JOBS

`USER_JOBS` describes the jobs owned by the current user. Its columns are the same as those in `DBA_JOBS`.

**See Also:**

["DBA\\_JOBS"](#)

## 7.575 USER\_JOIN\_IND\_COLUMNS

`USER_JOIN_IND_COLUMNS` describes all join conditions owned by the current user. Its columns are the same as those in `ALL_JOIN_IND_COLUMNS`.

**See Also:**

["ALL\\_JOIN\\_IND\\_COLUMNS"](#)

## 7.576 USER\_JOINGROUPS

`USER_JOINGROUPS` describes join groups belonging to the user. A join group is a user-created object that consists of two or more columns that can be meaningfully joined. The maximum number of columns that can be included in a join group is 255. The `USER_JOINGROUPS` columns (except for `JOINGROUP_OWNER`) are the same as those in `DBA_JOINGROUPS`.

In certain queries, join groups enable the database to eliminate the performance overhead of decompressing and hashing column values. Join groups require an In-Memory column store (IM column store).

 **See Also:**

- ["DBA\\_JOINGROUPS"](#)
- *Oracle Database In-Memory Guide* for an introduction to join groups
- *Oracle Database SQL Language Reference* for information about creating a join group using the `CREATE INMEMORY JOIN GROUP` statement

## 7.577 USER\_JSON\_COLLECTION\_TABLES

`USER_JSON_COLLECTION_TABLES` describes JSON collection tables owned by the current user. Its columns are the same as those in `ALL_JSON_COLLECTION_TABLES`.

 **Note:**

This view is available starting with Oracle Database 23ai.

 **See Also:**

["ALL\\_JSON\\_COLLECTION\\_TABLES"](#)

## 7.578 USER\_JSON\_COLLECTION\_VIEWS

`USER_JSON_COLLECTION_VIEWS` describes JSON collection views owned by the current user. Its columns are the same as those in `ALL_JSON_COLLECTION_VIEWS`.

 **Note:**

This view is available starting with Oracle Database 23ai, Release Update 23.6.

 **See Also:**

["ALL\\_JSON\\_COLLECTION\\_VIEWS"](#)

## 7.579 USER\_JSON\_COLLECTIONS

USER\_JSON\_COLLECTIONS describes JSON collections owned by the current user. Its columns are the same as those in ALL\_JSON\_COLLECTIONS.

### Note:

This view is available starting with Oracle Database 23ai.

### See Also:

["ALL\\_JSON\\_COLLECTIONS"](#)

## 7.580 USER\_JSON\_COLUMNS

USER\_JSON\_COLUMNS provides information on the JavaScript Object Notation (JSON) columns for which the user is the owner. Its columns (except for OWNER) are the same as those in ALL\_JSON\_COLUMNS.

### See Also:

- ["ALL\\_JSON\\_COLUMNS"](#)
- *Oracle Database JSON Developer's Guide* for more information about using JSON with Oracle Database

## 7.581 USER\_JSON\_DATAGUIDE\_FIELDS

USER\_JSON\_DATAGUIDE\_FIELDS extracts the path and type information from all the data guides in the current user's schema, which are the data guides returned to the user by the USER\_JSON\_DATAGUIDE view. Its columns (except for OWNER) are the same as those in ALL\_JSON\_DATAGUIDE\_FIELDS.

### See Also:

["ALL\\_JSON\\_DATAGUIDE\\_FIELDS"](#)

## 7.582 USER\_JSON\_DATAGUIDES

`USER_JSON_DATAGUIDES` provides information on the JavaScript Object Notation (JSON) columns owned by the current user that have data guide enabled. Its columns (except for `OWNER`) are the same as those in `ALL_JSON_DATAGUIDES`.

### See Also:

["ALL\\_JSON\\_DATAGUIDES"](#)

## 7.583 USER\_JSON\_DOMAIN\_SCHEMA\_COLUMNS

`USER_JSON_DOMAIN_SCHEMA_COLUMNS` describes JSON schema constraints on columns of data use case domains owned by the current user. Its columns (except for `OWNER`) are the same as those in `ALL_JSON_DOMAIN_SCHEMA_COLUMNS`.

### Note:

This view is available starting with Oracle Database 23ai.

### See Also:

["ALL\\_JSON\\_DOMAIN\\_SCHEMA\\_COLUMNS"](#)

## 7.584 USER\_JSON\_DUALITY\_VIEW\_LINKS

`USER_JSON_DUALITY_VIEW_LINKS` describes the links associated with the JSON-relational duality views owned by the current user. Its columns (except for `VIEW_OWNER`) are the same as those in `ALL_JSON_DUALITY_VIEW_LINKS`.

### Note:

This view is available starting with Oracle Database 23ai.

### See Also:

["ALL\\_JSON\\_DUALITY\\_VIEW\\_LINKS"](#)

## 7.585 USER\_JSON\_DUALITY\_VIEW\_TAB\_COLS

USER\_JSON\_DUALITY\_VIEW\_TAB\_COLS describes the table columns associated with the JSON-relational duality views owned by the current user. Its columns (except for VIEW\_OWNER) are the same as those in ALL\_JSON\_DUALITY\_VIEW\_TAB\_COLS.

**Note:**

This view is available starting with Oracle Database 23ai.

**See Also:**

"ALL\_JSON\_DUALITY\_VIEW\_TAB\_COLS"

## 7.586 USER\_JSON\_DUALITY\_VIEW\_TABS

USER\_JSON\_DUALITY\_VIEW\_TABS describes the tables associated with the JSON-relational duality views owned by the current user. Its columns (except for VIEW\_OWNER) are the same as those in ALL\_JSON\_DUALITY\_VIEW\_TABS.

**Note:**

This view is available starting with Oracle Database 23ai.

**See Also:**

"ALL\_JSON\_DUALITY\_VIEW\_TABS"

## 7.587 USER\_JSON\_DUALITY\_VIEWS

USER\_JSON\_DUALITY\_VIEWS describes the JSON-relational duality views owned by the current user. Its columns (except for VIEW\_OWNER) are the same as those in ALL\_JSON\_DUALITY\_VIEWS.

**Note:**

This view is available starting with Oracle Database 23ai.

**See Also:**

["ALL\\_JSON\\_DUALITY\\_VIEWS"](#)

## 7.588 USER\_JSON\_INDEXES

`USER_JSON_INDEXES` describes indexes on JSON data that are owned by the current user. Its columns (except for `INDEX_OWNER`) are the same as those in `ALL_JSON_INDEXES`.

**Note:**

This view is available starting with Oracle Database 23ai.

**See Also:**

["ALL\\_JSON\\_INDEXES"](#)

## 7.589 USER\_JSON\_SCHEMA\_COLUMNS

`USER_JSON_SCHEMA_COLUMNS` describes JSON schema constraints on columns in tables owned by the current user. Its columns (except for `OWNER`) are the same as those in `ALL_JSON_SCHEMA_COLUMNS`.

**Note:**

This view is available starting with Oracle Database 23ai.

**See Also:**

["ALL\\_JSON\\_SCHEMA\\_COLUMNS"](#)

## 7.590 USER\_KAFKA\_APPLICATIONS

USER\_KAFKA\_APPLICATIONS describes Oracle SQL Access to Kafka (OSAK) applications owned by the current user. Its columns (except for OWNER and CLUSTER\_ID) are the same as those in DBA\_KAFKA\_APPLICATIONS.

### Note:

This view is available starting with Oracle Database 23ai.

### See Also:

- ["DBA\\_KAFKA\\_APPLICATIONS"](#)
- ["DBMS\\_KAFKA\\_APPLICATIONS"](#)

### See Also:

["DBA\\_KAFKA\\_APPLICATIONS"](#)

## 7.591 USER\_KAFKA\_CLUSTERS

USER\_KAFKA\_CLUSTERS describes the Oracle SQL Access to Kafka (OSAK) clusters that are owned by the current user or for which the current user has READ access. Its columns (except for OWNER and GRANTEE) are the same as those in DBA\_KAFKA\_CLUSTERS.

### Note:

This view is available starting with Oracle Database 23ai.

### See Also:

- ["DBA\\_KAFKA\\_CLUSTERS"](#)
- ["DBMS\\_KAFKA\\_CLUSTERS"](#) for information about viewing all registered OSAK clusters in the database

## 7.592 USER\_KAFKA\_LOAD\_METRICS

USER\_KAFKA\_LOAD\_METRICS displays metrics for DBMS\_KAFKA.EXECUTE\_LOAD\_APP operations on tables owned by the current user. Its columns (except for OWNER and CLUSTER\_ID) are the same as those in DBA\_KAFKA\_LOAD\_METRICS.

### Note:

This view is available starting with Oracle Database 23ai.

### See Also:

- "DBA\_KAFKA\_LOAD\_METRICS"
- "DBMS\_KAFKA\_LOAD\_METRICS"
- *Oracle Database PL/SQL Packages and Types Reference* for more information about the DBMS\_KAFKA.EXECUTE\_LOAD\_APP procedure

## 7.593 USER\_KAFKA\_MESSAGES

USER\_KAFKA\_MESSAGES displays messages logged by Oracle SQL Access to Kafka (OSAK) applications owned by the current user.

| Column           | Datatype        | NULL     | Description                                                                                                                                          |
|------------------|-----------------|----------|------------------------------------------------------------------------------------------------------------------------------------------------------|
| CLUSTER_NAME     | VARCHAR2 (30)   | NOT NULL | Name of the OSAK cluster associated with the application                                                                                             |
| APPLICATION_NAME | VARCHAR2 (30)   |          | Application name (also used as the Kafka group name)                                                                                                 |
| VIEW_NAME        | VARCHAR2 (128)  |          | Name of the view associated with the application                                                                                                     |
| MESSAGE_TYPE     | VARCHAR2 (20)   |          | Message type. Possible values: <ul style="list-style-type: none"> <li>• BADFILE</li> <li>• LOGFILE</li> <li>• NETWORK</li> <li>• ROLLBACK</li> </ul> |
| MESSAGE_TS       | TIMESTAMP (6)   |          | Timestamp for when the message was logged                                                                                                            |
| MESSAGE          | VARCHAR2 (4000) |          | Message text                                                                                                                                         |

### Note:

This view is available starting with Oracle Database 23ai.

**See Also:**

"DBMS\_KAFKA\_MESSAGES"

## 7.594 USER\_KAFKA\_OPS

USER\_KAFKA\_OPS describes operations for Oracle SQL Access to Kafka (OSAK) views owned by the current user. Its columns (except for OWNER and CLUSTER\_ID) are the same as those in DBA\_KAFKA\_OPS.

**Note:**

This view is available starting with Oracle Database 23ai.

**See Also:**

- "DBA\_KAFKA\_OPS"
- "DBMS\_KAFKA\_OPS"

## 7.595 USER\_KAFKA\_OPS\_RESULTS

USER\_KAFKA\_OPS\_RESULTS displays the results of operations for Oracle SQL Access to Kafka (OSAK) views owned by the current user. Its columns (except for OWNER) are the same as those in DBA\_KAFKA\_OPS\_RESULTS.

**Note:**

This view is available starting with Oracle Database 23ai.

**See Also:**

- "DBA\_KAFKA\_OPS\_RESULTS"
- "DBMS\_KAFKA\_OPS\_RESULTS"

## 7.596 USER\_KAFKA\_PARTITIONS

USER\_KAFKA\_PARTITIONS describes partitions for Kafka topics associated with Oracle SQL Access to Kafka (OSAK) views owned by the current user. Its columns (except for OWNER and CLUSTER\_ID) are the same as those in DBA\_KAFKA\_PARTITIONS.

### Note:

This view is available starting with Oracle Database 23ai.

### See Also:

- ["DBA\\_KAFKA\\_PARTITIONS"](#)
- ["DBMS\\_KAFKA\\_PARTITIONS"](#)

## 7.597 USER\_LIBRARIES

USER\_LIBRARIES describes the libraries owned by the current user. Its columns (except for OWNER) are the same as those in ALL\_LIBRARIES.

### See Also:

["ALL\\_LIBRARIES"](#)

## 7.598 USER\_LOB\_PARTITIONS

USER\_LOB\_PARTITIONS displays the LOB partitions contained in the tables owned by the current user. Its columns are the same as those in ALL\_LOB\_PARTITIONS.

### See Also:

["ALL\\_LOB\\_PARTITIONS"](#)

## 7.599 USER\_LOB\_SUBPARTITIONS

USER\_LOB\_SUBPARTITIONS displays partition-level attributes of the LOB data subpartitions owned by the current user. Its columns are the same as those in ALL\_LOB\_SUBPARTITIONS.

DBA\_LOB\_TEMPLATES describes all LOB subpartition templates in the database.

**See Also:**

["ALL\\_LOB\\_SUBPARTITIONS"](#)

## 7.600 USER\_LOB\_TEMPLATES

USER\_LOB\_TEMPLATES describes the LOB subpartition templates owned by the current user. Its columns (except for USER\_NAME) are the same as those in ALL\_LOB\_TEMPLATES.

**See Also:**

["ALL\\_LOB\\_TEMPLATES"](#)

## 7.601 USER\_LOBS

USER\_LOBS displays the user's CLOBs and BLOBs contained in the user's tables. BFILEs are stored outside the database, so they are not described by this view. This view's columns are the same as those in ALL\_LOBS.

**See Also:**

["ALL\\_LOBS"](#)

## 7.602 USER\_LOG\_GROUP\_COLUMNS

USER\_LOG\_GROUP\_COLUMNS describes columns that are owned by the current user and that are specified in log groups. Its columns are the same as those in ALL\_LOG\_GROUP\_COLUMNS.

**See Also:**

["ALL\\_LOG\\_GROUP\\_COLUMNS"](#)

## 7.603 USER\_LOG\_GROUPS

USER\_LOG\_GROUPS describes log group definitions on tables owned by the current user. Its columns are the same as those in ALL\_LOG\_GROUPS.

**See Also:**

["ALL\\_LOG\\_GROUPS"](#)

## 7.604 USER\_MEASURE\_FOLDER\_CONTENTS

USER\_MEASURE\_FOLDER\_CONTENTS describes the contents of the OLAP measure folders owned by the current user. Its columns (except for OWNER) are the same as those in ALL\_MEASURE\_FOLDER\_CONTENTS.

**See Also:**

"ALL\_MEASURE\_FOLDER\_CONTENTS"

## 7.605 USER\_MEASURE\_FOLDER\_SUBFOLDERS

USER\_MEASURE\_FOLDER\_SUBFOLDERS describes the OLAP measure folders contained within the OLAP measure folders owned by the current user. Its columns (except for OWNER) are the same as those in ALL\_MEASURE\_FOLDER\_SUBFOLDERS.

**See Also:**

"ALL\_MEASURE\_FOLDER\_SUBFOLDERS"

## 7.606 USER\_MEASURE\_FOLDERS

USER\_MEASURE\_FOLDERS describes the OLAP measure folders owned by the current user. Its columns (except for OWNER) are the same as those in ALL\_MEASURE\_FOLDERS.

**See Also:**

"ALL\_MEASURE\_FOLDERS"

## 7.607 USER\_METADATA\_PROPERTIES

USER\_METADATA\_PROPERTIES describes OLAP metadata properties in the current user's schema. Its columns (except for OWNER) are the same as those in ALL\_METADATA\_PROPERTIES.

**See Also:**

"ALL\_METADATA\_PROPERTIES"

## 7.608 USER\_METHOD\_PARAMS

USER\_METHOD\_PARAMS describes the method parameters of the object types owned by the current user. Its columns (except for OWNER) are the same as those in ALL\_METHOD\_PARAMS.

### See Also:

"ALL\_METHOD\_PARAMS"

## 7.609 USER\_METHOD\_RESULTS

USER\_METHOD\_RESULTS describes the method results of the object types owned by the current user. Its columns (except for OWNER) are the same as those in ALL\_METHOD\_RESULTS.

### See Also:

"ALL\_METHOD\_RESULTS"

## 7.610 USER\_MINING\_MODEL\_ATTRIBUTES

USER\_MINING\_MODEL\_ATTRIBUTES describes the machine learning model attributes owned by the current user. Its columns (except for OWNER) are the same as those in ALL\_MINING\_MODEL\_ATTRIBUTES.

### See Also:

"ALL\_MINING\_MODEL\_ATTRIBUTES"

## 7.611 USER\_MINING\_MODEL\_PARTITIONS

USER\_MINING\_MODEL\_PARTITIONS describes the user's own model partitions. Its columns (except OWNER) are the same as those in ALL\_MINING\_MODEL\_PARTITIONS.

### Note:

The USER\_MINING\_MODEL\_PARTITIONS view is available in Oracle Database 12c Release 2 and later.

**See Also:**

["ALL\\_MINING\\_MODEL\\_PARTITIONS"](#)

## 7.612 USER\_MINING\_MODEL\_SETTINGS

USER\_MINING\_MODEL\_SETTINGS describes the machine learning model settings owned by the current user. Its columns (except for OWNER) are the same as those in ALL\_MINING\_MODEL\_SETTINGS.

**See Also:**

["ALL\\_MINING\\_MODEL\\_SETTINGS"](#)

## 7.613 USER\_MINING\_MODEL\_VIEWS

USER\_MINING\_MODEL\_VIEWS describes the user's own model views. Its columns (except OWNER) are the same as those in ALL\_MINING\_MODEL\_VIEWS.

**See Also:**

["ALL\\_MINING\\_MODEL\\_VIEWS"](#)

## 7.614 USER\_MINING\_MODEL\_XFORMS

USER\_MINING\_MODEL\_XFORMS describes the user-specified transformations embedded with the user's own models. Its columns (except OWNER) are the same as those in ALL\_MINING\_MODEL\_XFORMS.

**See Also:**

["ALL\\_MINING\\_MODEL\\_XFORMS"](#)

## 7.615 USER\_MINING\_MODELS

`USER_MINING_MODELS` describes the machine learning models owned by the current user. Its columns (except for `OWNER`) are the same as those in `ALL_MINING_MODELS`.

### See Also:

["ALL\\_MINING\\_MODELS"](#)

## 7.616 USER\_MLE\_ENV\_IMPORTS

`USER_MLE_ENV_IMPORTS` describes import name to module mappings in the Oracle Database Multilingual Engine (MLE) environments owned by the current user. Its columns (except for `ENV_OWNER`) are the same as those in `ALL_MLE_ENV_IMPORTS`.

### Note:

This view is available starting with Oracle Database 23ai.

### See Also:

["ALL\\_MLE\\_ENV\\_IMPORTS"](#)

## 7.617 USER\_MLE\_ENVS

`USER_MLE_ENVS` describes the Oracle Database Multilingual Engine (MLE) environments owned by the current user. Its columns (except for `ENV_OWNER`) are the same as those in `ALL_MLE_ENVS`.

### Note:

This view is available starting with Oracle Database 23ai.

### See Also:

["ALL\\_MLE\\_ENVS"](#)

## 7.618 USER\_MLE\_MODULES

USER\_MLE\_MODULES describes the Oracle Database Multilingual Engine (MLE) modules owned by the current user. Its columns (except for MODULE\_OWNER) are the same as those in ALL\_MLE\_MODULES.

**Note:**

This view is available starting with Oracle Database 23ai.

**See Also:**

"ALL\_MLE\_MODULES"

## 7.619 USER\_MLE\_PROCEDURES

USER\_MLE\_PROCEDURES describes the Oracle Database Multilingual Engine (MLE) functions and procedures owned by the current user. Its columns (except for OWNER) are the same as those in ALL\_MLE\_PROCEDURES.

**Note:**

This view is available starting with Oracle Database 23ai.

**See Also:**

"ALL\_MLE\_PROCEDURES"

## 7.620 USER\_MVIEW\_AGGREGATES

USER\_MVIEW\_AGGREGATES describes the grouping functions (aggregated measures) that appear in the SELECT list of aggregated materialized views owned by the current user. Its columns are the same as those in ALL\_MVIEW\_AGGREGATES.

**See Also:**

"ALL\_MVIEW\_AGGREGATES"

## 7.621 USER\_MVIEW\_ANALYSIS

USER\_MVIEW\_ANALYSIS describes all materialized views owned by the current user that potentially support query rewrite and that provide additional information for analysis by applications. Its columns are the same as those in ALL\_MVIEW\_ANALYSIS.

### Note:

This view excludes materialized views that reference remote tables or that include references to non-static values such as SYSDATE or USER. This view also excludes materialized views that were created as snapshots before Oracle8i and that were never altered to enable query rewrite.

### See Also:

"ALL\_MVIEW\_ANALYSIS"

## 7.622 USER\_MVIEW\_COMMENTS

USER\_MVIEW\_COMMENTS displays comments on the materialized views owned by the current user. Its columns (except for OWNER) are the same as those in ALL\_MVIEW\_COMMENTS.

### See Also:

"ALL\_MVIEW\_COMMENTS"

## 7.623 USER\_MVIEW\_DETAIL\_LOGICAL\_PARTITION

USER\_MVIEW\_DETAIL\_LOGICAL\_PARTITION displays freshness information, with respect to logical partition change tracking (LPCT) detail partitions, for the materialized views owned by the current user. Its columns are the same as those in ALL\_MVIEW\_DETAIL\_LOGICAL\_PARTITION.

### See Also:

"ALL\_MVIEW\_DETAIL\_LOGICAL\_PARTITION"

## 7.624 USER\_MVIEW\_DETAIL\_PARTITION

USER\_MVIEW\_DETAIL\_PARTITION displays freshness information, with respect to partition change tracking (PCT) detail partitions, for the materialized views owned by the current user. Its columns are the same as those in ALL\_MVIEW\_DETAIL\_PARTITION.

### See Also:

"ALL\_MVIEW\_DETAIL\_PARTITION"

## 7.625 USER\_MVIEW\_DETAIL\_RELATIONS

USER\_MVIEW\_DETAIL\_RELATIONS represents the named detail relations that are either in the FROM list of a materialized view, or that are indirectly referenced through views in the FROM list. Its columns are the same as those in ALL\_MVIEW\_DETAIL\_RELATIONS.

### See Also:

"ALL\_MVIEW\_DETAIL\_RELATIONS"

## 7.626 USER\_MVIEW\_DETAIL\_SUBPARTITION

USER\_MVIEW\_DETAIL\_SUBPARTITION displays freshness information, with respect to partition change tracking (PCT) detail subpartitions, for the materialized views owned by the current user. Its columns are the same as those in ALL\_MVIEW\_DETAIL\_SUBPARTITION.

### See Also:

"ALL\_MVIEW\_DETAIL\_SUBPARTITION"

## 7.627 USER\_MVIEW\_JOINS

USER\_MVIEW\_JOINS describes a join between two columns in the WHERE clause of a subquery that defines a materialized view. Its columns are the same as those in ALL\_MVIEW\_JOINS.

### See Also:

"ALL\_MVIEW\_JOINS"

## 7.628 USER\_MVIEW\_KEYS

USER\_MVIEW\_KEYS describes the columns or expressions in the `SELECT` list upon which materialized views in the current user's schema are based. Its columns are the same as those in `ALL_MVIEW_KEYS`.

**See Also:**

["ALL\\_MVIEW\\_KEYS"](#)

## 7.629 USER\_MVIEW\_LOGS

USER\_MVIEW\_LOGS describes all materialized view logs owned by the current user. Its columns are the same as those in `ALL_MVIEW_LOGS`.

**See Also:**

["ALL\\_MVIEW\\_LOGS"](#)

## 7.630 USER\_MVIEW\_REFRESH\_TIMES

USER\_MVIEW\_REFRESH\_TIMES describes refresh times of the materialized views owned by the current user. Its columns are the same as those in `ALL_MVIEW_REFRESH_TIMES`.

**See Also:**

["ALL\\_MVIEW\\_REFRESH\\_TIMES"](#)

## 7.631 USER\_MVIEWS

USER\_MVIEWS describes all materialized views owned by the current user. Its columns are the same as those in `ALL_MVIEWS`.

**See Also:**

["ALL\\_MVIEWS"](#)

## 7.632 USER\_MVREF\_CHANGE\_STATS

USER\_MVREF\_CHANGE\_STATS displays the change data load information on the master tables associated with a refresh run for all the materialized views in the database that are accessible to the current user. Its columns are the same as those in DBA\_MVREF\_CHANGE\_STATS.

### See Also:

"DBA\_MVREF\_CHANGE\_STATS"

## 7.633 USER\_MVREF\_RUN\_STATS

USER\_MVREF\_RUN\_STATS has information about each refresh run for the materialized views accessible for the current database user, with each run being identified by the REFRESH\_ID. The information includes timing statistics related to the run and the parameters specified in that run.

Its columns (except for RUN\_OWNER) are the same as those in DBA\_MVREF\_RUN\_STATS.

### See Also:

"DBA\_MVREF\_RUN\_STATS"

## 7.634 USER\_MVREF\_STATS

USER\_MVREF\_STATS shows the REFRESH\_ID associated with each refresh run of each materialized view for the database that is accessible to the current user. It also provides some basic timing statistics related to that materialized view's refresh in that run.

Its columns (except for MV\_OWNER) are the same as those in DBA\_MVREF\_STATS.

### See Also:

"DBA\_MVREF\_STATS"

## 7.635 USER\_MVREF\_STATS\_PARAMS

USER\_MVREF\_STATS\_PARAMS displays the refresh statistics properties associated with each materialized view accessible to the current user. These properties can be modified with the DBMS\_MVIEW\_STATS.SET\_MVREF\_STATS\_PARAMS procedure.

Its columns are the same as those in DBA\_MVREF\_STATS\_PARAMS.

**See Also:**

["DBA\\_MVREF\\_STATS\\_PARAMS"](#)

## 7.636 USER\_MVREF\_STATS\_SYS\_DEFAULTS

USER\_MVREF\_STATS\_SYS\_DEFAULTS displays the system-wide defaults for the refresh history statistics properties for materialized views accessible to the current user. These values can be altered with the SET\_SYSTEM\_DEFAULTS procedure by a database administrator.

Its columns are the same as those in DBA\_MVREF\_STATS\_SYS\_DEFAULTS.

This view contains exactly two rows corresponding to the collection-level and retention-period properties; their initial values are TYPICAL and 31 respectively.

**See Also:**

["DBA\\_MVREF\\_STATS\\_SYS\\_DEFAULTS"](#)

## 7.637 USER\_MVREF\_STMT\_STATS

USER\_MVREF\_STMT\_STATS shows information associated with each refresh statement of a materialized view accessible to the current user in a refresh run.

Its columns are the same as those in DBA\_MVREF\_STMT\_STATS.

**See Also:**

["DBA\\_MVREF\\_STMT\\_STATS"](#)

## 7.638 USER\_NESTED\_TABLE\_COLS

USER\_NESTED\_TABLE\_COLS describes the columns of the nested tables owned by the current user. Its columns (except for OWNER) are the same as those in ALL\_NESTED\_TABLE\_COLS.

To gather statistics for this view, use the DBMS\_STATS package.

**See Also:**

["ALL\\_NESTED\\_TABLE\\_COLS"](#)

## 7.639 USER\_NESTED\_TABLES

USER\_NESTED\_TABLES describes the nested tables in tables owned by the current user. Its columns are the same as those in ALL\_NESTED\_TABLES.

### See Also:

["ALL\\_NESTED\\_TABLES"](#)

## 7.640 USER\_NETWORK\_ACL\_PRIVILEGES

USER\_NETWORK\_ACL\_PRIVILEGES describes the status of the network privileges for the current user to access network hosts.

### Note:

This USER\_NETWORK\_ACL\_PRIVILEGES view is deprecated in Oracle Database 12c Release 1 (12.1). Oracle recommends that you use the USER\_HOST\_ACES view, instead.

| Column     | Datatype        | NULL     | Description                                                                                  |
|------------|-----------------|----------|----------------------------------------------------------------------------------------------|
| HOST       | VARCHAR2 (1000) | NOT NULL | Network host                                                                                 |
| LOWER_PORT | NUMBER (5)      |          | Lower bound of the port range                                                                |
| UPPER_PORT | NUMBER (5)      |          | Upper bound of the port range                                                                |
| PRIVILEGE  | CHAR (128)      |          | Network privilege                                                                            |
| STATUS     | VARCHAR2 (7)    |          | Privilege status: <ul style="list-style-type: none"><li>• DENIED</li><li>• GRANTED</li></ul> |

### See Also:

["USER\\_HOST\\_ACES"](#)

## 7.641 USER\_OBJ\_AUDIT\_OPTS

USER\_OBJ\_AUDIT\_OPTS describes auditing options on all objects owned by the current user. Its columns (except for OWNER) are the same as those in DBA\_OBJ\_AUDIT\_OPTS.

### Note:

This view is deprecated and applies only to traditional auditing. Traditional auditing is desupported starting in Oracle Database 23ai. Though traditional auditing is desupported, any current traditional audit settings that you have will still be honored and are viewable with this view. See *Oracle Database Security Guide* for more information about how this desupport works.

### See Also:

"DBA\_OBJ\_AUDIT\_OPTS"

## 7.642 USER\_OBJ\_COLATTRS

USER\_OBJ\_COLATTRS describes object columns and attributes contained in the tables owned by the current user. Its columns (except for OWNER) are the same as those in ALL\_OBJ\_COLATTRS.

### See Also:

"ALL\_OBJ\_COLATTRS"

## 7.643 USER\_OBJECT\_SIZE

USER\_OBJECT\_SIZE lists the sizes, in bytes, of various PL/SQL objects. Its columns are the same as those in DBA\_OBJECT\_SIZE.

### See Also:

"DBA\_OBJECT\_SIZE"

## 7.644 USER\_OBJECT\_TABLES

USER\_OBJECT\_TABLES describes the object tables owned by the current user. Its columns (except for OWNER) are the same as those in ALL\_OBJECT\_TABLES.

**See Also:**

"ALL\_OBJECT\_TABLES"

## 7.645 USER\_OBJECT\_USAGE

USER\_OBJECT\_USAGE displays statistics about index usage gathered from the database for the indexes owned by the current user.

You can use this view to monitor index usage. All indexes owned by the current user that have been used at least once can be monitored and displayed in this view. Its columns (except for OWNER) are the same as those in DBA\_OBJECT\_USAGE.

**See Also:**

"DBA\_OBJECT\_USAGE"

## 7.646 USER\_OBJECTS

USER\_OBJECTS describes all objects owned by the current user. Its columns (except for OWNER), are the same as those in ALL\_OBJECTS.

**See Also:**

"ALL\_OBJECTS"

## 7.647 USER\_OBJECTS\_AE

USER\_OBJECTS\_AE describes the objects (across all editions) owned by the current user. Its columns (except for OWNER) are the same as those in ALL\_OBJECTS\_AE.

**See Also:**

"ALL\_OBJECTS\_AE"

## 7.648 USER\_OGG\_AUTO\_CAPTURED\_TABLES

USER\_OGG\_AUTO\_CAPTURED\_TABLES describes the tables owned by the current user that are enabled for Oracle GoldenGate automatic capture. Its columns (except for OWNER) are the same as those in DBA\_OGG\_AUTO\_CAPTURED\_TABLES.

**See Also:**

["DBA\\_OGG\\_AUTO\\_CAPTURED\\_TABLES"](#)

## 7.649 USER\_OPANCILLARY

USER\_OPANCILLARY provides ancillary information for operators owned by the current user. Its columns are the same as those in ALL\_OPANCILLARY.

**See Also:**

["ALL\\_OPANCILLARY"](#)

## 7.650 USER\_OPARGUMENTS

USER\_OPARGUMENTS provides argument information for operator bindings owned by the current user. Its columns are the same as those in ALL\_OPARGUMENTS.

**See Also:**

["ALL\\_OPARGUMENTS"](#)

## 7.651 USER\_OPBINDINGS

USER\_OPBINDINGS describes the binding functions and methods on the operators owned by the current user. Its columns are the same as those in ALL\_OPBINDINGS.

**See Also:**

["ALL\\_OPBINDINGS"](#)

## 7.652 USER\_OPERATOR\_COMMENTS

USER\_OPERATOR\_COMMENTS displays comments for the user-defined operators owned by the current user. Its columns are the same as those in ALL\_OPERATOR\_COMMENTS.

**See Also:**

"ALL\_OPERATOR\_COMMENTS"

## 7.653 USER\_OPERATORS

USER\_OPERATORS describes all operators owned by the current user. Its columns are the same as those in ALL\_OPERATORS.

**See Also:**

"ALL\_OPERATORS"

## 7.654 USER\_OUTLINE\_HINTS

USER\_OUTLINE\_HINTS describes the set of hints stored in the outlines owned by the current user. Its columns (except for OWNER) are the same as those in DBA\_OUTLINE\_HINTS.

**See Also:**

"DBA\_OUTLINE\_HINTS"

## 7.655 USER\_OUTLINES

USER\_OUTLINES describes the stored outlines owned by the current user. Its columns (except for OWNER) are the same as those in DBA\_OUTLINES.

**See Also:**

"DBA\_OUTLINES"

## 7.656 USER\_PARALLEL\_EXECUTE\_CHUNKS

USER\_PARALLEL\_EXECUTE\_CHUNKS displays the chunks for tasks created by the current user. Its columns (except for TASK\_OWNER) are the same as those in DBA\_PARALLEL\_EXECUTE\_CHUNKS.

**See Also:**

["DBA\\_PARALLEL\\_EXECUTE\\_CHUNKS"](#)

## 7.657 USER\_PARALLEL\_EXECUTE\_TASKS

USER\_PARALLEL\_EXECUTE\_TASKS displays the tasks created by the current user. Its columns (except for TASK\_OWNER) are the same as those in DBA\_PARALLEL\_EXECUTE\_TASKS.

**See Also:**

["DBA\\_PARALLEL\\_EXECUTE\\_TASKS"](#)

## 7.658 USER\_PART\_COL\_STATISTICS

USER\_PART\_COL\_STATISTICS displays column statistics and histogram information for the table partitions owned by the current user. Its columns (except for OWNER) are the same as those in ALL\_PART\_COL\_STATISTICS.

**See Also:**

["ALL\\_PART\\_COL\\_STATISTICS"](#)

## 7.659 USER\_PART\_HISTOGRAMS

USER\_PART\_HISTOGRAMS displays the histogram data (endpoints per histogram) for the histograms on the table partitions owned by the current user. Its columns (except for OWNER) are the same as those in ALL\_PART\_HISTOGRAMS.

**See Also:**

["ALL\\_PART\\_HISTOGRAMS"](#)

## 7.660 USER\_PART\_INDEXES

USER\_PART\_INDEXES displays the object-level partitioning information for the partitioned indexes owned by the current user. Its columns (except for OWNER) are the same as those in ALL\_PART\_INDEXES.

### See Also:

"ALL\_PART\_INDEXES"

## 7.661 USER\_PART\_KEY\_COLUMNS

USER\_PART\_KEY\_COLUMNS describes the partitioning key columns for the partitioned objects owned by the current user. Its columns (except for OWNER) are the same as those in ALL\_PART\_KEY\_COLUMNS.

### See Also:

"ALL\_PART\_KEY\_COLUMNS"

## 7.662 USER\_PART\_LOBS

USER\_PART\_LOBS displays table-level information about the partitioned LOBs owned by the current user, including default attributes for LOB data partitions. Its columns (except for TABLE\_OWNER) are the same as those in ALL\_PART\_LOBS.

### See Also:

"ALL\_PART\_LOBS"

## 7.663 USER\_PART\_TABLES

USER\_PART\_TABLES displays the object-level partitioning information for the partitioned tables owned by the current user. Its columns (except for OWNER) are the same as those in ALL\_PART\_TABLES.

### See Also:

"ALL\_PART\_TABLES"

## 7.664 USER\_PARTIAL\_DROP\_TABS

USER\_PARTIAL\_DROP\_TABS describes all tables in the schema of the current user that have partially completed DROP COLUMN operations. Its columns are the same as those in ALL\_PARTIAL\_DROP\_TABS.

### See Also:

["ALL\\_PARTIAL\\_DROP\\_TABS"](#)

## 7.665 USER\_PASSWORD\_LIMITS

USER\_PASSWORD\_LIMITS describes the password profile parameters that are assigned to the user.

| Column        | Datatype      | NULL     | Description                   |
|---------------|---------------|----------|-------------------------------|
| RESOURCE_NAME | VARCHAR2 (32) | NOT NULL | Name of the password resource |
| LIMIT         | VARCHAR2 (40) |          | Value of the resource limit   |

## 7.666 USER\_PENDING\_CONV\_TABLES

USER\_PENDING\_CONV\_TABLES describes the pending conversion tables owned by the current user. Its columns (except for OWNER) are the same as those in ALL\_PENDING\_CONV\_TABLES.

### See Also:

["ALL\\_PENDING\\_CONV\\_TABLES"](#)

## 7.667 USER\_PG\_EDGE\_RELATIONSHIPS

USER\_PG\_EDGE\_RELATIONSHIPS describes edge relationships in the property graphs owned by the current user. Its columns (except for OWNER) are the same as those in ALL\_PG\_EDGE\_RELATIONSHIPS.

### Note:

This view is available starting with Oracle Database 23ai.

**See Also:**

"ALL\_PG\_EDGE\_RELATIONSHIPS"

## 7.668 USER\_PG\_ELEMENT\_LABELS

USER\_PG\_ELEMENT\_LABELS describes labels for the element tables in the property graphs owned by the current user. Its columns (except for OWNER) are the same as those in ALL\_PG\_ELEMENT\_LABELS.

**Note:**

This view is available starting with Oracle Database 23ai.

**See Also:**

"ALL\_PG\_ELEMENT\_LABELS"

## 7.669 USER\_PG\_ELEMENTS

USER\_PG\_ELEMENTS describes element tables in the property graphs owned by the current user. Its columns (except for OWNER) are the same as those in ALL\_PG\_ELEMENTS.

**Note:**

This view is available starting with Oracle Database 23ai.

**See Also:**

"ALL\_PG\_ELEMENTS"

## 7.670 USER\_PG\_KEYS

USER\_PG\_KEYS describes key columns in the property graphs owned by the current user. Its columns (except for OWNER) are the same as those in ALL\_PG\_KEYS.

**Note:**

This view is available starting with Oracle Database 23ai.

**See Also:**

"ALL\_PG\_KEYS"

## 7.671 USER\_PG\_LABEL\_PROPERTIES

USER\_PG\_LABEL\_PROPERTIES describes properties in the property graphs owned by the current user. Its columns (except for OWNER) are the same as those in ALL\_PG\_LABEL\_PROPERTIES.

**Note:**

This view is available starting with Oracle Database 23ai.

**See Also:**

"ALL\_PG\_LABEL\_PROPERTIES"

## 7.672 USER\_PG\_LABELS

USER\_PG\_LABELS describes labels in the property graphs owned by the current user. Its columns (except for OWNER) are the same as those in ALL\_PG\_LABELS.

**Note:**

This view is available starting with Oracle Database 23ai.

**See Also:**["ALL\\_PG\\_LABELS"](#)

## 7.673 USER\_PG\_PROP\_DEFINITIONS

USER\_PG\_PROP\_DEFINITIONS describes columns and expressions exposed as properties in the property graphs owned by the current user. Its columns (except for OWNER) are the same as those in ALL\_PG\_PROP\_DEFINITIONS.

**Note:**

This view is available starting with Oracle Database 23ai.

**See Also:**["ALL\\_PG\\_PROP\\_DEFINITIONS"](#)

## 7.674 USER\_PLSQL\_COLL\_TYPES

USER\_PLSQL\_COLL\_TYPES describes the user's own named PL/SQL collection types. Its columns (except for OWNER and CHAR\_USED) are the same as those in ALL\_PLSQL\_COLL\_TYPES.

**See Also:**["ALL\\_PLSQL\\_COLL\\_TYPES"](#)

## 7.675 USER\_PLSQL\_OBJECT\_SETTINGS

USER\_PLSQL\_OBJECT\_SETTINGS displays information about the compiler settings for the stored objects owned by the current user. Its columns (except for OWNER) are the same as those in ALL\_PLSQL\_OBJECT\_SETTINGS.

**See Also:**["ALL\\_PLSQL\\_OBJECT\\_SETTINGS"](#)

## 7.676 USER\_PLSQL\_TYPE\_ATTRS

USER\_PLSQL\_TYPE\_ATTRS describes the attributes of the user's own PL/SQL types. Its columns (except for OWNER and CHAR\_USED) are the same as those in ALL\_PLSQL\_TYPE\_ATTRS.

**See Also:**

"ALL\_PLSQL\_TYPE\_ATTRS"

## 7.677 USER\_PLSQL\_TYPES

USER\_PLSQL\_TYPES describes the user's own PL/SQL types. Its columns (except for OWNER) are the same as those in ALL\_PLSQL\_TYPES.

**See Also:**

"ALL\_PLSQL\_TYPES"

## 7.678 USER\_POLICIES

USER\_POLICIES describes all Oracle Virtual Private Database (VPD) security policies associated with objects owned by the current user. Its columns (except for OBJECT\_OWNER and EDITION\_NAME) are the same as those in ALL\_POLICIES.

**See Also:**

"ALL\_POLICIES"

## 7.679 USER\_POLICY\_ATTRIBUTES

USER\_POLICY\_ATTRIBUTES lists the attribute associations {Namespaces, Attributes} of all context-sensitive and shared-context sensitive Oracle Virtual Private Database (VPD) policies for synonyms, tables, or views owned by the user.

Its columns are the same as those in ALL\_POLICY\_ATTRIBUTES.

**See Also:**

"ALL\_POLICY\_ATTRIBUTES"

## 7.680 USER\_POLICY\_CONTEXTS

USER\_POLICY\_CONTEXTS describes the driving contexts defined for the synonyms, tables, and views owned by the current user. Its columns (except for OBJECT\_OWNER) are the same as those in ALL\_POLICY\_CONTEXTS.

**See Also:**

["ALL\\_POLICY\\_CONTEXTS"](#)

## 7.681 USER\_POLICY\_GROUPS

USER\_POLICY\_GROUPS describes the policy groups defined for the synonyms, tables, and views owned by the current user. Its columns (except for OBJECT\_OWNER) are the same as those in ALL\_POLICY\_GROUPS.

**See Also:**

["ALL\\_POLICY\\_GROUPS"](#)

## 7.682 USER\_PRIVATE\_TEMP\_TABLES

USER\_PRIVATE\_TEMP\_TABLES describes the private temporary tables in the current session. Its columns (except for INST\_ID) are the same as those in DBA\_PRIVATE\_TEMP\_TABLES.

**See Also:**

["DBA\\_PRIVATE\\_TEMP\\_TABLES"](#)

## 7.683 USER\_PRIVILEGE\_MAP

USER\_PRIVILEGE\_MAP shows privilege (auditing option) type codes for object privileges that can be granted on a user.

This table can be used to map privilege type numbers to type names.

| Column    | Datatype      | NULL     | Description                                     |
|-----------|---------------|----------|-------------------------------------------------|
| PRIVILEGE | NUMBER        | NOT NULL | A numeric privilege (auditing option) type code |
| NAME      | VARCHAR2 (40) | NOT NULL | Name of the type of privilege (auditing option) |

## 7.684 USER\_PROCEEDURES

`USER_PROCEEDURES` lists all functions and procedures that are owned by the current user, along with their associated properties. Its columns (except `OWNER`) are the same as those in `ALL_PROCEEDURES`.

### See Also:

- ["ALL\\_PROCEEDURES"](#)
- ["USER\\_ARGUMENTS"](#) for information about the arguments of the functions and procedures owned by the current user

## 7.685 USER\_PROPERTY\_GRAPHs

`USER_PROPERTY_GRAPHs` describes the property graphs owned by the current user. Its columns (except for `OWNER`) are the same as those in `ALL_PROPERTY_GRAPHs`.

### Note:

This view is available starting with Oracle Database 23ai.

### See Also:

["ALL\\_PROPERTY\\_GRAPHs"](#)

## 7.686 USER\_PROXIES

`USER_PROXIES` displays information about connections the current user is allowed to proxy. Its columns (except for `PROXY`) are the same as those in `DBA_PROXIES`.

### See Also:

["DBA\\_PROXIES"](#)

## 7.687 USER\_QUEUE\_EVENT\_STREAMS

`USER_QUEUE_EVENT_STREAMS` describes the Transactional Event Queue (TxEventQ) event streams owned by the current user. Its columns are the same as those in `ALL_QUEUE_EVENT_STREAMS`.

**See Also:**

["ALL\\_QUEUE\\_EVENT\\_STREAMS"](#)

## 7.688 USER\_QUEUE\_SCHEDULES

`USER_QUEUE_SCHEDULES` describes the propagation schedules whose source queues are owned by the current user. Its columns (except for `SCHEMA`) are the same as those in `ALL_QUEUE_SCHEDULES`.

**See Also:**

["ALL\\_QUEUE\\_SCHEDULES"](#)

## 7.689 USER\_QUEUE\_SUBSCRIBERS

`USER_QUEUE_SUBSCRIBERS` displays the list of subscribers on queues that are under the current user's schema. Its columns (except for `OWNER`) are the same as those in `ALL_QUEUE_SUBSCRIBERS`.

**See Also:**

["ALL\\_QUEUE\\_SUBSCRIBERS"](#)

## 7.690 USER\_QUEUE\_TABLES

`USER_QUEUE_TABLES` describes the queues in the queue tables created in the current user's schema. Its columns (except for `OWNER`) are the same as those in `ALL_QUEUE_TABLES`.

**See Also:**

["ALL\\_QUEUE\\_TABLES"](#)

## 7.691 USER\_QUEUES

USER\_QUEUES describes the operational characteristics of every queue in the user's schema. Its columns (except for OWNER) are the same as those in ALL\_QUEUES.

### See Also:

- ["ALL\\_QUEUES"](#)
- *Oracle Database Advanced Queuing User's Guide* for more information about these views and Advanced Queuing

## 7.692 USER\_RECYCLEBIN

USER\_RECYCLEBIN displays information about the recycle bin owned by the current user. Its columns (except for OWNER) are the same as those in DBA\_RECYCLEBIN.

### See Also:

- ["DBA\\_RECYCLEBIN"](#)

## 7.693 USER\_REFRESH

USER\_REFRESH describes all refresh groups owned by the current user. Its columns are the same as those in ALL\_REFRESH.

### See Also:

- ["ALL\\_REFRESH"](#)

## 7.694 USER\_REFRESH\_CHILDREN

USER\_REFRESH\_CHILDREN lists all the objects in refresh groups owned by the current user. Its columns are the same as those in ALL\_REFRESH\_CHILDREN.

### See Also:

- ["ALL\\_REFRESH\\_CHILDREN"](#)

## 7.695 USER\_REFS

USER\_REFS describes the REF columns and REF attributes in the object type columns of tables owned by the current user. Its columns are the same as those in ALL\_REFS.

**See Also:**

["ALL\\_REFS"](#)

## 7.696 USER\_REGISTERED\_MVIEWS

USER\_REGISTERED\_MVIEWS describes all registered materialized views (registered at a master site or a master materialized view site) owned by the current user. Its columns are the same as those in ALL\_REGISTERED\_MVIEWS.

**See Also:**

["ALL\\_REGISTERED\\_MVIEWS"](#)

## 7.697 USER\_REGISTRY

USER\_REGISTRY displays information about the components owned by the current user that are loaded into the component registry. Its columns are the same as those in DBA\_REGISTRY.

**See Also:**

["DBA\\_REGISTRY"](#)

## 7.698 USER\_RESOURCE\_LIMITS

USER\_RESOURCE\_LIMITS displays the resource limits for the current user.

| Column        | Datatype      | NULL     | Description                   |
|---------------|---------------|----------|-------------------------------|
| RESOURCE_NAME | VARCHAR2 (32) | NOT NULL | Name of the resource          |
| LIMIT         | VARCHAR2 (40) |          | Limit placed on this resource |

## 7.699 USER\_RESUMABLE

USER\_RESUMABLE displays the resumable statements executed by the current user. Its columns (except for USER\_ID) are the same as those in DBA\_RESUMABLE.

**See Also:**

"DBA\_RESUMABLE"

## 7.700 USER\_REWRITE\_EQUIVALENCES

USER\_REWRITE\_EQUIVALENCES describes the rewrite equivalences owned by the current user. Its columns are the same as those in ALL\_REWRITE\_EQUIVALENCES.

**See Also:**

"ALL\_REWRITE\_EQUIVALENCES"

## 7.701 USER\_ROLE\_PRIVS

USER\_ROLE\_PRIVS describes the roles granted to the current user.

| Column          | Datatype       | NULL | Description                                                                                                                                                                                                                                  |
|-----------------|----------------|------|----------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|
| USERNAME        | VARCHAR2 (128) |      | Name of the user, or PUBLIC                                                                                                                                                                                                                  |
| GRANTED_ROLE    | VARCHAR2 (128) |      | Name of the role granted to the user                                                                                                                                                                                                         |
| ADMIN_OPTION    | VARCHAR2 (3)   |      | Indicates whether the grant was with the ADMIN OPTION (YES) or not (NO)                                                                                                                                                                      |
| DELEGATE_OPTION | VARCHAR2 (3)   |      | Indicates whether the grant was with the DELEGATE OPTION (YES) or not (NO)                                                                                                                                                                   |
| DEFAULT_ROLE    | VARCHAR2 (3)   |      | Indicates whether the role is designated as a DEFAULT ROLE for the user (YES) or not (NO)                                                                                                                                                    |
| OS_GRANTED      | VARCHAR2 (3)   |      | Indicates whether the role was granted by the operating system (YES) or not (NO); occurs if the OS_ROLES initialization parameter is true                                                                                                    |
| COMMON          | VARCHAR2 (3)   |      | Indicates how the grant was made. Possible values: <ul style="list-style-type: none"><li>• YES if the role was granted commonly (CONTAINER=ALL was used)</li><li>• NO if the role was granted locally (CONTAINER=ALL was not used)</li></ul> |
| INHERITED       | VARCHAR2 (3)   |      | Indicates whether the grant was inherited from another container (YES) or not (NO)                                                                                                                                                           |

**See Also:**

["DBA\\_ROLE\\_PRIVS"](#)

## 7.702 USER\_RSRC\_CONSUMER\_GROUP\_PRIVS

USER\_RSRC\_CONSUMER\_GROUP\_PRIVS displays information about the resource consumer groups to which the current user is assigned. Its columns (except for GRANTEE) are the same as those in DBA\_RSRC\_CONSUMER\_GROUP\_PRIVS.

**See Also:**

["DBA\\_RSRC\\_CONSUMER\\_GROUP\\_PRIVS"](#)

## 7.703 USER\_RSRC\_MANAGER\_SYSTEM\_PRIVS

USER\_RSRC\_MANAGER\_SYSTEM\_PRIVS displays information about the users who are granted system privileges for the DBMS\_RESOURCE\_MANAGER package. Its columns (except for GRANTEE) are the same as those in DBA\_RSRC\_MANAGER\_SYSTEM\_PRIVS.

**See Also:**

["DBA\\_RSRC\\_MANAGER\\_SYSTEM\\_PRIVS"](#)

## 7.704 USER\_RULE\_SET\_RULES

USER\_RULE\_SET\_RULES describes the rules in the rule sets owned by the current user. Its columns (except for RULE\_SET\_OWNER) are the same as those in ALL\_RULE\_SET\_RULES.

**See Also:**

["ALL\\_RULE\\_SET\\_RULES"](#)

## 7.705 USER\_RULE\_SETS

USER\_RULE\_SETS describes the rule sets owned by the current user. Its columns (except for RULE\_SET\_OWNER) are the same as those in ALL\_RULE\_SETS.

### See Also:

"ALL\_RULE\_SETS"

## 7.706 USER\_RULES

USER\_RULES describes the rules owned by the current user. Its columns (except for RULE\_OWNER) are the same as those in ALL\_RULES.

### See Also:

"ALL\_RULES"

## 7.707 USER\_SAGA\_BROKERS

USER\_SAGA\_BROKERS displays the saga brokers owned by the current user. Its columns are the same as those in ALL\_SAGA\_BROKERS.

### Note:

This view is available starting with Oracle Database 23ai.

### See Also:

"ALL\_SAGA\_BROKERS"

## 7.708 USER\_SAGA\_DETAILS

USER\_SAGA\_DETAILS displays details for sagas owned by the current user. Its columns are the same as those in ALL\_SAGA\_DETAILS.

### Note:

This view is available starting with Oracle Database 23ai.

**See Also:**

["ALL\\_SAGA\\_DETAILS"](#)

## 7.709 USER\_SAGA\_ERRORS

`USER_SAGA_ERRORS` describes errors generated by the sagas owned by the current user. Its columns are the same as those in `ALL_SAGA_ERRORS`.

This view displays sagas that were either initiated in the current PDB or joined by participants in the current PDB.

**Note:**

This view is available starting with Oracle Database 23ai.

**See Also:**

["ALL\\_SAGA\\_ERRORS"](#)

## 7.710 USER\_SAGA\_FINALIZATION

`USER_SAGA_FINALIZATION` displays information about pending finalization actions for sagas owned by the current user. Its columns are the same as those in `ALL_SAGA_FINALIZATION`.

This view displays one row for each unique reservable table updated as part of a participant transaction for sagas that were either initiated in the current PDB or joined by participants in the current PDB.

**Note:**

This view is available starting with Oracle Database 23ai.

**See Also:**

["ALL\\_SAGA\\_FINALIZATION"](#)

## 7.711 USER\_SAGA\_PARTICIPANT\_SET

USER\_SAGA\_PARTICIPANT\_SET displays information about saga participants for sagas owned by the current user. Its columns are the same as those in ALL\_SAGA\_PARTICIPANT\_SET.

**Note:**

This view is available starting with Oracle Database 23ai.

**See Also:**

["ALL\\_SAGA\\_PARTICIPANT\\_SET"](#)

## 7.712 USER\_SAGA\_PARTICIPANTS

USER\_SAGA\_PARTICIPANTS describes the saga participants owned by the current user. Its columns (except for OWNER) are the same as those in ALL\_SAGA\_PARTICIPANTS.

This view displays sagas that were either initiated in the current PDB or joined by participants or coordinators in the current PDB.

**Note:**

This view is available starting with Oracle Database 23ai.

**See Also:**

["ALL\\_SAGA\\_PARTICIPANTS"](#)

## 7.713 USER\_SAGA\_PENDING

USER\_SAGA\_PENDING describes the pending sagas owned by the current user. Its columns are the same as those in ALL\_SAGA\_PENDING.

This view displays sagas that were initiated in the current PDB.

**Note:**

This view is available starting with Oracle Database 23ai.

**See Also:**

"ALL\_SAGA\_PENDING"

## 7.714 USER\_SAGAS

USER\_SAGAS describes the active sagas owned by the current user. Its columns (except for OWNER) are the same as those in ALL\_SAGAS.

This view displays sagas that were either initiated in the current PDB or joined by participants in the current PDB.

**Note:**

This view displays active sagas. Completed sagas are displayed in the USER\_HIST\_SAGAS view.

**Note:**

This view is available starting with Oracle Database 23ai.

**See Also:**

"ALL\_SAGAS"

## 7.715 USER\_SCHEDULER\_CHAIN\_RULES

USER\_SCHEDULER\_CHAIN\_RULES displays information about the rules for the chains owned by the current user. Its columns (except for OWNER) are the same as those in ALL\_SCHEDULER\_CHAIN\_RULES.

**See Also:**

"ALL\_SCHEDULER\_CHAIN\_RULES"

## 7.716 USER\_SCHEDULER\_CHAIN\_STEPS

USER\_SCHEDULER\_CHAIN\_STEPS displays information about the defined steps of the chains owned by the current user. Its columns (except for OWNER) are the same as those in ALL\_SCHEDULER\_CHAIN\_STEPS.

### See Also:

"ALL\_SCHEDULER\_CHAIN\_STEPS"

## 7.717 USER\_SCHEDULER\_CHAINS

USER\_SCHEDULER\_CHAINS displays information about the chains owned by the current user. Its columns (except for OWNER) are the same as those in ALL\_SCHEDULER\_CHAINS.

### See Also:

"ALL\_SCHEDULER\_CHAINS"

## 7.718 USER\_SCHEDULER\_CREDENTIALS

USER\_SCHEDULER\_CREDENTIALS displays information about the credentials owned by the current user. Its columns (except for OWNER) are the same as those in ALL\_SCHEDULER\_CREDENTIALS.

### Note:

This view is deprecated in favor of the USER\_CREDENTIALS view. Oracle recommends that you use USER\_CREDENTIALS instead. USER\_SCHEDULER\_CREDENTIALS is retained for backward compatibility only.

### See Also:

- "USER\_CREDENTIALS"
- "ALL\_SCHEDULER\_CREDENTIALS"

## 7.719 USER\_SCHEDULER\_DB\_DESTS

USER\_SCHEDULER\_DB\_DESTS displays information about the destination objects owned by the current user pointing to remote databases. Its columns (except for OWNER) are the same as those in ALL\_SCHEDULER\_DB\_DESTS.

### See Also:

"ALL\_SCHEDULER\_DB\_DESTS"

## 7.720 USER\_SCHEDULER\_DESTS

USER\_SCHEDULER\_DESTS displays information about the destination objects for jobs owned by the current user. Its columns (except for OWNER) are the same as those in ALL\_SCHEDULER\_DESTS.

### See Also:

"ALL\_SCHEDULER\_DESTS"

## 7.721 USER\_SCHEDULER\_FILE\_WATCHERS

USER\_SCHEDULER\_FILE\_WATCHERS displays information about the Scheduler file watch requests owned by the current user. Its columns (except for OWNER) are the same as those in ALL\_SCHEDULER\_FILE\_WATCHERS.

### See Also:

"ALL\_SCHEDULER\_FILE\_WATCHERS"

## 7.722 USER\_SCHEDULER\_GROUP\_MEMBERS

USER\_SCHEDULER\_GROUP\_MEMBERS displays information about the members of the Scheduler object groups owned by the current user. Its columns (except for OWNER) are the same as those in ALL\_SCHEDULER\_GROUP\_MEMBERS.

### See Also:

"ALL\_SCHEDULER\_GROUP\_MEMBERS"

## 7.723 USER\_SCHEDULER\_GROUPS

USER\_SCHEDULER\_GROUPS displays information about the Scheduler object groups owned by the current user. Its columns (except for OWNER) are the same as those in ALL\_SCHEDULER\_GROUPS.

### See Also:

"ALL\_SCHEDULER\_GROUPS"

## 7.724 USER\_SCHEDULER\_INCOMPAT\_MEMBER

USER\_SCHEDULER\_INCOMPAT\_MEMBER displays all Scheduler incompatibility resource objects members owned by the current user. Its columns are the same as those in ALL\_SCHEDULER\_INCOMPAT\_MEMBER.

### See Also:

"ALL\_SCHEDULER\_INCOMPAT\_MEMBER"

## 7.725 USER\_SCHEDULER\_INCOMPATS

USER\_SCHEDULER\_INCOMPATS displays all Scheduler incompatibility resource objects owned by the current user. Its columns (except for OWNER) are the same as those in ALL\_SCHEDULER\_INCOMPATS.

### See Also:

"ALL\_SCHEDULER\_INCOMPATS"

## 7.726 USER\_SCHEDULER\_JOB\_ARGS

USER\_SCHEDULER\_JOB\_ARGS displays information about the arguments of the Scheduler jobs owned by the current user. Its columns (except for OWNER) are the same as those in ALL\_SCHEDULER\_JOB\_ARGS.

### See Also:

"ALL\_SCHEDULER\_JOB\_ARGS"

## 7.727 USER\_SCHEDULER\_JOB\_DESTS

USER\_SCHEDULER\_JOB\_DESTS displays information about the state of the jobs owned by the current user at each of their destinations. Its columns (except for OWNER) are the same as those in ALL\_SCHEDULER\_JOB\_DESTS.

### See Also:

"ALL\_SCHEDULER\_JOB\_DESTS"

## 7.728 USER\_SCHEDULER\_JOB\_LOG

USER\_SCHEDULER\_JOB\_LOG displays log information for the Scheduler jobs owned by the current user. Its columns are the same as those in ALL\_SCHEDULER\_JOB\_LOG.

### See Also:

"ALL\_SCHEDULER\_JOB\_LOG"

## 7.729 USER\_SCHEDULER\_JOB\_RUN\_DETAILS

USER\_SCHEDULER\_JOB\_RUN\_DETAILS displays log run details for the Scheduler jobs owned by the current user. Its columns are the same as those in ALL\_SCHEDULER\_JOB\_RUN\_DETAILS.

### See Also:

"ALL\_SCHEDULER\_JOB\_RUN\_DETAILS"

## 7.730 USER\_SCHEDULER\_JOBS

USER\_SCHEDULER\_JOBS displays information about the Scheduler jobs owned by the current user. Its columns (except for OWNER) are the same as those in ALL\_SCHEDULER\_JOBS.

### See Also:

"ALL\_SCHEDULER\_JOBS"

## 7.731 USER\_SCHEDULER\_NOTIFICATIONS

USER\_SCHEDULER\_NOTIFICATIONS displays information about the E-mail notifications for the jobs owned by the current user. Its columns (except for OWNER) are the same as those in ALL\_SCHEDULER\_NOTIFICATIONS.

**See Also:**

["ALL\\_SCHEDULER\\_NOTIFICATIONS"](#)

## 7.732 USER\_SCHEDULER\_PROGRAM\_ARGS

USER\_SCHEDULER\_PROGRAM\_ARGS displays information about the arguments of the Scheduler programs owned by the current user. Its columns (except for OWNER) are the same as those in ALL\_SCHEDULER\_PROGRAM\_ARGS.

**See Also:**

["ALL\\_SCHEDULER\\_PROGRAM\\_ARGS"](#)

## 7.733 USER\_SCHEDULER\_PROGRAMS

USER\_SCHEDULER\_PROGRAMS displays information about the Scheduler programs owned by the current user. Its columns (except for OWNER) are the same as those in ALL\_SCHEDULER\_PROGRAMS.

**See Also:**

["ALL\\_SCHEDULER\\_PROGRAMS"](#)

## 7.734 USER\_SCHEDULER\_REMOTE\_JOBSTATE

USER\_SCHEDULER\_REMOTE\_JOBSTATE displays information about the state of the jobs owned by the current user at remote databases. Its columns (except for OWNER) are the same as those in ALL\_SCHEDULER\_REMOTE\_JOBSTATE.

**See Also:**

["ALL\\_SCHEDULER\\_REMOTE\\_JOBSTATE"](#)

## 7.735 USER\_SCHEDULER\_RESOURCES

USER\_SCHEDULER\_RESOURCES displays all scheduler resource objects in the database from the schema of the current user. Its columns (except for OWNER) are the same as those in ALL\_SCHEDULER\_RESOURCES.

### See Also:

["ALL\\_SCHEDULER\\_RESOURCES"](#)

## 7.736 USER\_SCHEDULER\_RSC\_CONSTRAINTS

USER\_SCHEDULER\_RSC\_CONSTRAINTS lists all Oracle Scheduler resource constraint members owned by the current user. Its columns are the same as those in ALL\_SCHEDULER\_RSC\_CONSTRAINTS.

### See Also:

["ALL\\_SCHEDULER\\_RSC\\_CONSTRAINTS"](#)

## 7.737 USER\_SCHEDULER\_RUNNING\_CHAINS

USER\_SCHEDULER\_RUNNING\_CHAINS displays information about the chain steps of the running chains owned by the current user. Its columns (except for OWNER) are the same as those in ALL\_SCHEDULER\_RUNNING\_CHAINS.

### See Also:

["ALL\\_SCHEDULER\\_RUNNING\\_CHAINS"](#)

## 7.738 USER\_SCHEDULER\_RUNNING\_JOBS

USER\_SCHEDULER\_RUNNING\_JOBS displays information about the running Scheduler jobs owned by the current user. Its columns (except for OWNER) are the same as those in ALL\_SCHEDULER\_RUNNING\_JOBS.

### See Also:

["ALL\\_SCHEDULER\\_RUNNING\\_JOBS"](#)

## 7.739 USER\_SCHEDULER\_SCHEDULES

`USER_SCHEDULER_SCHEDULES` displays information about the Scheduler schedules owned by the current user. Its columns (except for `OWNER`) are the same as those in `ALL_SCHEDULER_SCHEDULES`.

### See Also:

["ALL\\_SCHEDULER\\_SCHEDULES"](#)

## 7.740 USER\_SCHEMA\_PRIVS

`USER_SCHEMA_PRIVS` describes schema privileges granted to the current user.

| Column       | Datatype       | NULL | Description                                                                                                                                                                                                                                            |
|--------------|----------------|------|--------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|
| USERNAME     | VARCHAR2 (128) |      | Name of the user, or <code>PUBLIC</code>                                                                                                                                                                                                               |
| PRIVILEGE    | VARCHAR2 (40)  |      | Schema privilege                                                                                                                                                                                                                                       |
| SCHEMA       | VARCHAR2 (128) |      | Schema on which the privilege was granted                                                                                                                                                                                                              |
| ADMIN_OPTION | VARCHAR2 (3)   |      | Indicates whether the grant was with the <code>ADMIN</code> option (YES) or not (NO)                                                                                                                                                                   |
| COMMON       | VARCHAR2 (3)   |      | Indicates how the grant was made. Possible values: <ul style="list-style-type: none"><li>• YES if the privilege was granted commonly (CONTAINER=ALL was used)</li><li>• NO if the privilege was granted locally (CONTAINER=ALL was not used)</li></ul> |
| INHERITED    | VARCHAR2 (3)   |      | Indicates whether the grant was inherited from another container (YES) or not (NO)                                                                                                                                                                     |

### Note:

This view is available starting with Oracle Database 23ai.

### See Also:

["DBA\\_SCHEMA\\_PRIVS"](#)

## 7.741 USER\_SEC\_RELEVANT\_COLS

USER\_SEC\_RELEVANT\_COLS describes the security relevant columns of the security policies for the tables and views owned by the current user. Its columns (except for OBJECT\_OWNER) are the same as those in ALL\_SEC\_RELEVANT\_COLS.

### See Also:

["ALL\\_SEC\\_RELEVANT\\_COLS"](#)

## 7.742 USER\_SECONDARY\_OBJECTS

USER\_SECONDARY\_OBJECTS provides information about secondary objects associated with domain indexes owned by the current user. Its columns are the same as those in ALL\_SECONDARY\_OBJECTS.

This view is only relevant in the context of domain indexes.

### See Also:

["ALL\\_SECONDARY\\_OBJECTS"](#)

## 7.743 USER\_SEGMENTS

USER\_SEGMENTS describes the storage allocated for the segments owned by the current user's objects. Its columns (except for OWNER, HEADER\_FILE, HEADER\_BLOCK, and RELATIVE\_FNO) are the same as those in DBA\_SEGMENTS.

### See Also:

["DBA\\_SEGMENTS"](#)

## 7.744 USER\_SEQUENCES

USER\_SEQUENCES describes all sequences owned by the current user. Its columns are the same as those in ALL\_SEQUENCES.

### See Also:

["ALL\\_SEQUENCES"](#)

## 7.745 USER\_SODA\_COLLECTIONS

USER\_SODA\_COLLECTIONS describes the Simple Oracle Document Access (SODA) collections owned by the current user. Its columns (except for OWNER) are the same as those in DBA\_SODA\_COLLECTIONS.

**See Also:**

"DBA\_SODA\_COLLECTIONS"

## 7.746 USER\_SOURCE

USER\_SOURCE describes the text source of the stored objects owned by the current user. Its columns (except for OWNER) are the same as those in ALL\_SOURCE.

**See Also:**

"ALL\_SOURCE"

## 7.747 USER\_SOURCE\_AE

USER\_SOURCE\_AE describes the text source of the stored objects (across all editions) owned by the current user. Its columns (except for OWNER) are the same as those in ALL\_SOURCE\_AE.

**See Also:**

"ALL\_SOURCE\_AE"

## 7.748 USER\_SQL\_TRANSLATION\_PROFILES

USER\_SQL\_TRANSLATION\_PROFILES describes all SQL translation profiles owned by the user. Its columns (except for OWNER) are the same as those in ALL\_SQL\_TRANSLATION\_PROFILES.

**See Also:**

"ALL\_SQL\_TRANSLATION\_PROFILES"

## 7.749 USER\_SQL\_TRANSLATIONS

USER\_SQL\_TRANSLATIONS describes all SQL translations owned by the user. Its columns (except for OWNER) are the same as those in ALL\_SQL\_TRANSLATIONS.

**See Also:**

["ALL\\_SQL\\_TRANSLATIONS"](#)

## 7.750 USER\_SQLJ\_TYPE\_ATTRS

USER\_SQLJ\_TYPE\_ATTRS describes the attributes of the SQLJ object types owned by the current user. Its columns (except for OWNER) are the same as those in ALL\_SQLJ\_TYPE\_ATTRS.

**See Also:**

["ALL\\_SQLJ\\_TYPE\\_ATTRS"](#)

## 7.751 USER\_SQLJ\_TYPE\_METHODS

USER\_SQLJ\_TYPE\_METHODS describes the methods of the SQLJ object types owned by the current user. Its columns (except for OWNER) are the same as those in ALL\_SQLJ\_TYPE\_METHODS.

**See Also:**

["ALL\\_SQLJ\\_TYPE\\_METHODS"](#)

## 7.752 USER\_SQLJ\_TYPES

USER\_SQLJ\_TYPES describes the SQLJ object types owned by the current user. Its columns (except for OWNER) are the same as those in ALL\_SQLJ\_TYPES.

**See Also:**

["ALL\\_SQLJ\\_TYPES"](#)

## 7.753 USER\_SQLSET

USER\_SQLSET displays information about the SQL tuning sets owned by the current user. Its columns (except for OWNER) are the same as those in ALL\_SQLSET.

**See Also:**

"ALL\_SQLSET"

## 7.754 USER\_SQLSET\_BINDS

USER\_SQLSET\_BINDS displays the bind values associated with the SQL tuning sets owned by the current user. Its columns (except for SQLSET\_OWNER) are the same as those in ALL\_SQLSET\_BINDS.

**See Also:**

"ALL\_SQLSET\_BINDS"

## 7.755 USER\_SQLSET\_PLANS

USER\_SQLSET\_PLANS describes captured plans for statements in the SQL tuning sets owned by the current user. Its columns (except for SQLSET\_OWNER) are the same as those in ALL\_SQLSET\_PLANS.

**See Also:**

"ALL\_SQLSET\_PLANS"

## 7.756 USER\_SQLSET\_REFERENCES

USER\_SQLSET\_REFERENCES describes whether or not the SQL tuning sets owned by the current user are active. Its columns (except for SQLSET\_OWNER) are the same as those in ALL\_SQLSET\_REFERENCES.

**See Also:**

"ALL\_SQLSET\_REFERENCES"

## 7.757 USER\_SQLSET\_STATEMENTS

USER\_SQLSET\_STATEMENTS displays information about the SQL statements, along with their statistics, that form the SQL tuning sets owned by the current user. Its columns (except for SQLSET\_OWNER) are the same as those in ALL\_SQLSET\_STATEMENTS.

**See Also:**

["ALL\\_SQLSET\\_STATEMENTS"](#)

## 7.758 USER\_SQLTUNE\_BINDS

USER\_SQLTUNE\_BINDS displays the bind values associated with the tuned SQL statements owned by the current user. Its columns are the same as those in DBA\_SQLTUNE\_BINDS.

**See Also:**

["DBA\\_SQLTUNE\\_BINDS"](#)

## 7.759 USER\_SQLTUNE\_PLANS

USER\_SQLTUNE\_PLANS displays information about the execution plans generated for the SQL statements owned by the current user during a SQL tuning session. Its columns are the same as those in DBA\_SQLTUNE\_PLANS.

**See Also:**

["DBA\\_SQLTUNE\\_PLANS"](#)

## 7.760 USER\_SQLTUNE\_RATIONALE\_PLAN

USER\_SQLTUNE\_RATIONALE\_PLAN displays the association between rationales and operations in the execution plan of the SQL statements owned by the current user. Its columns are the same as those in DBA\_SQLTUNE\_RATIONALE\_PLAN.

**See Also:**

["DBA\\_SQLTUNE\\_RATIONALE\\_PLAN"](#)

## 7.761 USER\_SQLTUNE\_STATISTICS

USER\_SQLTUNE\_STATISTICS displays statistics associated with the SQL statements owned by the current user. Its columns are the same as those in DBA\_SQLTUNE\_STATISTICS.

**See Also:**

["DBA\\_SQLTUNE\\_STATISTICS"](#)

## 7.762 USER\_SR\_GRP\_STATUS

USER\_SR\_GRP\_STATUS provides information on the current refresh operations for the current synchronous refresh groups in the database which are owned by the current user. Its columns are the same as those in DBA\_SR\_GRP\_STATUS.

**See Also:**

["DBA\\_SR\\_GRP\\_STATUS"](#)

## 7.763 USER\_SR\_GRP\_STATUS\_ALL

USER\_SR\_GRP\_STATUS\_ALL provides information on the refresh operations on the synchronous refresh groups in the database which are owned by the current user. Its columns are the same as those in DBA\_SR\_GRP\_STATUS\_ALL.

**See Also:**

["DBA\\_SR\\_GRP\\_STATUS\\_ALL"](#)

## 7.764 USER\_SR\_OBJ

USER\_SR\_OBJ provides information on the objects currently registered for synchronous refresh for current groups for the current user. Its columns are the same as those in DBA\_SR\_OBJ.

**See Also:**

["DBA\\_SR\\_OBJ"](#)

## 7.765 USER\_SR\_OBJ\_ALL

USER\_SR\_OBJ\_ALL provides information on the objects registered for synchronous refresh for current and defunct groups for the current user. Its columns are the same as those in DBA\_SR\_OBJ\_ALL.

### See Also:

["DBA\\_SR\\_OBJ\\_ALL"](#)

## 7.766 USER\_SR\_OBJ\_STATUS

USER\_SR\_OBJ\_STATUS provides information on the status of objects registered for synchronous refresh for the current refresh operations for the current synchronous refresh groups in the database which are owned by the current user. Its columns are the same as those in DBA\_SR\_OBJ\_STATUS.

### See Also:

["DBA\\_SR\\_OBJ\\_STATUS"](#)

## 7.767 USER\_SR\_OBJ\_STATUS\_ALL

USER\_SR\_OBJ\_STATUS\_ALL provides information on the status of objects registered for synchronous refresh in the database which are owned by the current user. Its columns are the same as those in DBA\_SR\_OBJ\_STATUS\_ALL.

### See Also:

["DBA\\_SR\\_OBJ\\_STATUS\\_ALL"](#)

## 7.768 USER\_SR\_PARTN\_OPS

USER\_SR\_PARTN\_OPS provides information on the partition operations registered on the base tables of the materialized views registered for synchronous refresh belonging to the current user. Its columns are the same as those in DBA\_SR\_PARTN\_OPS.

### See Also:

["DBA\\_SR\\_PARTN\\_OPS"](#)

## 7.769 USER\_SR\_STLOG\_EXCEPTIONS

USER\_SR\_STLOG\_EXCEPTIONS provides information on the exceptions in the staging logs for the tables belonging to the current user processed by DBMS\_SYNC\_REFRESH.PREPARE\_STAGING\_LOG. Its columns are the same as those in DBA\_SR\_STLOG\_EXCEPTIONS.

### See Also:

["DBA\\_SR\\_STLOG\\_EXCEPTIONS"](#)

## 7.770 USER\_SR\_STLOG\_STATS

USER\_SR\_STLOG\_STATS provides information on the statistics in the staging logs for the tables belonging to the current user processed by DBMS\_SYNC\_REFRESH.PREPARE\_STAGING\_LOG. Its columns are the same as those in DBA\_SR\_STLOG\_STATS.

### See Also:

["DBA\\_SR\\_STLOG\\_STATS"](#)

## 7.771 USER\_STAT\_EXTENSIONS

USER\_STAT\_EXTENSIONS displays information about the optimizer statistics extensions owned by the current user. Its columns (except for OWNER) are the same as those in ALL\_STAT\_EXTENSIONS.

### See Also:

["ALL\\_STAT\\_EXTENSIONS"](#)

## 7.772 USER\_STATEMENTS

USER\_STATEMENTS SQL statements in stored PL/SQL objects accessible to the user. Its columns (except for OWNER) are the same as those in ALL\_STATEMENTS.

### See Also:

["ALL\\_STATEMENTS"](#)

## 7.773 USER\_STORED\_SETTINGS

USER\_STORED\_SETTINGS lists information about the persistent parameter settings for stored PL/SQL units, but only shows information about PL/SQL units owned by the current user.

USER\_STORED\_SETTINGS does not display the OWNER column. The rest of its columns are the same as those in ALL\_STORED\_SETTINGS.

**See Also:**

["ALL\\_STORED\\_SETTINGS"](#)

## 7.774 USER\_SUBPART\_COL\_STATISTICS

USER\_SUBPART\_COL\_STATISTICS provides column statistics and histogram information for subpartitions of subpartitioned objects owned by the current user. Its columns (except for OWNER) are the same as those in ALL\_SUBPART\_COL\_STATISTICS.

**See Also:**

["ALL\\_SUBPART\\_COL\\_STATISTICS"](#)

## 7.775 USER\_SUBPART\_HISTOGRAMS

USER\_SUBPART\_HISTOGRAMS lists actual histogram data (end-points per histogram) for histograms on table subpartitions owned by the current user. Its columns (except for OWNER) are the same as those in ALL\_SUBPART\_HISTOGRAMS.

**See Also:**

["ALL\\_SUBPART\\_HISTOGRAMS"](#)

## 7.776 USER\_SUBPART\_KEY\_COLUMNS

USER\_SUBPART\_KEY\_COLUMNS lists subpartitioning key columns for composite-partitioned tables (and local indexes on composite-partitioned tables) owned by the current user. Its columns are the same as those in ALL\_SUBPART\_KEY\_COLUMNS.

**See Also:**

["ALL\\_SUBPART\\_KEY\\_COLUMNS"](#)

## 7.777 USER\_SUBPARTITION\_TEMPLATES

USER\_SUBPARTITION\_TEMPLATES describes the subpartition templates owned by the current user. Its columns (except for USER\_NAME) are the same as those in ALL\_SUBPARTITION\_TEMPLATES.

**See Also:**

"ALL\_SUBPARTITION\_TEMPLATES"

## 7.778 USER\_SUBSCR\_REGISTRATIONS

USER\_SUBSCR\_REGISTRATIONS displays information about the subscription registrations owned by the current user. Its columns are the same as those in DBA\_SUBSCR\_REGISTRATIONS.

**See Also:**

"DBA\_SUBSCR\_REGISTRATIONS"

## 7.779 USER\_SYNONYMS

USER\_SYNONYMS describes the private synonyms (synonyms owned by the current user). Its columns (except for OWNER) are the same as those in ALL\_SYNONYMS.

**See Also:**

"ALL\_SYNONYMS"

## 7.780 USER\_SYS\_PRIVS

USER\_SYS\_PRIVS describes system privileges granted to the current user.

| Column       | Datatype       | NULL | Description                                                             |
|--------------|----------------|------|-------------------------------------------------------------------------|
| USERNAME     | VARCHAR2 (128) |      | Name of the user, or PUBLIC                                             |
| PRIVILEGE    | VARCHAR2 (40)  |      | System privilege                                                        |
| ADMIN_OPTION | VARCHAR2 (3)   |      | Indicates whether the grant was with the ADMIN option (YES) or not (NO) |

| Column    | Datatype     | NULL | Description                                                                                                                                                                                                                                            |
|-----------|--------------|------|--------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|
| COMMON    | VARCHAR2 (3) |      | Indicates how the grant was made. Possible values: <ul style="list-style-type: none"><li>• YES if the privilege was granted commonly (CONTAINER=ALL was used)</li><li>• NO if the privilege was granted locally (CONTAINER=ALL was not used)</li></ul> |
| INHERITED | VARCHAR2 (3) |      | Indicates whether the grant was inherited from another container (YES) or not (NO)                                                                                                                                                                     |

**See Also:**["DBA\\_SYS\\_PRIVS"](#)

## 7.781 USER\_SYS\_PRIVS\_ALL

USER\_SYS\_PRIVS\_ALL describes system privileges and schema privileges granted to the current user.

| Column       | Datatype       | NULL | Description                                                                                                                                                                                                                                            |
|--------------|----------------|------|--------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|
| USERNAME     | VARCHAR2 (128) |      | Name of the user, or PUBLIC                                                                                                                                                                                                                            |
| PRIVILEGE    | VARCHAR2 (40)  |      | Privilege                                                                                                                                                                                                                                              |
| SCHEMA       | VARCHAR2 (128) |      | Schema on which the privilege was granted<br>For system privileges, the value of this column is null.                                                                                                                                                  |
| ADMIN_OPTION | VARCHAR2 (3)   |      | Indicates whether the grant was with the ADMIN option (YES) or not (NO)                                                                                                                                                                                |
| COMMON       | VARCHAR2 (3)   |      | Indicates how the grant was made. Possible values: <ul style="list-style-type: none"><li>• YES if the privilege was granted commonly (CONTAINER=ALL was used)</li><li>• NO if the privilege was granted locally (CONTAINER=ALL was not used)</li></ul> |
| INHERITED    | VARCHAR2 (3)   |      | Indicates whether the grant was inherited from another container (YES) or not (NO)                                                                                                                                                                     |

**Note:**

This view is available starting with Oracle Database 23ai.

**See Also:**["DBA\\_SYS\\_PRIVS\\_ALL"](#)

## 7.782 USER\_TAB\_COL\_STAT\_MODELS

USER\_TAB\_COL\_STAT\_MODELS describes real-time statistics models for all tables owned by the current user. Its columns (except for OWNER) are the same as those in ALL\_TAB\_COL\_STAT\_MODELS.

Real-time statistics models use machine learning algorithms to predict the number of distinct values (NDV) for table columns.

### See Also:

"ALL\_TAB\_COL\_STAT\_MODELS"

## 7.783 USER\_TAB\_COL\_STATISTICS

USER\_TAB\_COL\_STATISTICS contains column statistics and histogram information extracted from USER\_TAB\_COLUMNS.

Its columns (except for OWNER) are the same as those in ALL\_TAB\_COL\_STATISTICS.

### See Also:

- "USER\_TAB\_COLUMNS"
- "ALL\_TAB\_COL\_STATISTICS"

## 7.784 USER\_TAB\_COLS

USER\_TAB\_COLS describes the columns of the tables, views, and clusters owned by the current user.

Its columns (except for OWNER) are the same as those in ALL\_TAB\_COLS.

To gather statistics for this view, use the DBMS\_STATS package.

This view differs from USER\_TAB\_COLUMNS in that system-generated hidden columns are not filtered out.

### See Also:

- "ALL\_TAB\_COLS"
- "USER\_TAB\_COLUMNS"
- *Oracle Database PL/SQL Packages and Types Reference* for more information about the DBMS\_STATS package

## 7.785 USER\_TAB\_COLUMNS

`USER_TAB_COLUMNS` describes the columns of the tables, views, and clusters owned by the current user.

Its columns (except for `OWNER`) are the same as those in `ALL_TAB_COLUMNS`.

To gather statistics for this view, use the `DBMS_STATS` package.

This view filters out system-generated hidden columns. The `USER_TAB_COLS` view does not filter out system-generated hidden columns.

### See Also:

- ["ALL\\_TAB\\_COLUMNS"](#)
- ["USER\\_TAB\\_COLS"](#)
- *Oracle Database PL/SQL Packages and Types Reference* for more information about the `DBMS_STATS` package

## 7.786 USER\_TAB\_COMMENTS

`USER_TAB_COMMENTS` displays comments on the tables and views owned by the current user. Its columns (except for `OWNER`) are the same as those in `ALL_TAB_COMMENTS`.

### See Also:

- ["ALL\\_TAB\\_COMMENTS"](#)

## 7.787 USER\_TAB\_HISTGRM\_PENDING\_STATS

`USER_TAB_HISTGRM_PENDING_STATS` describes pending statistics for tables, partitions, and subpartitions owned by the current user. Its columns (except for `OWNER`) are the same as those in `ALL_TAB_HISTGRM_PENDING_STATS`.

### See Also:

- ["ALL\\_TAB\\_HISTGRM\\_PENDING\\_STATS"](#)

## 7.788 USER\_TAB\_HISTOGRAMS

USER\_TAB\_HISTOGRAMS describes histograms on columns of tables owned by the current user. Its columns (except for OWNER) are the same as those in ALL\_TAB\_HISTOGRAMS.

### See Also:

["ALL\\_TAB\\_HISTOGRAMS"](#)

## 7.789 USER\_TAB\_IDENTITY\_COLS

USER\_TAB\_IDENTITY\_COLS describes all table identity columns. Its columns (except for OWNER) are the same as those in ALL\_TAB\_IDENTITY\_COLS.

### See Also:

["ALL\\_TAB\\_IDENTITY\\_COLS"](#)

## 7.790 USER\_TAB\_MODIFICATIONS

USER\_TAB\_MODIFICATIONS describes modifications to all tables owned by the current user that have been modified since the last time statistics were gathered on the tables. Its columns are the same as those in ALL\_TAB\_MODIFICATIONS.

### Note:

For performance reasons, Oracle Database does not populate this view immediately when the actual modifications occur.

### See Also:

["ALL\\_TAB\\_MODIFICATIONS"](#)

## 7.791 USER\_TAB\_PARTITIONS

USER\_TAB\_PARTITIONS describes partition-level partitioning information, partition storage parameters, and partition statistics generated by the DBMS\_STATS package for all partitions owned by the current user.

Its columns are the same as those in ALL\_TAB\_PARTITIONS.

**See Also:**["ALL\\_TAB\\_PARTITIONS"](#)

## 7.792 USER\_TAB\_PENDING\_STATS

USER\_TAB\_PENDING\_STATS describes pending statistics for tables, partitions, and subpartitions owned by the current user. Its columns (except for OWNER) are the same as those in ALL\_TAB\_PENDING\_STATS.

**See Also:**["ALL\\_TAB\\_PENDING\\_STATS"](#)

## 7.793 USER\_TAB\_PRIVS

USER\_TAB\_PRIVS describes the object grants for which the current user is the object owner, grantor, or grantee. Its columns are the same as those in DBA\_TAB\_PRIVS.

**See Also:**["DBA\\_TAB\\_PRIVS"](#)

## 7.794 USER\_TAB\_PRIVS\_MADE

USER\_TAB\_PRIVS\_MADE describes the object grants for which the current user is the object owner. Its columns (except for OWNER) are the same as those in ALL\_TAB\_PRIVS\_MADE.

**See Also:**["ALL\\_TAB\\_PRIVS\\_MADE"](#)

## 7.795 USER\_TAB\_PRIVS\_RECD

USER\_TAB\_PRIVS\_RECD describes the object grants for which the current user is the grantee. Its columns (except for GRANTEE) are the same as those in ALL\_TAB\_PRIVS\_RECD.

**See Also:**["ALL\\_TAB\\_PRIVS\\_RECD"](#)

## 7.796 USER\_TAB\_STAT\_PREFS

USER\_TAB\_STAT\_PREFS displays information about statistics preferences for the tables owned by the current user. Its columns (except for OWNER) are the same as those in ALL\_TAB\_STAT\_PREFS.

**See Also:**

["ALL\\_TAB\\_STAT\\_PREFS"](#)

## 7.797 USER\_TAB\_STATISTICS

USER\_TAB\_STATISTICS displays optimizer statistics for the tables owned by the current user. Its columns (except for OWNER) are the same as those in ALL\_TAB\_STATISTICS.

**See Also:**

["ALL\\_TAB\\_STATISTICS"](#)

## 7.798 USER\_TAB\_STATS\_HISTORY

USER\_TAB\_STATS\_HISTORY provides a history of table statistics modifications for all tables owned by the current user. Its columns (except for OWNER) are the same as those in ALL\_TAB\_STATS\_HISTORY.

**See Also:**

["ALL\\_TAB\\_STATS\\_HISTORY"](#)

## 7.799 USER\_TAB\_SUBPARTITIONS

USER\_TAB\_SUBPARTITIONS describes, for each table subpartition owned by the current user, the subpartition name, name of the table and partition to which it belongs, and its storage attributes. Its columns are the same as those in ALL\_TAB\_SUBPARTITIONS.

**See Also:**

["ALL\\_TAB\\_SUBPARTITIONS"](#)

## 7.800 USER\_TABLE\_ACCESS\_STATS

USER\_TABLE\_ACCESS\_STATS displays the scan count for tables and partitions owned by the current user. Its columns (except for TABLE\_OWNER) are the same as those in ALL\_TABLE\_ACCESS\_STATS.

### Note:

The ALL\_TABLE\_ACCESS\_STATS and DBA\_TABLE\_ACCESS\_STATS views do not display data for Oracle-maintained schemas. You can view data for an Oracle-maintained schema by connecting to the schema and querying the USER\_TABLE\_ACCESS\_STATS view.

### See Also:

- ["ALL\\_TABLE\\_ACCESS\\_STATS"](#)
- ["DBA\\_TABLE\\_ACCESS\\_STATS"](#)

## 7.801 USER\_TABLE\_VIRTUAL\_COLUMNS

USER\_TABLE\_VIRTUAL\_COLUMNS describes virtual columns in tables owned by the current user. Its columns are the same as those in ALL\_TABLE\_VIRTUAL\_COLUMNS.

### See Also:

["ALL\\_TABLE\\_VIRTUAL\\_COLUMNS"](#)

## 7.802 USER\_TABLES

USER\_TABLES describes the relational tables owned by the current user. Its columns (except for OWNER) are the same as those in ALL\_TABLES.

To gather statistics for this view, use the DBMS\_STATS package.

### See Also:

["ALL\\_TABLES"](#)

## 7.803 USER\_TABLESPACES

USER\_TABLESPACES describes the tablespaces accessible to the current user. Its columns (except for PLUGGED\_IN) are the same as those in DBA\_TABLESPACES.

**See Also:**

"DBA\_TABLESPACES"

## 7.804 USER\_TRANSFORMATIONS

USER\_TRANSFORMATIONS displays information about the transformations owned by the current user. Its columns (except for OWNER) are the same as those in ALL\_TRANSFORMATIONS.

**See Also:**

"ALL\_TRANSFORMATIONS"

## 7.805 USER\_TRIGGER\_COLS

USER\_TRIGGER\_COLS describes the use of columns in the triggers owned by the current user and in triggers on tables owned by the current user. Its columns are the same as those in ALL\_TRIGGER\_COLS.

**See Also:**

"ALL\_TRIGGER\_COLS"

## 7.806 USER\_TRIGGER\_ORDERING

USER\_TRIGGER\_ORDERING describes the triggers owned by the current user that have FOLLOWS or PRECEDES ordering. Its columns (except for TRIGGER\_OWNER) are the same as those in ALL\_TRIGGER\_ORDERING.

**See Also:**

"ALL\_TRIGGER\_ORDERING"

## 7.807 USER\_TRIGGERS

USER\_TRIGGERS describes the triggers owned by the current user. Its columns (except for OWNER) are the same as those in ALL\_TRIGGERS.

**See Also:**

"ALL\_TRIGGERS"

## 7.808 USER\_TRIGGERS\_AE

USER\_TRIGGERS\_AE describes the triggers (across all editions) owned by the current user. Its columns (except for OWNER) are the same as those in ALL\_TRIGGERS\_AE.

**See Also:**

"ALL\_TRIGGERS\_AE"

## 7.809 USER\_TS\_QUOTAS

USER\_TS\_QUOTAS contains information about tablespace quotas for the current user. Its columns (except for USERNAME) are the same as those in DBA\_TS\_QUOTAS.

**See Also:**

"DBA\_TS\_QUOTAS"

## 7.810 USER\_TSTZ\_TAB\_COLS

USER\_TSTZ\_TAB\_COLS displays information about the columns of the tables owned by the current user, which have columns defined on `TIMESTAMP WITH TIME ZONE` data types or object types containing attributes of `TIMESTAMP WITH TIME ZONE` data types.

Its columns (except for OWNER, COLUMN\_NAME, NESTED, VIRTUAL\_COLUMN, SCALAR\_COLUMN, and UNUSED\_COLUMN) are the same as those in ALL\_TSTZ\_TAB\_COLS.

**See Also:**

"ALL\_TSTZ\_TAB\_COLS"

## 7.811 USER\_TSTZ\_TABLES

USER\_TSTZ\_TABLES displays information about the tables owned by the current user, which have columns defined on `TIMESTAMP WITH TIME ZONE` data types or object types containing attributes of `TIMESTAMP WITH TIME ZONE` data types.

Its columns (except for `OWNER`) are the same as those in `ALL_TSTZ_TABLES`.

### See Also:

["ALL\\_TSTZ\\_TABLES"](#)

## 7.812 USER\_TUNE\_MVIEW

USER\_TUNE\_MVIEW displays the result of executing the `DBMS_ADVISOR.TUNE_MVIEW` procedure. Its columns (except for `OWNER`) are the same as those in `DBA_TUNE_MVIEW`.

### See Also:

["DBA\\_TUNE\\_MVIEW"](#)

## 7.813 USER\_TXEVENTQ\_MIGRATION\_STATUS

USER\_TXEVENTQ\_MIGRATION\_STATUS provides information about migrations from AQ classic queues to Transactional Event Queues (TxEventQs) owned by the current user. Its columns (except for `SOURCE_SCHEMA_NAME`) are the same as those in `ALL_TXEVENTQ_MIGRATION_STATUS`.

### Note:

This view is available starting with Oracle Database 23ai.

### See Also:

["ALL\\_TXEVENTQ\\_MIGRATION\\_STATUS"](#)

## 7.814 USER\_TYPE\_ATTRS

USER\_TYPE\_ATTRS describes the attributes of the object types owned by the current user. Its columns (except for OWNER and CHAR\_USED) are the same as those in ALL\_TYPE\_ATTRS.

**See Also:**

["ALL\\_TYPE\\_ATTRS"](#)

## 7.815 USER\_TYPE\_METHODS

USER\_TYPE\_METHODS describes the methods of the object types owned by the current user. Its columns (except for OWNER) are the same as those in ALL\_TYPE\_METHODS.

**See Also:**

["ALL\\_TYPE\\_METHODS"](#)

## 7.816 USER\_TYPE\_VERSIONS

USER\_TYPE\_VERSIONS describes the versions of the object types owned by the current user. Its columns (except for OWNER) are the same as those in ALL\_TYPE\_VERSIONS.

**See Also:**

["ALL\\_TYPE\\_VERSIONS"](#)

## 7.817 USER\_TYPES

USER\_TYPES describes the object types owned by the current user. Its columns (except for OWNER) are the same as those in ALL\_TYPES.

**See Also:**

["ALL\\_TYPES"](#)

## 7.818 USER\_UNUSED\_COL\_TABS

USER\_UNUSED\_COL\_TABS describes the tables owned by the current user that contain unused columns. Its columns (except for OWNER) are the same as those in ALL\_UNUSED\_COL\_TABS.

### See Also:

["ALL\\_UNUSED\\_COL\\_TABS"](#)

## 7.819 USER\_UPDATABLE\_COLUMNS

USER\_UPDATABLE\_COLUMNS describes columns in a join view that can be updated by the current user, subject to appropriate privileges. Its columns are the same as those in ALL\_UPDATABLE\_COLUMNS.

### See Also:

- ["ALL\\_UPDATABLE\\_COLUMNS"](#)
- *Oracle Database Concepts* for information on updatable join views

## 7.820 USER\_USERS

USER\_USERS describes the current user.

| Column   | Datatype       | NULL     | Description           |
|----------|----------------|----------|-----------------------|
| USERNAME | VARCHAR2 (128) | NOT NULL | Name of the user      |
| USER_ID  | NUMBER         | NOT NULL | ID number of the user |

| Column         | Datatype      | NULL     | Description                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                 |
|----------------|---------------|----------|---------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|

| LOCAL_TEMP_TABLESPACE       | VARCHAR2 (30)   |          | Default local temporary tablespace for the user                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                  |
| CREATED                     | DATE            | NOT NULL | User creation date                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                               |
| INITIAL_RSRC_CONSUMER_GROUP | VARCHAR2 (128)  |          | Initial resource consumer group for the user                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                     |
| EXTERNAL_NAME               | VARCHAR2 (4000) |          | User external name. For centrally managed users, if the database user mapping is an exclusive mapping, then this will be the directory service DN for the user. If this database user is a shared schema, it will be the DN of a group.                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                          |
| PROXY_ONLY_CONNECT          | VARCHAR2 (1)    |          | <p>Indicates whether a user can connect directly (N) or whether the account can only be proxied (Y) by users who have proxy privileges for this account (that is, by users who have been granted the "connect through" privilege for this account).</p> <p><b>Note:</b> Setting PROXY_ONLY_CONNECT for users is deprecated in this release, and may be desupported in a future release. Oracle recommends that you instead use schema-only accounts. For more information about schema-only accounts, see <i>Oracle Database Security Guide</i>.</p>                                                                                                                                                                                                                                                                                                                                                                                             |
| COMMON                      | VARCHAR2 (3)    |          | <p>Indicates whether a given user is common. Possible values</p> <ul style="list-style-type: none"> <li>• YES if a user is common</li> <li>• NO if a user is local (not common)</li> </ul>                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                       |

| Column                      | Datatype       | NULL | Description                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                       |
|-----------------------------|----------------|------|-------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|
| ORACLE_MAINTAINED           | VARCHAR2 (1)   |      | Denotes whether the user was created, and is maintained, by Oracle-supplied scripts (such as catalog.sql or catproc.sql). A user for which this column has the value Y must not be changed in any way except by running an Oracle-supplied script.                                                                                                                                                                                                                                                                |
| INHERITED                   | VARCHAR2 (3)   |      | Indicates whether the user definition was inherited from another container (YES) or not (NO)                                                                                                                                                                                                                                                                                                                                                                                                                      |
| DEFAULT_COLLATION           | VARCHAR2 (100) |      | Default collation for the user's schema                                                                                                                                                                                                                                                                                                                                                                                                                                                                           |
| IMPLICIT                    | VARCHAR2 (3)   |      | Indicates whether this user is a common user created by an implicit application (YES) or not (NO)                                                                                                                                                                                                                                                                                                                                                                                                                 |
| ALL_SHARD                   | VARCHAR2 (3)   |      | <p>In a sharded database, the value in this column indicates whether the user was created with shard DDL enabled. The possible values are:</p> <ul style="list-style-type: none"> <li>YES: The user was created with shard DDL enabled. The user exists on all shards and the shard catalog.</li> <li>NO: The user was created without shard DDL enabled. The user exists only in the database in which the user was created.</li> </ul> <p>In a non-sharded database, the value in this column is always NO.</p> |
| EXTERNAL_SHARD              | VARCHAR2 (3)   |      | <p>In a federated sharded database, the value in this column indicates whether the user is an external shard user (YES) or not (NO).</p> <p>In other types of databases, the value in this column is always NO.</p>                                                                                                                                                                                                                                                                                               |
| PASSWORD_CHANGE_DATE        | DATE           |      | <p>Date on which the user's password was last set</p> <p>This column is populated only when the value of the AUTHENTICATION_TYPE column is PASSWORD. Otherwise, this column is null.</p>                                                                                                                                                                                                                                                                                                                          |
| MANDATORY_PROFILE_VIOLATION | VARCHAR2 (3)   |      | <p>If the value in this column is YES, then the user account password violates the mandatory profile password complexity requirements and must be changed before the grace period expires.</p> <p>Otherwise, the value in this column is NO.</p>                                                                                                                                                                                                                                                                  |
| PROTECTED                   | VARCHAR2 (3)   |      | <p>Indicates whether the user is a protected user (YES) or not (NO)</p> <p>A protected user can be managed only by another protected user or a common user.</p>                                                                                                                                                                                                                                                                                                                                                   |
| READ_ONLY                   | VARCHAR2 (3)   |      | Indicates whether write privileges for the user are disabled (YES) or enabled (NO)                                                                                                                                                                                                                                                                                                                                                                                                                                |
| DICTIONARY_PROTECTED        | VARCHAR2 (3)   |      | <p>Indicates whether the user's schema is dictionary protected (YES) or not (NO)</p> <p><b>See Also:</b> <i>Oracle Database Security Guide</i> for more information about dictionary-protected schemas</p>                                                                                                                                                                                                                                                                                                        |

## 7.821 USER\_USTATS

USER\_USTATS describes the user-defined statistics collected on the tables and indexes owned by the current user. Its columns are the same as those in ALL\_USTATS.

**See Also:**

["ALL\\_USTATS"](#)

## 7.822 USER\_VARRAYS

USER\_VARRAYS describes the varrays owned by the current user. Its columns (except for OWNER) are the same as those in ALL\_VARRAYS.

**See Also:**

["ALL\\_VARRAYS"](#)

## 7.823 USER\_VIEWS

USER\_VIEWS describes the views owned by the current user. Its columns (except for OWNER) are the same as those in ALL\_VIEWS.

**See Also:**

["ALL\\_VIEWS"](#)

## 7.824 USER\_VIEWS\_AE

USER\_VIEWS\_AE describes the views (across all editions) owned by the current user. Its columns (except for OWNER) are the same as those in ALL\_VIEWS\_AE.

**See Also:**

["ALL\\_VIEWS\\_AE"](#)

## 7.825 USER\_WALLET\_ACES

USER\_WALLET\_ACES describes the status of access control entries for the current user to access wallets through PL/SQL network utility packages.

Its columns (except for ACE\_ORDER, START\_DATE, END\_DATE, GRANT\_TYPE, INVERTED\_PRINCIPAL, PRINCIPAL, PRINCIPAL\_TYPE, and STATUS) are the same as those in DBA\_WALLET\_ACES.

**See Also:**

["DBA\\_WALLET\\_ACES"](#)

## 7.826 USER\_WARNING\_SETTINGS

USER\_WARNING\_SETTINGS displays information about the warning parameter settings for the objects owned by the current user. Its columns (except for OWNER) are the same as those in ALL\_WARNING\_SETTINGS.

**See Also:**

["ALL\\_WARNING\\_SETTINGS"](#)

## 7.827 USER\_XML\_INDEXES

USER\_XML\_INDEXES describes the XML indexes owned by the current user. Its columns (except for INDEX\_OWNER) are the same as those in ALL\_XML\_INDEXES.

**See Also:**

["ALL\\_XML\\_INDEXES"](#)

## 7.828 USER\_XML\_NESTED\_TABLES

`USER_XML_NESTED_TABLES` describes all the tables and their corresponding nested tables owned by the current user. Its columns (except for `OWNER`) are the same as those in `ALL_XML_NESTED_TABLES`.

**See Also:**

["ALL\\_XML\\_NESTED\\_TABLES"](#)

## 7.829 USER\_XML\_OUT\_OF\_LINE\_TABLES

`USER_XML_OUT_OF_LINE_TABLES` describes all the out of line tables connected to a given root table for the same schema owned by the current user. Its columns (except for `TABLE_OWNER`) are the same as those in `ALL_XML_OUT_OF_LINE_TABLES`.

**See Also:**

["ALL\\_XML\\_OUT\\_OF\\_LINE\\_TABLES"](#)

## 7.830 USER\_XML\_SCHEMA\_ATTRIBUTES

`USER_XML_SCHEMA_ATTRIBUTES` describes all the attributes and their properties owned by the current user. Its columns (except for `OWNER`) are the same as those in `ALL_XML_SCHEMA_ATTRIBUTES`.

**See Also:**

["ALL\\_XML\\_SCHEMA\\_ATTRIBUTES"](#)

## 7.831 USER\_XML\_SCHEMA\_COMPLEX\_TYPES

`USER_XML_SCHEMA_COMPLEX_TYPES` describes all complex types owned by the current user. Its columns (except for `OWNER`) are the same as those in `ALL_XML_SCHEMA_COMPLEX_TYPES`.

**See Also:**

["ALL\\_XML\\_SCHEMA\\_COMPLEX\\_TYPES"](#)

## 7.832 USER\_XML\_SCHEMA\_ELEMENTS

USER\_XML\_SCHEMA\_ELEMENTS describes all the elements and their properties owned by the current user. Its columns (except for OWNER) are the same as those in ALL\_XML\_SCHEMA\_ELEMENTS.

**See Also:**

["ALL\\_XML\\_SCHEMA\\_ELEMENTS"](#)

## 7.833 USER\_XML\_SCHEMA\_NAMESPACES

USER\_XML\_SCHEMA\_NAMESPACES describes all the available namespaces owned by the current user. Its columns (except for OWNER) are the same as those in ALL\_XML\_SCHEMA\_NAMESPACES.

**See Also:**

["ALL\\_XML\\_SCHEMA\\_NAMESPACES"](#)

## 7.834 USER\_XML\_SCHEMA\_SIMPLE\_TYPES

USER\_XML\_SCHEMA\_SIMPLE\_TYPES describes all simple types owned by the current user. Its columns (except for OWNER) are the same as those in ALL\_XML\_SCHEMA\_SIMPLE\_TYPES.

**See Also:**

["ALL\\_XML\\_SCHEMA\\_SIMPLE\\_TYPES"](#)

## 7.835 USER\_XML\_SCHEMA\_SUBSTGRP\_HEAD

USER\_XML\_SCHEMA\_SUBSTGRP\_HEAD describes the heads of substitution groups owned by the current user. Its columns (except for OWNER) are the same as those in ALL\_XML\_SCHEMA\_SUBSTGRP\_HEAD.

**See Also:**

["ALL\\_XML\\_SCHEMA\\_SUBSTGRP\\_HEAD"](#)

## 7.836 USER\_XML\_SCHEMA\_SUBSTGRP\_MBRs

USER\_XML\_SCHEMA\_SUBSTGRP\_MBRs describes all members of substitution groups owned by the current user. Its columns (except for OWNER) are the same as those in ALL\_XML\_SCHEMA\_SUBSTGRP\_MBRs.

**See Also:**

"ALL\_XML\_SCHEMA\_SUBSTGRP\_MBRs"

## 7.837 USER\_XML\_SCHEMAS

USER\_XML\_SCHEMAS describes the registered XML schemas owned by the current user. Its columns (except for OWNER) are the same as those in ALL\_XML\_SCHEMAS.

**See Also:**

"ALL\_XML\_SCHEMAS"

## 7.838 USER\_XML\_TAB\_COLS

USER\_XML\_TAB\_COLS describes the columns of the XML tables owned by the current user. Its columns (except for OWNER) are the same as those in ALL\_XML\_TAB\_COLS.

**See Also:**

"ALL\_XML\_TAB\_COLS"

## 7.839 USER\_XML\_TABLES

USER\_XML\_TABLES describes the XML tables owned by the current user. Its columns (except for OWNER) are the same as those in ALL\_XML\_TABLES.

**See Also:**

"ALL\_XML\_TABLES"

## 7.840 USER\_XML\_VIEW\_COLS

USER\_XML\_VIEW\_COLS describes the columns of the XML views owned by the current user. Its columns (except for OWNER) are the same as those in ALL\_XML\_VIEW\_COLS.

**See Also:**

["ALL\\_XML\\_VIEW\\_COLS"](#)

## 7.841 USER\_XML\_VIEWS

USER\_XML\_VIEWS describes the XML views owned by the current user. Its columns (except for OWNER) are the same as those in ALL\_XML\_VIEWS.

**See Also:**

["ALL\\_XML\\_VIEWS"](#)

## 7.842 USER\_XTERNAL\_LOC\_PARTITIONS

USER\_XTERNAL\_LOC\_PARTITIONS describes partition-level locations owned by the current user. Its columns (except for OWNER) are the same as those in ALL\_XTERNAL\_LOC\_PARTITIONS.

**See Also:**

["ALL\\_XTERNAL\\_LOC\\_PARTITIONS"](#)

## 7.843 USER\_XTERNAL\_LOC\_SUBPARTITIONS

USER\_XTERNAL\_LOC\_SUBPARTITIONS describes subpartition-level locations owned by the current user. Its columns (except for TABLE\_OWNER) are the same as those in ALL\_XTERNAL\_LOC\_SUBPARTITIONS.

**See Also:**

["ALL\\_XTERNAL\\_LOC\\_SUBPARTITIONS"](#)

## 7.844 USER\_XTERNAL\_PART\_TABLES

USER\_XTERNAL\_PART\_TABLES describes object-level information for partitioned external tables owned by the current user. Its columns (except for OWNER) are the same as those in ALL\_XTERNAL\_PART\_TABLES.

### See Also:

["ALL\\_XTERNAL\\_PART\\_TABLES"](#)

## 7.845 USER\_XTERNAL\_TAB\_PARTITIONS

USER\_XTERNAL\_TAB\_PARTITIONS describes partition-level information for partitioned external tables owned by the current user. Its columns (except for TABLE\_OWNER) are the same as those in ALL\_XTERNAL\_TAB\_PARTITIONS.

### See Also:

["ALL\\_XTERNAL\\_TAB\\_PARTITIONS"](#)

## 7.846 USER\_XTERNAL\_TAB\_SUBPARTITIONS

USER\_XTERNAL\_TAB\_SUBPARTITIONS describes subpartition-level information for partitioned external tables owned by the current user. Its columns (except for TABLE\_OWNER) are the same as those in ALL\_XTERNAL\_TAB\_SUBPARTITIONS.

### See Also:

["ALL\\_XTERNAL\\_TAB\\_SUBPARTITIONS"](#)

## 7.847 USER\_ZONEMAP\_MEASURES

USER\_ZONEMAP\_MEASURES describes the measures for all the zone maps owned by the user. Its columns are the same as those in ALL\_ZONEMAP\_MEASURES.

### Note:

This view is intended for use with Oracle Exadata release 12.1.2.1.1 or later.

**See Also:**

- ["ALL\\_ZONEMAP\\_MEASURES"](#)
- *Oracle Database Data Warehousing Guide* for more information about zone maps

## 7.848 USER\_ZONEMAPS

USER\_ZONEMAPS describes the zone maps owned by the user. Its columns are the same as those in ALL\_ZONEMAPS.

**Note:**

This view is intended for use with Oracle Exadata release 12.1.2.1.1 or later.

**See Also:**

- ["ALL\\_ZONEMAPS"](#)
- *Oracle Database Data Warehousing Guide* for more information about zone maps

# Part III

## Dynamic Performance Views

This part describes the dynamic performance views, which are often referred to as `V$` views.

This part contains the following chapters:

- [Dynamic Performance \(V\\$\) Views: V\\$ACCESS to V\\$HVMaster\\_Info](#)
- [Dynamic Performance \(V\\$\) Views: V\\$IM\\_COLUMN\\_LEVEL to V\\$RULE\\_SET\\_AGGREGATE\\_STATS](#)
- [Dynamic Performance \(V\\$\) Views: V\\$SCHEDULER\\_IN\\_MEMORY\\_TRACE to V\\$ZONEMAP\\_USAGE\\_STATS](#)

### Note:

Oracle also maintains tables and views that change only when a change is made to the data dictionary. These **static** tables and views are described in [Static Data Dictionary Views](#).

### Note:

A multitenant container database is the only supported architecture in Oracle Database 21c and later releases. While the documentation is being revised, legacy terminology may persist. In most cases, "database" and "non-CDB" refer to a CDB or PDB, depending on context. In some contexts, such as upgrades, "non-CDB" refers to a non-CDB from a previous release.

# 8

## Dynamic Performance (V\$) Views: V\$ACCESS to V\$HVMMASTER\_INFO

This chapter describes the first set (in alphabetical order) of dynamic performance views.

The remaining dynamic performance views appear in alphabetical order in [Dynamic Performance \(V\\$\) Views: V\\$IM\\_COLUMN\\_LEVEL to V\\$RULE\\_SET\\_AGGREGATE\\_STATS](#) through [Dynamic Performance \(V\\$\) Views: V\\$SCHEDULER\\_IN\\_MEMORY\\_TRACE to V\\$ZONEMAP\\_USAGE\\_STATS](#).

This chapter contains the following topics:

- [About Dynamic Performance Views](#)
- [Oracle Exadata Database Machine Views](#)
- [Dynamic Performance View Descriptions](#)

### 8.1 About Dynamic Performance Views

Oracle contains a set of underlying views that are maintained by the database server and accessible to the database administrator user `SYS`. These views are called **dynamic performance views** because they are continuously updated while a database is open and in use, and their contents relate primarily to performance.

Although these views appear to be regular database tables, they are not. These views provide data on internal disk structures and memory structures. You can select from these views, but you can never update or alter them.

#### Note:

- You can query the dynamic performance views to extract information from them. However, only simple queries are supported. If sorts, joins, `GROUP BY` clauses and the like are needed, then you should copy the information from each `V$` view into a table (for example, using a `CREATE TABLE ... AS SELECT` statement), and then query from those tables.
- Because the information in the `V$` views is dynamic, read consistency is not guaranteed for `SELECT` operations on these views.

The `catalog.sql` script contains definitions of the views and public synonyms for the dynamic performance views. You must run `catalog.sql` to create these views and synonyms. After installation, only user `SYS` or anyone with `SYSDBA` privilege has access to the dynamic performance tables. See *Oracle Database Administrator's Guide* for more information about running `catalog.sql`.

## 8.1.1 V\$ Views

The actual dynamic performance views are identified by the prefix `v_`. Public synonyms for these views have the prefix `v$`. Database administrators and other users should access only the `v$` objects, not the `v_` objects.

The dynamic performance views are used by Oracle Enterprise Manager, which is the primary interface for accessing information about system performance. After an instance is started, the `v$` views that read from memory are accessible. Views that read data from disk require that the database be mounted, and some require that the database be open.

`V$` views are `CONTAINER_DATA` objects. When a user connected to the root queries a `V$` view, the query results will depend on the `CONTAINER_DATA` attribute for users for the view. The `CONTAINER_DATA` clause of the `SQL ALTER USER` statement is used to set and modify users' `CONTAINER_DATA` attribute.

`V$` views can return data from different containers in a CDB when queried from the root container. These objects will implicitly convert data to the character set of the root container (AL32UTF8) and then return the result to the user. Some character sets may have character expansion (more bytes needed to represent a character) when converted to AL32UTF8, so there may be data truncation if the view column width is not able to accommodate data from a given PDB.

### See Also:

- *Oracle Database Security Guide* for more information about container data objects
- *Oracle Database SQL Language Reference* for more information about the `CONTAINER_DATA` clause for the `SQL ALTER USER` statement

## 8.1.2 GV\$ Views

For almost every `v$` view described in this chapter, Oracle has a corresponding `GV$` (global `v$`) view. In Oracle Real Application Clusters, querying a `GV$` view retrieves the `v$` view information from all qualified instances. In addition to the `v$` information, each `GV$` view contains an extra column named `INST_ID` of data type `NUMBER`. The `INST_ID` column displays the instance number from which the associated `v$` view information was obtained. The `INST_ID` column can be used as a filter to retrieve `v$` information from a subset of available instances. For example, the following query retrieves the information from the `V$LOCK` view on instances 2 and 5:

```
SQL> SELECT * FROM GV$LOCK WHERE INST_ID = 2 OR INST_ID = 5;
```

### See Also:

*Oracle Real Application Clusters Installation and Configuration Guide* for your operating system

GV\$ views are `CONTAINER_DATA` objects. When a user connected to the root queries a GV\$ view, the query results will depend on the `CONTAINER_DATA` attribute for users for the view. The `CONTAINER_DATA` clause of the SQL `ALTER USER` statement is used to set and modify users' `CONTAINER_DATA` attribute.

GV\$ views can return data from different containers in a CDB when queried from the root container. These objects will implicitly convert data to the character set of the root container (AL32UTF8) and then return the result to the user. Some character sets may have character expansion (more bytes needed to represent a character) when converted to AL32UTF8, so there may be data truncation if the view column width is not able to accommodate data from a given PDB.

 **See Also:**

- *Oracle Database Security Guide* for more information about container data objects
- *Oracle Database SQL Language Reference* for more information about the `CONTAINER_DATA` clause for the SQL `ALTER USER` statement

## 8.2 Oracle Exadata Database Machine Views

Descriptions of Oracle Exadata Database Machine views are not provided in this manual.

See *Oracle Exadata System Software User's Guide* for descriptions of Oracle Exadata Database Machine views.

 **Note:**

Oracle Exadata Database Machine view names begin with `V$CELL`.

## 8.3 Dynamic Performance View Descriptions

The remainder of this chapter describes the dynamic performance views in alphabetical order.

## 8.4 V\$ACCESS

`V$ACCESS` displays information about locks that are currently imposed on library cache objects.

The locks are imposed to ensure that they are not aged out of the library cache while they are required for SQL execution.

| Column | Datatype        | Description                                |
|--------|-----------------|--------------------------------------------|
| SID    | NUMBER          | Session number that is accessing an object |
| OWNER  | VARCHAR2 (64)   | Owner of the object                        |
| OBJECT | VARCHAR2 (1000) | Name of the object                         |
| TYPE   | VARCHAR2 (64)   | Type identifier for the object             |

| Column | Datatype | Description                                                                                                                                                                                                                                                                                                                                                                                                                                                                  |
|--------|----------|------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|
| CON_ID | NUMBER   | The ID of the container to which the data pertains. Possible values include: <ul style="list-style-type: none"><li>0: This value is used for rows containing data that pertain to the entire multitenant container database (CDB). This value is also used for rows in non-CDBs.</li><li>1: This value is used for rows containing data that pertain to only the root</li><li><i>n</i>: Where <i>n</i> is the applicable container ID for the rows containing data</li></ul> |

## 8.5 V\$ACTIVE\_INSTANCES

V\$ACTIVE\_INSTANCES displays the mapping between instance names and instance numbers for all instances that have the database currently mounted.

| Column      | Datatype       | Description                                                                                                                                                                                                                                                                                                                                                                                                                                 |
|-------------|----------------|---------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|
| INST_NUMBER | NUMBER         | Instance number                                                                                                                                                                                                                                                                                                                                                                                                                             |
| INST_NAME   | VARCHAR2 (256) | Instance name                                                                                                                                                                                                                                                                                                                                                                                                                               |
| CON_ID      | NUMBER         | The ID of the container to which the data pertains. Possible values include: <ul style="list-style-type: none"><li>0: This value is used for rows containing data that pertain to the entire CDB. This value is also used for rows in non-CDBs.</li><li>1: This value is used for rows containing data that pertain to only the root</li><li><i>n</i>: Where <i>n</i> is the applicable container ID for the rows containing data</li></ul> |

## 8.6 V\$ACTIVE\_SERVICES

V\$ACTIVE\_SERVICES displays information about the active services in the database.

| Column             | Datatype       | Description                                                                                                                                                                                                                                                                                      |
|--------------------|----------------|--------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|
| SERVICE_ID         | NUMBER         | Service ID                                                                                                                                                                                                                                                                                       |
| NAME               | VARCHAR2 (64)  | Name of the service                                                                                                                                                                                                                                                                              |
| NAME_HASH          | NUMBER         | Service name hash                                                                                                                                                                                                                                                                                |
| NETWORK_NAME       | VARCHAR2 (512) | Network name                                                                                                                                                                                                                                                                                     |
| CREATION_DATE      | DATE           | Creation date                                                                                                                                                                                                                                                                                    |
| CREATION_DATE_HASH | NUMBER         | Creation date hash                                                                                                                                                                                                                                                                               |
| GOAL               | VARCHAR2 (12)  | Runtime Load Balancing Goal being used to create run-time load balancing and connection load balancing advice: <ul style="list-style-type: none"><li>NONE</li><li>SERVICE_TIME - Connections are balanced by response time</li><li>THROUGHPUT - Connections are balanced by throughput</li></ul> |

| Column                    | Datatype       | Description                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                            |
|---------------------------|----------------|----------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|
| DTP                       | VARCHAR2 (1)   | Indicates whether or not Distributed Transaction Processing is enabled for this service. When Distributed Transaction Processing is set to <code>Y</code> (YES), it means that the service is offered at exactly one instance at a time for XA affinity. Possible values: <ul style="list-style-type: none"> <li><code>Y</code> - YES</li> <li><code>N</code> - NO</li> </ul>                                                                                                                                                                                                                                                                                                                                                                                                          |
| BLOCKED                   | CHAR (2)       | Indicates whether a service on the specified instance is blocked from accepting new connections altogether (YES) or not (NO). If a service is blocked, then all connections will be directed to other instances (if any) that are hosting the desired service.                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                         |
| AQ_HA_NOTIFICATION        | VARCHAR2 (3)   | Indicates whether FAN - Fast Application Notification for OCI connections is set (YES) or not (NO)                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                     |
| CLB_GOAL                  | VARCHAR2 (5)   | Connection load balancing goal used with statistics that are sent to the listeners to determine how new connections are distributed: <ul style="list-style-type: none"> <li><code>LONG</code></li> <li><code>SHORT</code></li> </ul>                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                   |
| COMMIT_OUTCOME            | VARCHAR2 (3)   | For Transaction Guard and Database Native Transaction Guard, indicates whether the database service associated with the user session has the <code>COMMIT_OUTCOME</code> service attribute enabled (YES) or not (NO). This attribute applies on a per session basis and is set at connect time. <p>When the value of this column is <code>YES</code>, the commit status is managed for all supported transaction types and the outcome of a <code>COMMIT</code> transaction is preserved after the <code>COMMIT</code> has executed. Refer to the <code>COMMIT_OUTCOME_FASTPATH</code> column to view the preferred method for preserving the commit outcome.</p> <p><b>See Also:</b> <i>Oracle Database Development Guide</i> for information about preserving the commit outcome</p> |
| RETENTION_TIME            | NUMBER         | For Transaction Guard and Database Native Transaction Guard, when <code>COMMIT_OUTCOME = YES</code> , this value indicates the amount of time (in seconds) that the commit outcome is retained in the database.                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                        |
| REPLAY_INITIATION_TIMEOUT | NUMBER         | For Application Continuity, this option specifies the difference between the time (in seconds) of original execution of the first operation of a request and the time that the replay is ready to start after a successful reconnect. Application Continuity will not replay after the specified amount of time has passed. This option is intended to avoid the unintentional execution of a transaction when a system is recovered after a long period of time. The default is 5 minutes (300 seconds).                                                                                                                                                                                                                                                                              |
| SESSION_STATE_CONSISTENCY | VARCHAR2 (128) | Describes how non-transactional is changed during a request. This parameter is considered only if <code>failover_type</code> is set to <code>TRANSACTION</code> for Application Continuity. Examples of session state are NLS settings, optimizer preferences, event settings, PL/SQL global variables, temporary tables, advanced queues, LOBs, and result cache. If non-transactional values change after the request starts, the default value of <code>DYNAMIC</code> should be set. Almost all applications should use <code>DYNAMIC</code> mode. If you are unsure, use <code>DYNAMIC</code> mode.                                                                                                                                                                               |
| GLOBAL                    | VARCHAR2 (3)   | Indicates whether the service is global. A global service is managed by Global Service Manager (GSM) and can be provided by multiple databases that contain replicated data. Possible values: <ul style="list-style-type: none"> <li><code>YES</code>: Indicates the service is global</li> <li><code>NO</code>: Indicates the service is not global</li> </ul>                                                                                                                                                                                                                                                                                                                                                                                                                        |

| Column                  | Datatype       | Description                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                       |
|-------------------------|----------------|-----------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|
| CON_NAME                | VARCHAR2 (128) | Container name of the object. The value of this column is NULL in non-CDBs.                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                       |
| SQL_TRANSLATION_PROFILE | VARCHAR2 (261) | A non-NULL value specifies the initial SQL translation profile for subsequent database connections that use the service and do not specify a SQL translation profile. A NULL value has no effect.                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                 |
| MAX_LAG_TIME            | VARCHAR2 (128) | The maximum replication lag (in seconds) that is acceptable for a data replica to be used for providing the database service. Can only be specified for global services.                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                          |
| STOP_OPTION             | VARCHAR2 (128) | Stop option for sessions of this service for planned maintenance                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                  |
| FAILOVER_RESTORE        | VARCHAR2 (128) | Indicates whether sessions recover their commonly used session state (like NLS, schema) when they are failed over with TAF                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                        |
| DRAIN_TIMEOUT           | NUMBER         | Number of seconds to wait for sessions to be drained                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                              |
| TABLE_FAMILY_ID         | NUMBER         | Sharded table family ID associated with the service                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                               |
| PLACEMENT_TEMPLATE      | VARCHAR2 (64)  | Reserved for future use                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                           |
| COMMIT_OUTCOME_FASTPATH | VARCHAR2 (3)   | <p>For Transaction Guard and Database Native Transaction Guard, when COMMIT_OUTCOME = YES, the value of this column indicates the preferred method for preserving the commit outcome. Possible values:</p> <ul style="list-style-type: none"> <li>YES - Database Native Transaction Guard is used. Each transaction is assigned a unique transaction identifier (DB XID) in the database. The DB XID and status of the corresponding transaction are maintained persistently in a transaction table. Note that if COMMIT_OUTCOME = YES, then the value of COMMIT_OUTCOME_FASTPATH defaults to YES.</li> <li>NO - Transaction Guard is used. A logical transaction ID (LTXID) is set for each user session at login and at each successful commit. LTXIDs are used only when the commit is not in the same round-trip to the database as the start of the transaction. Moreover, some transaction types, such as commit on success transactions, DDL transactions, and PL/SQL transactions, will continue to use LTXIDs in the same round-trip. When Transaction Guard is used, the outcome of a COMMIT transaction is known. If there is an outage, the application can use DBMS_APP_CONT.GET_LTXID_OUTCOME to return a reliable status for the last in-flight work.</li> </ul> <p><b>See Also:</b> <i>Oracle Real Application Clusters Administration and Deployment Guide</i> for information about logical transaction IDs</p> |
| TRUE_CACHE_SERVICE      | VARCHAR2 (64)  | True Cache service associated with this database service                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                          |
| CON_ID                  | NUMBER         | <p>The ID of the container to which the data pertains. Possible values include:</p> <ul style="list-style-type: none"> <li>0: This value is used for rows containing data that pertain to the entire CDB. This value is also used for rows in non-CDBs.</li> <li>1: This value is used for rows containing data that pertain to only the root</li> <li>n: Where n is the applicable container ID for the rows containing data</li> </ul>                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                          |

## 8.7 V\$ACTIVE\_SESS\_POOL\_MTH

V\$ACTIVE\_SESS\_POOL\_MTH displays available active session pool resource allocation methods.

| Column | Datatype      | Description                                                                                                                                                                                                                                                                                                                                                                                                                                     |
|--------|---------------|-------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|
| NAME   | VARCHAR2 (40) | Name of the active session pool resource allocation method                                                                                                                                                                                                                                                                                                                                                                                      |
| CON_ID | NUMBER        | The ID of the container to which the data pertains. Possible values include: <ul style="list-style-type: none"> <li>0: This value is used for rows containing data that pertain to the entire CDB. This value is also used for rows in non-CDBs.</li> <li>1: This value is used for rows containing data that pertain to only the root</li> <li><i>n</i>: Where <i>n</i> is the applicable container ID for the rows containing data</li> </ul> |

## 8.8 V\$ACTIVE\_SESSION\_HISTORY

V\$ACTIVE\_SESSION\_HISTORY displays sampled session activity in the database.

It contains snapshots of active database sessions taken once a second. A database session is considered active if it was on the CPU or was waiting for an event that didn't belong to the `Idle` wait class. Refer to the V\$EVENT\_NAME view for more information on wait classes.

This view contains one row for each active session per sample and returns the latest session sample rows first. A majority of the columns describing the session in the active session history are present in the V\$SESSION view.

| Column           | Datatype      | Description                                                                                                                                          |
|------------------|---------------|------------------------------------------------------------------------------------------------------------------------------------------------------|
| SAMPLE_ID        | NUMBER        | ID of the sample                                                                                                                                     |
| SAMPLE_TIME      | TIMESTAMP (3) | Time at which the sample was taken                                                                                                                   |
| SAMPLE_TIME_UTC  | TIMESTAMP (3) | Time at which the sample was taken in UTC (Coordinated Universal Time) time zone                                                                     |
| USECS_PER_ROW    | NUMBER        | Time in microseconds since the last sample was taken                                                                                                 |
| IS_AWR_SAMPLE    | VARCHAR2 (1)  | Indicates whether this sample has been flushed or will be flushed to the Automatic Workload Repository (DBA_HIST_ACTIVE_SESS_HISTORY) (Y) or not (N) |
| SESSION_ID       | NUMBER        | Session identifier; maps to V\$SESSION.SID                                                                                                           |
| SESSION_SERIAL#  | NUMBER        | Session serial number (used to uniquely identify a session's objects); maps to V\$SESSION.SERIAL#                                                    |
| SESSION_TYPE     | VARCHAR2 (10) | Session type: <ul style="list-style-type: none"> <li>BACKGROUND</li> <li>BACKGROUND</li> </ul>                                                       |
| FLAGS            | NUMBER        | Reserved for future use                                                                                                                              |
| USER_ID          | NUMBER        | Oracle user identifier; maps to V\$SESSION.USER#                                                                                                     |
| SQL_ID           | VARCHAR2 (13) | SQL identifier of the SQL statement that the session was executing at the time of sampling                                                           |
| IS_SQLID_CURRENT | VARCHAR2 (1)  | Indicates whether the SQL identifier in the SQL_ID column is being executed (Y) or not (N)                                                           |
| SQL_CHILD_NUMBER | NUMBER        | Child number of the SQL statement that the session was executing at the time of sampling                                                             |

| Column                     | Datatype      | Description                                                                                                                                                                                                                  |
|----------------------------|---------------|------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|
| SQL_OPCODE                 | NUMBER        | Indicates what phase of operation the SQL statement was in; maps to V\$SESSION.COMMAND<br><br><b>See Also:</b> "V\$SESSION" for information on interpreting this column                                                      |
| SQL_OPNAME                 | VARCHAR2 (64) | SQL command name                                                                                                                                                                                                             |
| FORCE_MATCHING_SIGNATURE   | NUMBER        | Signature used when the CURSOR_SHARING parameter is set to FORCE                                                                                                                                                             |
| TOP_LEVEL_SQL_ID           | VARCHAR2 (13) | SQL identifier of the top level SQL statement                                                                                                                                                                                |
| TOP_LEVEL_SQL_OPCODE       | NUMBER        | Indicates what phase of operation the top level SQL statement was in                                                                                                                                                         |
| SQL_ADAPTIVE_PLAN_RESOLVED | NUMBER        | Indicates whether the SQL plan of the sampled database session is a resolved adaptive plan or not                                                                                                                            |
| SQL_FULL_PLAN_HASH_VALUE   | NUMBER        | Numerical representation of the complete SQL plan for the cursor being executed by this session                                                                                                                              |
| SQL_PLAN_HASH_VALUE        | NUMBER        | Numeric representation of the SQL plan for the cursor. This information might not be available for all session samples. V\$SESSION does not contain this information.                                                        |
| SQL_PLAN_LINE_ID           | NUMBER        | SQL plan line ID                                                                                                                                                                                                             |
| SQL_PLAN_OPERATION         | VARCHAR2 (30) | Plan operation name                                                                                                                                                                                                          |
| SQL_PLAN_OPTIONS           | VARCHAR2 (30) | Plan operation options                                                                                                                                                                                                       |
| SQL_EXEC_ID                | NUMBER        | SQL execution identifier                                                                                                                                                                                                     |
| SQL_EXEC_START             | DATE          | Time when the execution of the SQL started                                                                                                                                                                                   |
| PLSQL_ENTRY_OBJECT_ID      | NUMBER        | Object ID of the top-most PL/SQL subprogram on the stack; NULL if there is no PL/SQL subprogram on the stack. Maps to DBA_OBJECTS.OBJECT_ID.                                                                                 |
| PLSQL_ENTRY_SUBPROGRAM_ID  | NUMBER        | Subprogram ID of the top-most PL/SQL subprogram on the stack. Maps to DBA_OBJECTS.DATA_OBJECT_ID.                                                                                                                            |
| PLSQL_OBJECT_ID            | NUMBER        | Object ID of the currently executing PL/SQL subprogram. Maps to DBA_OBJECTS.OBJECT_ID.                                                                                                                                       |
| PLSQL_SUBPROGRAM_ID        | NUMBER        | Subprogram ID of the currently executing PL/SQL object; NULL if executing SQL. Maps to DBA_OBJECTS.DATA_OBJECT_ID.                                                                                                           |
| QC_INSTANCE_ID             | NUMBER        | Query coordinator instance ID. This information is only available if the sampled session is a parallel query worker. For all other sessions, the value is 0.                                                                 |
| QC_SESSION_ID              | NUMBER        | Query coordinator session ID. This information is only available if the sampled session is a parallel query worker. For all other sessions, the value is 0.                                                                  |
| QC_SESSION_SERIAL#         | NUMBER        | Query coordinator session serial number. This information is only available if the sampled session is a parallel query worker. For all other sessions, the value is 0.                                                       |
| PX_FLAGS                   | NUMBER        | Reserved for internal use                                                                                                                                                                                                    |
| EVENT                      | VARCHAR2 (64) | If SESSION_STATE = WAITING, then the event for which the session was waiting for at the time of sampling.<br>If SESSION_STATE = ON CPU, then this column is NULL.<br><br><b>See Also:</b> <a href="#">Oracle Wait Events</a> |
| EVENT_ID                   | NUMBER        | Identifier of the resource or event for which the session is waiting or for which the session last waited. Interpretation is similar to that of the EVENT column.                                                            |

| P3                       | NUMBER        | Third additional parameter                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                          |
| WAIT_CLASS               | VARCHAR2 (64) | Wait class name of the event for which the session was waiting at the time of sampling. Interpretation is similar to that of the <code>EVENT</code> column. Maps to <code>V\$SESSION.WAIT_CLASS</code> .                                                                                                                                                                                                                                                                                                                                            |
| WAIT_CLASS_ID            | NUMBER        | Wait class identifier of the event for which the session was waiting at the time of sampling. Interpretation is similar to that of the <code>EVENT</code> column. Maps to <code>V\$SESSION.WAIT_CLASS_ID</code> .                                                                                                                                                                                                                                                                                                                                   |
| WAIT_TIME                | NUMBER        | Total wait time for the event for which the session last waited if the session was on the CPU when sampled; 0 if the session was waiting at the time of sampling<br><br><b>Note:</b> Whether or not <code>WAIT_TIME = 0</code> is what is useful to find the <code>SESSION_STATE</code> at the time of sampling, rather than the actual value of <code>WAIT_TIME</code> itself. Maps to <code>V\$SESSION.WAIT_TIME</code> .                                                                                                                         |
| SESSION_STATE            | VARCHAR2 (7)  | Session state: <ul style="list-style-type: none"> <li>• WAITING</li> <li>• ON CPU</li> </ul>                                                                                                                                                                                                                                                                                                                                                                                                                                                        |
| TIME_WAITED              | NUMBER        | If <code>SESSION_STATE = WAITING</code> , then the time that the session actually spent waiting for that event (in microseconds). This column is set for waits that were in progress at the time the sample was taken.<br><br>If a wait event lasted for more than a second and was caught waiting in more than one session sample row, then the actual time spent waiting for that wait event will be populated in the last of those session sample rows. At any given time, this information will not be available for the latest session sample. |
| BLOCKING_SESSION_STATUS  | VARCHAR2 (11) | Status of the blocking session: <ul style="list-style-type: none"> <li>• VALID</li> <li>• NO HOLDER</li> <li>• GLOBAL</li> <li>• NOT IN WAIT</li> <li>• UNKNOWN</li> </ul>                                                                                                                                                                                                                                                                                                                                                                          |
| BLOCKING_SESSION         | NUMBER        | Session identifier of the blocking session. Populated only if the blocker is on the same instance and the session was waiting for enqueues or a "buffer busy" wait. Maps to <code>V\$SESSION.BLOCKING_SESSION</code> .                                                                                                                                                                                                                                                                                                                              |
| BLOCKING_SESSION_SERIAL# | NUMBER        | Serial number of the blocking session                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                               |
| BLOCKING_INST_ID         | NUMBER        | Instance number of the blocker shown in <code>BLOCKING_SESSION</code>                                                                                                                                                                                                                                                                                                                                                                                                                                                                               |
| BLOCKING_HANGCHAIN_INFO  | VARCHAR2 (1)  | Indicates whether the information about <code>BLOCKING_SESSION</code> comes from the hang chain (Y) or not (N)                                                                                                                                                                                                                                                                                                                                                                                                                                      |

| Column               | Datatype      | Description                                                                                                                                                                                                                        |
|----------------------|---------------|------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|
| CURRENT_OBJ#         | NUMBER        | Object ID of the object that the session is referencing. This information is only available if the session was waiting for application, cluster, concurrency, and user I/O wait events. Maps to V\$SESSION.ROW_WAIT_OBJ#.          |
| CURRENT_FILE#        | NUMBER        | File number of the file containing the block that the session is referencing. This information is only available if the session was waiting for cluster, concurrency, and user I/O wait events. Maps to V\$SESSION.ROW_WAIT_FILE#. |
| CURRENT_BLOCK#       | NUMBER        | ID of the block that the session is referencing. This information is only available if the session was waiting for cluster, concurrency, and user I/O wait events. Maps to V\$SESSION.ROW_WAIT_BLOCK#.                             |
| CURRENT_ROW#         | NUMBER        | Row identifier that the session is referencing. This information is only available if the session was waiting for cluster, concurrency, and user I/O wait events. Maps to V\$SESSION.ROW_WAIT_ROW#.                                |
| TOP_LEVEL_CALL#      | NUMBER        | Oracle top level call number                                                                                                                                                                                                       |
| TOP_LEVEL_CALL_NAME  | VARCHAR2 (64) | Oracle top level call name                                                                                                                                                                                                         |
| CONSUMER_GROUP_ID    | NUMBER        | Consumer group ID                                                                                                                                                                                                                  |
| XID                  | RAW (8)       | Transaction ID that the session was working on at the time of sampling. V\$SESSION does not contain this information.                                                                                                              |
| REMOTE_INSTANCE#     | NUMBER        | Remote instance identifier that will serve the block that this session is waiting for. This information is only available if the session was waiting for cluster events.                                                           |
| TIME_MODEL           | NUMBER        | Time model information                                                                                                                                                                                                             |
| IN_CONNECTION_MGMT   | VARCHAR2 (1)  | Indicates whether the session was doing connection management at the time of sampling (Y) or not (N)                                                                                                                               |
| IN_PARSE             | VARCHAR2 (1)  | Indicates whether the session was parsing at the time of sampling (Y) or not (N)                                                                                                                                                   |
| IN_HARD_PARSE        | VARCHAR2 (1)  | Indicates whether the session was hard parsing at the time of sampling (Y) or not (N)                                                                                                                                              |
| IN_SQL_EXECUTION     | VARCHAR2 (1)  | Indicates whether the session was executing SQL statements at the time of sampling (Y) or not (N)                                                                                                                                  |
| IN_PLSQL_EXECUTION   | VARCHAR2 (1)  | Indicates whether the session was executing PL/SQL at the time of sampling (Y) or not (N)                                                                                                                                          |
| IN_PLSQL_RPC         | VARCHAR2 (1)  | Indicates whether the session was executing inbound PL/SQL RPC calls at the time of sampling (Y) or not (N)                                                                                                                        |
| IN_PLSQL_COMPILATION | VARCHAR2 (1)  | Indicates whether the session was compiling PL/SQL at the time of sampling (Y) or not (N)                                                                                                                                          |
| IN_JAVA_EXECUTION    | VARCHAR2 (1)  | Indicates whether the session was executing Java at the time of sampling (Y) or not (N)                                                                                                                                            |
| IN_BIND              | VARCHAR2 (1)  | Indicates whether the session was doing bind operations at the time of sampling (Y) or not (N)                                                                                                                                     |
| IN_CURSOR_CLOSE      | VARCHAR2 (1)  | Indicates whether the session was closing a cursor at the time of sampling (Y) or not (N)                                                                                                                                          |
| IN_SEQUENCE_LOAD     | VARCHAR2 (1)  | Indicates whether the session is loading in sequence (in sequence load code) (Y) or not (N)                                                                                                                                        |
| IN_INMEMORY_QUERY    | VARCHAR2 (1)  | Indicates whether the session was querying the In-Memory Column Store (IM column store) at the time of sampling (Y) or not (N)                                                                                                     |

| Column                      | Datatype      | Description                                                                                                                                                             |
|-----------------------------|---------------|-------------------------------------------------------------------------------------------------------------------------------------------------------------------------|
| IN_INMEMORY_POPULATE        | VARCHAR2 (1)  | Indicates whether the session was populating the IM column store at the time of sampling (Y) or not (N)                                                                 |
| IN_INMEMORY_PREPOPULATE     | VARCHAR2 (1)  | Indicates whether the session was prepopulating the IM column store at the time of sampling (Y) or not (N)                                                              |
| IN_INMEMORY_REPOPULATE      | VARCHAR2 (1)  | Indicates whether the session was repopulating the IM column store at the time of sampling (Y) or not (N)                                                               |
| IN_INMEMORY_TREPOPULATE     | VARCHAR2 (1)  | Indicates whether the session was trickle repopulating the IM column store at the time of sampling (Y) or not (N)                                                       |
| IN_TABLESPACE_ENCRYPTION    | VARCHAR2 (1)  | Indicates whether encryption or decryption of a tablespace occurred at the time of sampling (Y) or not (N)                                                              |
| CAPTURE_OVERHEAD            | VARCHAR2 (1)  | Indicates whether the session is executing capture code (Y) or not (N)                                                                                                  |
| REPLAY_OVERHEAD             | VARCHAR2 (1)  | Indicates whether the session is executing replay code (Y) or not (N)                                                                                                   |
| IS_CAPTURED                 | VARCHAR2 (1)  | Indicates whether the session is being captured (Y) or not (N)                                                                                                          |
| IS_REPLAYED                 | VARCHAR2 (1)  | Indicates whether the session is being replayed (Y) or not (N)                                                                                                          |
| IS_REPLAY_SYNC_TOKEN_HOLDER | VARCHAR2 (1)  | Indicates whether the session is holding a synchronization token (Y) or not (N) during workload replay                                                                  |
| SPID                        | VARCHAR2 (24) | Operating system process identifier                                                                                                                                     |
| STID                        | VARCHAR2 (24) | Operating system thread identifier                                                                                                                                      |
| SERVICE_HASH                | NUMBER        | Hash that identifies the Service; maps to V\$ACTIVE_SERVICES.NAME_HASH                                                                                                  |
| PROGRAM                     | VARCHAR2 (84) | Name of the operating system program                                                                                                                                    |
| MODULE                      | VARCHAR2 (64) | Name of the executing module when sampled, as set by the DBMS_APPLICATION_INFO.SET_MODULE procedure                                                                     |
| ACTION                      | VARCHAR2 (64) | Name of the executing module when sampled, as set by the DBMS_APPLICATION_INFO.SET_ACTION procedure                                                                     |
| CLIENT_ID                   | VARCHAR2 (64) | Client identifier of the session; maps to V\$SESSION.CLIENT_IDENTIFIER                                                                                                  |
| CLIENT_INFO                 | VARCHAR2 (64) | Client information for the session; maps to V\$SESSION.CLIENT_INFO                                                                                                      |
| MACHINE                     | VARCHAR2 (64) | Client's operating system machine name                                                                                                                                  |
| PORT                        | NUMBER        | Client port number                                                                                                                                                      |
| ECID                        | VARCHAR2 (64) | Execution context identifier (sent by Application Server)                                                                                                               |
| DBREPLAY_FILE_ID            | NUMBER        | If the session is being captured or replayed, then DBREPLAY_FILE_ID is the file ID for the workload capture or workload replay; otherwise it is NULL.                   |
| DBREPLAY_CALL_COUNTER       | NUMBER        | If the session is being captured or replayed, then DBREPLAY_CALL_COUNTER is the call counter of the user call that is being captured or replayed; otherwise it is NULL. |
| TM_DELTA_TIME               | NUMBER        | Time interval (in microseconds) over which TM_DELTA_CPU_TIME and TM_DELTA_DB_TIME are accumulated                                                                       |
| TM_DELTA_CPU_TIME           | NUMBER        | Amount of time this session spent on CPU over the last TM_DELTA_TIME microseconds                                                                                       |
| TM_DELTA_DB_TIME            | NUMBER        | Amount of time spent by this session in database calls over the last TM_DELTA_TIME microseconds                                                                         |
| DELTA_TIME                  | NUMBER        | Time interval (in microseconds) since the last time this session was sampled or created, over which the next five statistics are accumulated                            |

| Column                      | Datatype      | Description                                                                                                                                                                                                                                                                                                                                                                                                                                     |
|-----------------------------|---------------|-------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|
| DELTA_READ_IO_REQUESTS      | NUMBER        | Number of read I/O requests made by this session over the last DELTA_TIME microseconds                                                                                                                                                                                                                                                                                                                                                          |
| DELTA_WRITE_IO_REQUESTS     | NUMBER        | Number of write I/O requests made by this session over the last DELTA_TIME microseconds                                                                                                                                                                                                                                                                                                                                                         |
| DELTA_READ_IO_BYTES         | NUMBER        | Number of I/O bytes read by this session over the last DELTA_TIME microseconds                                                                                                                                                                                                                                                                                                                                                                  |
| DELTA_WRITE_IO_BYTES        | NUMBER        | Number of I/O bytes written by this session over the last DELTA_TIME microseconds                                                                                                                                                                                                                                                                                                                                                               |
| DELTA_INTERCONNECT_IO_BYTES | NUMBER        | Number of I/O bytes sent over the I/O interconnect over the last DELTA_TIME microseconds                                                                                                                                                                                                                                                                                                                                                        |
| DELTA_READ_MEM_BYTES        | NUMBER        | Number of read bytes through the buffer cache                                                                                                                                                                                                                                                                                                                                                                                                   |
| PGA_ALLOCATED               | NUMBER        | Amount of PGA memory (in bytes) consumed by this session at the time this sample was taken                                                                                                                                                                                                                                                                                                                                                      |
| TEMP_SPACE_ALLOCATED        | NUMBER        | Amount of TEMP memory (in bytes) consumed by this session at the time this sample was taken                                                                                                                                                                                                                                                                                                                                                     |
| CON_DBID                    | NUMBER        | The database ID of the pluggable database (PDB)                                                                                                                                                                                                                                                                                                                                                                                                 |
| CON_ID                      | NUMBER        | The ID of the container to which the data pertains. Possible values include: <ul style="list-style-type: none"> <li>0: This value is used for rows containing data that pertain to the entire CDB. This value is also used for rows in non-CDBs.</li> <li>1: This value is used for rows containing data that pertain to only the root</li> <li><i>n</i>: Where <i>n</i> is the applicable container ID for the rows containing data</li> </ul> |
| DBOP_NAME                   | VARCHAR2 (30) | Database operation name. If the type is SQL, the DBOP_NAME will be NULL.                                                                                                                                                                                                                                                                                                                                                                        |
| DBOP_EXEC_ID                | NUMBER        | Database operation execution identifier for the current execution. If the type is SQL, the DBOP_EXEC_ID will be NULL.                                                                                                                                                                                                                                                                                                                           |

## 8.9 V\$ACTIVITY\_MVIEW

V\$ACTIVITY\_MVIEW describes the materialized view activity snapshots that are currently being taken by the Object Activity Tracking System (OATS).

Each row in this view represents one in-progress activity snapshot and describes the materialized view activity that has occurred so far during the snapshot interval.

| Column                 | Datatype       | Description                                                                                                                                                                                                                                                                                                                                                                                                                                                 |
|------------------------|----------------|-------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|
| MVIEW_NAME             | VARCHAR2 (128) | Name of the materialized view for which the activity snapshot is being taken                                                                                                                                                                                                                                                                                                                                                                                |
| MVIEW_OWNER            | VARCHAR2 (128) | Owner of the materialized view for which the activity snapshot is being taken                                                                                                                                                                                                                                                                                                                                                                               |
| USER_CLASS             | VARCHAR2 (7)   | Indicates whether the activity was performed by the RDBMS (SYS) or by a user (NON-SYS)                                                                                                                                                                                                                                                                                                                                                                      |
| COMPILES               | NUMBER         | <p>Number of times the materialized view was compiled</p> <p>This number includes:</p> <ul style="list-style-type: none"> <li>Explicit compiles performed with the SQL statement <code>ALTER MATERIALIZED VIEW ... COMPILE</code></li> <li>Automatic compiles that occurred because the structure of an underlying base table changed</li> </ul>                                                                                                            |
| REWRITES_TEXTMATCH     | NUMBER         | Number of query rewrites that used the text match rewrite method                                                                                                                                                                                                                                                                                                                                                                                            |
| REWRITES_GENERAL       | NUMBER         | Number of query rewrites that used general rewrite methods                                                                                                                                                                                                                                                                                                                                                                                                  |
| REWRITES_PARTIAL       | NUMBER         | <p>Number of query rewrites that occurred when the view was partially stale</p> <p>This number includes:</p> <ul style="list-style-type: none"> <li>UNION ALL operations involving rewritten queries that had one branch with the materialized view and the other branch with its underlying base tables (partial rewrites)</li> <li>Single query block rewrites of the materialized view that involved a join back to its underlying base table</li> </ul> |
| REWRITES_DELTA         | NUMBER         | Number of query rewrites that used stale data in the materialized view plus the delta information stored in the materialized view logs                                                                                                                                                                                                                                                                                                                      |
| REWRITES_PCT           | NUMBER         | Number of partition change tracking (PCT) rewrites                                                                                                                                                                                                                                                                                                                                                                                                          |
| REWRITES_HINTED        | NUMBER         | Number of query rewrites that occurred because the materialized view was eligible for query rewrite and the <code>SELECT</code> statement contained the <code>REWRITE</code> hint with the name of the materialized view specified in the hint                                                                                                                                                                                                              |
| NOREWRITES_HINTED      | NUMBER         | Reserved for future use                                                                                                                                                                                                                                                                                                                                                                                                                                     |
| NOREWRITES_STALE       | NUMBER         | Number of query executions that did not use query rewrite because the materialized view was eligible for query rewrite, but stale                                                                                                                                                                                                                                                                                                                           |
| REFRESHES_ON_DEMAND    | NUMBER         | <p>Number of ON DEMAND refreshes</p> <p>This type of refresh is performed on materialized views that use the ON DEMAND refresh mode, which instructs the database to refresh the materialized view only when a manual refresh is launched by one of the three DBMS_MVIEW refresh procedures.</p>                                                                                                                                                            |
| REFRESHES_ON_COMMIT    | NUMBER         | <p>Number of ON COMMIT refreshes</p> <p>This type of refresh is performed on materialized views that use the ON COMMIT refresh mode, which instructs the database to refresh the materialized view whenever the database commits a transaction that operates on a master table of the materialized view.</p>                                                                                                                                                |
| REFRESHES_ON_STATEMENT | NUMBER         | <p>Number of ON STATEMENT refreshes</p> <p>This type of refresh is performed on materialized views that use the ON STATEMENT refresh mode, which instructs the database to perform an automatic refresh of the materialized view every time a DML operation is performed on any of the view's base tables.</p>                                                                                                                                              |

| REFRESHES_FAST     | NUMBER   | Number of incremental refreshes                                                                                                                                                                                                                                                                                                                                                                                                                 |
| REFRESHES_COMPLETE | NUMBER   | Number of full refreshes                                                                                                                                                                                                                                                                                                                                                                                                                        |
| REFRESHES_PCT      | NUMBER   | Number of partition change tracking (PCT) refreshes                                                                                                                                                                                                                                                                                                                                                                                             |
| CON_ID             | NUMBER   | The ID of the container to which the data pertains. Possible values include: <ul style="list-style-type: none"> <li>0: This value is used for rows containing data that pertain to the entire CDB. This value is also used for rows in non-CDBs.</li> <li>1: This value is used for rows containing data that pertain to only the root</li> <li><i>n</i>: Where <i>n</i> is the applicable container ID for the rows containing data</li> </ul> |

 **Note:**

The counts in this view are approximate in order to keep system overhead low. Also, there are database activities, such as statistics collection, query compilation, and query optimization, that may cause the counts to be different than expected or to vary slightly across successive queries.

## 8.10 V\$ACTIVITY\_TABLE

V\$ACTIVITY\_TABLE describes the table activity snapshots that are currently being taken by the Object Activity Tracking System (OATS).

Each row in this view represents one in-progress activity snapshot and describes the table activity that has occurred so far during the snapshot interval.

| Column      | Datatype       | Description                                                       |
|-------------|----------------|-------------------------------------------------------------------|
| TABLE_NAME  | VARCHAR2 (128) | Name of the table for which the activity snapshot is being taken  |
| TABLE_OWNER | VARCHAR2 (128) | Owner of the table for which the activity snapshot is being taken |
| USER_CLASS  | VARCHAR2       | Reserved for future use                                           |
| SCANS       | NUMBER         | Number of table scans                                             |
| LOADS       | NUMBER         | Number of table loads                                             |
| LOAD_ROWS   | NUMBER         | Number of rows that were loaded into the table                    |
| INSERT_ROWS | NUMBER         | Number of rows that were inserted into the table                  |
| DELETE_ROWS | NUMBER         | Number of rows that were deleted from the table                   |
| UPDATE_ROWS | NUMBER         | Number of table rows that were updated                            |

| Column                   | Datatype | Description                                                                                                                                                                                                                                                                                                                                                                                                                                            |
|--------------------------|----------|--------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|
| TRUNCATES                | NUMBER   | Number of table truncations                                                                                                                                                                                                                                                                                                                                                                                                                            |
| TRUNCATED_ROWS           | NUMBER   | Number of table rows that were deleted due to table truncations                                                                                                                                                                                                                                                                                                                                                                                        |
| PARTITION_TRUNCATES      | NUMBER   | Number of table partition or subpartition truncations                                                                                                                                                                                                                                                                                                                                                                                                  |
| PARTITION_TRUNCATED_ROWS | NUMBER   | Number of table rows that were deleted due to table partition or subpartition truncations                                                                                                                                                                                                                                                                                                                                                              |
| PARTITION_CREATES        | NUMBER   | Number of table partitions or subpartitions that were created                                                                                                                                                                                                                                                                                                                                                                                          |
| PARTITION_DROPS          | NUMBER   | Number of table partition or subpartition drops                                                                                                                                                                                                                                                                                                                                                                                                        |
| PARTITION_DROPS_ROWS     | NUMBER   | Number of table rows that were dropped due to table partition or subpartition drops                                                                                                                                                                                                                                                                                                                                                                    |
| PARTITION_MOVES          | NUMBER   | Number of table partition or subpartition moves                                                                                                                                                                                                                                                                                                                                                                                                        |
| PARTITION_MOVES_ROWS     | NUMBER   | Number of table rows that were moved due to table partition or subpartition moves                                                                                                                                                                                                                                                                                                                                                                      |
| PARTITION_SPLITS         | NUMBER   | Number of table partition or subpartition splits                                                                                                                                                                                                                                                                                                                                                                                                       |
| PARTITION_SPLITS_ROWS    | NUMBER   | Number of table rows that were split due to table partition or subpartition splits                                                                                                                                                                                                                                                                                                                                                                     |
| PARTITION_MERGES         | NUMBER   | Number of table partition or subpartition merges                                                                                                                                                                                                                                                                                                                                                                                                       |
| PARTITION_MERGES_ROWS    | NUMBER   | Number of table rows that were merged due to table partition or subpartition merges                                                                                                                                                                                                                                                                                                                                                                    |
| PARTITION_COALESCE       | NUMBER   | Number of table partition or subpartition coalesces                                                                                                                                                                                                                                                                                                                                                                                                    |
| PARTITION_COALESCE_ROWS  | NUMBER   | Number of table rows that were redistributed due to table partition or subpartition coalesces                                                                                                                                                                                                                                                                                                                                                          |
| PARTITION_EXCHANGES      | NUMBER   | Number of table partition or subpartition exchanges                                                                                                                                                                                                                                                                                                                                                                                                    |
| PARTITION_EXCHANGES_ROWS | NUMBER   | Number of table rows that were exchanged due to table partition or subpartition exchanges                                                                                                                                                                                                                                                                                                                                                              |
| CON_ID                   | NUMBER   | <p>The ID of the container to which the data pertains. Possible values include:</p> <ul style="list-style-type: none"> <li>0: This value is used for rows containing data that pertain to the entire CDB. This value is also used for rows in non-CDBs.</li> <li>1: This value is used for rows containing data that pertain to only the root</li> <li><i>n</i>: Where <i>n</i> is the applicable container ID for the rows containing data</li> </ul> |

**Note:**

The counts in this view are approximate in order to keep system overhead low. Also, there are database activities, such as statistics collection, query compilation, and query optimization, that may cause the counts to be different than expected or to vary slightly across successive queries.

**Note:**

This view does not contain information related to temporary tables or external tables.

## 8.13 V\$ALL\_ACTIVE\_SESSION\_HISTORY

V\$ALL\_ACTIVE\_SESSION\_HISTORY displays sampled session activity in the database.

### Note:

V\$ALL\_ACTIVE\_SESSION\_HISTORY allows application developers to view their own session activity. It is similar to the V\$ACTIVE\_SESSION\_HISTORY view, with the following exception:

- When queried by the SYS user, or any user with the SYSDBA privilege, the V\$ALL\_ACTIVE\_SESSION\_HISTORY view displays the same data as the V\$ACTIVE\_SESSION\_HISTORY view.
- When queried by any other user, the V\$ALL\_ACTIVE\_SESSION\_HISTORY view displays only data about sessions owned by that user.

| FLAGS                      | NUMBER        | Reserved for future use                                                                                                                                               |
| USER_ID                    | NUMBER        | Oracle user identifier; maps to V\$SESSION.USER#                                                                                                                      |
| SQL_ID                     | VARCHAR2 (13) | SQL identifier of the SQL statement that the session was executing at the time of sampling                                                                            |
| IS_SQLID_CURRENT           | VARCHAR2 (1)  | Indicates whether the SQL identifier in the SQL_ID column is being executed (Y) or not (N)                                                                            |
| SQL_CHILD_NUMBER           | NUMBER        | Child number of the SQL statement that the session was executing at the time of sampling                                                                              |
| SQL_OPCODE                 | NUMBER        | Indicates what phase of operation the SQL statement was in; maps to V\$SESSION.COMMAND<br><b>See Also:</b> "V\$SESSION" for information on interpreting this column   |
| SQL_OPNAME                 | VARCHAR2 (64) | SQL command name                                                                                                                                                      |
| FORCE_MATCHING_SIGNATURE   | NUMBER        | Signature used when the CURSOR_SHARING parameter is set to FORCE                                                                                                      |
| TOP_LEVEL_SQL_ID           | VARCHAR2 (13) | SQL identifier of the top level SQL statement                                                                                                                         |
| TOP_LEVEL_SQL_OPCODE       | NUMBER        | Indicates what phase of operation the top level SQL statement was in                                                                                                  |
| SQL_ADAPTIVE_PLAN_RESOLVED | NUMBER        | Indicates whether the SQL plan of the sampled database session is a resolved adaptive plan or not                                                                     |
| SQL_FULL_PLAN_HASH_VALUE   | NUMBER        | Numerical representation of the complete SQL plan for the cursor being executed by this session                                                                       |
| SQL_PLAN_HASH_VALUE        | NUMBER        | Numeric representation of the SQL plan for the cursor. This information might not be available for all session samples. V\$SESSION does not contain this information. |
| SQL_PLAN_LINE_ID           | NUMBER        | SQL plan line ID                                                                                                                                                      |
| SQL_PLAN_OPERATION         | VARCHAR2 (30) | Plan operation name                                                                                                                                                   |
| SQL_PLAN_OPTIONS           | VARCHAR2 (30) | Plan operation options                                                                                                                                                |
| SQL_EXEC_ID                | NUMBER        | SQL execution identifier                                                                                                                                              |
| SQL_EXEC_START             | DATE          | Time when the execution of the SQL started                                                                                                                            |
| PLSQL_ENTRY_OBJECT_ID      | NUMBER        | Object ID of the top-most PL/SQL subprogram on the stack; NULL if there is no PL/SQL subprogram on the stack. Maps to DBA_OBJECTS.OBJECT_ID.                          |
| PLSQL_ENTRY_SUBPROGRAM_ID  | NUMBER        | Subprogram ID of the top-most PL/SQL subprogram on the stack. Maps to DBA_OBJECTS.DATA_OBJECT_ID.                                                                     |
| PLSQL_OBJECT_ID            | NUMBER        | Object ID of the currently executing PL/SQL subprogram. Maps to DBA_OBJECTS.OBJECT_ID.                                                                                |
| PLSQL_SUBPROGRAM_ID        | NUMBER        | Subprogram ID of the currently executing PL/SQL object; NULL if executing SQL. Maps to DBA_OBJECTS.DATA_OBJECT_ID.                                                    |

| Column                            | Datatype      | Description                                                                                                                                                                                                                                                                                                                                                                                                             |
|-----------------------------------|---------------|-------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|
| PLSQL_CURRENT_ENTRY_OBJE<br>CT_ID | NUMBER        | Object ID of the currently executing PL/SQL subprogram; NULL if executing SQL.                                                                                                                                                                                                                                                                                                                                          |
| QC_INSTANCE_ID                    | NUMBER        | Query coordinator instance ID. This information is only available if the sampled session is a parallel query worker. For all other sessions, the value is 0.                                                                                                                                                                                                                                                            |
| QC_SESSION_ID                     | NUMBER        | Query coordinator session ID. This information is only available if the sampled session is a parallel query worker. For all other sessions, the value is 0.                                                                                                                                                                                                                                                             |
| QC_SESSION_SERIAL#                | NUMBER        | Query coordinator session serial number. This information is only available if the sampled session is a parallel query worker. For all other sessions, the value is 0.                                                                                                                                                                                                                                                  |
| PX_FLAGS                          | NUMBER        | Reserved for internal use                                                                                                                                                                                                                                                                                                                                                                                               |
| EVENT                             | VARCHAR2 (64) | If <code>SESSION_STATE = WAITING</code> , then the event for which the session was waiting for at the time of sampling.<br>If <code>SESSION_STATE = ON CPU</code> , then this column is NULL.<br><b>See Also:</b> <a href="#">Oracle Wait Events</a>                                                                                                                                                                    |
| EVENT_ID                          | NUMBER        | Identifier of the resource or event for which the session is waiting or for which the session last waited. Interpretation is similar to that of the <code>EVENT</code> column.                                                                                                                                                                                                                                          |
| EVENT#                            | NUMBER        | Number of the resource or event for which the session is waiting or for which the session last waited. Interpretation is similar to that of the <code>EVENT</code> column.                                                                                                                                                                                                                                              |
| SEQ#                              | NUMBER        | Sequence number that uniquely identifies the wait (incremented for each wait)                                                                                                                                                                                                                                                                                                                                           |

| P3                                | NUMBER        | Third additional parameter                                                                                                                                                                                                                                                                                                                                                                                              |
| WAIT_CLASS                        | VARCHAR2 (64) | Wait class name of the event for which the session was waiting at the time of sampling. Interpretation is similar to that of the <code>EVENT</code> column. Maps to <code>V\$SESSION.WAIT_CLASS</code> .                                                                                                                                                                                                                |
| WAIT_CLASS_ID                     | NUMBER        | Wait class identifier of the event for which the session was waiting at the time of sampling. Interpretation is similar to that of the <code>EVENT</code> column. Maps to <code>V\$SESSION.WAIT_CLASS_ID</code> .                                                                                                                                                                                                       |
| WAIT_TIME                         | NUMBER        | Total wait time for the event for which the session last waited if the session was on the CPU when sampled; 0 if the session was waiting at the time of sampling<br><b>Note:</b> Whether or not <code>WAIT_TIME = 0</code> is what is useful to find the <code>SESSION_STATE</code> at the time of sampling, rather than the actual value of <code>WAIT_TIME</code> itself. Maps to <code>V\$SESSION.WAIT_TIME</code> . |
| SESSION_STATE                     | VARCHAR2 (7)  | Session state: <ul style="list-style-type: none"> <li>• WAITING</li> <li>• ON CPU</li> </ul>                                                                                                                                                                                                                                                                                                                            |

| Column                   | Datatype      | Description                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                         |
|--------------------------|---------------|-----------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|
| TIME_WAITED              | NUMBER        | If <code>SESSION_STATE = WAITING</code> , then the time that the session actually spent waiting for that event (in microseconds). This column is set for waits that were in progress at the time the sample was taken.<br><br>If a wait event lasted for more than a second and was caught waiting in more than one session sample row, then the actual time spent waiting for that wait event will be populated in the last of those session sample rows. At any given time, this information will not be available for the latest session sample. |
| BLOCKING_SESSION_STATUS  | VARCHAR2 (11) | Status of the blocking session: <ul style="list-style-type: none"> <li>• VALID</li> <li>• NO HOLDER</li> <li>• GLOBAL</li> <li>• NOT IN WAIT</li> <li>• UNKNOWN</li> </ul>                                                                                                                                                                                                                                                                                                                                                                          |
| BLOCKING_SESSION         | NUMBER        | Session identifier of the blocking session. Populated only if the blocker is on the same instance and the session was waiting for enqueues or a "buffer busy" wait. Maps to <code>V\$SESSION.BLOCKING_SESSION</code> .                                                                                                                                                                                                                                                                                                                              |
| BLOCKING_SESSION_SERIAL# | NUMBER        | Serial number of the blocking session                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                               |
| BLOCKING_INST_ID         | NUMBER        | Instance number of the blocker shown in <code>BLOCKING_SESSION</code>                                                                                                                                                                                                                                                                                                                                                                                                                                                                               |
| BLOCKING_HANGCHAIN_INFO  | VARCHAR2 (1)  | Indicates whether the information about <code>BLOCKING_SESSION</code> comes from the hang chain (Y) or not (N)                                                                                                                                                                                                                                                                                                                                                                                                                                      |
| CURRENT_OBJ#             | NUMBER        | Object ID of the object that the session is referencing. This information is only available if the session was waiting for application, cluster, concurrency, and user I/O wait events. Maps to <code>V\$SESSION.ROW_WAIT_OBJ#</code> .                                                                                                                                                                                                                                                                                                             |
| CURRENT_FILE#            | NUMBER        | File number of the file containing the block that the session is referencing. This information is only available if the session was waiting for cluster, concurrency, and user I/O wait events. Maps to <code>V\$SESSION.ROW_WAIT_FILE#</code> .                                                                                                                                                                                                                                                                                                    |
| CURRENT_BLOCK#           | NUMBER        | ID of the block that the session is referencing. This information is only available if the session was waiting for cluster, concurrency, and user I/O wait events. Maps to <code>V\$SESSION.ROW_WAIT_BLOCK#</code> .                                                                                                                                                                                                                                                                                                                                |
| CURRENT_ROW#             | NUMBER        | Row identifier that the session is referencing. This information is only available if the session was waiting for cluster, concurrency, and user I/O wait events. Maps to <code>V\$SESSION.ROW_WAIT_ROW#</code> .                                                                                                                                                                                                                                                                                                                                   |
| TOP_LEVEL_CALL#          | NUMBER        | Oracle top level call number                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                        |
| TOP_LEVEL_CALL_NAME      | VARCHAR2 (64) | Oracle top level call name                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                          |
| CONSUMER_GROUP_ID        | NUMBER        | Consumer group ID                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                   |
| XID                      | RAW (8)       | Transaction ID that the session was working on at the time of sampling. <code>V\$SESSION</code> does not contain this information.                                                                                                                                                                                                                                                                                                                                                                                                                  |
| REMOTE_INSTANCE#         | NUMBER        | Remote instance identifier that will serve the block that this session is waiting for. This information is only available if the session was waiting for cluster events.                                                                                                                                                                                                                                                                                                                                                                            |
| TIME_MODEL               | NUMBER        | Time model information                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                              |
| IN_CONNECTION_MGMT       | VARCHAR2 (1)  | Indicates whether the session was doing connection management at the time of sampling (Y) or not (N)                                                                                                                                                                                                                                                                                                                                                                                                                                                |
| IN_PARSE                 | VARCHAR2 (1)  | Indicates whether the session was parsing at the time of sampling (Y) or not (N)                                                                                                                                                                                                                                                                                                                                                                                                                                                                    |

| Column                      | Datatype      | Description                                                                                                                    |
|-----------------------------|---------------|--------------------------------------------------------------------------------------------------------------------------------|
| IN_HARD_PARSE               | VARCHAR2 (1)  | Indicates whether the session was hard parsing at the time of sampling (Y) or not (N)                                          |
| IN_SQL_EXECUTION            | VARCHAR2 (1)  | Indicates whether the session was executing SQL statements at the time of sampling (Y) or not (N)                              |
| IN_PLSQL_EXECUTION          | VARCHAR2 (1)  | Indicates whether the session was executing PL/SQL at the time of sampling (Y) or not (N)                                      |
| IN_PLSQL_RPC                | VARCHAR2 (1)  | Indicates whether the session was executing inbound PL/SQL RPC calls at the time of sampling (Y) or not (N)                    |
| IN_PLSQL_COMPILATION        | VARCHAR2 (1)  | Indicates whether the session was compiling PL/SQL at the time of sampling (Y) or not (N)                                      |
| IN_JAVA_EXECUTION           | VARCHAR2 (1)  | Indicates whether the session was executing Java at the time of sampling (Y) or not (N)                                        |
| IN_BIND                     | VARCHAR2 (1)  | Indicates whether the session was doing bind operations at the time of sampling (Y) or not (N)                                 |
| IN_CURSOR_CLOSE             | VARCHAR2 (1)  | Indicates whether the session was closing a cursor at the time of sampling (Y) or not (N)                                      |
| IN_SEQUENCE_LOAD            | VARCHAR2 (1)  | Indicates whether the session is loading in sequence (in sequence load code) (Y) or not (N)                                    |
| IN_INMEMORY_QUERY           | VARCHAR2 (1)  | Indicates whether the session was querying the In-Memory Column Store (IM column store) at the time of sampling (Y) or not (N) |
| IN_INMEMORY_POPULATE        | VARCHAR2 (1)  | Indicates whether the session was populating the IM column store at the time of sampling (Y) or not (N)                        |
| IN_INMEMORY_PREPOPULATE     | VARCHAR2 (1)  | Indicates whether the session was prepopulating the IM column store at the time of sampling (Y) or not (N)                     |
| IN_INMEMORY_REPOPULATE      | VARCHAR2 (1)  | Indicates whether the session was repopulating the IM column store at the time of sampling (Y) or not (N)                      |
| IN_INMEMORY_TREPOPULATE     | VARCHAR2 (1)  | Indicates whether the session was trickle repopulating the IM column store at the time of sampling (Y) or not (N)              |
| IN_TABLESPACE_ENCRYPTION    | VARCHAR2 (1)  | Indicates whether encryption or decryption of a tablespace occurred at the time of sampling (Y) or not (N)                     |
| CAPTURE_OVERHEAD            | VARCHAR2 (1)  | Indicates whether the session is executing capture code (Y) or not (N)                                                         |
| REPLAY_OVERHEAD             | VARCHAR2 (1)  | Indicates whether the session is executing replay code (Y) or not (N)                                                          |
| IS_CAPTURED                 | VARCHAR2 (1)  | Indicates whether the session is being captured (Y) or not (N)                                                                 |
| IS_REPLAYED                 | VARCHAR2 (1)  | Indicates whether the session is being replayed (Y) or not (N)                                                                 |
| IS_REPLAY_SYNC_TOKEN_HOLDER | VARCHAR2 (1)  | Indicates whether the session is holding a synchronization token (Y) or not (N) during workload replay                         |
| SERVICE_HASH                | NUMBER        | Hash that identifies the Service; maps to V\$ACTIVE_SERVICES.NAME_HASH                                                         |
| PROGRAM                     | VARCHAR2 (84) | Name of the operating system program                                                                                           |
| MODULE                      | VARCHAR2 (64) | Name of the executing module when sampled, as set by the DBMS_APPLICATION_INFO.SET_MODULE procedure                            |
| ACTION                      | VARCHAR2 (64) | Name of the executing module when sampled, as set by the DBMS_APPLICATION_INFO.SET_ACTION procedure                            |
| CLIENT_ID                   | VARCHAR2 (64) | Client identifier of the session; maps to V\$SESSION.CLIENT_IDENTIFIER                                                         |
| MACHINE                     | VARCHAR2 (64) | Client's operating system machine name                                                                                         |

| Column                      | Datatype      | Description                                                                                                                                                                                                                                                                                                                                                                                                                                     |
|-----------------------------|---------------|-------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|
| PORT                        | NUMBER        | Client port number                                                                                                                                                                                                                                                                                                                                                                                                                              |
| ECID                        | VARCHAR2 (64) | Execution context identifier (sent by Application Server)                                                                                                                                                                                                                                                                                                                                                                                       |
| DBREPLAY_FILE_ID            | NUMBER        | If the session is being captured or replayed, then DBREPLAY_FILE_ID is the file ID for the workload capture or workload replay; otherwise it is NULL.                                                                                                                                                                                                                                                                                           |
| DBREPLAY_CALL_COUNTER       | NUMBER        | If the session is being captured or replayed, then DBREPLAY_CALL_COUNTER is the call counter of the user call that is being captured or replayed; otherwise it is NULL.                                                                                                                                                                                                                                                                         |
| TM_DELTA_TIME               | NUMBER        | Time interval (in microseconds) over which TM_DELTA_CPU_TIME and TM_DELTA_DB_TIME are accumulated                                                                                                                                                                                                                                                                                                                                               |
| TM_DELTA_CPU_TIME           | NUMBER        | Amount of time this session spent on CPU over the last TM_DELTA_TIME microseconds                                                                                                                                                                                                                                                                                                                                                               |
| TM_DELTA_DB_TIME            | NUMBER        | Amount of time spent by this session in database calls over the last TM_DELTA_TIME microseconds                                                                                                                                                                                                                                                                                                                                                 |
| DELTA_TIME                  | NUMBER        | Time interval (in microseconds) since the last time this session was sampled or created, over which the next five statistics are accumulated                                                                                                                                                                                                                                                                                                    |
| DELTA_READ_IO_REQUESTS      | NUMBER        | Number of read I/O requests made by this session over the last DELTA_TIME microseconds                                                                                                                                                                                                                                                                                                                                                          |
| DELTA_WRITE_IO_REQUESTS     | NUMBER        | Number of write I/O requests made by this session over the last DELTA_TIME microseconds                                                                                                                                                                                                                                                                                                                                                         |
| DELTA_READ_IO_BYTES         | NUMBER        | Number of I/O bytes read by this session over the last DELTA_TIME microseconds                                                                                                                                                                                                                                                                                                                                                                  |
| DELTA_WRITE_IO_BYTES        | NUMBER        | Number of I/O bytes written by this session over the last DELTA_TIME microseconds                                                                                                                                                                                                                                                                                                                                                               |
| DELTA_INTERCONNECT_IO_BYTES | NUMBER        | Number of I/O bytes sent over the I/O interconnect over the last DELTA_TIME microseconds                                                                                                                                                                                                                                                                                                                                                        |
| DELTA_READ_MEM_BYTES        | NUMBER        | Number of read bytes through the buffer cache                                                                                                                                                                                                                                                                                                                                                                                                   |
| PGA_ALLOCATED               | NUMBER        | Amount of PGA memory (in bytes) consumed by this session at the time this sample was taken                                                                                                                                                                                                                                                                                                                                                      |
| TEMP_SPACE_ALLOCATED        | NUMBER        | Amount of TEMP memory (in bytes) consumed by this session at the time this sample was taken                                                                                                                                                                                                                                                                                                                                                     |
| CON_DBID                    | NUMBER        | The database ID of the pluggable database (PDB)                                                                                                                                                                                                                                                                                                                                                                                                 |
| CON_ID                      | NUMBER        | The ID of the container to which the data pertains. Possible values include: <ul style="list-style-type: none"> <li>0: This value is used for rows containing data that pertain to the entire CDB. This value is also used for rows in non-CDBs.</li> <li>1: This value is used for rows containing data that pertain to only the root</li> <li><i>n</i>: Where <i>n</i> is the applicable container ID for the rows containing data</li> </ul> |
| DBOP_NAME                   | VARCHAR2 (30) | Database operation name. If the type is SQL, the DBOP_NAME will be NULL.                                                                                                                                                                                                                                                                                                                                                                        |
| DBOP_EXEC_ID                | NUMBER        | Database operation execution identifier for the current execution. If the type is SQL, the DBOP_EXEC_ID will be NULL.                                                                                                                                                                                                                                                                                                                           |

## 8.14 V\$ALL\_SQL\_BIND\_CAPTURE

V\$ALL\_SQL\_BIND\_CAPTURE displays information on bind variables used by SQL cursors.

### Note:

V\$ALL\_SQL\_BIND\_CAPTURE allows application developers to view information about their own bind variables used by SQL cursors. It is similar to the V\$SQL\_BIND\_CAPTURE view, with the following exception:

- When queried by the SYS user, or any user with the SYSDBA privilege, the V\$ALL\_SQL\_BIND\_CAPTURE view displays the same data as the V\$SQL\_BIND\_CAPTURE view.
- When queried by any other user, the V\$ALL\_SQL\_BIND\_CAPTURE view displays only data about bind variables used by the SQL cursors owned by that user.

| Column          | Datatype        | Description                                                                                                                                                                                                                                                              |
|-----------------|-----------------|--------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|
| ADDRESS         | RAW (4   8)     | Address of the parent cursor                                                                                                                                                                                                                                             |
| HASH_VALUE      | NUMBER          | Hash value of the parent cursor in the library cache. The hash value is a fixed index for the view and should always be used to speed up access to the view.                                                                                                             |
| SQL_ID          | VARCHAR2 (13)   | SQL identifier of the parent cursor in the library cache                                                                                                                                                                                                                 |
| CHILD_ADDRESS   | RAW (4   8)     | Address of the child cursor                                                                                                                                                                                                                                              |
| CHILD_NUMBER    | NUMBER          | Child cursor number                                                                                                                                                                                                                                                      |
| NAME            | VARCHAR2 (128)  | Name of the bind variable                                                                                                                                                                                                                                                |
| POSITION        | NUMBER          | Position of the bind variable in the SQL statement                                                                                                                                                                                                                       |
| DUP_POSITION    | NUMBER          | If the binding is performed by name and the bind variable is duplicated, then this column gives the position of the primary bind variable.                                                                                                                               |
| DATATYPE        | NUMBER          | Internal identifier for the bind data type. Beginning in Oracle Database 12c, a number representing a PL/SQL data type can appear in this column.                                                                                                                        |
| DATATYPE_STRING | VARCHAR2 (15)   | Textual representation of the bind data type. Beginning in Oracle Database 12c, a text representation of a PL/SQL-only data type can appear in this column. If the actual data type is a PL/SQL sub type, the name of the data type, not the sub type will be displayed. |
| CHARACTER_SID   | NUMBER          | National character set identifier                                                                                                                                                                                                                                        |
| PRECISION       | NUMBER          | Precision (for numeric binds)                                                                                                                                                                                                                                            |
| SCALE           | NUMBER          | Scale (for numeric binds)                                                                                                                                                                                                                                                |
| MAX_LENGTH      | NUMBER          | Maximum bind length                                                                                                                                                                                                                                                      |
| WAS_CAPTURED    | VARCHAR2 (3)    | Indicates whether the bind value was captured (YES) or not (NO)                                                                                                                                                                                                          |
| LAST_CAPTURED   | DATE            | Date when the bind value was captured. Bind values are captured when SQL statements are executed. To limit the overhead, binds are captured at most every 15 minutes for a given cursor.                                                                                 |
| VALUE_STRING    | VARCHAR2 (4000) | Value of the bind represented as a string                                                                                                                                                                                                                                |

| Column | Datatype | Description                                                                                                                                                                                                                                                                                                                                                                                                                                            |
|--------|----------|--------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|
| CON_ID | NUMBER   | <p>The ID of the container to which the data pertains. Possible values include:</p> <ul style="list-style-type: none"> <li>0: This value is used for rows containing data that pertain to the entire CDB. This value is also used for rows in non-CDBs.</li> <li>1: This value is used for rows containing data that pertain to only the root</li> <li><i>n</i>: Where <i>n</i> is the applicable container ID for the rows containing data</li> </ul> |

**Note:**

This view is available starting with Oracle Database 23ai.

## 8.15 V\$ALL\_SQL\_MONITOR

V\$ALL\_SQL\_MONITOR displays SQL statements whose execution have been (or are being) monitored by Oracle.

**Note:**

V\$ALL\_SQL\_MONITOR allows application developers to view information about their own SQL statements. It is similar to the V\$SQL\_MONITOR view, with the following exception:

- When queried by the SYS user, or any user with the SYSDBA privilege, the V\$ALL\_SQL\_MONITOR view displays the same data as the V\$SQL\_MONITOR view.
- When queried by any other user, the V\$ALL\_SQL\_MONITOR view displays data only about SQL statements that were executed in sessions owned by that user.

| Column    | Datatype      | Description                                                                                                                                                                                                                                                                                                                                                                                                                                                              |
|-----------|---------------|--------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|
| KEY       | NUMBER        | Artificial join key to efficiently join V\$ALL_SQL_MONITOR with its corresponding plan level monitoring statistics stored in V\$ALL_SQL_PLAN_MONITOR                                                                                                                                                                                                                                                                                                                     |
| REPORT_ID | NUMBER        | Unique ID of the XML report stored in Automatic Workload Repository (AWR) for this monitored entity                                                                                                                                                                                                                                                                                                                                                                      |
| STATUS    | VARCHAR2 (19) | <p>SQL execution status:</p> <ul style="list-style-type: none"> <li>QUEUED - SQL statement is queued</li> <li>EXECUTING - SQL statement is still executing</li> <li>DONE (ERROR) - Execution terminated with an error</li> <li>DONE (FIRST N ROWS) - Execution terminated by the application before all rows were fetched</li> <li>DONE (ALL ROWS) - Execution terminated and all rows were fetched</li> <li>DONE - Execution terminated (parallel execution)</li> </ul> |
| USER#     | NUMBER        | User ID of the database user who issued the SQL being monitored                                                                                                                                                                                                                                                                                                                                                                                                          |

| Column                    | Datatype        | Description                                                                                                                                                                                               |
|---------------------------|-----------------|-----------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|
| USERNAME                  | VARCHAR2 (128)  | User name of the database user who issued the SQL being monitored                                                                                                                                         |
| MODULE                    | VARCHAR2 (64)   | Name of the executing module when sampled, as set by the DBMS_APPLICATION_INFO.SET_MODULE procedure                                                                                                       |
| ACTION                    | VARCHAR2 (64)   | Name of the executing action when sampled, as set by the DBMS_APPLICATION_INFO.SET_ACTION procedure                                                                                                       |
| SERVICE_NAME              | VARCHAR2 (64)   | Service name of the user session                                                                                                                                                                          |
| CLIENT_IDENTIFIER         | VARCHAR2 (64)   | Client identifier from the user session                                                                                                                                                                   |
| CLIENT_INFO               | VARCHAR2 (64)   | Client information for the user session                                                                                                                                                                   |
| PROGRAM                   | VARCHAR2 (84)   | Name of the operating system program that issued the monitored SQL                                                                                                                                        |
| PLSQL_ENTRY_OBJECT_ID     | NUMBER          | Object ID of the top-most PL/SQL subprogram on the stack; NULL if there is no PL/SQL subprogram on the stack                                                                                              |
| PLSQL_ENTRY_SUBPROGRAM_ID | NUMBER          | Subprogram ID of the top-most PL/SQL subprogram on the stack; NULL if there is no PL/SQL subprogram on the stack                                                                                          |
| PLSQL_OBJECT_ID           | NUMBER          | Object ID of the currently executing PL/SQL subprogram; NULL if executing SQL                                                                                                                             |
| PLSQL_OWNER_ID            | NUMBER          | ID of the owner of the currently executing PL/SQL subprogram; NULL if executing SQL                                                                                                                       |
| PLSQL_SUBPROGRAM_ID       | NUMBER          | Subprogram ID of the currently executing PL/SQL object; NULL if executing SQL                                                                                                                             |
| FIRST_REFRESH_TIME        | DATE            | Time when monitoring of the SQL statement started, generally a few seconds after execution start time                                                                                                     |
| LAST_REFRESH_TIME         | DATE            | Time when statistics in V\$ALL_SQL_MONITOR were last updated for the SQL statement. Statistics are generally refreshed every second when the statement executes.                                          |
| REFRESH_COUNT             | NUMBER          | Number of times V\$ALL_SQL_MONITOR statistics have been refreshed (generally once every second when the SQL statement executes)                                                                           |
| DBOP_EXEC_ID              | NUMBER          | Database operation execution identifier for the current execution. If the type is SQL, the DBOP_EXEC_ID will be NULL.                                                                                     |
| DBOP_NAME                 | VARCHAR2 (30)   | Database operation name. If the type is SQL, the DBOP_NAME will be NULL.                                                                                                                                  |
| SID                       | NUMBER          | Session identifier executing (or having executed) the SQL statement being monitored                                                                                                                       |
| PROCESS_NAME              | VARCHAR2 (5)    | Process name identifier executing (or having executed) the statement; ora if the process is foreground, else the background process name (for example, p001 for PX server p001)                           |
| SQL_ID                    | VARCHAR2 (13)   | SQL identifier of the statement being monitored                                                                                                                                                           |
| SQL_TEXT                  | VARCHAR2 (2000) | Up to the first 2000 characters of the text of the SQL being monitored                                                                                                                                    |
| IS_FULL_SQLTEXT           | VARCHAR2 (1)    | Indicates whether the SQL_TEXT column has the entire SQL text (Y) or not (N)                                                                                                                              |
| SQL_EXEC_START            | DATE            | Time when the execution started                                                                                                                                                                           |
| SQL_EXEC_ID               | NUMBER          | Execution identifier. Together, the three columns SQL_ID, SQL_EXEC_START, and SQL_EXEC_ID represent the execution key. The execution key is used to uniquely identify one execution of the SQL statement. |
| SQL_PLAN_HASH_VALUE       | NUMBER          | SQL plan hash value                                                                                                                                                                                       |

| Column                   | Datatype      | Description                                                                                                                                                                                                                                                                                                                                                                  |
|--------------------------|---------------|------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|
| SQL_FULL_PLAN_HASH_VALUE | NUMBER        | Numeric representation of the complete SQL plan for this cursor. Comparing one <code>SQL_FULL_PLAN_HASH_VALUE</code> to another easily identifies whether or not two plans are the same (rather than comparing the two plans line by line). Note that the <code>SQL_FULL_PLAN_HASH_VALUE</code> cannot be compared across databases releases. It is not backward compatible. |
| EXACT_MATCHING_SIGNATURE | NUMBER        | Signature calculated on the normalized SQL text. The normalization includes the removal of white space and the uppercasing of all non-literal strings.                                                                                                                                                                                                                       |
| FORCE_MATCHING_SIGNATURE | NUMBER        | Same as <code>EXACT_MATCHING_SIGNATURE</code> but literals in the SQL text are replaced by binds                                                                                                                                                                                                                                                                             |
| SQL_CHILD_ADDRESS        | RAW(8)        | Address of the child cursor (can be used with <code>SQL_ID</code> to join with <code>V\$SQL</code> )                                                                                                                                                                                                                                                                         |
| SESSION_SERIAL#          | NUMBER        | Session serial number executing the statement being monitored                                                                                                                                                                                                                                                                                                                |
| PX_IS_CROSS_INSTANCE     | VARCHAR2(1)   | Indicates whether the SQL statement ran parallel across multiple instances (Y) or not (N)                                                                                                                                                                                                                                                                                    |
| PX_MAXDOP                | NUMBER        | Maximum degree of parallelism for any plan operation executed on behalf of the monitored SQL                                                                                                                                                                                                                                                                                 |
| PX_MAXDOP_INSTANCES      | NUMBER        | Number of database instances touched at the maximum degree of parallelism                                                                                                                                                                                                                                                                                                    |
| PX_SERVERS_REQUESTED     | NUMBER        | Total number of parallel execution servers requested to execute the monitored SQL                                                                                                                                                                                                                                                                                            |
| PX_SERVERS_ALLOCATED     | NUMBER        | Actual number of parallel execution servers allocated to execute the query                                                                                                                                                                                                                                                                                                   |
| PX_SERVER#               | NUMBER        | Logical parallel execution server process number executing (or having executed) the statement being monitored; NULL if this monitoring entry is not associated with an execution server. This is a logical number within the parallel server set (see <code>SERVER#</code> in <code>V\$PX_SESSION</code> ).                                                                  |
| PX_SERVER_GROUP          | NUMBER        | Logical parallel execution server group number to which <code>PX_SERVER#</code> belongs (see <code>SERVER_GROUP</code> in <code>V\$PX_SESSION</code> ); NULL if this monitoring entry is not associated with a parallel execution server. This value is generally 1 unless the SQL statement has one or more parallel sub-queries.                                           |
| PX_SERVER_SET            | NUMBER        | Number (1 or 2) of the logical set of parallel execution servers to which <code>PX_SERVER#</code> belongs (see <code>SERVER_SET</code> in <code>V\$PX_SESSION</code> ); NULL if this monitoring entry is not associated with a parallel execution server                                                                                                                     |
| PX_QCINST_ID             | NUMBER        | Instance identifier where the parallel execution coordinator runs; NULL if <code>PX_SERVER#</code> is NULL                                                                                                                                                                                                                                                                   |
| PX_QCSID                 | NUMBER        | Session identifier for the parallel execution coordinator; NULL if <code>PX_SERVER#</code> is NULL                                                                                                                                                                                                                                                                           |

| Column                         | Datatype       | Description                                                                                                                                                                                                                                                                                                                                                                                                                                                                               |
|--------------------------------|----------------|-------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|
| RM_LAST_ACTION                 | VARCHAR2 (48)  | <p>The most recent action that was taken on this SQL operation by Resource Manager. Its value is one of the following:</p> <ul style="list-style-type: none"> <li>CANCEL_SQL</li> <li>KILL_SESSION</li> <li>LOG_ONLY</li> <li>SWITCH TO &lt;CG NAME&gt;</li> </ul> <p>For the last value, &lt;CG NAME&gt; is the name of the consumer group that the SQL operation was switched to. If the Resource Plan has since been changed then &lt;CG NAME&gt; is the ID of the consumer group.</p> |
| RM_LAST_ACTION_REASON          | VARCHAR2 (128) | <p>The reason for the most recent action that was taken on this SQL operation by Resource Manager. Its value is one of the following:</p> <ul style="list-style-type: none"> <li>SWITCH_CPU_TIME</li> <li>SWITCH_IO_REQS</li> <li>SWITCH_IO_MBS</li> <li>SWITCH_ELAPSED_TIME</li> <li>SWITCH_IO_LOGICAL</li> </ul>                                                                                                                                                                        |
| RM_LAST_ACTION_TIME            | DATE           | The time of the most recent action that was taken on this SQL operation by Resource Manager                                                                                                                                                                                                                                                                                                                                                                                               |
| RM_CONSUMER_GROUP              | VARCHAR2 (128) | The current consumer group for this SQL operation                                                                                                                                                                                                                                                                                                                                                                                                                                         |
| CON_ID                         | NUMBER         | <p>The ID of the container to which the data pertains. Possible values include:</p> <ul style="list-style-type: none"> <li>0: This value is used for rows containing data that pertain to the entire CDB. This value is also used for rows in non-CDBs.</li> <li>1: This value is used for rows containing data that pertain to only the root</li> <li><i>n</i>: Where <i>n</i> is the applicable container ID for the rows containing data</li> </ul>                                    |
| CON_NAME                       | VARCHAR2 (128) | Container name of the object. The value of this column is NULL in non-CDBs.                                                                                                                                                                                                                                                                                                                                                                                                               |
| ECID                           | VARCHAR2 (64)  | Execution context identifier (sent by Application Server)                                                                                                                                                                                                                                                                                                                                                                                                                                 |
| IS_ADAPTIVE_PLAN               | VARCHAR2 (1)   | Indicates whether the statistics are from an adaptive plan (Y) or not (N).                                                                                                                                                                                                                                                                                                                                                                                                                |
| IS_FINAL_PLAN                  | VARCHAR2 (1)   | Indicates whether the statistics are from the final plan (Y) or not (N).                                                                                                                                                                                                                                                                                                                                                                                                                  |
| IN_DBOP_NAME                   | VARCHAR2 (30)  | If the SQL that is monitored was executed by a session that was also monitored by a database operation (DBOP), then this column specifies the name of that DBOP                                                                                                                                                                                                                                                                                                                           |
| IN_DBOP_EXEC_ID                | NUMBER         | If the SQL that is monitored was executed by a session that was also monitored by a database operation (DBOP), then this column specifies the execution ID of that DBO                                                                                                                                                                                                                                                                                                                    |
| IO_CELL_UNCOMPRESSED_BYTES     | NUMBER         | <p>Number of uncompressed bytes (that is, size after decompression) that are offloaded to the Exadata cells</p> <p><b>See Also:</b> Oracle Exadata Storage Server Software documentation for more information</p>                                                                                                                                                                                                                                                                         |
| IO_CELL_OFFLOAD_ELIGIBLE_BYTES | NUMBER         | <p>Number of I/O bytes which can be filtered by the Exadata storage system</p> <p><b>See Also:</b> Oracle Exadata Storage Server Software documentation for more information</p>                                                                                                                                                                                                                                                                                                          |

| Column                         | Datatype       | Description                                                                                                                                                                                                                                       |
|--------------------------------|----------------|---------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|
| IO_CELL_OFFLOAD_RETURNED_BYTES | NUMBER         | Number of filtered bytes returned by Exadata cells (that is, the number of bytes returned after processing has been offloaded on the Exadata cells)<br><b>See Also:</b> Oracle Exadata Storage Server Software documentation for more information |
| CURRENT_USER#                  | NUMBER         | Unique number identifying the current user                                                                                                                                                                                                        |
| CURRENT_USERNAME               | VARCHAR2 (128) | Username for the current user                                                                                                                                                                                                                     |
| PDB_REPORT_ID                  | NUMBER         | Unique ID of the XML report of a PDB monitored entity that is stored in the CDB's Automatic Workload Repository (AWR) tables                                                                                                                      |
| PDB_ID                         | NUMBER         | Container ID of the PDB                                                                                                                                                                                                                           |
| PARSING_SCHEMA#                | NUMBER         | Identifier of the parsing schema                                                                                                                                                                                                                  |
| PARSING_SCHEMA_NAME            | VARCHAR2 (128) | Name of the parsing schema                                                                                                                                                                                                                        |

## 8.16 V\$ALL\_SQL\_PLAN\_MONITOR

V\$ALL\_SQL\_PLAN\_MONITOR displays plan level monitoring statistics for each SQL statement found in V\$ALL\_SQL\_MONITOR.

### Note:

V\$ALL\_SQL\_PLAN\_MONITOR allows application developers to view statistics about their own SQL statements. It is similar to the V\$SQL\_PLAN\_MONITOR view, with the following exception:

- When queried by the SYS user, or any user with the SYSDBA privilege, the V\$ALL\_SQL\_PLAN\_MONITOR view displays the same data as the V\$SQL\_PLAN\_MONITOR view.
- When queried by any other user, the V\$ALL\_SQL\_PLAN\_MONITOR view displays data only about SQL statements that were executed in sessions owned by that user.

| Column | Datatype | Description                                                                                                                                                                                                                                                                                                                                                                                                                                           |
|--------|----------|-------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|
| CON_ID | NUMBER   | The ID of the container to which the data pertains. Possible values include: <ul style="list-style-type: none"> <li>• 0: This value is used for rows containing data that pertain to the entire CDB. This value is also used for rows in non-CDBs.</li> <li>• 1: This value is used for rows containing data that pertain to only the root</li> <li>• <i>n</i>: Where <i>n</i> is the applicable container ID for the rows containing data</li> </ul> |
| KEY    | NUMBER   | Foreign key to efficiently join V\$ALL_SQL_PLAN_MONITOR with V\$ALL_SQL_MONITOR (see V\$ALL_SQL_MONITOR)                                                                                                                                                                                                                                                                                                                                              |

| Column               | Datatype       | Description                                                                                                                                                                                                                                                                                                                                                                                                             |
|----------------------|----------------|-------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|
| STATUS               | VARCHAR2 (19)  | SQL execution status: <ul style="list-style-type: none"> <li>EXECUTING - SQL statement is still executing</li> <li>DONE (ERROR) - Execution terminated with an error</li> <li>DONE (FIRST N ROWS) - Execution terminated by the application before all rows were fetched</li> <li>DONE (ALL ROWS) - Execution terminated and all rows were fetched</li> <li>DONE - Execution terminated (parallel execution)</li> </ul> |
| FIRST_REFRESH_TIME   | DATE           | Time when monitoring of the SQL statement started                                                                                                                                                                                                                                                                                                                                                                       |
| LAST_REFRESH_TIME    | DATE           | Time when statistics were last updated for the SQL statement                                                                                                                                                                                                                                                                                                                                                            |
| FIRST_CHANGE_TIME    | DATE           | First time a row was produced by this operation                                                                                                                                                                                                                                                                                                                                                                         |
| LAST_CHANGE_TIME     | DATE           | Last time a row was produced by this operation                                                                                                                                                                                                                                                                                                                                                                          |
| REFRESH_COUNT        | NUMBER         | Number of times statistics have been refreshed                                                                                                                                                                                                                                                                                                                                                                          |
| SID                  | NUMBER         | Session identifier executing (or having executed) the SQL statement being monitored                                                                                                                                                                                                                                                                                                                                     |
| PROCESS_NAME         | VARCHAR2 (5)   | Process name identifier                                                                                                                                                                                                                                                                                                                                                                                                 |
| SQL_ID               | VARCHAR2 (13)  | SQL identifier                                                                                                                                                                                                                                                                                                                                                                                                          |
| SQL_EXEC_START       | DATE           | Time when the execution started                                                                                                                                                                                                                                                                                                                                                                                         |
| SQL_EXEC_ID          | NUMBER         | Execution identifier                                                                                                                                                                                                                                                                                                                                                                                                    |
| SQL_PLAN_HASH_VALUE  | NUMBER         | SQL plan hash value                                                                                                                                                                                                                                                                                                                                                                                                     |
| SQL_CHILD_ADDRESS    | RAW (8)        | Address of the child cursor                                                                                                                                                                                                                                                                                                                                                                                             |
| PLAN_PARENT_ID       | NUMBER         | ID of the next execution step that operates on the output of the current step                                                                                                                                                                                                                                                                                                                                           |
| PLAN_LINE_ID         | NUMBER         | Plan line number for the entry                                                                                                                                                                                                                                                                                                                                                                                          |
| PLAN_OPERATION       | VARCHAR2 (30)  | Plan operation name (from V\$SQL_PLAN)                                                                                                                                                                                                                                                                                                                                                                                  |
| PLAN_OPTIONS         | VARCHAR2 (30)  | Plan option name (from V\$SQL_PLAN)                                                                                                                                                                                                                                                                                                                                                                                     |
| PLAN_OBJECT_OWNER    | VARCHAR2 (128) | Name of the user who owns the schema containing the table or index                                                                                                                                                                                                                                                                                                                                                      |
| PLAN_OBJECT_NAME     | VARCHAR2 (128) | Name of the table or index                                                                                                                                                                                                                                                                                                                                                                                              |
| PLAN_OBJECT_TYPE     | VARCHAR2 (20)  | Type of the object                                                                                                                                                                                                                                                                                                                                                                                                      |
| PLAN_DEPTH           | NUMBER         | Depth (or level) of the operation in the tree. It is not necessary to issue a CONNECT BY statement to get the level information, which is generally used to indent the rows from the PLAN_TABLE table. The root operation (statement) is level 0.                                                                                                                                                                       |
| PLAN_POSITION        | NUMBER         | Order of processing for all operations that have the same PARENT_ID                                                                                                                                                                                                                                                                                                                                                     |
| PLAN_COST            | NUMBER         | Cost of the operation as estimated by the optimizer's cost-based approach. For statements that use the rule-based approach, this column is NULL.                                                                                                                                                                                                                                                                        |
| PLAN_CARDINALITY     | NUMBER         | Estimate, by the cost-based optimizer, of the number of rows produced by the operation                                                                                                                                                                                                                                                                                                                                  |
| PLAN_BYTES           | NUMBER         | Estimate, by the cost-based optimizer, of the number of bytes produced by the operation                                                                                                                                                                                                                                                                                                                                 |
| PLAN_TIME            | NUMBER         | Elapsed time (in seconds) of the operation as estimated by the optimizer's cost-based approach. For statements that use the rule-based approach, this column is NULL.                                                                                                                                                                                                                                                   |
| PLAN_PARTITION_START | VARCHAR2 (64)  | Start partition of a range of accessed partitions                                                                                                                                                                                                                                                                                                                                                                       |
| PLAN_PARTITION_STOP  | VARCHAR2 (64)  | Stop partition of a range of accessed partitions                                                                                                                                                                                                                                                                                                                                                                        |

| Column                  | Datatype | Description                                                                                                                                                                                                                                                                                                                                                                                                                                                        |
|-------------------------|----------|--------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|
| PLAN_CPU_COST           | NUMBER   | CPU cost of the operation as estimated by the optimizer's cost-based approach. For statements that use the rule-based approach, this column is NULL.                                                                                                                                                                                                                                                                                                               |
| PLAN_IO_COST            | NUMBER   | I/O cost of the operation as estimated by the optimizer's cost-based approach. For statements that use the rule-based approach, this column is NULL.                                                                                                                                                                                                                                                                                                               |
| PLAN_TEMP_SPACE         | NUMBER   | Temporary space usage of the operation (sort or hash-join) as estimated by the optimizer's cost-based approach. For statements that use the rule-based approach, this column is NULL.                                                                                                                                                                                                                                                                              |
| STARTS                  | NUMBER   | Number of times this operation was executed. For example, an operation is executed multiple times when it is on the right side of a nested-loop join (once for each row of the left input of that nested-loop join).                                                                                                                                                                                                                                               |
| OUTPUT_ROWS             | NUMBER   | Number of rows produced by this operation since the execution started. This number is cumulated for all executions of this operation. Divide by the value of the STARTS column to compute the average number of rows per execution of the operation. Note that the value in the STARTS column is equal to or higher than the value in the OUTPUT_ROWS column. The value will usually be equal, but depending on internal optimizations a higher value may be seen. |
| IO_INTERCONNECT_BYTES   | NUMBER   | Number of I/O bytes exchanged between Oracle Database and the storage system. Maintained only after Oracle starts to monitor the execution.                                                                                                                                                                                                                                                                                                                        |
| PHYSICAL_READ_REQUESTS  | NUMBER   | Number of physical read I/O requests issued by the monitored SQL. Maintained only after Oracle starts to monitor the execution.                                                                                                                                                                                                                                                                                                                                    |
| PHYSICAL_READ_BYTES     | NUMBER   | Number of bytes read from disks by the monitored SQL. Maintained only after Oracle starts to monitor the execution.                                                                                                                                                                                                                                                                                                                                                |
| PHYSICAL_WRITE_REQUESTS | NUMBER   | Number of physical write I/O requests issued by the monitored SQL. Maintained only after Oracle starts to monitor the execution.                                                                                                                                                                                                                                                                                                                                   |
| PHYSICAL_WRITE_BYTES    | NUMBER   | Number of bytes written to disks by the monitored SQL. Maintained only after Oracle starts to monitor the execution.                                                                                                                                                                                                                                                                                                                                               |
| WORKAREA_MEM            | NUMBER   | Amount of memory (in bytes) used by the operation when the query is executing; NULL if the execution is done. This applies only to operations using a work area, such as sort, hash-join, group-by, and so on.                                                                                                                                                                                                                                                     |
| WORKAREA_MAX_MEM        | NUMBER   | Maximum value (in bytes) for WORKAREA_MEM; NULL if the operation is not using a work area. When the execution is finished, this value will hold the maximum amount of memory consumed by this operation during the execution of the statement.                                                                                                                                                                                                                     |
| WORKAREA_TEMPSEG        | NUMBER   | Amount of temporary space (in bytes) used by the operation when the query is executing; NULL if the operation has not spilled to disk or if the execution is finished                                                                                                                                                                                                                                                                                              |
| WORKAREA_MAX_TEMPSEG    | NUMBER   | Maximum value (in bytes) for WORKAREA_TEMPSEG; NULL if this operation never spilled to disk. When the execution is done, this value will hold the maximum amount of temporary space consumed by this operation during the entire execution.                                                                                                                                                                                                                        |
| OTHERSTAT_GROUP_ID      | NUMBER   | Plan line statistic group identifier (see GROUP_ID column in V\$SQL_MONITOR_STATNAME)                                                                                                                                                                                                                                                                                                                                                                              |
| OTHERSTAT_1_ID          | NUMBER   | Statistic identifier (see ID column in V\$SQL_MONITOR_STATNAME) for statistic number 1 of that plan line                                                                                                                                                                                                                                                                                                                                                           |
| OTHERSTAT_1_TYPE        | NUMBER   | Reserved for internal use                                                                                                                                                                                                                                                                                                                                                                                                                                          |

| Column             | Datatype | Description                                                                                               |
|--------------------|----------|-----------------------------------------------------------------------------------------------------------|
| OTHERSTAT_1_VALUE  | NUMBER   | Value of statistic number 1 of that plan line                                                             |

| OTHERSTAT_29_ID    | NUMBER   | Statistic identifier (see ID column in V\$SQL_MONITOR_STATNAME) for statistic number 29 of that plan line |
| OTHERSTAT_29_TYPE  | NUMBER   | Reserved for internal use                                                                                 |
| OTHERSTAT_29_VALUE | NUMBER   | Value of statistic number 29 of that plan line                                                            |
| OTHERSTAT_30_ID    | NUMBER   | Statistic identifier (see ID column in V\$SQL_MONITOR_STATNAME) for statistic number 30 of that plan line |
| OTHERSTAT_30_TYPE  | NUMBER   | Reserved for internal use                                                                                 |
| OTHERSTAT_30_VALUE | NUMBER   | Value of statistic number 30 of that plan line                                                            |

| Column                  | Datatype | Description                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                  |
|-------------------------|----------|------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|
| OTHER_XML               | CLOB     | Provides extra information specific to an execution step of the execution plan. The content of this column is structured using XML, which allows multiple pieces of information to be stored, including the following: <ul style="list-style-type: none"> <li>Name of the schema against which the query was parsed</li> <li>Release number of the Oracle Database that produced the explain plan</li> <li>Hash value associated with the execution plan</li> <li>Name (if any) of the outline or the SQL profile used to build the execution plan</li> <li>Indication of whether or not dynamic statistics were used to produce the plan</li> <li>The outline data, a set of optimizer hints that can be used to regenerate the same plan</li> <li>Additional data that describes the relationship between rows in the plan table and subplans of adaptive plans</li> </ul> |
| PLAN_OPERATION_INACTIVE | NUMBER   | Indicates whether this plan operation was part of the final resolved plan                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                    |
| PDB_ID                  | NUMBER   | Container ID of the PDB                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                      |

## 8.17 V\$AQ

V\$AQ displays statistics for the queues in the database.

| Column          | Datatype | Description                                                                                                                                                                                                                                                                                                                                                                                                                                     |
|-----------------|----------|-------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|
| QID             | NUMBER   | Unique queue identifier                                                                                                                                                                                                                                                                                                                                                                                                                         |
| WAITING         | NUMBER   | Number of messages in the queue in the state 'WAITING'                                                                                                                                                                                                                                                                                                                                                                                          |
| READY           | NUMBER   | Number of messages in the queue in the state 'READY'                                                                                                                                                                                                                                                                                                                                                                                            |
| EXPIRED         | NUMBER   | Number of messages in the queue the state 'EXPIRED'                                                                                                                                                                                                                                                                                                                                                                                             |
| AVERAGE_MSG_AGE | NUMBER   | Average age of the messages in the queue'                                                                                                                                                                                                                                                                                                                                                                                                       |
| TOTAL_WAIT      | NUMBER   | Total wait time of all 'READY' messages in the queue                                                                                                                                                                                                                                                                                                                                                                                            |
| AVERAGE_WAIT    | NUMBER   | Average wait time of 'READY' messages in the queue                                                                                                                                                                                                                                                                                                                                                                                              |
| CON_ID          | NUMBER   | The ID of the container to which the data pertains. Possible values include: <ul style="list-style-type: none"> <li>0: This value is used for rows containing data that pertain to the entire CDB. This value is also used for rows in non-CDBs.</li> <li>1: This value is used for rows containing data that pertain to only the root</li> <li><i>n</i>: Where <i>n</i> is the applicable container ID for the rows containing data</li> </ul> |

## 8.18 V\$AQ\_BACKGROUND\_COORDINATOR

V\$AQ\_BACKGROUND\_COORDINATOR lists performance statistics for the Oracle Database Advanced Queuing primary background coordinator process (AQPC).

| Column           | Datatype      | Description                                                                                                                                          |
|------------------|---------------|------------------------------------------------------------------------------------------------------------------------------------------------------|
| PROCESS_ID       | VARCHAR2 (24) | Operating system process ID of the primary                                                                                                           |
| PROCESS_NAME     | VARCHAR2 (48) | Operating system name of the primary                                                                                                                 |
| NUM_JOBS         | NUMBER        | Number of jobs started                                                                                                                               |
| JOB_LATENCY      | NUMBER        | Job start latency                                                                                                                                    |
| NUM_COORDINATORS | NUMBER        | Number of primaries started                                                                                                                          |
| CON_ID           | NUMBER        | The ID of the container to which the data pertains. The CON_ID value in this view is always 0. The rows pertain to the entire CDB or to the non-CDB. |

## 8.19 V\$AQ\_BMAP\_NONDUR\_SUBSCRIBERS

V\$AQ\_BMAP\_NONDUR\_SUBSCRIBERS can be used to get the available bit positions. The view is queried to get the free bit position during creation of a non-durable subscriber.

| Column   | Datatype  | Description                                                                                                                                                                                                                                                                                                                                                                                                                                 |
|----------|-----------|---------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|
| QUEUE_ID | NUMBER    | Queue ID                                                                                                                                                                                                                                                                                                                                                                                                                                    |
| USED_POS | RAW (128) | Stream of bits to identify used and available bit positions                                                                                                                                                                                                                                                                                                                                                                                 |
| CON_ID   | NUMBER    | The ID of the container to which the data pertains. Possible values include: <ul style="list-style-type: none"><li>0: This value is used for rows containing data that pertain to the entire CDB. This value is also used for rows in non-CDBs.</li><li>1: This value is used for rows containing data that pertain to only the root</li><li><i>n</i>: Where <i>n</i> is the applicable container ID for the rows containing data</li></ul> |

## 8.20 V\$AQ\_CROSS\_INSTANCE\_JOBS

V\$AQ\_CROSS\_INSTANCE\_JOBS describes each of the cross process jobs.

Each job serves to forward messages for a shard from a source instance to a destination instance for a set of subscribers of a sharded queue.

### Note:

AQ sharded queues are deprecated in Oracle Database 21c. Oracle recommends that you instead use Transactional Event Queues (TxEventQs) for higher throughput and better performance.

| Column                  | Datatype       | Description                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                       |

## 8.21 V\$AQ\_IPC\_ACTIVE\_MSGS

V\$AQ\_IPC\_ACTIVE\_MSGS displays the information related to active IPC messages being processed by AQ background processes.

| Column       | Datatype     | Description                       |
|--------------|--------------|-----------------------------------|
| PROCESS_NAME | VARCHAR2(48) | Worker process name               |
| PROCESS_ID   | NUMBER       | Oracle process ID for this worker |

| Column          | Datatype      | Description                                                                                                                                                                                                                                                                                                                                                                                                                                     |

## 8.22 V\$AQ\_IPC\_MSG\_STATS

V\$AQ\_IPC\_MSG\_STATS displays the statistics of each IPC message class, such as the total number of invocations of a message class, total pending message/processed message count, and last failure related data. Information like total processed message count, average pending time/average processing time gives a real-time outline of AQ IPC background state.

| Column               | Datatype                     | Description                                                                        |
|----------------------|------------------------------|------------------------------------------------------------------------------------|
| MSG_CLASS_NAME       | VARCHAR2 (30)                | Message class name                                                                 |
| TOTAL_MSG_CALLS      | NUMBER                       | Total number of calls for this message class                                       |
| TOTAL_ACTIVE_MSGS    | NUMBER                       | Total number of active messages presently processed by workers and primary         |
| TOTAL_PENDING_MSGS   | NUMBER                       | Total number of pending messages in the primary's local context                    |
| TOTAL_PROCESSED_MSGS | NUMBER                       | Total number of processed messages                                                 |
| LAST_RECEIVED_TIME   | TIMESTAMP (3) WITH TIME ZONE | Time when the last message of this type was received in the primary's context list |
| LAST_PROCESS_TIME    | TIMESTAMP (3) WITH TIME ZONE | Time when the last message was picked for processing                               |

| Column                  | Datatype                    | Description                                                                                                                                                                                                                                                                                                                                                                                                                                 |
|-------------------------|-----------------------------|---------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|
| LAST_DONE_TIME          | TIMESTAMP(3) WITH TIME ZONE | Time when the last message was done processing                                                                                                                                                                                                                                                                                                                                                                                              |
| AVERAGE_PENDING_TIME    | NUMBER                      | Average pending time for this message class (in seconds)                                                                                                                                                                                                                                                                                                                                                                                    |
| AVERAGE_PROCESSING_TIME | NUMBER                      | Average processing time for this message class (in seconds)                                                                                                                                                                                                                                                                                                                                                                                 |
| LAST_FAILURE_TIME       | TIMESTAMP(3) WITH TIME ZONE | Time of the last failure for this message class                                                                                                                                                                                                                                                                                                                                                                                             |
| LAST_ERROR_MSG          | VARCHAR2(512)               | Last error message for this message class                                                                                                                                                                                                                                                                                                                                                                                                   |
| CON_ID                  | NUMBER                      | The ID of the container to which the data pertains. Possible values include: <ul style="list-style-type: none"><li>0: This value is used for rows containing data that pertain to the entire CDB. This value is also used for rows in non-CDBs.</li><li>1: This value is used for rows containing data that pertain to only the root</li><li><i>n</i>: Where <i>n</i> is the applicable container ID for the rows containing data</li></ul> |

## 8.23 V\$AQ\_IPC\_PENDING\_MSGS

V\$AQ\_IPC\_PENDING\_MSGS displays information about pending messages, present in the local primary context.

| Column          | Datatype     | Description                                                                                                                                                                                                                                                                                                                                                                                                                                 |
|-----------------|--------------|---------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|
| SEQUENCE_NUMBER | NUMBER       | Message sequence number                                                                                                                                                                                                                                                                                                                                                                                                                     |
| MSG_CLASS_NAME  | VARCHAR2(30) | Message class name                                                                                                                                                                                                                                                                                                                                                                                                                          |
| MSG_FLAGS       | NUMBER       | Message flags: <ul style="list-style-type: none"><li>1: This message needs ack</li><li>2: Short</li><li>4: Long</li><li>8: Priority</li><li>10: Special ack</li></ul>                                                                                                                                                                                                                                                                       |
| MSG_SUBMT_TIME  | NUMBER       | Time this message was added into the IPC primary's list (in seconds)                                                                                                                                                                                                                                                                                                                                                                        |
| CON_ID          | NUMBER       | The ID of the container to which the data pertains. Possible values include: <ul style="list-style-type: none"><li>0: This value is used for rows containing data that pertain to the entire CDB. This value is also used for rows in non-CDBs.</li><li>1: This value is used for rows containing data that pertain to only the root</li><li><i>n</i>: Where <i>n</i> is the applicable container ID for the rows containing data</li></ul> |

## 8.24 V\$AQ\_JOB\_COORDINATOR

V\$AQ\_JOB\_COORDINATOR lists performance statistics per coordinator, for every AQ coordinator controlled by the Oracle Database Advanced Queueing primary coordinator.

| Column           | Datatype      | Description                                                                                                                                          |
|------------------|---------------|------------------------------------------------------------------------------------------------------------------------------------------------------|
| COORDINATOR_ID   | NUMBER        | ID of the coordinator                                                                                                                                |
| PROCESS_ID       | VARCHAR2 (24) | Operating system process ID of the coordinator                                                                                                       |
| PROCESS_NAME     | VARCHAR2 (48) | Operating system process name of the coordinator                                                                                                     |
| JOB_NAME         | VARCHAR2 (32) | Name of the job handled                                                                                                                              |
| JOB_TYPE         | NUMBER        | Type of job handled                                                                                                                                  |
| SERVER_COUNT     | NUMBER        | Number of servers active                                                                                                                             |
| MAX_SERVER_COUNT | NUMBER        | Maximum server fanout achieved                                                                                                                       |
| CON_ID           | NUMBER        | The ID of the container to which the data pertains. The CON_ID value in this view is always 0. The rows pertain to the entire CDB or to the non-CDB. |

## 8.25 V\$AQ\_MESSAGE\_CACHE

V\$AQ\_MESSAGE\_CACHE provides performance statistics of the message cache for sharded queues at the subshard level in the instance.

**Note:**

AQ sharded queues are deprecated in Oracle Database 21c. Oracle recommends that you instead use Transactional Event Queues (TxEventQs) for higher throughput and better performance.

| Column            | Datatype | Description                                                       |
|-------------------|----------|-------------------------------------------------------------------|
| QUEUE_ID          | NUMBER   | Queue ID                                                          |
| SHARD_ID          | NUMBER   | Shard ID                                                          |
| PRIORITY          | NUMBER   | Priority of the subshard for dequeue, range 0–9                   |
| SUBSHARD_ID       | NUMBER   | Subshard ID in the shard                                          |
| PARTITION_ID      | NUMBER   | Partition id for the particular subshard                          |
| MAX_MSGS          | NUMBER   | Maximum number of messages of subshard                            |
| ENQUEUED_MSGS     | NUMBER   | Number of messages enqueued for the subshard                      |
| MSGS_MADE_EXPIRED | NUMBER   | Number of messages made expired                                   |
| CHUNK_SIZE        | NUMBER   | The size of the memory chunk for storing messages                 |
| NUM_CHUNKS        | NUMBER   | Number of chunks for the subshard                                 |
| NUM_FREE_CHUNKS   | NUMBER   | Number of free chunks for the subshard                            |
| USED_MEMORY_SIZE  | NUMBER   | Total estimated size of memory in use (in bytes) for the subshard |

| Column | Datatype      | Description                                                                                                                                                                                                                                                                                                                                                                                                                                     |
|--------|---------------|-------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|
| STATE  | VARCHAR2 (13) | Subshard state. Possible values: <ul style="list-style-type: none"> <li>CACHED (in memory)</li> <li>UNCACHED (on disk)</li> <li>UNCACHED_FREE</li> <li>CACHED_FREE</li> <li>UNKNOWN</li> </ul>                                                                                                                                                                                                                                                  |
| CON_ID | NUMBER        | The ID of the container to which the data pertains. Possible values include: <ul style="list-style-type: none"> <li>0: This value is used for rows containing data that pertain to the entire CDB. This value is also used for rows in non-CDBs.</li> <li>1: This value is used for rows containing data that pertain to only the root</li> <li><i>n</i>: Where <i>n</i> is the applicable container ID for the rows containing data</li> </ul> |

## 8.26 V\$AQ\_MESSAGE\_CACHE\_ADVICE

V\$AQ\_MESSAGE\_CACHE\_ADVICE shows simulated metrics for a range of potential message cache sizes. This view assists in cache sizing by providing information in the form of metrics as described below.

**Note:**

AQ sharded queues are deprecated in Oracle Database 21c. Oracle recommends that you instead use Transactional Event Queues (TxEventQs) for higher throughput and better performance.

| Column                | Datatype     | Description                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                          |
|-----------------------|--------------|--------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|
| SIZE_FOR_ESTIMATE     | NUMBER       | Cache size for simulation (in megabytes)                                                                                                                                                                                                                                                                                                                                                                                                                                                                                             |
| SIZE_FACTOR           | NUMBER       | Size factor with respect to the current cache size                                                                                                                                                                                                                                                                                                                                                                                                                                                                                   |
| ESTD_SIZE_TYPE        | VARCHAR2 (9) | Possible values: <ul style="list-style-type: none"> <li>MINIMUM: This cache size is required to have all dequeues in-memory (no uncached).</li> <li>PREFERRED: This is the smallest message cache size required to eliminate 80% of unevictions that occur with a message cache size of MINIMUM for subscribers who keep up, that is, subscribers whose dequeue rate matches the enqueue rate.</li> <li>MAXIMUM: This cache size is required to have zero evictions.</li> <li>NULL: This is the value in all other cases.</li> </ul> |
| ESTD_CACHED_SUBSHARDS | NUMBER       | Estimated number of cached subshards for this size                                                                                                                                                                                                                                                                                                                                                                                                                                                                                   |

| Column                  | Datatype | Description                                                                                                                                                                                                                                                                                                                                                                                                                                     |
|-------------------------|----------|-------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|
| ESTD_UNCACHED_SUBSHARDS | NUMBER   | Estimated number of uncached subshards for this size                                                                                                                                                                                                                                                                                                                                                                                            |
| ESTD_EVICTIONS          | NUMBER   | Estimated number of subshards evicted for this size                                                                                                                                                                                                                                                                                                                                                                                             |
| ESTD_EVICTION_RATE      | NUMBER   | Estimated number of subshards getting evicted per minute                                                                                                                                                                                                                                                                                                                                                                                        |
| ESTD_FG_UNEVICTIONS     | NUMBER   | Estimated number of subshards unevicted by foreground processes                                                                                                                                                                                                                                                                                                                                                                                 |

| TOTAL_ENQUEUE_RATE      | NUMBER   | Simulated number of messages being enqueued per second                                                                                                                                                                                                                                                                                                                                                                                          |
| TOTAL_DEQUEUE_RATE      | NUMBER   | Simulated number of messages being dequeued per second                                                                                                                                                                                                                                                                                                                                                                                          |
| AVG_SUBSHARD_SIZE       | NUMBER   | Simulated average number of messages per cached subshard                                                                                                                                                                                                                                                                                                                                                                                        |
| AVG_SUBSHARD_MEMORY     | NUMBER   | Simulated average memory per cached subshard (in megabytes)                                                                                                                                                                                                                                                                                                                                                                                     |
| AVG_EVICTION_TIME       | NUMBER   | Simulated average time to evict a cached subshard (in milliseconds)                                                                                                                                                                                                                                                                                                                                                                             |
| AVG_UNEVICTION_TIME     | NUMBER   | Simulated average time to unevict a cached subshard (in milliseconds)                                                                                                                                                                                                                                                                                                                                                                           |
| FLAGS                   | NUMBER   | Reserved for internal use                                                                                                                                                                                                                                                                                                                                                                                                                       |
| SIMULATION_TIME         | NUMBER   | Amount of time that was simulated for (in minutes)                                                                                                                                                                                                                                                                                                                                                                                              |
| CON_ID                  | NUMBER   | The ID of the container to which the data pertains. Possible values include: <ul style="list-style-type: none"> <li>0: This value is used for rows containing data that pertain to the entire CDB. This value is also used for rows in non-CDBs.</li> <li>1: This value is used for rows containing data that pertain to only the root</li> <li><i>n</i>: Where <i>n</i> is the applicable container ID for the rows containing data</li> </ul> |

## 8.27 V\$AQ\_MESSAGE\_CACHE\_STAT

V\$AQ\_MESSAGE\_CACHE\_STAT displays statistics about memory management for sharded queues in the Streams pool within the System Global Area (SGA). Sharded queues use the Streams pool in units of subshards. Thus, columns of this view shows statistics at subshard level. This view shows statistics across all sharded queues.

### Note:

AQ sharded queues are deprecated in Oracle Database 21c. Oracle recommends that you instead use Transactional Event Queues (TxEventQs) for higher throughput and better performance.

| Column         | Datatype | Description                                              |
|----------------|----------|----------------------------------------------------------|
| NUM_EVICTED    | NUMBER   | Number of evicted subshards across all sharded queues    |
| NUM_PREFETCHED | NUMBER   | Number of subshards pre-fetched by AQ background process |

| Column                            | Datatype | Description                                                                                                                                                                                                                                                                                                                                                                                                                                         |
|-----------------------------------|----------|-----------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|
| NUM_UNEVICTION                    | NUMBER   | Number of subshards un-evicted by foreground process (like dequeue process)                                                                                                                                                                                                                                                                                                                                                                         |
| NUM_UNCACHED                      | NUMBER   | Number of subshards stored as uncached                                                                                                                                                                                                                                                                                                                                                                                                              |
| NUM_TRACKED                       | NUMBER   | Number of subshards which are actively tracking dequeue rates                                                                                                                                                                                                                                                                                                                                                                                       |
| NUM_CACHED                        | NUMBER   | Number of subshards stored as cached                                                                                                                                                                                                                                                                                                                                                                                                                |
| MAX_SUBSH_SIZE                    | NUMBER   | Maximum subshard size seen till now, in terms of number of messages per subshard                                                                                                                                                                                                                                                                                                                                                                    |
| MIN_SUBSH_SIZE                    | NUMBER   | Minimum subshard size seen till now, in terms of number of messages per subshard                                                                                                                                                                                                                                                                                                                                                                    |
| MEAN_SUBSH_SIZE                   | NUMBER   | Mean subshard size seen till now, in terms of number of messages per subshard                                                                                                                                                                                                                                                                                                                                                                       |
| AVG_EVICTION_RATE                 | NUMBER   | Average number subshards evicted per second                                                                                                                                                                                                                                                                                                                                                                                                         |
| AVG_LOAD_RATE                     | NUMBER   | Average number of subshards pre-fetched or un-evicted per second                                                                                                                                                                                                                                                                                                                                                                                    |
| AVG_EVICTION_TIME                 | NUMBER   | Average time taken to evict one subshard (in milliseconds)                                                                                                                                                                                                                                                                                                                                                                                          |
| AVG_LOAD_TIME                     | NUMBER   | Average time taken to un-evict one subshard (in milliseconds)                                                                                                                                                                                                                                                                                                                                                                                       |
| AVG_MISS_RATIO                    | NUMBER   | Average ratio of number of foreground un-evictions versus background pre-fetch                                                                                                                                                                                                                                                                                                                                                                      |
| AVG_THRASH_RATIO                  | NUMBER   | Average ratio of number of subshard pre-fetched by background without dequeue attempt versus total number of subshards prefetched                                                                                                                                                                                                                                                                                                                   |
| MANDATORY_AFF_SWITCH_ATT<br>EMPTS | NUMBER   | An affinity switch is a change in dequeue instance for a shard-subscriber pair. A mandatory affinity switch is when there are local enqueues in the queue at the instance but no local dequeues present, so the dequeue affinity is switched to another instance for that shard-subscriber pair. This column shows the number of times mandatory affinity switches were attempted across all instances. Populated at the smallest instance id only. |
| OPTIONAL_AFF_SWITCH_ATT<br>MPTS   | NUMBER   | Optional affinity switches are affinity switches that are not mandatory. Optional affinity switches are done for global load balancing across the Oracle Real Application Clusters (Oracle RAC) database. This column shows the number of times optional affinity switches were attempted across all instances. Populated at the smallest instance id only.                                                                                         |
| MIN_EVICT_PERCENT                 | NUMBER   | Percentage of <code>streams_pool</code> memory beyond which sharded queue subshard eviction is triggered                                                                                                                                                                                                                                                                                                                                            |
| LAST_AVG_CACHED_HORIZON           | NUMBER   | Last average number of cached subshards seen in sharded queue memory manager horizon                                                                                                                                                                                                                                                                                                                                                                |
| LAST_AVG_MEMORY_HORIZON           | NUMBER   | Last average memory of cached subshards seen in sharded queue memory manager horizon                                                                                                                                                                                                                                                                                                                                                                |
| LAST_AVG_SUBSHARD_HORIZO<br>N     | NUMBER   | Last average number of subshards seen in sharded queue memory manager horizon                                                                                                                                                                                                                                                                                                                                                                       |
| LAST_LEEWAY_SHIFT                 | NUMBER   | Internal leeway for memory threshold                                                                                                                                                                                                                                                                                                                                                                                                                |
| AVG_OPTTIME_DRIFT                 | NUMBER   | Average drift of <code>opt_time</code> for all subshards. A drift is defined as a difference between <code>opt_time</code> as set on a subshard and the actual time at which subshard is first dequeued after prefetch/uneviction.                                                                                                                                                                                                                  |
| NUM_THRESHOLD_DRIFT               | NUMBER   | Number of times drift value has gone over threshold time. A typical threshold time can be <code>horizon_time/2</code> .                                                                                                                                                                                                                                                                                                                             |
| MAX_OPT_TIME_DRIFT                | NUMBER   | Maximum drift till now                                                                                                                                                                                                                                                                                                                                                                                                                              |
| MIN_OPT_TIME_DRIFT                | NUMBER   | Minimum drift till now                                                                                                                                                                                                                                                                                                                                                                                                                              |

| Column             | Datatype | Description                                                                                                                                                                                                                                                                                                                                                                                                                       |
|--------------------|----------|-----------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|
| AVG_OPT_TIME_ERROR | NUMBER   | An opt_time error occurs when a cached subshard is unevicted by a foreground process (instead of being prefetched by the aq background). Thus, opt_time error is the difference between the actual opt_time set for a sharded queue subshard and the absolute time at which foreground unevicts the same subshard. This column represents average time of this error.                                                             |
| MAX_OPT_TIME_ERROR | NUMBER   | Maximum opt_time error                                                                                                                                                                                                                                                                                                                                                                                                            |
| MIN_OPT_TIME_ERROR | NUMBER   | Minimum opt_time error                                                                                                                                                                                                                                                                                                                                                                                                            |
| NUM_FG_RELOADED    | NUMBER   | Number of subshards reloaded from disk into message cache by foreground processes                                                                                                                                                                                                                                                                                                                                                 |
| NUM_PRERELOADED    | NUMBER   | Number of subshards reloaded from disk into message cache in advance by background processes                                                                                                                                                                                                                                                                                                                                      |
| AVG_RELOAD_TIME    | NUMBER   | Average time to reload a subshard from disk into message cache (in milliseconds)                                                                                                                                                                                                                                                                                                                                                  |
| CON_ID             | NUMBER   | The ID of the container to which the data pertains. Possible values include: <ul style="list-style-type: none"> <li>0: This value is used for rows containing data that pertain to the entire CDB. This value is also used for rows in non-CDBs.</li> <li>1: This value is used for rows containing data that pertain to only the root</li> <li>n: Where n is the applicable container ID for the rows containing data</li> </ul> |

## 8.28 V\$AQ\_NONDUR\_REGISTRATIONS

V\$AQ\_NONDUR\_REGISTRATIONS provides information about non-durable subscriptions.

| Column       | Datatype                     | Description                                                                                                                                                                                                                                                                                                                                                                                |

## 8.29 V\$AQ\_NONDUR\_SUBSCRIBER

V\$AQ\_NONDUR\_SUBSCRIBER provides information about the non-durable subscriptions on sharded queues.

**Note:**

AQ sharded queues are deprecated in Oracle Database 21c. Oracle recommends that you instead use Transactional Event Queues (TxEventQs) for higher throughput and better performance.

## 8.30 V\$AQ\_NONDUR\_SUBSCRIBER\_LWM

V\$AQ\_NONDUR\_SUBSCRIBER\_LWM projects the low watermarks (LWMs) of non-durable subscribers in a sharded queue. The LWM of a non-durable subscriber is a combination of shard, priority and LWM (subshard).

**Note:**

AQ sharded queues are deprecated in Oracle Database 21c. Oracle recommends that you instead use Transactional Event Queues (TxEventQs) for higher throughput and better performance.

| Column        | Datatype | Description                                                   |
|---------------|----------|---------------------------------------------------------------|
| QUEUE_ID      | NUMBER   | Queue ID                                                      |
| SUBSCRIBER_ID | NUMBER   | ID of the non-durable subscriber                              |
| SHARD_ID      | NUMBER   | Shard ID                                                      |
| PRIORITY      | NUMBER   | Priority of the shard                                         |
| LWM           | NUMBER   | Lower watermark (in a subshard) of the non-durable subscriber |

| Column | Datatype | Description                                                                                                                                                                                                                                                                                                                                                                                                                                            |

## 8.32 V\$AQ\_PARTITION\_STATS

V\$AQ\_PARTITION\_STATS displays usage statistics for the queue partition cache and the dequeue log partition cache.

**Note:**

AQ sharded queues are deprecated in Oracle Database 21c. Oracle recommends that you instead use Transactional Event Queues (TxEventQs) for higher throughput and better performance.

| Column                 | Datatype       | Description                                                                                                                                                                                               |
|------------------------|----------------|-----------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|
| INST_ID                | NUMBER         | Current instance ID                                                                                                                                                                                       |
| QUEUE_ID               | NUMBER         | Queue ID                                                                                                                                                                                                  |
| QUEUE_TABLE_ID         | NUMBER         | Queue table object ID                                                                                                                                                                                     |
| QUEUE_SCHEMA           | VARCHAR2 (128) | Queue schema name                                                                                                                                                                                         |
| QUEUE_NAME             | VARCHAR2 (128) | Queue name                                                                                                                                                                                                |
| PT_TUNED_SIZ_QT        | NUMBER         | Current tuned size of the queue partition cache, expressed in number of partition cache elements                                                                                                          |
| PT_CACHED_PTNS_QT      | NUMBER         | Current number of cached partitions in the queue partition cache                                                                                                                                          |
| PT_OVER_CACHED_PTNS_QT | NUMBER         | Current number of over-cached partitions in the queue partition cache, that is, the number of cached partitions whose partition cache elements exceed the current tuned size of the queue partition cache |
| PT_TOTAL_UPTUNE_QT     | NUMBER         | Total amount of space added to the queue partition cache due to tune-ups, since the cache was initialized, expressed in number of partition cache elements                                                |
| PT_NO_OF_UPTUNES_QT    | NUMBER         | Total number of times a tune-up was triggered on the queue partition cache, since the cache was initialized                                                                                               |
| PT_TOTAL_DOWNTUNE_QT   | NUMBER         | Total amount of space removed from the queue partition cache due to tune-downs, since the cache was initialized, expressed in number of partition cache elements                                          |
| PT_NO_OF_DOWNTUNES_QT  | NUMBER         | Total number of times a tune-down was triggered on the queue partition cache, since the cache was initialized                                                                                             |
| PT_CACHE_MISS_QT       | NUMBER         | Total number of cache misses during partition lookups on the queue partition cache                                                                                                                        |
| PT_CACHE_HIT_QT        | NUMBER         | Total number of cache hits during partition lookups on the queue partition cache                                                                                                                          |
| PT_TOTAL_CACH_GET_QT   | NUMBER         | Total number of successful fetches from the queue partition cache                                                                                                                                         |
| PT_TOTAL_CACH_PUT_QT   | NUMBER         | Total number of caching operations that occurred on the queue partition cache                                                                                                                             |
| PT_UNBOUNDINGS_QT      | NUMBER         | Total number of times queue partitions were unbounded                                                                                                                                                     |

| Column                 | Datatype | Description                                                                                                                                                                                                                                                                                                                                                                                                                                            |
|------------------------|----------|--------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|
| PT_TUNED_SIZ_DQ        | NUMBER   | Current tuned size of the dequeue log partition cache, expressed in number of partition cache elements                                                                                                                                                                                                                                                                                                                                                 |
| PT_CACHED_PTNS_DQ      | NUMBER   | Current number of cached partitions in the dequeue log partition cache                                                                                                                                                                                                                                                                                                                                                                                 |
| PT_OVER_CACHED_PTNS_DQ | NUMBER   | Current number of over-cached partitions in the dequeue log partition cache, that is, the number of cached dequeue log partitions whose partition cache elements exceed the current tuned size of the dequeue log partition cache                                                                                                                                                                                                                      |

This value is also used for rows in non-CDBs.</li> <li>1: This value is used for rows containing data that pertain to only the root</li> <li><i>n</i>: Where <i>n</i> is the applicable container ID for the rows containing data</li> </ul> |

## 8.33 V\$AQ\_REMOTE\_DEQUEUE\_AFFINITY

V\$AQ\_REMOTE\_DEQUEUE\_AFFINITY lists the dequeue affinity instance of the subscribers not dequeuing locally from the shard's owner instance. Cross instance message forwarding is used for these subscribers.

### Note:

AQ sharded queues are deprecated in Oracle Database 21c. Oracle recommends that you instead use Transactional Event Queues (TxEventQs) for higher throughput and better performance.

| Column             | Datatype       | Description                                                                                                                                                                                                                                                                                                                                                                                                                                 |
|--------------------|----------------|---------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|
| QUEUE_ID           | NUMBER         | Queue ID                                                                                                                                                                                                                                                                                                                                                                                                                                    |
| SHARD_ID           | NUMBER         | Shard ID which is being forwarded from SOURCE_INSTANCE to INST_ID for the subscriber                                                                                                                                                                                                                                                                                                                                                        |
| SOURCE_INSTANCE_ID | NUMBER         | Owner instance ID from where the shard is being forwarded                                                                                                                                                                                                                                                                                                                                                                                   |
| SUBSCRIBER_ID      | NUMBER         | Subscriber ID                                                                                                                                                                                                                                                                                                                                                                                                                               |
| QUEUE_SCHEMA       | VARCHAR2 (128) | Queue schema name                                                                                                                                                                                                                                                                                                                                                                                                                           |
| QUEUE_NAME         | VARCHAR2 (128) | Queue name                                                                                                                                                                                                                                                                                                                                                                                                                                  |
| CON_ID             | NUMBER         | The ID of the container to which the data pertains. Possible values include: <ul style="list-style-type: none"><li>0: This value is used for rows containing data that pertain to the entire CDB. This value is also used for rows in non-CDBs.</li><li>1: This value is used for rows containing data that pertain to only the root</li><li><i>n</i>: Where <i>n</i> is the applicable container ID for the rows containing data</li></ul> |

## 8.34 V\$AQ\_SERVER\_POOL

V\$AQ\_SERVER\_POOL lists performance statistics for all the servers in the pool.

| Column                  | Datatype      | Description                                                                                                                                          |
|-------------------------|---------------|------------------------------------------------------------------------------------------------------------------------------------------------------|
| COORDINATOR_ID          | NUMBER        | ID of the coordinator                                                                                                                                |
| COORDINATOR_INSTANCE_ID | NUMBER        | Instance of the coordinator                                                                                                                          |
| PROCESS_ID              | VARCHAR2 (24) | Operating system process ID of the server                                                                                                            |
| PROCESS_NAME            | VARCHAR2 (48) | Operating system process name of the server                                                                                                          |
| JOB_NAME                | VARCHAR2 (32) | Name of the job handled                                                                                                                              |
| POOL_STATE              | VARCHAR2 (20) | State of the pool: <ul style="list-style-type: none"><li>REMOTE</li><li>IDLE</li><li>ACTIVE</li></ul>                                                |
| CON_ID                  | NUMBER        | The ID of the container to which the data pertains. The CON_ID value in this view is always 0. The rows pertain to the entire CDB or to the non-CDB. |

## 8.35 V\$AQ\_SHARDED\_SUBSCRIBER\_STAT

V\$AQ\_SHARDED\_SUBSCRIBER\_STAT displays basic statistical information about the subscribers of sharded queues. There is one row per queue per shard per subscriber.

**Note:**

AQ sharded queues are deprecated in Oracle Database 21c. Oracle recommends that you instead use Transactional Event Queues (TxEventQs) for higher throughput and better performance.

| Column                    | Datatype | Description                                                                                                                                                              |
|---------------------------|----------|--------------------------------------------------------------------------------------------------------------------------------------------------------------------------|
| QUEUE_ID                  | NUMBER   | Queue identifier                                                                                                                                                         |
| SUBSCRIBER_ID             | NUMBER   | Subscriber identifier                                                                                                                                                    |
| SHARD_ID                  | NUMBER   | Shard identifier                                                                                                                                                         |
| PRIORITY                  | NUMBER   | Priority value of the shard                                                                                                                                              |
| MSG_SN                    | NUMBER   | Message serial number                                                                                                                                                    |
| DEQUEUE_SUBSHARD          | NUMBER   | Last known dequeue position in this shard                                                                                                                                |
| ENQUEUED_MSGS             | NUMBER   | Number of enqueued messages                                                                                                                                              |
| DEQUEUED_MSGS             | NUMBER   | Number of dequeued messages                                                                                                                                              |
| ELAPSED_DEQUEUE_TIME      | NUMBER   | Amount of time spent performing dequeues (in seconds)                                                                                                                    |
| CPU_DEQUEUE_TIME          | NUMBER   | Actual amount of CPU time spent performing dequeues (in seconds)                                                                                                         |
| DEQUEUE_RATE              | NUMBER   | Number of messages dequeued per second                                                                                                                                   |
| DEQUEUE_POSITION          | RAW (16) | Message ID at the dequeue position of the subscriber in this shard<br>A NULL value indicates that either the shard is empty or no dequeues have been done on this shard. |
| TIME_SINCE_LAST_DEQUEUE   | NUMBER   | Time since last dequeue activity (in seconds)                                                                                                                            |
| ESTD_TIME_TO_DRAIN        | NUMBER   | Estimated amount of time to drain the shard (in seconds) with current enqueue and dequeue rates. Null, if the enqueue rate is greater than the dequeue rate.             |
| ESTD_TIME_TO_DRAIN_NO_ENQ | NUMBER   | Estimated amount of time to drain the shard (in seconds) with no new enqueues                                                                                            |
| MESSAGE_LATENCY_1         | NUMBER   | Message latency within the last 5 minutes (in milliseconds). Null if no message is consumed or it is delay dequeue.                                                      |
| MESSAGE_LATENCY_2         | NUMBER   | Message latency within the last 1 hour (in milliseconds). Null if no message is consumed or it is delay dequeue.                                                         |
| MESSAGE_LATENCY_3         | NUMBER   | Message latency within the last 5 hours (in milliseconds). Null if no message is consumed or it is delay dequeue.                                                        |

| Column | Datatype | Description                                                                                                                                                                                                                                                                                                                                                                                                                                            |
|--------|----------|--------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|
| CON_ID | NUMBER   | <p>The ID of the container to which the data pertains. Possible values include:</p> <ul style="list-style-type: none"> <li>0: This value is used for rows containing data that pertain to the entire CDB. This value is also used for rows in non-CDBs.</li> <li>1: This value is used for rows containing data that pertain to only the root</li> <li><i>n</i>: Where <i>n</i> is the applicable container ID for the rows containing data</li> </ul> |

## 8.36 V\$AQ\_SUBSCRIBER\_LOAD

V\$AQ\_SUBSCRIBER\_LOAD describes the load of all subscribers of sharded queues in terms of latency at every instance in an Oracle RAC environment.

Latency denotes the predicted amount of time (in seconds) required from the current time to drain all the messages for that subscriber at each respective instance. The latency calculation considers past enqueue/dequeue rates and future enqueue/dequeue rates based on history.

### Note:

AQ sharded queues are deprecated in Oracle Database 21c. Oracle recommends that you instead use Transactional Event Queues (TxEventQs) for higher throughput and better performance.

| Column           | Datatype       | Description                                                                                                                                                                                                                                                                                              |
|------------------|----------------|----------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|
| QUEUE_ID         | NUMBER         | Queue ID                                                                                                                                                                                                                                                                                                 |
| QUEUE_SCHEMA     | VARCHAR2 (128) | Queue schema                                                                                                                                                                                                                                                                                             |
| QUEUE_NAME       | VARCHAR2 (128) | Queue name                                                                                                                                                                                                                                                                                               |
| SUBSCRIBER_ID    | NUMBER         | Subscriber ID                                                                                                                                                                                                                                                                                            |
| SUBSCRIBER_NAME  | VARCHAR2 (128) | Subscriber name                                                                                                                                                                                                                                                                                          |
| LATENCY_STATE    | VARCHAR2 (8)   | <p>Possible values:</p> <ul style="list-style-type: none"> <li>FINITE - The subscriber will be able to dequeue all the messages in a finite amount of time</li> <li>INFINITE - The subscriber's dequeue rate may not catch up to the enqueue rate</li> <li>UNKNOWN - Latency is not yet known</li> </ul> |
| LATENCY          | NUMBER         | Latency (in seconds). Valid only when LATENCY_STATE is FINITE.                                                                                                                                                                                                                                           |
| DEQUEUE_REQUESTS | NUMBER         | Approximate number of dequeue requests noted recently                                                                                                                                                                                                                                                    |
| ACTIVE_SHARDS    | NUMBER         | Number of queue shards that have messages for this subscriber                                                                                                                                                                                                                                            |
| ACTIVE_LISTENER  | VARCHAR2 (5)   | Indicates whether the subscriber is actively listening at this instance for messages (TRUE) or not (FALSE)                                                                                                                                                                                               |
| DEQUEUE_SESSIONS | NUMBER         | Displays the number of active dequeue sessions for this subscriber                                                                                                                                                                                                                                       |
| FLAGS            | NUMBER         | For internal use only                                                                                                                                                                                                                                                                                    |

| Column                 | Datatype | Description                                                                                                                                                                                                                                                                                                                                                                                                                                     |
|------------------------|----------|-------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|
| MANDATORY_AFF_SWITCHES | NUMBER   | An affinity switch is a change in the dequeue instance for a shard-subscriber pair. A mandatory affinity switch is when there are local enqueues in the queue at the instance but no local dequeues present, so the dequeue affinity is switched to another instance for that shard-subscriber pair. This column shows the number of times mandatory affinity switches were needed from this instance to another for this subscriber.           |
| OPTIONAL_AFF_SWITCHES  | NUMBER   | Optional affinity switches are affinity switches that are not mandatory. Optional affinity switches are done for global load balancing across the Oracle Real Application Clusters (Oracle RAC) database. This column shows the number of times optional affinity switches were needed from this instance to another for this subscriber.                                                                                                       |
| CON_ID                 | NUMBER   | The ID of the container to which the data pertains. Possible values include: <ul style="list-style-type: none"> <li>0: This value is used for rows containing data that pertain to the entire CDB. This value is also used for rows in non-CDBs.</li> <li>1: This value is used for rows containing data that pertain to only the root</li> <li><i>n</i>: Where <i>n</i> is the applicable container ID for the rows containing data</li> </ul> |

## 8.37 V\$ARCHIVE

V\$ARCHIVE displays information about redo log files in need of archiving.

Each row displays information for one thread. This information is also available in V\$LOG. Oracle recommends that you use V\$LOG.

## 8.38 V\$ARCHIVE\_DEST

V\$ARCHIVE\_DEST displays, for the current instance, all of the destinations in the Data Guard configuration, including each destination's current value, mode, and status.

| Column     | Datatype       | Description                                                                                                                                                                                                                                                                                                                                                                                                                                                                                       |
|------------|----------------|---------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|
| DEST_ID    | NUMBER         | Log archive destination parameter identifier (1 to 31)                                                                                                                                                                                                                                                                                                                                                                                                                                            |
| DEST_NAME  | VARCHAR2 (256) | Log archive destination parameter name                                                                                                                                                                                                                                                                                                                                                                                                                                                            |
| STATUS     | VARCHAR2 (9)   | <p>Identifies the current status of the destination:</p> <ul style="list-style-type: none"> <li>VALID - Initialized and available</li> <li>INACTIVE - No destination information</li> <li>DEFERRED - Manually disabled by the user</li> <li>ERROR - Error during open or copy</li> <li>DISABLED - Disabled after error</li> <li>BAD PARAM - Parameter has errors</li> <li>ALTERNATE - Destination is available as an alternate</li> <li>FULL - Exceeded quota size for the destination</li> </ul> |
| BINDING    | VARCHAR2 (9)   | <p>Specifies how failure will affect the archival operation:</p> <ul style="list-style-type: none"> <li>MANDATORY - Successful archival is required</li> <li>OPTIONAL - Successful archival is not required (depends on LOG_ARCHIVE_MIN_SUCCEED_DEST)</li> </ul>                                                                                                                                                                                                                                  |
| NAME_SPACE | VARCHAR2 (7)   | <p>Identifies the scope of parameter setting:</p> <ul style="list-style-type: none"> <li>SYSTEM - System definition</li> <li>SESSION - Session definition</li> </ul>                                                                                                                                                                                                                                                                                                                              |
| TARGET     | VARCHAR2 (7)   | <p>For a primary database, this column specifies whether the archive destination is local or remote to the primary database:</p> <ul style="list-style-type: none"> <li>PRIMARY - local</li> <li>STANDBY - remote</li> </ul> <p>For a standby database, this column specifies whether the archive destination is local or remote to the standby database:</p> <ul style="list-style-type: none"> <li>LOCAL - local</li> <li>REMOTE - remote</li> </ul>                                            |
| ARCHIVER   | VARCHAR2 (10)  | <p>Identifies the archiver process relative to the database where the query is issued:</p> <ul style="list-style-type: none"> <li>ARC<i>n</i></li> <li>FOREGROUND</li> <li>LGWR</li> <li>RFS</li> </ul>                                                                                                                                                                                                                                                                                           |

| Column          | Datatype       | Description                                                                                                                                                                                                                                                                                                                            |
|-----------------|----------------|----------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|
| SCHEDULE        | VARCHAR2 (8)   | Indicates whether the archival of this destination is <code>INACTIVE</code> , <code>PENDING</code> , <code>ACTIVE</code> , or <code>LATENT</code>                                                                                                                                                                                      |
| DESTINATION     | VARCHAR2 (256) | Specifies the location where the archived redo logs are to be archived                                                                                                                                                                                                                                                                 |
| LOG_SEQUENCE    | NUMBER         | Identifies the sequence number of the last archived redo log to be archived                                                                                                                                                                                                                                                            |
| REOPEN_SECS     | NUMBER         | Identifies the retry time (in seconds) after error                                                                                                                                                                                                                                                                                     |
| DELAY_MINS      | NUMBER         | Identifies the delay interval (in minutes) before the archived redo log is automatically applied to a standby database                                                                                                                                                                                                                 |
| NET_TIMEOUT     | NUMBER         | Number of seconds the log writer process will wait for status from the network server of a network operation issued by the log writer process                                                                                                                                                                                          |
| PROCESS         | VARCHAR2 (10)  | Identifies the archiver process relative to the primary database, even if the query is issued on the standby database: <ul style="list-style-type: none"> <li>• <code>ARCn</code></li> <li>• <code>FOREGROUND</code></li> <li>• <code>LGWR</code></li> </ul>                                                                           |
| REGISTER        | VARCHAR2 (3)   | Indicates whether the archived redo log is registered in the remote destination control file ( <code>YES</code> ) or not ( <code>NO</code> ). If the archived redo log is registered, it is available to log apply services.                                                                                                           |
| FAIL_DATE       | DATE           | Date and time of last error                                                                                                                                                                                                                                                                                                            |
| FAIL_SEQUENCE   | NUMBER         | Sequence number of the archived redo log being archived when the last error occurred                                                                                                                                                                                                                                                   |
| FAIL_BLOCK      | NUMBER         | Block number of the archived redo log being archived when the last error occurred                                                                                                                                                                                                                                                      |
| FAILURE_COUNT   | NUMBER         | Current number of contiguous archival operation failures that have occurred for the destination                                                                                                                                                                                                                                        |
| MAX_FAILURE     | NUMBER         | Allows you to control the number of times log transport services will attempt to reestablish communication and resume archival operations with a failed destination                                                                                                                                                                    |
| ERROR           | VARCHAR2 (256) | Displays the error text                                                                                                                                                                                                                                                                                                                |
| ALTERNATE       | VARCHAR2 (256) | Alternate destination, if any                                                                                                                                                                                                                                                                                                          |
| DEPENDENCY      | VARCHAR2 (256) | Reserved for future use                                                                                                                                                                                                                                                                                                                |
| REMOTE_TEMPLATE | VARCHAR2 (256) | Specifies the template to be used to derive the location to be recorded                                                                                                                                                                                                                                                                |
| QUOTA_SIZE      | NUMBER         | Destination quotas, expressed in bytes                                                                                                                                                                                                                                                                                                 |
| QUOTA_USED      | NUMBER         | Size of all the archived redo logs currently residing on the specified destination                                                                                                                                                                                                                                                     |
| MOUNTID         | NUMBER         | Instance mount identifier                                                                                                                                                                                                                                                                                                              |
| TRANSMIT_MODE   | VARCHAR2 (12)  | Specifies network transmission mode: <ul style="list-style-type: none"> <li>• <code>SYNCHRONOUS</code></li> <li>• <code>PARALLELSYNC</code></li> <li>• <code>ASYNCHRONOUS</code></li> </ul>                                                                                                                                            |
| ASYNC_BLOCKS    | NUMBER         | Number of blocks specified for the <code>ASYNC</code> attribute                                                                                                                                                                                                                                                                        |
| AFFIRM          | VARCHAR2 (3)   | Specifies disk I/O mode                                                                                                                                                                                                                                                                                                                |
| TYPE            | VARCHAR2 (7)   | Indicates whether the archived log destination definition is <code>PUBLIC</code> or <code>PRIVATE</code> . Only <code>PUBLIC</code> destinations can be modified at run time using the <code>ALTER SYSTEM SET</code> or <code>ALTER SESSION SET</code> statements. By default, all archived log destinations are <code>PUBLIC</code> . |

| Column         | Datatype      | Description                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                     |
|----------------|---------------|-------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|
| VALID_NOW      | VARCHAR2 (16) | <p>Indicates whether the destination is valid right now for archival operations:</p> <ul style="list-style-type: none"> <li>• YES - Redo log type and database role for this destination are valid for the current database</li> <li>• WRONG_VALID_TYPE - Redo log type specified for this destination is not valid for the current database role. For example, WRONG_VALID_TYPE would be returned if a destination specified with the VALID_FOR=(STANDBY_LOGFILE,STANDBY_ROLE) attribute is running in the standby database role but does not have standby redo logs implemented.</li> <li>• WRONG_VALID_ROLE - Database role specified for this destination is not the role in which the database is currently running. For example, the WRONG_VALID_ROLE would be returned when a destination defined with the VALID_FOR=(ONLINE_LOGFILE,STANDBY_ROLE) attribute is running in the primary database role.</li> <li>• INACTIVE - Destination is inactive, probably due to an error</li> </ul> |
| VALID_TYPE     | VARCHAR2 (15) | <p>Redo log type or types that are valid for the destination:</p> <ul style="list-style-type: none"> <li>• ONLINE_LOGFILE</li> <li>• STANDBY_LOGFILE</li> <li>• ALL_LOGFILES</li> </ul>                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                         |

| DB_UNIQUE_NAME | VARCHAR2 (30) | Unique database name                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                            |
| VERIFY         | VARCHAR2 (3)  | Indicates whether the value of the VERIFY attribute on the LOG_ARCHIVE_DEST_n parameter is verified (YES) or not verified (NO)                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                  |
| COMPRESSION    | VARCHAR2 (7)  | <p>Indicates whether network compression is ENABLED or DISABLED, or whether the ZLIB or LZO algorithm is in use. These values correspond to the values accepted by the COMPRESSION attribute for the database initialization parameter LOG_ARCHIVE_DEST_n. The possible values include:</p> <ul style="list-style-type: none"> <li>• DISABLE: Compression is disabled.</li> <li>• ENABLE: Compression is enabled. The ZLIB compression algorithm is used.</li> <li>• ZLIB: ZLIB compression is used.</li> <li>• LZO: LZO compression is used.</li> </ul>                                                                                                                                                                                                                                                                                                                                                                                                                                        |
| APPLIED_SCN    | NUMBER        | For a destination that corresponds to a physical or logical standby database, the SCN of the last applied redo. For a destination that corresponds to a snapshot standby database, the SCN of the last redo applied before conversion to a snapshot standby database. This column is only valid for enabled and active standby database destinations on a primary or cascading standby database.                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                |
| CON_ID         | NUMBER        | <p>The ID of the container to which the data pertains. Possible values include:</p> <ul style="list-style-type: none"> <li>• 0: This value is used for rows containing data that pertain to the entire CDB. This value is also used for rows in non-CDBs.</li> <li>• 1: This value is used for rows containing data that pertain to only the root</li> <li>• n: Where n is the applicable container ID for the rows containing data</li> </ul>                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                  |

| Column     | Datatype     | Description                                                                                                                                                                                      |
|------------|--------------|--------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|
| ENCRYPTION | VARCHAR2 (7) | Indicates whether encryption of the redo stream sent to Zero Data Loss Recovery Appliance (Recovery Appliance) is enabled (ENABLED) or not (DISABLED)                                            |
| ROLE       | VARCHAR2 (9) | Role of the destination: <ul style="list-style-type: none"><li>• DATACACHE</li><li>• FARSYNC</li><li>• LOCAL</li><li>• LOGICAL</li><li>• PHYSICAL</li><li>• PRIMARY</li><li>• SNAPSHOT</li></ul> |

## 8.39 V\$ARCHIVE\_DEST\_STATUS

V\$ARCHIVE\_DEST\_STATUS displays run time and configuration information for the archived redo log destinations.

The information in this view does not persist across an instance shutdown.

| Column    | Datatype       | Description                                                                                                                                                                                                                                                                                                                                                                                                                                                                    |

It may be possible to resolve the gap by fetching the missing redo from another destination.</li> </ul>                                                                                                                                                                                                   |

| Column | Datatype | Description                                                                                                                                                                                                                                                                                                                                                                                                                                     |
|--------|----------|-------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|
| CON_ID | NUMBER   | The ID of the container to which the data pertains. Possible values include: <ul style="list-style-type: none"> <li>0: This value is used for rows containing data that pertain to the entire CDB. This value is also used for rows in non-CDBs.</li> <li>1: This value is used for rows containing data that pertain to only the root</li> <li><i>n</i>: Where <i>n</i> is the applicable container ID for the rows containing data</li> </ul> |

## 8.40 V\$ARCHIVE\_GAP

V\$ARCHIVE\_GAP displays information about archive gaps on a standby database. This view can be used to find out the current archive gap that is blocking recovery for the current recovery incarnation.

| Column         | Datatype | Description                                                                                                                                                                                                                                                                                                                                                                                                                                     |
|----------------|----------|-------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|
| THREAD#        | NUMBER   | Thread number of the missing archived redo log files. The number is 1 for a single instance. For Oracle Real Application Clusters, this column will contain different numbers.                                                                                                                                                                                                                                                                  |
| LOW_SEQUENCE#  | NUMBER   | Lowest sequence number of the log files received on the standby system                                                                                                                                                                                                                                                                                                                                                                          |
| HIGH_SEQUENCE# | NUMBER   | Highest sequence number of the log files received on the standby system                                                                                                                                                                                                                                                                                                                                                                         |
| CON_ID         | NUMBER   | The ID of the container to which the data pertains. Possible values include: <ul style="list-style-type: none"> <li>0: This value is used for rows containing data that pertain to the entire CDB. This value is also used for rows in non-CDBs.</li> <li>1: This value is used for rows containing data that pertain to only the root</li> <li><i>n</i>: Where <i>n</i> is the applicable container ID for the rows containing data</li> </ul> |

## 8.41 V\$ARCHIVE\_PROCESSES

V\$ARCHIVE\_PROCESSES displays the state of the various ARCH processes for the instance.

| Column       | Datatype      | Description                                                                                                                              |
|--------------|---------------|------------------------------------------------------------------------------------------------------------------------------------------|
| PROCESS      | NUMBER        | Identifier for the ARCH process for the instance, numbered from 0-9                                                                      |
| STATUS       | VARCHAR2 (10) | Status of the ARCH process, displayed as a keyword. Possible values are: STOPPED, SCHEDULED, STARTING, ACTIVE, STOPPING, and TERMINATED. |
| LOG_SEQUENCE | NUMBER        | This is the online redo log sequence number currently being archived, if STATE="BUSY"                                                    |
| STATE        | VARCHAR2 (4)  | This is the current state of the ARCH process, displayed as a keyword. Possible keywords are IDLE or BUSY.                               |
| ROLES        | VARCHAR2 (36) | The list of roles assigned to the archive process. The roles include: HEART_BEAT, NO_FAL, NO_SRL, CLEAR_LOGS                             |

| Column | Datatype | Description                                                                                                                                                                                                                                                                                                                                                                                                                                            |
|--------|----------|--------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|
| CON_ID | NUMBER   | <p>The ID of the container to which the data pertains. Possible values include:</p> <ul style="list-style-type: none"> <li>0: This value is used for rows containing data that pertain to the entire CDB. This value is also used for rows in non-CDBs.</li> <li>1: This value is used for rows containing data that pertain to only the root</li> <li><i>n</i>: Where <i>n</i> is the applicable container ID for the rows containing data</li> </ul> |

## 8.42 V\$ARCHIVED\_LOG

V\$ARCHIVED\_LOG displays archived log information from the control file, including archive log names.

An archive log record is inserted after the online redo log is successfully archived or cleared (name column is NULL if the log was cleared). If the log is archived twice, there will be two archived log records with the same THREAD#, SEQUENCE#, and FIRST\_CHANGE#, but with a different name. An archive log record is also inserted when an archive log is restored from a backup set or a copy and whenever a copy of a log is made with the RMAN COPY command.

| Column            | Datatype       | Description                                                                                                                                                                                                                                                                       |
|-------------------|----------------|-----------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|
| RECID             | NUMBER         | Archived log record ID                                                                                                                                                                                                                                                            |
| STAMP             | NUMBER         | Archived log record stamp                                                                                                                                                                                                                                                         |
| NAME              | VARCHAR2 (513) | Archived log file name. If set to NULL, either the log file was cleared before it was archived or an RMAN backup command with the "delete input" option was executed to back up archivelog all (RMAN> backup archivelog all delete input;).                                       |
| DEST_ID           | NUMBER         | Original destination from which the archive log was generated. The value is 0 if the destination identifier is not available.                                                                                                                                                     |
| THREAD#           | NUMBER         | Redo thread number                                                                                                                                                                                                                                                                |
| SEQUENCE#         | NUMBER         | Redo log sequence number                                                                                                                                                                                                                                                          |
| RESETLOGS_CHANGE# | NUMBER         | Resetlogs change number of the database when the log was written                                                                                                                                                                                                                  |
| RESETLOGS_TIME    | DATE           | Resetlogs time of the database when the log was written                                                                                                                                                                                                                           |
| RESETLOGS_ID      | NUMBER         | Resetlogs identifier associated with the archived redo log                                                                                                                                                                                                                        |
| FIRST_CHANGE#     | NUMBER         | First change number in the archived log                                                                                                                                                                                                                                           |
| FIRST_TIME        | DATE           | Timestamp of the first change                                                                                                                                                                                                                                                     |
| NEXT_CHANGE#      | NUMBER         | First change in the next log                                                                                                                                                                                                                                                      |
| NEXT_TIME         | DATE           | Timestamp of the next change                                                                                                                                                                                                                                                      |
| BLOCKS            | NUMBER         | Size of the archived log (in blocks)                                                                                                                                                                                                                                              |
| BLOCK_SIZE        | NUMBER         | Redo log block size. This is the logical block size of the archived log, which is the same as the logical block size of the online log from which the archived log was copied. The online log logical block size is a platform-specific value that is not adjustable by the user. |

| Column           | Datatype     | Description                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                            |

| IS_RECOVERY_DEST_FILE | VARCHAR2 (3)  | Indicates whether the file was created in the fast recovery area (YES) or not (NO)                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                 |
| COMPRESSED            | VARCHAR2 (3)  | Reserved for internal use                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                          |
| FAL                   | VARCHAR2 (3)  | Indicates whether the archive log was generated as the result of a FAL request (YES) or not (NO)                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                   |
| END_OF_REDO_TYPE      | VARCHAR2 (10) | Possible values are as follows: <ul style="list-style-type: none"> <li>SWITCHOVER - Shows archived redo log files that are produced at the end of a switchover</li> <li>TERMINAL - Shows archived redo log files produced after a failover</li> <li>RESETLOGS - Shows online redo log files archived on the primary database after an <code>ALTER DATABASE OPEN RESETLOGS</code> statement is issued</li> <li>ACTIVATION - Shows any log files archived on a physical standby database after an <code>ALTER DATABASE ACTIVATE STANDBY DATABASE</code> statement is issued</li> <li>"empty string" - Any empty string implies that the log is just a normal archival and was not archived due to any of the other events</li> </ul> |
| BACKED_BY_VSS         | VARCHAR2 (3)  | Whether or not the file has been backed up by Volume Shadow Copy Service (VSS). This column is reserved for internal use.                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                          |
| CON_ID                | NUMBER        | The ID of the container to which the data pertains. Possible values include: <ul style="list-style-type: none"> <li>0: This value is used for rows containing data that pertain to the entire CDB. This value is also used for rows in non-CDBs.</li> <li>1: This value is used for rows containing data that pertain to only the root</li> <li><i>n</i>: Where <i>n</i> is the applicable container ID for the rows containing data</li> </ul>                                                                                                                                                                                                                                                                                    |

## 8.43 V\$ASM\_ACFS\_ENCRYPTION\_INFO

V\$ASM\_ACFS\_ENCRYPTION\_INFO displays encryption information for every mounted Oracle ACFS.

| Column         | Datatype        | Description                                                                                                    |
|----------------|-----------------|----------------------------------------------------------------------------------------------------------------|
| FS_NAME        | VARCHAR2 (1024) | File system mount point (foreign key to <code>V\$ASM_FILESYSTEM</code> )                                       |
| VOL_DEVICE     | VARCHAR2 (256)  | Name of the Oracle ADVM device                                                                                 |
| SET_STATUS     | VARCHAR2 (7)    | Indicates whether encryption parameters have been set on the file system (YES) or not (NO); otherwise UNKNOWN. |
| ENABLED_STATUS | VARCHAR2 (8)    | Indicates whether file system level encryption is enabled (ENABLED) or not (DISABLED); otherwise UNKNOWN.      |

| Column          | Datatype     | Description                                                                                                                                                                                                                                                                                                                                                                                                                                                                                         |
|-----------------|--------------|-----------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|
| ALGORITHM       | VARCHAR2 (7) | Encryption algorithm used. AES is the only supported algorithm.                                                                                                                                                                                                                                                                                                                                                                                                                                     |
| KEY_LENGTH      | VARCHAR2 (7) | Key length used for the encryption key                                                                                                                                                                                                                                                                                                                                                                                                                                                              |
| LAST_REKEY_TIME | DATE         | Time that the volume was last rekeyed                                                                                                                                                                                                                                                                                                                                                                                                                                                               |
| CON_ID          | NUMBER       | <p>The ID of the container to which the data pertains. Possible values include:</p> <ul style="list-style-type: none"> <li>0: This value is used for rows containing data that pertain to the entire CDB. This value is also used for rows in non-CDBs.</li> <li>1: This value is used for rows containing data that pertain to only the root</li> <li><i>n</i>: Where <i>n</i> is the applicable container ID for the rows containing data</li> </ul> <p>For this view, the value is always 0.</p> |

- *Oracle Automatic Storage Management Administrator's Guide* for more information about Oracle Advanced Cluster File System (Oracle ACFS)
- *Oracle Automatic Storage Management Administrator's Guide* for additional information about using views to display Oracle Advanced Cluster File System (Oracle ACFS) and Oracle ASM Dynamic Volume Manager (Oracle ADVM) information

#### Note:

To display information about Oracle ACFS file systems or volumes that are located on nodes in an Oracle Flex ASM configuration, you must connect to the Oracle ASM proxy instance instead of the local Oracle ASM instance. For information about Oracle Flex ASM, refer to *Oracle Automatic Storage Management Administrator's Guide*.

## 8.44 V\$ASM\_ACFSAUTORESIZE

V\$ASM\_ACFSAUTORESIZE displays the auto-resize settings for each mounted Oracle ACFS file system.

| Column           | Datatype        | Description                                               |
|------------------|-----------------|-----------------------------------------------------------|
| FS_NAME          | VARCHAR2 (1024) | Full path name of the Oracle ACFS file system mount point |
| RESIZE_INCREMENT | NUMBER          | Auto-resize increment (in megabytes)                      |
| RESIZE_MAXIMUM   | NUMBER          | Auto-resize maximum (in megabytes)                        |

| Column | Datatype | Description                                                                                                                                                                                                                                                                                                                                                                                                                                 |
|--------|----------|---------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|
| CON_ID | NUMBER   | The ID of the container to which the data pertains. Possible values include: <ul style="list-style-type: none"><li>0: This value is used for rows containing data that pertain to the entire CDB. This value is also used for rows in non-CDBs.</li><li>1: This value is used for rows containing data that pertain to only the root</li><li><i>n</i>: Where <i>n</i> is the applicable container ID for the rows containing data</li></ul> |

## 8.45 V\$ASM\_ACFSSREPL

V\$ASM\_ACFSSREPL displays information for Oracle ACFS file systems that are initialized for replication.

| Column | Datatype        | Description                                                                                                                                                                        |
|--------|-----------------|------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|
| FSNAME | VARCHAR2 (1024) | File system mount point (foreign key to V\$ASM_FILESYSTEM)                                                                                                                         |
| VOLDEV | VARCHAR2 (256)  | Name of the Oracle ADVM device                                                                                                                                                     |
| SITE   | VARCHAR2 (7)    | Replication site role: <ul style="list-style-type: none"><li>PRIMARY - File system is initialized as a primary</li><li>STANDBY - File system is initialized as a standby</li></ul> |
| LAG    | VARCHAR2 (128)  | Amount of time standby is behind primary in hours:minutes:seconds (primary only)                                                                                                   |

| Column      | Datatype        | Description                                                                                                                                                                                                                                                                                                                                                                                                                                                                                 |

| TAGS        | NUMBER          | TRUE (1) if replicating tagged files                                                                                                                                                                                                                                                                                                                                                                                                                                                        |
| COMPRESSION | VARCHAR2 (3)    | Replication log compression status: <ul style="list-style-type: none"> <li>• <b>OFF</b> - Replication logs are not being compressed</li> <li>• <b>ON</b> - Replication logs are being compressed</li> </ul>                                                                                                                                                                                                                                                                                 |
| DBGLVL      | NUMBER          | Replication trace log debug level                                                                                                                                                                                                                                                                                                                                                                                                                                                           |
| CON_ID      | NUMBER          | The ID of the container to which the data pertains. Possible values include: <ul style="list-style-type: none"> <li>• 0: This value is used for rows containing data that pertain to the entire CDB. This value is also used for rows in non-CDBs.</li> <li>• 1: This value is used for rows containing data that pertain to only the root</li> <li>• <i>n</i>: Where <i>n</i> is the applicable container ID for the rows containing data</li> </ul> For this view, the value is always 0. |

**Note:**

This view only contains records for Oracle ASM releases prior to Oracle Database 12c Release 2 (12.2.0.1). To display Oracle ACFS replication information for Oracle Database 12c Release 2 (12.2.0.1) or higher, use the `acfsutil repl info` command.

**See Also:**

- *Oracle Automatic Storage Management Administrator's Guide* for more information about Oracle Advanced Cluster File System (Oracle ACFS)
- *Oracle Automatic Storage Management Administrator's Guide* for additional information about using views to display Oracle Advanced Cluster File System (Oracle ACFS) and Oracle ASM Dynamic Volume Manager (Oracle ADVM) information

**Note:**

To display information about Oracle ACFS file systems or volumes that are located on nodes in an Oracle Flex ASM configuration, you must connect to the Oracle ASM proxy instance instead of the local Oracle ASM instance. For information about Oracle Flex ASM, refer to *Oracle Automatic Storage Management Administrator's Guide*.

## 8.46 V\$ASM\_ACFSREPLTAG

V\$ASM\_ACFSREPLTAG displays replicated tag information for Oracle ACFS file systems that are initialized for replication.

| Column | Datatype        | Description                                                                                                                                                                                                                                                                                                                                                                                                                                                                                           |
|--------|-----------------|-------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|
| FSNAME | VARCHAR2 (1024) | File system mount point (foreign key to V\$ASM_FILESYSTEM)                                                                                                                                                                                                                                                                                                                                                                                                                                            |
| VOLDEV | VARCHAR2 (256)  | Name of the Oracle ADVM device                                                                                                                                                                                                                                                                                                                                                                                                                                                                        |
| TAG    | VARCHAR2 (32)   | Tag name that is being replicated                                                                                                                                                                                                                                                                                                                                                                                                                                                                     |
| CON_ID | NUMBER          | <p>The ID of the container to which the data pertains. Possible values include:</p> <ul style="list-style-type: none"><li>• 0: This value is used for rows containing data that pertain to the entire CDB. This value is also used for rows in non-CDBs.</li><li>• 1: This value is used for rows containing data that pertain to only the root</li><li>• <i>n</i>: Where <i>n</i> is the applicable container ID for the rows containing data</li></ul> <p>For this view, the value is always 0.</p> |

**Note:**

This view only contains records for Oracle ASM releases prior to Oracle Database 12c Release 2 (12.2.0.1). To display Oracle ACFS replication information for Oracle Database 12c Release 2 (12.2.0.1) or higher, use the `acfsutil repl info` command.

**See Also:**

- *Oracle Automatic Storage Management Administrator's Guide* for more information about Oracle Advanced Cluster File System (Oracle ACFS)
- *Oracle Automatic Storage Management Administrator's Guide* for additional information about using views to display Oracle Advanced Cluster File System (Oracle ACFS) and Oracle ASM Dynamic Volume Manager (Oracle ADVM) information

**Note:**

To display information about Oracle ACFS file systems or volumes that are located on nodes in an Oracle Flex ASM configuration, you must connect to the Oracle ASM proxy instance instead of the local Oracle ASM instance. For information about Oracle Flex ASM, refer to *Oracle Automatic Storage Management Administrator's Guide*.

## 8.47 V\$ASM\_ACFSSNAPSHOTS

V\$ASM\_ACFSSNAPSHOTS displays snapshot information for every mounted Oracle ACFS.

| Column             | Datatype        | Description                                                                                                                                                                                                                                                                                                        |
|--------------------|-----------------|--------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|
| FS_NAME            | VARCHAR2 (1024) | File system mount point (foreign key to V\$ASM_FILESYSTEM)                                                                                                                                                                                                                                                         |
| VOL_DEVICE         | VARCHAR2 (256)  | Name of the Oracle ADVM device                                                                                                                                                                                                                                                                                     |
| SNAP_NAME          | VARCHAR2 (1024) | Name of the snapshot                                                                                                                                                                                                                                                                                               |
| CREATE_TIME        | DATE            | Time when the snapshot was created                                                                                                                                                                                                                                                                                 |
| TYPE               | VARCHAR2 (2)    | Snapshot type. Possible types are read-only (RO) or read/write (RW).                                                                                                                                                                                                                                               |
| PARENT             | VARCHAR2 (1024) | Parent name used to create the snapshot. If the snapshot was created using the mount point as a base, parent name will be NULL. If the snapshot was created using an existing snapshot as the base, the parent name will be the name of the snapshot passed to the <code>acfsutil snap create -p</code> operation. |
| LINK               | VARCHAR2 (1024) | If link has been set, the path of the link. If unset, NULL.                                                                                                                                                                                                                                                        |
| ADDITIONAL_STORAGE | NUMBER          | Equivalent to "storage added to snapshot" output                                                                                                                                                                                                                                                                   |
| QUOTA              | NUMBER          | Value of quota. If unset, NULL.                                                                                                                                                                                                                                                                                    |

| Column | Datatype      | Description                                                                                                                                                                                                                                                                                                                                                                                                                                                                           |
|--------|---------------|---------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|
| REPL   | VARCHAR2 (5)  | Indicates whether the snapshot is being used for replication ( <b>TRUE</b> ) or not ( <b>FALSE</b> )                                                                                                                                                                                                                                                                                                                                                                                  |
| STATE  | VARCHAR2 (14) | The state of the snapshot: <ul style="list-style-type: none"> <li>AVAILABLE - Default</li> <li>DELETE_WAITING - Maps to "delete waiting for last close"</li> <li>DELETE_IN_PROGRESS - Maps to "delete in progress"</li> </ul>                                                                                                                                                                                                                                                         |
| CON_ID | NUMBER        | The ID of the container to which the data pertains. Possible values include: <ul style="list-style-type: none"> <li>0: This value is used for rows containing data that pertain to the entire CDB. This value is also used for rows in non-CDBs.</li> <li>1: This value is used for rows containing data that pertain to only the root</li> <li><i>n</i>: Where <i>n</i> is the applicable container ID for the rows containing data</li> </ul> For this view, the value is always 0. |

- *Oracle Automatic Storage Management Administrator's Guide* for additional information about using views to display Oracle Advanced Cluster File System (Oracle ACFS) and Oracle ASM Dynamic Volume Manager (Oracle ADVM) information

#### Note:

To display information about Oracle ACFS file systems or volumes that are located on nodes in an Oracle Flex ASM configuration, you must connect to the Oracle ASM proxy instance instead of the local Oracle ASM instance. For information about Oracle Flex ASM, refer to *Oracle Automatic Storage Management Administrator's Guide*.

## 8.48 V\$ASM\_ACFSTAG

V\$ASM\_ACFSTAG displays every file or directory that has a tag and its tag name for every mounted Oracle ACFS.

| Column    | Datatype        | Description                   |
|-----------|-----------------|-------------------------------|
| TAG_NAME  | VARCHAR2 (32)   | Tag name on file or directory |
| FS_NAME   | VARCHAR2 (1024) | File system mount point       |
| PATH_NAME | VARCHAR2 (4096) | Complete file path name       |

| Column | Datatype | Description                                                                                                                                                                                                                                                                                                                                                                                                                                                                                           |
|--------|----------|-------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|
| CON_ID | NUMBER   | <p>The ID of the container to which the data pertains. Possible values include:</p> <ul style="list-style-type: none"><li>• 0: This value is used for rows containing data that pertain to the entire CDB. This value is also used for rows in non-CDBs.</li><li>• 1: This value is used for rows containing data that pertain to only the root</li><li>• <i>n</i>: Where <i>n</i> is the applicable container ID for the rows containing data</li></ul> <p>For this view, the value is always 0.</p> |

 **See Also:**

## 8.49 V\$ASM\_ACFSVOLUMES

V\$ASM\_ACFSVOLUMES displays information about mounted Oracle ACFS volumes, correlated with V\$ASM\_FILESYSTEM.

| Column      | Datatype        | Description                                                                                         |
|-------------|-----------------|-----------------------------------------------------------------------------------------------------|
| FS_NAME     | VARCHAR2 (1024) | File system mount point (foreign key to V\$ASM_FILESYSTEM)                                          |
| VOL_DEVICE  | VARCHAR2 (256)  | Name of the Oracle ADVM device                                                                      |
| VOL_LABEL   | VARCHAR2 (64)   | Volume label (optional name) assigned through <code>mkfs/acfsformat</code> ; NULL if no name exists |
| PRIMARY_VOL | VARCHAR2 (5)    | Indicates whether the volume is the primary volume for the file system (TRUE) or not (FALSE)        |
| TOTAL_MB    | NUMBER          | Size of the volume device (in megabytes)                                                            |
| FREE_MB     | NUMBER          | Available space on the volume device (in megabytes)                                                 |

| Column | Datatype | Description                                                                                                                                                                                                                                                                                                                                                                                                                                                                                         |
|--------|----------|-----------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|
| CON_ID | NUMBER   | <p>The ID of the container to which the data pertains. Possible values include:</p> <ul style="list-style-type: none"> <li>0: This value is used for rows containing data that pertain to the entire CDB. This value is also used for rows in non-CDBs.</li> <li>1: This value is used for rows containing data that pertain to only the root</li> <li><i>n</i>: Where <i>n</i> is the applicable container ID for the rows containing data</li> </ul> <p>For this view, the value is always 0.</p> |

- *Oracle Automatic Storage Management Administrator's Guide* for more information about Oracle Advanced Cluster File System (Oracle ACFS)
- *Oracle Automatic Storage Management Administrator's Guide* for additional information about using views to display Oracle Advanced Cluster File System (Oracle ACFS) and Oracle ASM Dynamic Volume Manager (Oracle ADVM) information

#### Note:

To display information about Oracle ACFS file systems or volumes that are located on nodes in an Oracle Flex ASM configuration, you must connect to the Oracle ASM proxy instance instead of the local Oracle ASM instance. For information about Oracle Flex ASM, refer to *Oracle Automatic Storage Management Administrator's Guide*.

## 8.50 V\$ASM\_ALIAS

In an Oracle Automatic Storage Management (Oracle ASM) instance, V\$ASM\_ALIAS displays one row for every alias present in every disk group mounted by the Oracle ASM instance.

| Column            | Datatype      | Description                                                                      |
|-------------------|---------------|----------------------------------------------------------------------------------|
| NAME              | VARCHAR2 (70) | Oracle ASM alias or alias directory name                                         |
| GROUP_NUMBER      | NUMBER        | Owning disk group number of the alias (foreign key to the V\$ASM_DISKGROUP view) |
| FILE_NUMBER       | NUMBER        | Oracle ASM file number of the alias (foreign key to the V\$ASM_FILE view)        |
| FILE_INCARNATION  | NUMBER        | Oracle ASM file incarnation number for the alias                                 |
| ALIAS_INDEX       | NUMBER        | Alias entry number for the alias                                                 |
| ALIAS_INCARNATION | NUMBER        | Incarnation number for the parent of the alias                                   |

| Column          | Datatype     | Description                                                                                                                                                                                                                                                                                                                                                                                                                                                                                         |
|-----------------|--------------|-----------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|
| PARENT_INDEX    | NUMBER       | A 32-bit number consisting of a disk group number in the high-order 8 bits and an alias entry number in the low-order 24 bits (number of the directory containing the alias)                                                                                                                                                                                                                                                                                                                        |
| REFERENCE_INDEX | NUMBER       | A 32-bit number consisting of a disk group number in the high-order 8 bits and an alias entry number in the low-order 24 bits (number of the directory describing the current entry)                                                                                                                                                                                                                                                                                                                |
| ALIAS_DIRECTORY | VARCHAR2 (1) | Indicates whether the alias is to a directory (Y) or to an Oracle ASM file (N)                                                                                                                                                                                                                                                                                                                                                                                                                      |
| SYSTEM_CREATED  | VARCHAR2 (1) | Indicates whether the alias is system created (Y) or user created (N)                                                                                                                                                                                                                                                                                                                                                                                                                               |
| CON_ID          | NUMBER       | <p>The ID of the container to which the data pertains. Possible values include:</p> <ul style="list-style-type: none"> <li>0: This value is used for rows containing data that pertain to the entire CDB. This value is also used for rows in non-CDBs.</li> <li>1: This value is used for rows containing data that pertain to only the root</li> <li><i>n</i>: Where <i>n</i> is the applicable container ID for the rows containing data</li> </ul> <p>For this view, the value is always 0.</p> |

## 8.51 V\$ASM\_ATTRIBUTE

V\$ASM\_ATTRIBUTE displays one row for each attribute defined. In addition to attributes specified by CREATE DISKGROUP and ALTER DISKGROUP statements, the view may show other attributes that are created automatically.

Note that attributes are only displayed for disk groups where COMPATIBLE.ASM is set to 11.1 or higher.

| Column                | Datatype       | Description                                                                     |
|-----------------------|----------------|---------------------------------------------------------------------------------|
| NAME                  | VARCHAR2 (256) | Full name of the attribute                                                      |
| VALUE                 | VARCHAR2 (256) | Value of the attribute                                                          |
| GROUP_NUMBER          | NUMBER         | Number of the disk group in which this attribute exists (composite primary key) |
| ATTRIBUTE_INDEX       | NUMBER         | Number of this attribute in the disk group (composite primary key)              |
| ATTRIBUTE_INCARNATION | NUMBER         | Incarnation number for this attribute (composite primary key)                   |
| READ_ONLY             | VARCHAR2 (7)   | Indicates whether the attribute is read-only (Y) or not (N)                     |
| SYSTEM_CREATED        | VARCHAR2 (7)   | Indicates whether this is a system-created attribute (Y) or not (N)             |

| Column | Datatype | Description                                                                                                                                                                                                                                                                                                                                                                                                                                                                       |
|--------|----------|-----------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|
| CON_ID | NUMBER   | The ID of the container to which the data pertains. Possible values include: <ul style="list-style-type: none"><li>0: This value is used for rows containing data that pertain to the entire CDB. This value is also used for rows in non-CDBs.</li><li>1: This value is used for rows containing data that pertain to only the root</li><li><i>n</i>: Where <i>n</i> is the applicable container ID for the rows containing data</li></ul> For this view, the value is always 0. |

**Note:**

In an Oracle Database instance, this view returns 0 rows when queried from a PDB.

- Oracle Automatic Storage Management Administrator's Guide* for additional information about using views to display Oracle ASM information

## 8.52 V\$ASM\_AUDIT\_CLEANUP\_JOBS

In an Oracle Automatic Storage Management (Oracle ASM) instance, V\$ASM\_AUDIT\_CLEANUP\_JOBS displays information about the configured audit trail purge jobs.

In a database instance, V\$ASM\_AUDIT\_CLEANUP\_JOBS displays no rows.

| Column        | Datatype      | Description                                                                                                       |
|---------------|---------------|-------------------------------------------------------------------------------------------------------------------|
| JOB_NAME      | VARCHAR2 (64) | Name of the audit trail purge job                                                                                 |
| JOB_STATUS    | VARCHAR2 (64) | Current status of the audit trail purge job (ENABLED) or (DISABLED)                                               |
| AUDIT_TRAIL   | VARCHAR2 (64) | Audit trail for which the audit trail purge job is configured: OS AUDIT TRAIL and UNIFIED AUDIT TRAIL             |
| JOB_FREQUENCY | NUMBER        | Frequency at which the audit trail purge job runs                                                                 |
| USE_TIMESTAMP | VARCHAR2 (64) | Indicates whether the audit trail purge job is configured to use the last archive timestamp (TRUE) or not (FALSE) |

| Column | Datatype | Description                                                                                                                                                                                                                                                                                                                                                                                                                                                                             |
|--------|----------|-----------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|
| CON_ID | NUMBER   | The ID of the container to which the data pertains. Possible values include: <ul style="list-style-type: none"><li>• 0: This value is used for rows containing data that pertain to the entire CDB. This value is also used for rows in non-CDBs.</li><li>• 1: This value is used for rows containing data that pertain to only the root</li><li>• <i>n</i>: Where <i>n</i> is the applicable container ID for the rows containing data</li></ul> For this view, the value is always 0. |

**See Also:**

*Oracle Automatic Storage Management Administrator's Guide* for additional information about using views to display Oracle ASM information

## 8.53 V\$ASM\_AUDIT\_CONFIG\_PARAMS

In an Oracle Automatic Storage Management (Oracle ASM) instance, V\$ASM\_AUDIT\_CONFIG\_PARAMS displays information about the currently configured audit trail properties that are used by the DBMS\_AUDIT\_MGMT package.

In a database instance, V\$ASM\_AUDIT\_CONFIG\_PARAMS displays no rows.

| Column          | Datatype      | Description                                                                                                                                                                                                                                                                                                                                                                                                                                                                             |
|-----------------|---------------|-----------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|
| PARAMETER_NAME  | VARCHAR2 (64) | Name of the property                                                                                                                                                                                                                                                                                                                                                                                                                                                                    |
| PARAMETER_VALUE | VARCHAR2 (64) | Value of the property                                                                                                                                                                                                                                                                                                                                                                                                                                                                   |
| AUDIT_TRAIL     | VARCHAR2 (64) | Audit trails for which the property is configured: OS AUDIT TRAIL and UNIFIED AUDIT TRAIL                                                                                                                                                                                                                                                                                                                                                                                               |
| PARAMETER_UNIT  | VARCHAR2 (64) | Provides description of units of audit properties (file size in KB and file age in day(s))                                                                                                                                                                                                                                                                                                                                                                                              |
| CON_ID          | NUMBER        | The ID of the container to which the data pertains. Possible values include: <ul style="list-style-type: none"><li>• 0: This value is used for rows containing data that pertain to the entire CDB. This value is also used for rows in non-CDBs.</li><li>• 1: This value is used for rows containing data that pertain to only the root</li><li>• <i>n</i>: Where <i>n</i> is the applicable container ID for the rows containing data</li></ul> For this view, the value is always 0. |

## 8.54 V\$ASM\_AUDIT\_LAST\_ARCH\_TS

In an Oracle Automatic Storage Management (Oracle ASM) instance, `V$ASM_AUDIT_LAST_ARCH_TS` displays information about the last archive timestamps set for audit trail cleanup or purges.

In a database instance, `V$ASM_AUDIT_LAST_ARCH_TS` displays no rows.

| Column          | Datatype                     | Description                                                                                                                                                                                                                                                                                                                                                                                                                                                                             |
|-----------------|------------------------------|-----------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|
| AUDIT_TRAIL     | VARCHAR2 (64)                | Audit trail for which the last archive timestamp applies: OS AUDIT TRAIL and UNIFIED AUDIT TRAIL                                                                                                                                                                                                                                                                                                                                                                                        |
| LAST_ARCHIVE_TS | TIMESTAMP (6) WITH TIME ZONE | Timestamp of the last audit file that has been archived                                                                                                                                                                                                                                                                                                                                                                                                                                 |
| CON_ID          | NUMBER                       | The ID of the container to which the data pertains. Possible values include: <ul style="list-style-type: none"><li>• 0: This value is used for rows containing data that pertain to the entire CDB. This value is also used for rows in non-CDBs.</li><li>• 1: This value is used for rows containing data that pertain to only the root</li><li>• <i>n</i>: Where <i>n</i> is the applicable container ID for the rows containing data</li></ul> For this view, the value is always 0. |

## 8.55 V\$ASM\_CLIENT

In an Oracle Automatic Storage Management (Oracle ASM) instance, `V$ASM_CLIENT` identifies databases using disk groups managed by the Oracle ASM instance.

In a database instance, `V$ASM_CLIENT` displays information about the Oracle ASM instance if the database has any open Oracle ASM files.

| Column             | Datatype      | Description                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                          |
|--------------------|---------------|--------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|
| GROUP_NUMBER       | NUMBER        | <p>Number of the disk group being used by the database instance (foreign key to the V\$ASM_DISKGROUP view). When a client is connected to an Oracle ASM instance, but is not currently using any disk groups, V\$ASM_CLIENT.GROUP_NUMBER contains 0.</p> <p>When the Cluster Ready Services Daemon (CRSD) or Cluster Synchronization Services (OCSSD) connects to the Oracle ASM instance, this will represent the number of the disk group used for their OCR and voting files respectively.</p>                                    |
| INSTANCE_NAME      | VARCHAR2 (64) | <p>Identifier for the database instance client</p> <p>When CRSD or OCSSD has opened its files in the disk group mounted by the Oracle ASM instance, this will contain the node name where CRSD or OCSSD is running.</p>                                                                                                                                                                                                                                                                                                              |
| DB_NAME            | VARCHAR2 (8)  | <p>Unique database name of the database client instance</p> <p>When CRSD has opened the Oracle Cluster Registry (OCR) file in the disk group mounted by the Oracle ASM instance, DB_NAME will contain _OCR.</p> <p>When OCSSD has opened the voting file in the disk group mounted by the Oracle ASM instance, DB_NAME will contain _CSS.</p>                                                                                                                                                                                        |
| CLUSTER_NAME       | VARCHAR2 (31) | Name of the cluster                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                  |
| STATUS             | VARCHAR2 (12) | <p>Status of the client connection:</p> <ul style="list-style-type: none"> <li>CONNECTED - Database instance client has an active connection to the Oracle ASM instance</li> <li>DISCONNECTED - Database instance client normally ended its connection to the Oracle ASM instance</li> <li>BROKEN - Connection with the database instance client terminated in a nonstandard way</li> </ul> <p>When CRSD or OCSSD has opened its files in the disk group mounted by the Oracle ASM instance, it will report Connected as status.</p> |
| SOFTWARE_VERSION   | VARCHAR2 (60) | Software version number of the database or Oracle ASM instance for the selected disk group connection                                                                                                                                                                                                                                                                                                                                                                                                                                |
| COMPATIBLE_VERSION | VARCHAR2 (60) | <p>Compatibility setting of the database or Oracle ASM instance for the selected disk group connection</p> <p>The value will be - when CRSD or OCSSD has opened its files in the disk group mounted by the Oracle ASM instance.</p>                                                                                                                                                                                                                                                                                                  |
| CON_ID             | NUMBER        | <p>The ID of the container to which the data pertains. Possible values include:</p> <ul style="list-style-type: none"> <li>0: This value is used for rows containing data that pertain to the entire CDB. This value is also used for rows in non-CDBs.</li> <li>1: This value is used for rows containing data that pertain to only the root</li> <li>n: Where n is the applicable container ID for the rows containing data</li> </ul> <p>For this view, the value is always 0.</p>                                                |

**Note:**

In an Oracle Database instance, this view returns 0 rows when queried from a PDB.

## 8.57 V\$ASM\_DISK

V\$ASM\_DISK displays one row for every disk discovered by the Oracle Automatic Storage Management (Oracle ASM) instance, including disks that are not part of any disk group.

| Column         | Datatype      | Description                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                   |

| GROUP_NUMBER   | NUMBER        | Number of the disk group containing the disk (foreign key to the V\$ASM_DISKGROUP view)                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                       |
| DISK_NUMBER    | NUMBER        | Number assigned to the disk within its disk group                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                             |
| COMPOUND_INDEX | NUMBER        | A 32-bit number consisting of a disk group number in the high-order 8 bits and a disk number in the low-order 24 bits (for efficient access to the view)                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                      |
| INCARNATION    | NUMBER        | Incarnation number for the disk                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                               |
| MOUNT_STATUS   | VARCHAR2 (7)  | <p>Per-instance status of the disk relative to group mounts:</p> <ul style="list-style-type: none"> <li>• <b>MISSING</b> - Oracle ASM metadata indicates that the disk is known to be part of the Oracle ASM disk group but no disk in the storage system was found with the indicated name</li> <li>• <b>CLOSED</b> - Disk is present in the storage system but is not being accessed by Oracle ASM</li> <li>• <b>OPENED</b> - Disk is present in the storage system and is being accessed by Oracle ASM. This is the normal state for disks in a database instance which are part of a disk group being actively used by the instance.</li> <li>• <b>CACHED</b> - Disk is present in the storage system and is part of a disk group being accessed by the Oracle ASM instance. This is the normal state for disks in an Oracle ASM instance which are part of a mounted disk group.</li> <li>• <b>IGNORED</b> - Disk is present in the system but is ignored by Oracle ASM because of one of the following: <ul style="list-style-type: none"> <li>– The disk is detected by the system library but is ignored because an Oracle ASM library discovered the same disk</li> <li>– Oracle ASM has determined that the membership claimed by the disk header is no longer valid</li> </ul> </li> <li>• <b>CLOSING</b> - Oracle ASM is in the process of closing this disk</li> </ul>                                                                                                                                                                                           |
| HEADER_STATUS  | VARCHAR2 (12) | <p>Per-instance status of the disk as seen by discovery:</p> <ul style="list-style-type: none"> <li>• <b>UNKNOWN</b> - Oracle ASM disk header has not been read</li> <li>• <b>CANDIDATE</b> - Disk is not part of a disk group and may be added to a disk group with the <code>ALTER DISKGROUP</code> statement</li> <li>• <b>INCOMPATIBLE</b> - Version number in the disk header is not compatible with the Oracle ASM software version</li> <li>• <b>PROVISIONED</b> - Disk is not part of a disk group and may be added to a disk group with the <code>ALTER DISKGROUP</code> statement. The <b>PROVISIONED</b> header status is different from the <b>CANDIDATE</b> header status in that <b>PROVISIONED</b> implies that an additional platform-specific action has been taken by an administrator to make the disk available for Oracle ASM.</li> <li>• <b>MEMBER</b> - Disk is a member of an existing disk group. No attempt should be made to add the disk to a different disk group. The <code>ALTER DISKGROUP</code> statement will reject such an addition unless overridden with the <code>FORCE</code> option.</li> <li>• <b>FORMER</b> - Disk was once part of a disk group but has been dropped cleanly from the group. It may be added to a new disk group with the <code>ALTER DISKGROUP</code> statement.</li> <li>• <b>CONFLICT</b> - Oracle ASM disk was not mounted due to a conflict</li> <li>• <b>FOREIGN</b> - Disk contains data created by an Oracle product other than Oracle ASM. This includes data files, logfiles, and OCR disks.</li> </ul> |

| Column                    | Datatype       | Description                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                           |

| COLD_BYTES_WRITTEN <sup>1</sup> | NUMBER       | Number of bytes written to the disk                                                                                                                                                                                                                                                                                                                                                                                                     |
| VOTING_FILE                     | VARCHAR2 (1) | Indicates whether the disk contains a voting file (Y) or not (N)                                                                                                                                                                                                                                                                                                                                                                        |
| SECTOR_SIZE                     | NUMBER       | Physical block size (in bytes)                                                                                                                                                                                                                                                                                                                                                                                                          |
| LOGICAL_SECTOR_SIZE             | NUMBER       | <p>Shows the logical sector size value of the disk in bytes. This is the smallest possible I/O that can be done by the disk.</p> <p>If the value of the <code>LOGICAL_SECTOR_SIZE</code> column is 512, while the value in the <code>SECTOR_SIZE</code> column is 4096, then the disk supports 512 sector size emulation. This means the disk can be used for both 512 native and 4096 native disk groups.</p>                          |

| Column                 | Datatype      | Description                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                      |

| SITE_GUID              | VARCHAR2 (33) | The GUID for the site to which the specific disk belongs                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                         |
| FAILGROUP_LABEL        | VARCHAR2 (30) | This is the suggested name for the failure group to which the disk belongs, as returned by discovery                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                             |
| SITE_LABEL             | VARCHAR2 (30) | This is the suggested name for the site to which the disk belongs, as returned by discovery                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                      |
| SITE_STATUS            | VARCHAR2 (11) | This column is populated only for disks in Oracle ASM extended disk groups. The site status is computed after every Partnership and Status Table (PST) refresh or when the PST is read from disks into memory. The possible states include: <ul style="list-style-type: none"> <li>UNKNOWN: This is the state before any checks have been performed.</li> <li>UNAVAILABLE: This is the state when all the disks in the site are offline.</li> <li>COMPROMISED: The state when enough disks or PST copies are offline, such that the site can no longer provide data availability.</li> <li>AVAILABLE: The state when there is enough redundancy within the site to provide data availability in case another site becomes compromised or unavailable.</li> </ul> |

<sup>1</sup> Intelligent Data Placement is desupported starting with Oracle Database 21c. As a result, the individual values for the HOT\_USED\_MB and COLD\_USED\_MB columns are not meaningful. However, the sum of the HOT\_USED\_MB and COLD\_USED\_MB values represents the total number of used megabytes on the disk. Also, the HOT\_READS, HOT\_WRITES, HOT\_BYTES\_READ, and HOT\_BYTES\_WRITTEN columns are no longer meaningful and always return 0, and the COLD\_READS, COLD\_WRITES, COLD\_BYTES\_READ, and COLD\_BYTES\_WRITTEN columns return statistics for the entire disk.

#### Note:

The GROUP\_NUMBER and DISK\_NUMBER columns will only be valid if the disk is part of a disk group which is currently mounted by the instance. Otherwise, GROUP\_NUMBER will be 0, and DISK\_NUMBER will be a unique value with respect to the other disks that also have a group number of 0.

**Note:**

In an Oracle Database instance, this view returns 0 rows when queried from a PDB.

**Note:**

This view performs disk discovery every time it is queried. Because performing disk discovery is very resource intensive, Oracle recommends against using this view for monitoring scripts. Instead, use the less expensive view [V\\$ASM\\_DISK\\_STAT](#).

**See Also:**

## 8.58 V\$ASM\_DISK\_IOSTAT

V\$ASM\_DISK\_IOSTAT displays information about disk I/O statistics for each Oracle Automatic Storage Management (Oracle ASM) client.

If this view is queried from the database instance, only the rows for that instance are shown.

| Column        | Datatype      | Description                                                                                                                                     |
|---------------|---------------|-------------------------------------------------------------------------------------------------------------------------------------------------|
| INSTNAME      | VARCHAR2 (64) | Identifier for the DB/ADVM instance client                                                                                                      |
| DBNAME        | VARCHAR2 (8)  | Unique database name (DB_UNIQUE_NAME)                                                                                                           |
| CLUSTERNAME   | VARCHAR2 (31) | Name of the cluster                                                                                                                             |
| GROUP_NUMBER  | NUMBER        | Number of the disk group containing the disk                                                                                                    |
| DISK_NUMBER   | NUMBER        | Number assigned to the disk within its disk group                                                                                               |
| FAILGROUP     | VARCHAR2 (30) | Name of the failure group to which the disk belongs                                                                                             |
| SITE_NAME     | VARCHAR2 (30) | This is the name of the site to which the disk belongs                                                                                          |
| READS         | NUMBER        | Total number of I/O read requests for the disk                                                                                                  |
| WRITES        | NUMBER        | Total number of I/O write requests for the disk                                                                                                 |
| READ_ERRS     | NUMBER        | Total number of failed I/O read requests for the disk                                                                                           |
| WRITE_ERRS    | NUMBER        | Total number of failed I/O write requests for the disk                                                                                          |
| READ_TIMEOUT  | NUMBER        | Number of read I/Os that are timed out                                                                                                          |
| WRITE_TIMEOUT | NUMBER        | Number of write I/Os that are timed out                                                                                                         |
| READ_TIME     | NUMBER        | Total I/O time (in seconds) for read requests for the disk if the TIMED_STATISTICS initialization parameter is set to TRUE (0 if set to FALSE). |
| WRITE_TIME    | NUMBER        | Total I/O time (in seconds) for write requests for the disk if the TIMED_STATISTICS initialization parameter is set to TRUE (0 if set to FALSE) |

| Column                          | Datatype | Description                                                                                                                                                                                                                                                                                                                                                                                                                                                                                         |
|---------------------------------|----------|-----------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|
| BYTES_READ                      | NUMBER   | Total number of bytes read from the disk                                                                                                                                                                                                                                                                                                                                                                                                                                                            |
| BYTES_WRITTEN                   | NUMBER   | Total number of bytes written from the disk                                                                                                                                                                                                                                                                                                                                                                                                                                                         |
| HOT_READS <sup>1</sup>          | NUMBER   | This column is not meaningful and its value is always 0                                                                                                                                                                                                                                                                                                                                                                                                                                             |
| HOT_WRITES <sup>1</sup>         | NUMBER   | This column is not meaningful and its value is always 0                                                                                                                                                                                                                                                                                                                                                                                                                                             |
| HOT_BYTES_READ <sup>1</sup>     | NUMBER   | This column is not meaningful and its value is always 0                                                                                                                                                                                                                                                                                                                                                                                                                                             |
| HOT_BYTES_WRITTEN <sup>1</sup>  | NUMBER   | This column is not meaningful and its value is always 0                                                                                                                                                                                                                                                                                                                                                                                                                                             |
| COLD_READS <sup>1</sup>         | NUMBER   | Number of reads from the disk                                                                                                                                                                                                                                                                                                                                                                                                                                                                       |
| COLD_WRITES <sup>1</sup>        | NUMBER   | Number of writes to the disk                                                                                                                                                                                                                                                                                                                                                                                                                                                                        |
| COLD_BYTES_READ <sup>1</sup>    | NUMBER   | Number of bytes read from the disk                                                                                                                                                                                                                                                                                                                                                                                                                                                                  |
| COLD_BYTES_WRITTEN <sup>1</sup> | NUMBER   | Number of bytes written to the disk                                                                                                                                                                                                                                                                                                                                                                                                                                                                 |
| CON_ID                          | NUMBER   | <p>The ID of the container to which the data pertains. Possible values include:</p> <ul style="list-style-type: none"> <li>0: This value is used for rows containing data that pertain to the entire CDB. This value is also used for rows in non-CDBs.</li> <li>1: This value is used for rows containing data that pertain to only the root</li> <li><i>n</i>: Where <i>n</i> is the applicable container ID for the rows containing data</li> </ul> <p>For this view, the value is always 0.</p> |

<sup>1</sup> Intelligent Data Placement is desupported starting with Oracle Database 21c. As a result, the HOT\_READS, HOT\_WRITES, HOT\_BYTES\_READ, and HOT\_BYTES\_WRITTEN columns are no longer meaningful and always return 0, and the COLD\_READS, COLD\_WRITES, COLD\_BYTES\_READ, and COLD\_BYTES\_WRITTEN columns return statistics for the entire disk.

#### Note:

In an Oracle Database instance, this view returns 0 rows when queried from a PDB.

## 8.59 V\$ASM\_DISK\_STAT

V\$ASM\_DISK\_STAT displays performance statistics in the same way that V\$ASM\_DISK does, but without performing discovery of new disks

This results in a less expensive operation. However, since discovery is not performed, the output of this view does not include any data about disks that are new to the system.

The columns for V\$ASM\_DISK\_STAT are the same as those for V\$ASM\_DISK.

**Note:**

In an Oracle Database instance, this view returns 0 rows when queried from a PDB.

**See Also:**

"V\$ASM\_DISK"

## 8.60 V\$ASM\_DISKGROUP

V\$ASM\_DISKGROUP displays one row for every Oracle Automatic Storage Management (Oracle ASM) disk group discovered by the Oracle ASM instance on the node.

| Column               | Datatype      | Description                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                   |

| GROUP_NUMBER         | NUMBER        | Cluster-wide number assigned to the disk group (primary key)                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                  |
| NAME                 | VARCHAR2 (30) | Name of the disk group                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                        |
| SECTOR_SIZE          | NUMBER        | Physical block size (in bytes)                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                |
| LOGICAL_SECTOR_SIZE  | NUMBER        | <p>This column represents the logical sector size value of the disk group in bytes. This is the smallest possible I/O that can be done in this disk group. Any I/O smaller than the logical sector size will cause an assert in the code.</p> <p>If the value of the LOGICAL_SECTOR_SIZE column is 512, while the value in the SECTOR_SIZE column is 4096, then the disk group supports 512 sector size emulation. This means that I/O operations can be both 512 or 4096 aligned. For example, this means that you can have redo log files with a file block size of 512 bytes in this disk group that can be both read and written to, as well as create new redo log files with a file block size of 4096 bytes.</p>                                                                                                                                                                                                                                                                                       |
| BLOCK_SIZE           | NUMBER        | Oracle ASM metadata block size (in bytes)                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                     |
| ALLOCATION_UNIT_SIZE | NUMBER        | Size of the allocation unit (in bytes)                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                        |
| STATE                | VARCHAR2 (11) | <p>State of the disk group relative to the instance:</p> <ul style="list-style-type: none"> <li><b>BROKEN</b> - Database instance lost connectivity to the Oracle ASM instance that mounted the disk group</li> <li><b>CONNECTED</b> - Disk group is in use by the database instance</li> <li><b>DISMOUNTED</b> - Disk group was cleanly dismounted by the Oracle ASM instance following a successful mount</li> <li><b>MOUNTED</b> - Instance is successfully serving the disk group to its database clients</li> <li><b>QUIESCING</b> - CRSCTL utility attempted to dismount a disk group that contains the Oracle Cluster Registry (OCR). The disk group cannot be dismounted until Cluster Ready Services (CRS) exits, because the disk group contains the OCR.</li> <li><b>RESTRICTED</b> - A disk group mounted in this mode can only be seen by this Oracle ASM instance for maintenance purposes</li> <li><b>UNKNOWN</b> - Oracle ASM instance has never attempted to mount the disk group</li> </ul> |

| Column                    | Datatype      | Description                                                                                                                                                                                                                                                                                                                                                                                                                                                                                 |
|---------------------------|---------------|---------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|
| TYPE                      | VARCHAR2 (6)  | Redundancy type for the disk group: <ul style="list-style-type: none"> <li>• EXTEND</li> <li>• EXTERN</li> <li>• FLEX</li> <li>• HIGH</li> <li>• NORMAL</li> </ul>                                                                                                                                                                                                                                                                                                                          |

| FREE_MB                   | NUMBER        | Unused capacity of the disk group (in megabytes)                                                                                                                                                                                                                                                                                                                                                                                                                                            |
| HOT_USED_MB <sup>1</sup>  | NUMBER        | Number of used megabytes in the hot region                                                                                                                                                                                                                                                                                                                                                                                                                                                  |
| COLD_USED_MB <sup>1</sup> | NUMBER        | Number of used megabytes in the cold region                                                                                                                                                                                                                                                                                                                                                                                                                                                 |
| REQUIRED_MIRROR_FREE_MB   | NUMBER        | Amount of space that is required to be available in a given disk group in order to restore redundancy after one or more disk failures. The amount of space displayed in this column takes mirroring effects into account.                                                                                                                                                                                                                                                                   |
| USABLE_FILE_MB            | NUMBER        | Amount of free space that can be safely utilized taking mirroring into account and yet be able to restore redundancy after a disk failure                                                                                                                                                                                                                                                                                                                                                   |
| OFFLINE_DISKS             | NUMBER        | Number of disks in the disk group that are currently offline                                                                                                                                                                                                                                                                                                                                                                                                                                |
| COMPATIBILITY             | VARCHAR2 (60) | Minimum software version required for an Oracle ASM instance to mount this disk group                                                                                                                                                                                                                                                                                                                                                                                                       |
| DATABASE_COMPATIBILITY    | VARCHAR2 (60) | Minimum software version required for a database instance to use files in this disk group                                                                                                                                                                                                                                                                                                                                                                                                   |
| VOTING_FILES              | VARCHAR2 (1)  | Indicates whether the disk contains voting files (Y) or not (N)                                                                                                                                                                                                                                                                                                                                                                                                                             |
| CON_ID                    | NUMBER        | The ID of the container to which the data pertains. Possible values include: <ul style="list-style-type: none"> <li>• 0: This value is used for rows containing data that pertain to the entire CDB. This value is also used for rows in non-CDBs.</li> <li>• 1: This value is used for rows containing data that pertain to only the root</li> <li>• <i>n</i>: Where <i>n</i> is the applicable container ID for the rows containing data</li> </ul> For this view, the value is always 0. |

<sup>1</sup> Intelligent Data Placement is desupported starting with Oracle Database 21c. As a result, the individual values for the HOT\_USED\_MB and COLD\_USED\_MB columns are not meaningful. However, the sum of the HOT\_USED\_MB and COLD\_USED\_MB values represents the total number of used megabytes in the disk group.

#### Note:

The GROUP\_NUMBER, TOTAL\_MB, and FREE\_MB columns are only meaningful if the disk group is mounted by the instance. Otherwise, their values will be 0.

**Note:**

This view performs disk discovery every time it is queried. Because performing disk discovery is very resource intensive, Oracle recommends against using this view for monitoring scripts. Instead, use the less expensive view [V\\$ASM\\_DISKGROUP\\_STAT](#).

**See Also:**

*Oracle Automatic Storage Management Administrator's Guide* for additional information about using views to display Oracle ASM information

## 8.61 V\$ASM\_DISKGROUP\_STAT

V\$ASM\_DISKGROUP\_STAT displays performance statistics in the same way that V\$ASM\_DISKGROUP does, but without performing discovery of new disk groups.

This results in a less expensive operation. However, since discovery is not performed, the output of this view does not include any data about disk groups that are new to the system.

The columns for V\$ASM\_DISKGROUP\_STAT are the same as those for V\$ASM\_DISKGROUP.

**See Also:**

["V\\$ASM\\_DISKGROUP"](#)

## 8.62 V\$ASM\_ESTIMATE

V\$ASM\_ESTIMATE displays an estimate of the work involved in execution plans for Oracle Automatic Storage Management (Oracle ASM) disk group rebalance and resync operations.

| Column       | Datatype      | Description                                                                          |
|--------------|---------------|--------------------------------------------------------------------------------------|
| GROUP_NUMBER | NUMBER        | Oracle ASM disk group number                                                         |
| STATEMENT_ID | VARCHAR2 (30) | Value of the optional STATEMENT_ID parameter specified in the EXPLAIN WORK statement |
| TIMESTAMP    | DATE          | Date and time when the EXPLAIN WORK statement was issued                             |
| EST_WORK     | NUMBER        | Estimated number of Allocation Units that have to be moved by the operation          |

| Column | Datatype | Description                                                                                                                                                                                                                                                                                                                                                                                                                                                                       |
|--------|----------|-----------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|
| CON_ID | NUMBER   | The ID of the container to which the data pertains. Possible values include: <ul style="list-style-type: none"><li>0: This value is used for rows containing data that pertain to the entire CDB. This value is also used for rows in non-CDBs.</li><li>1: This value is used for rows containing data that pertain to only the root</li><li><i>n</i>: Where <i>n</i> is the applicable container ID for the rows containing data</li></ul> For this view, the value is always 0. |

**See Also:**

*Oracle Automatic Storage Management Administrator's Guide* for additional information about using views to display Oracle ASM information

## 8.63 V\$ASM\_FILE

In an Oracle Automatic Storage Management (Oracle ASM) instance, V\$ASM\_FILE displays one row for each file in each disk group mounted by the Oracle ASM instance.

For example, if there are three disk groups and five files in each, fifteen rows are displayed (unless the query is qualified with a WHERE clause).

| Column         | Datatype | Description                                                                                                                                              |
|----------------|----------|----------------------------------------------------------------------------------------------------------------------------------------------------------|
| GROUP_NUMBER   | NUMBER   | Number of the disk group containing the file (composite primary key)                                                                                     |
| FILE_NUMBER    | NUMBER   | Number of the file within the disk group (composite primary key)                                                                                         |
| COMPOUND_INDEX | NUMBER   | A 32-bit number consisting of a disk group number in the high-order 8 bits and a file number in the low-order 24 bits (for efficient access to the view) |
| INCARNATION    | NUMBER   | Incarnation number for the file (composite primary key)                                                                                                  |
| BLOCK_SIZE     | NUMBER   | Block size of the file (in bytes)                                                                                                                        |
| BLOCKS         | NUMBER   | Number of blocks in the file                                                                                                                             |
| BYTES          | NUMBER   | Number of bytes in the file                                                                                                                              |
| SPACE          | NUMBER   | Number of bytes allocated to the file                                                                                                                    |

| Column                         | Datatype      | Description                                                                                                                                                                                                                                                                                                                                                                                                                                                                |
|--------------------------------|---------------|----------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|
| TYPE                           | VARCHAR2 (64) | Type of the file. Possible values are as follows: <ul style="list-style-type: none"> <li>ARCHIVELOG</li> <li>AUTOBACKUP</li> <li>BACKUPSET</li> <li>CHANGETRACKING</li> <li>CONTROLFILE</li> <li>DATAFILE</li> <li>DATAGUARDCONFIG</li> <li>DUMPSET</li> <li>FLASHBACK</li> <li>ONLINELOG</li> <li>PARAMETERFILE</li> <li>TEMPFILE</li> <li>XTRANSPORT</li> </ul>                                                                                                          |
| REDUNDANCY                     | VARCHAR2 (6)  | Redundancy of the file: <ul style="list-style-type: none"> <li>HIGH</li> <li>MIRROR</li> <li>PARITY</li> <li>UNPROT</li> </ul>                                                                                                                                                                                                                                                                                                                                             |
| STRIPED                        | VARCHAR2 (6)  | Indicates how the file is striped: <ul style="list-style-type: none"> <li>FINE</li> <li>COARSE</li> </ul>                                                                                                                                                                                                                                                                                                                                                                  |
| CREATION_DATE                  | DATE          | Date on which the file was created                                                                                                                                                                                                                                                                                                                                                                                                                                         |
| MODIFICATION_DATE              | DATE          | Date of the last open/close for writing, rounded back to the nearest hour                                                                                                                                                                                                                                                                                                                                                                                                  |
| REDUNDANCY_LOWERED             | VARCHAR2 (1)  | Indicates whether a file has lower redundancy than what was expected (Y) or not (N). Redundancy is said to have been lowered for a file when one or more data extents in that file are not mirrored at the level specified by the administrator. In case of unprotected files, data extents could be missing altogether. Another possible value for this column is (U), which means that it is unknown.<br>This column is deprecated, and it always displays a value of U. |
| PERMISSIONS                    | VARCHAR2 (16) | Access permissions of the file, in order of user, group, and other                                                                                                                                                                                                                                                                                                                                                                                                         |
| USER_NUMBER                    | NUMBER        | User number                                                                                                                                                                                                                                                                                                                                                                                                                                                                |
| USER_INCARNATION               | NUMBER        | Incarnation number of the user                                                                                                                                                                                                                                                                                                                                                                                                                                             |
| USERGROUP_NUMBER               | NUMBER        | User group number                                                                                                                                                                                                                                                                                                                                                                                                                                                          |
| USERGROUP_INCARNATION          | NUMBER        | Incarnation number of the user group                                                                                                                                                                                                                                                                                                                                                                                                                                       |
| PRIMARY_REGION <sup>1</sup>    | VARCHAR2 (4)  | Region used for allocating primary extents: <ul style="list-style-type: none"> <li>HOT</li> <li>COLD</li> </ul>                                                                                                                                                                                                                                                                                                                                                            |

| FILEGROUP_INCARNATION           | NUMBER       | The incarnation number for the file group the file belongs to in a flex redundancy disk group                                                                                                                                                                                                                                                                                                                                                                                         |
| REMIRROR                        | VARCHAR2 (1) | This column has the value <b>Y</b> when rebalance is needed for the file after a redundancy change in a flex redundancy disk group, <b>N</b> otherwise. A redundancy change can occur when the file is moved to a file group with a different redundancy, or when the redundancy property of the file group is changed. After rebalance is run for the file, the value changes to <b>N</b> .                                                                                          |
| PARENT_FILNUM                   | NUMBER       | For internal use only.                                                                                                                                                                                                                                                                                                                                                                                                                                                                |
| PARENT_FILNUMINC                | NUMBER       | For internal use only.                                                                                                                                                                                                                                                                                                                                                                                                                                                                |
| CON_ID                          | NUMBER       | The ID of the container to which the data pertains. Possible values include: <ul style="list-style-type: none"> <li>0: This value is used for rows containing data that pertain to the entire CDB. This value is also used for rows in non-CDBs.</li> <li>1: This value is used for rows containing data that pertain to only the root</li> <li><i>n</i>: Where <i>n</i> is the applicable container ID for the rows containing data</li> </ul> For this view, the value is always 0. |

<sup>1</sup> Intelligent Data Placement is desupported starting with Oracle Database 21c. As a result, the `PRIMARY_REGION` and `MIRROR_REGION` columns are no longer meaningful. Also, the `HOT_READS`, `HOT_WRITES`, `HOT_BYTES_READ`, and `HOT_BYTES_WRITTEN` columns are no longer meaningful and always return 0, and the `COLD_READS`, `COLD_WRITES`, `COLD_BYTES_READ`, and `COLD_BYTES_WRITTEN` columns return statistics for the entire file.

## 8.64 V\$ASM\_FILEGROUP

`V$ASM_FILEGROUP` describes the properties of the Oracle Automatic Storage Management (Oracle ASM) File Groups.

In both Oracle ASM and Oracle Database instances, `V$ASM_FILEGROUP` displays one row for every File Group present in every Disk Group mounted by the Oracle ASM instance. File Groups are only displayed for Disk Groups where `COMPATIBLE.ASM` is set to 12.2 or higher.

**Note:**

There will not be an entry for the default File Group.

| Column                 | Datatype       | Description                                                                                                                                                                                                                                                                                                                                                                                                                                     |
|------------------------|----------------|-------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|
| GROUP_NUMBER           | NUMBER         | Number of the Disk Group in which this File Group exists (composite primary key)                                                                                                                                                                                                                                                                                                                                                                |
| FILEGROUP_NUMBER       | NUMBER         | Number associated to the File Group within its Disk Group (composite primary key)                                                                                                                                                                                                                                                                                                                                                               |
| INCARNATION            | NUMBER         | Incarnation number for the File Group (composite primary key)                                                                                                                                                                                                                                                                                                                                                                                   |
| COMPOUND_INDEX         | NUMBER         | A 32-bit number consisting of a Disk Group number in the high-order 8 bits and a File Group number in the low-order 24 bits (for efficient access to the view)                                                                                                                                                                                                                                                                                  |
| NAME                   | VARCHAR2 (128) | Name of the File Group                                                                                                                                                                                                                                                                                                                                                                                                                          |
| CLIENT_TYPE            | NUMBER         | Type of client that the File Group is associated to: <ul style="list-style-type: none"> <li>DATABASE</li> <li>CLUSTER</li> <li>VOLUME</li> </ul>                                                                                                                                                                                                                                                                                                |
| CLIENT_NAME            | VARCHAR2 (128) | Name of the client (database, PDB, CDB, cluster, or volume) that the File Group is associated to                                                                                                                                                                                                                                                                                                                                                |
| GUID                   | VARCHAR2 (32)  | If the CLIENT_TYPE is DATABASE: <ul style="list-style-type: none"> <li>In a CDB environment, it is the GUID of the PDB or CDB associated with the file group, the same value as the GUID in V\$CONTAINERS.</li> <li>In a non-CDB environment it is the database identifier (DBID) of the database associated with that file group.</li> </ul> If the CLIENT_TYPE is VOLUME or CLUSTER, the GUID column is empty.                                |
| QUOTAGROUP_NUMBER      | NUMBER         | Number of the quota group associated with this File Group (foreign key to the V\$ASM_QUOTAGROUP view)                                                                                                                                                                                                                                                                                                                                           |
| QUOTAGROUP_INCARNATION | NUMBER         | Incarnation number for the Quota Group                                                                                                                                                                                                                                                                                                                                                                                                          |
| USED_QUOTA_MB          | NUMBER         | Used quota of the quota group in GB                                                                                                                                                                                                                                                                                                                                                                                                             |

## 8.65 V\$ASM\_FILEGROUP\_FILE

V\$ASM\_FILEGROUP\_FILE lists all the Oracle Automatic Storage Management (Oracle ASM) files associated with each File Group.

In both Oracle ASM and Oracle Database instances, V\$ASM\_FILEGROUP\_FILE will display one row for every file associated with a File Group contained in every Disk Group mounted by the instance.

| Column           | Datatype | Description                                                                                                                                                                                                                                                                                                                                                                                                                                 |

## 8.66 V\$ASM\_FILEGROUP\_PROPERTY

V\$ASM\_FILEGROUP\_PROPERTY describes all the properties of every Oracle Automatic Storage Management (Oracle ASM) File Group.

In both Oracle ASM and Oracle Database instances, V\$ASM\_FILEGROUP\_PROPERTY will display one row for every property of every file type of every File Group contained in every Disk Group mounted by the instance.

File Group properties are only displayed for File Groups on Disk Groups where COMPATIBLE.ASM is set to 12.2 or higher.

**Note:**

There will not be an entry for the default File Group.

| Column           | Datatype      | Description                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                 |
|------------------|---------------|---------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|
| GROUP_NUMBER     | NUMBER        | Number of the Disk Group in which this File Group exists (composite primary key)                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                            |
| FILEGROUP_NUMBER | NUMBER        | Number associated to the File Group within its Disk Group (composite primary key)                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                           |
| COMPOUND_INDEX   | NUMBER        | A 32-bit number consisting of a Disk Group number in the high-order 8 bits and a Property Number in the low-order 24 bits (for efficient access to the view)                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                |

## 8.67 V\$ASM\_FILESYSTEM

V\$ASM\_FILESYSTEM displays information for every mounted Oracle ACFS.

| Column         | Datatype        | Description                                                                                                                                                                                                                                                                                                                                                                                                                                                                                    |
|----------------|-----------------|------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|
| FS_NAME        | VARCHAR2 (1024) | Mount point (primary key)                                                                                                                                                                                                                                                                                                                                                                                                                                                                      |
| AVAILABLE_TIME | DATE            | Mount time or the time that the file system became available again; NULL if the file system is not available                                                                                                                                                                                                                                                                                                                                                                                   |
| BLOCK_SIZE     | NUMBER          | File system block size (in kilobytes)                                                                                                                                                                                                                                                                                                                                                                                                                                                          |
| STATE          | VARCHAR2 (13)   | <p>File system status::</p> <ul style="list-style-type: none"> <li>NOT AVAILABLE</li> <li>AVAILABLE</li> <li>OFFLINE - Either the Oracle ASM instance is down, the disk group has been forced dismounted, or less commonly, a metadata I/O failure occurred or serious metadata corruption was detected. In the case of a metadata I/O failure, the file system is also marked as corrupt. An offline file system can only be unmounted; other attempts at access result in errors.</li> </ul> |
| CORRUPT        | VARCHAR2 (5)    | Indicates whether the file system needs the fixer (fsck, acfschkdsk) to be run (TRUE) or not (FALSE)                                                                                                                                                                                                                                                                                                                                                                                           |

| Column                 | Datatype      | Description                                                                                                                                                                                                                                                                                                                                                                                                                                                                                 |
|------------------------|---------------|---------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|
| NUM_VOL                | NUMBER        | Number of volumes in the file system                                                                                                                                                                                                                                                                                                                                                                                                                                                        |
| TOTAL_SIZE             | NUMBER        | Total capacity of the file system (in megabytes)                                                                                                                                                                                                                                                                                                                                                                                                                                            |
| TOTAL_FREE             | NUMBER        | Total free space in the file system (in megabytes)                                                                                                                                                                                                                                                                                                                                                                                                                                          |
| TOTAL_SNAP_SPACE_USAGE | NUMBER        | Total space used by snapshots (in megabytes)                                                                                                                                                                                                                                                                                                                                                                                                                                                |
| REPLSTATE              | VARCHAR2 (7)  | Replication status: <ul style="list-style-type: none"> <li>• NO REPL - Replication is not initialized</li> <li>• PRIMARY - File system is initialized for replication as a primary</li> <li>• STANDBY - File system is initialized for replication as a standby</li> </ul>                                                                                                                                                                                                                  |
| RESIZE_STATE           | VARCHAR2 (5)  | Possible resize states: <ul style="list-style-type: none"> <li>• NONE - AutoResize not configured</li> <li>• AUTO - Equivalent to AutoResizeEnabled flag</li> <li>• ERROR - Equivalent to AutoResizeError flag</li> </ul>                                                                                                                                                                                                                                                                   |
| COMPRESS_STATE         | VARCHAR2 (7)  | Compression status of the file system. Possible values: <ul style="list-style-type: none"> <li>• DISABLED - Compression is not active</li> <li>• ENABLED - Compression is active</li> <li>• PARTIAL - Compression is disabled, but the file system may contain compressed files</li> </ul>                                                                                                                                                                                                  |
| FROZEN_STATE           | VARCHAR2 (5)  | Indicates whether the filesystem is frozen (TRUE) or not (FALSE)                                                                                                                                                                                                                                                                                                                                                                                                                            |
| ACFS_COMPATIBILITY     | VARCHAR2 (60) | Oracle Release streams where Oracle ACFS has shipped                                                                                                                                                                                                                                                                                                                                                                                                                                        |
| METADATA_BLOCK_SIZE    | NUMBER        | Metadata block size of the file system. Possible values: <ul style="list-style-type: none"> <li>• 512</li> <li>• 4096</li> </ul>                                                                                                                                                                                                                                                                                                                                                            |
| CON_ID                 | NUMBER        | The ID of the container to which the data pertains. Possible values include: <ul style="list-style-type: none"> <li>• 0: This value is used for rows containing data that pertain to the entire CDB. This value is also used for rows in non-CDBs.</li> <li>• 1: This value is used for rows containing data that pertain to only the root</li> <li>• <i>n</i>: Where <i>n</i> is the applicable container ID for the rows containing data</li> </ul> For this view, the value is always 0. |

## 8.68 V\$ASM\_OPERATION

In an Oracle Automatic Storage Management (Oracle ASM) instance, V\$ASM\_OPERATION displays one row for every active Oracle ASM long running operation executing in the Oracle ASM instance.

| Column       | Datatype     | Description                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                     |
|--------------|--------------|-------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|
| GROUP_NUMBER | NUMBER       | Disk group number (primary key). This is the foreign key to the V\$ASM_DISKGROUP view.                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                          |
| OPERATION    | CHAR (5)     | Type of the operation: <ul style="list-style-type: none"> <li>REBAL - Rebalance pending for this group. The disk group is rebalancing.</li> <li>REMIRROR - Remirror is pending for this group.</li> <li>SCRUB - Scrubbing is pending for this group.</li> </ul> Starting with Oracle Database 12c, new queries should use the PASS column instead of this column.                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                               |
| PASS         | VARCHAR2 (9) | Type of the operation: <ul style="list-style-type: none"> <li>COMPACT - Oracle ASM is moving user data closer together, which improves performance by reducing seek distance</li> <li>PREPARE - Completing work corresponding to the prepare SQL operation. This phase is enabled only for FLEX or EXTENDED redundancy disk groups and COMPATIBLE.ASM must be set to 12.2 or higher.</li> <li>REBALANCE - Rebalance pending for this group. The disk group is rebalancing.</li> <li>REBUILD - Restoring the redundancy of forcing disks. Forcing disks are those disks that have been dropped with the FORCE option.</li> <li>RESILVER - This value appears in Oracle Exadata environments when WriteBack FlashCache is enabled</li> <li>RESYNC - Resync operation in progress to bring one or more Oracle ASM disks online</li> <li>SCRUBBING - The disk group is scrubbing.</li> </ul> Starting with Oracle Database 12c, new queries should use this column instead of the OPERATION column. |
| STATE        | VARCHAR2 (4) | State of the operation: <ul style="list-style-type: none"> <li>WAIT - No operations running for the group</li> <li>EST - An estimate is computed on the amount of work to be done for the rebalance</li> <li>RUN - Operation running for the group</li> <li>REAP - Operation is being run down</li> <li>DONE - Displayed for a pass that is complete</li> <li>ERRS - Operation halted by errors</li> </ul> Estimates are computed in parallel in the background while the work is being executed. Thus, the transition from the EST to the RUN state may be extremely fast.                                                                                                                                                                                                                                                                                                                                                                                                                     |
| POWER        | NUMBER       | Power requested for the operation as specified by the ASM_POWER_LIMIT initialization parameter or command syntax. Or, power requested for the operation as specified by the power option of the scrubbing SQL syntax.                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                           |
| ACTUAL       | NUMBER       | Power allocated to the operation                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                |
| SO FAR       | NUMBER       | Number of Allocation Units that are being moved per minute by the operation. Or, the number of Allocation Units that have been scrubbed so far.                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                 |
| EST_WORK     | NUMBER       | Estimated number of Allocation Units that have to be moved by the operation. Or, the estimated number of Allocation Units that have to be scrubbed by the scrubbing operation.                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                  |
| EST_RATE     | NUMBER       | Estimated number of Allocation Units that are being moved per minute by the operation                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                           |

## 8.69 V\$ASM\_QUOTAGROUP

V\$ASM\_QUOTAGROUP displays one row for every Oracle Automatic Storage Management (Oracle ASM) quota group discovered by the Oracle ASM instance on the node.

| Column            | Datatype      | Description                                                                                                                                                                                                                                                                                                                                                                                                                                       |
|-------------------|---------------|---------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|

## 8.70 V\$ASM\_TEMPLATE

In an Oracle Automatic Storage Management (Oracle ASM) instance, V\$ASM\_TEMPLATE displays one row for every template present in every disk group mounted by the Oracle ASM instance.

In a database instance, V\$ASM\_TEMPLATE displays one row for every template present in every disk group mounted by the Oracle ASM instance with which the database instance communicates.

| Column                      | Datatype      | Description                                                                                                                                                                                                                                                                                                                                                                                                                                                                                 |

| GROUP_NUMBER                | NUMBER        | Owning disk group number (foreign key to the V\$ASM_DISKGROUP view)                                                                                                                                                                                                                                                                                                                                                                                                                         |
| ENTRY_NUMBER                | NUMBER        | Template number (primary key)                                                                                                                                                                                                                                                                                                                                                                                                                                                               |
| REDUNDANCY                  | VARCHAR2 (6)  | Redundancy of the template: <ul style="list-style-type: none"> <li>• HIGH</li> <li>• MIRROR</li> <li>• PARITY</li> <li>• UNPROT</li> </ul>                                                                                                                                                                                                                                                                                                                                                  |
| STRIPE                      | VARCHAR2 (6)  | Indicates how the template is striped: <ul style="list-style-type: none"> <li>• FINE</li> <li>• COARSE</li> </ul>                                                                                                                                                                                                                                                                                                                                                                           |
| SYSTEM                      | VARCHAR2 (1)  | Indicates whether the template is a system template (Y) or not (N)                                                                                                                                                                                                                                                                                                                                                                                                                          |
| NAME                        | VARCHAR2 (30) | Name of the template                                                                                                                                                                                                                                                                                                                                                                                                                                                                        |
| PRIMARY_REGION <sup>1</sup> | VARCHAR2 (4)  | Region used for allocating primary extents: <ul style="list-style-type: none"> <li>• HOT</li> <li>• COLD</li> </ul>                                                                                                                                                                                                                                                                                                                                                                         |
| MIRROR_REGION <sup>1</sup>  | VARCHAR2 (4)  | Region for allocating mirrored extents: <ul style="list-style-type: none"> <li>• HOT</li> <li>• COLD</li> </ul>                                                                                                                                                                                                                                                                                                                                                                             |
| CON_ID                      | NUMBER        | The ID of the container to which the data pertains. Possible values include: <ul style="list-style-type: none"> <li>• 0: This value is used for rows containing data that pertain to the entire CDB. This value is also used for rows in non-CDBs.</li> <li>• 1: This value is used for rows containing data that pertain to only the root</li> <li>• <i>n</i>: Where <i>n</i> is the applicable container ID for the rows containing data</li> </ul> For this view, the value is always 0. |

<sup>1</sup> Intelligent Data Placement is desupported starting with Oracle Database 21c. As a result, the PRIMARY\_REGION and MIRROR\_REGION columns are no longer meaningful.

### Note:

In an Oracle Database instance, this view returns 0 rows when queried from a PDB.

## 8.71 V\$ASM\_USER

V\$ASM\_USER displays the effective operating system user names of connected database instances and of file owners.

| Column         | Datatype       | Description                                                                                                                                                                                                                                                                                                                                                                                                                                                                       |
|----------------|----------------|-----------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|
| GROUP_NUMBER   | NUMBER         | Oracle ASM disk group number                                                                                                                                                                                                                                                                                                                                                                                                                                                      |
| USER_NUMBER    | NUMBER         | Oracle ASM internal unique user number                                                                                                                                                                                                                                                                                                                                                                                                                                            |
| COMPOUND_INDEX | NUMBER         | A 32-bit number consisting of a disk group number in the high-order 8 bits and a user number in the low-order 24 bits (for efficient access to the view)                                                                                                                                                                                                                                                                                                                          |
| INCARNATION    | NUMBER         | Incarnation number of the user                                                                                                                                                                                                                                                                                                                                                                                                                                                    |
| CLUSTER_ID     | VARCHAR2 (128) | Oracle ASM cluster ID. The CLUSTER_ID and OS_NAME pair can be used to uniquely identify a user.                                                                                                                                                                                                                                                                                                                                                                                   |
| OS_ID          | VARCHAR2 (128) | Operating system user ID                                                                                                                                                                                                                                                                                                                                                                                                                                                          |
| OS_NAME        | VARCHAR2 (33)  | Operating system user name                                                                                                                                                                                                                                                                                                                                                                                                                                                        |
| CON_ID         | NUMBER         | The ID of the container to which the data pertains. Possible values include: <ul style="list-style-type: none"><li>0: This value is used for rows containing data that pertain to the entire CDB. This value is also used for rows in non-CDBs.</li><li>1: This value is used for rows containing data that pertain to only the root</li><li><i>n</i>: Where <i>n</i> is the applicable container ID for the rows containing data</li></ul> For this view, the value is always 0. |

**Note:**

In an Oracle Database instance, this view returns 0 rows when queried from a PDB.

## 8.72 V\$ASM\_USERGROUP

V\$ASM\_USERGROUP displays the creator for each Oracle Automatic Storage Management (Oracle ASM) File Access Control group.

| Column            | Datatype      | Description                                                                                                                                                                                                                                                                                                                                                                                                                                                                       |
|-------------------|---------------|-----------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|
| GROUP_NUMBER      | NUMBER        | Oracle ASM disk group number                                                                                                                                                                                                                                                                                                                                                                                                                                                      |
| USERGROUP_NUMBER  | NUMBER        | Number of the user group                                                                                                                                                                                                                                                                                                                                                                                                                                                          |
| COMPOUND_INDEX    | NUMBER        | A 32-bit number consisting of a disk group number in the high-order 8 bits and a user group number in the low-order 24 bits (for efficient access to the view)                                                                                                                                                                                                                                                                                                                    |
| INCARNATION       | NUMBER        | Incarnation number of the user group                                                                                                                                                                                                                                                                                                                                                                                                                                              |
| OWNER_NUMBER      | NUMBER        | User group owner identified by a unique number                                                                                                                                                                                                                                                                                                                                                                                                                                    |
| OWNER_INCARNATION | NUMBER        | Incarnation number of the user group owner                                                                                                                                                                                                                                                                                                                                                                                                                                        |
| NAME              | VARCHAR2 (64) | User group name                                                                                                                                                                                                                                                                                                                                                                                                                                                                   |
| CON_ID            | NUMBER        | The ID of the container to which the data pertains. Possible values include: <ul style="list-style-type: none"><li>0: This value is used for rows containing data that pertain to the entire CDB. This value is also used for rows in non-CDBs.</li><li>1: This value is used for rows containing data that pertain to only the root</li><li><i>n</i>: Where <i>n</i> is the applicable container ID for the rows containing data</li></ul> For this view, the value is always 0. |

**Note:**

In an Oracle Database instance, this view returns 0 rows when queried from a PDB.

## 8.73 V\$ASM\_USERGROUP\_MEMBER

V\$ASM\_USERGROUP\_MEMBER displays the members for each Oracle Automatic Storage Management (Oracle ASM) File Access Control group.

| Column                | Datatype | Description                                 |
|-----------------------|----------|---------------------------------------------|
| GROUP_NUMBER          | NUMBER   | Oracle ASM disk group number                |
| MEMBER_NUMBER         | NUMBER   | Number of the user group member             |
| MEMBER_INCARNATION    | NUMBER   | Incarnation number of the user group member |
| USERGROUP_NUMBER      | NUMBER   | User group number                           |
| USERGROUP_INCARNATION | NUMBER   | Incarnation number of the user group        |

| Column | Datatype | Description                                                                                                                                                                                                                                                                                                                                                                                                                                                                                         |
|--------|----------|-----------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|
| CON_ID | NUMBER   | <p>The ID of the container to which the data pertains. Possible values include:</p> <ul style="list-style-type: none"> <li>0: This value is used for rows containing data that pertain to the entire CDB. This value is also used for rows in non-CDBs.</li> <li>1: This value is used for rows containing data that pertain to only the root</li> <li><i>n</i>: Where <i>n</i> is the applicable container ID for the rows containing data</li> </ul> <p>For this view, the value is always 0.</p> |

**Note:**

In an Oracle Database instance, this view returns 0 rows when queried from a PDB.

## 8.74 V\$ASM\_VOLUME

In an Oracle Automatic Storage Management (Oracle ASM) instance, V\$ASM\_VOLUME displays information about each Oracle ADVM volume.

| Column         | Datatype      | Description                                                                                                                                                |
|----------------|---------------|------------------------------------------------------------------------------------------------------------------------------------------------------------|
| GROUP_NUMBER   | NUMBER        | Cluster-wide number assigned to the disk group (composite primary key)                                                                                     |
| VOLUME_NAME    | VARCHAR2 (30) | Name of the volume                                                                                                                                         |
| COMPOUND_INDEX | NUMBER        | A 32-bit number consisting of a disk group number in the high-order 8 bits and a volume number in the low-order 24 bits (for efficient access to the view) |
| SIZE_MB        | NUMBER        | Size of the volume (in megabytes)                                                                                                                          |
| VOLUME_NUMBER  | NUMBER        | Number of the Volume within the disk group (composite primary key)                                                                                         |
| REDUNDANCY     | VARCHAR2 (6)  | <p>Redundancy type for the volume:</p> <ul style="list-style-type: none"> <li>UNPROT</li> <li>HIGH</li> <li>MIRROR</li> </ul>                              |
| STRIPE_COLUMNS | NUMBER        | Number of columns in a stripe set                                                                                                                          |
| STRIPE_WIDTH_K | NUMBER        | Stripe width of the volume (in kilobytes)                                                                                                                  |
| STATE          | VARCHAR2 (8)  | Indicates whether the volume is enabled (ENABLED), disabled (DISABLED), or remote (REMOTE)                                                                 |
| FILE_NUMBER    | NUMBER        | Volume file number                                                                                                                                         |

| Column                      | Datatype        | Description                                                                                                                                                                                                                                                                                                                                                                                                                                                                           |
|-----------------------------|-----------------|---------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|
| INCARNATION                 | NUMBER          | Volume file incarnation number                                                                                                                                                                                                                                                                                                                                                                                                                                                        |
| DRL_FILE_NUMBER             | NUMBER          | Volume Dirty Region Logging (DRL) file used for mirrored volumes                                                                                                                                                                                                                                                                                                                                                                                                                      |
| RESIZE_UNIT_MB              | NUMBER          | Volume allocation unit (in megabytes) that a volume can be created                                                                                                                                                                                                                                                                                                                                                                                                                    |
| USAGE                       | VARCHAR2 (30)   | Optional usage string for the volume                                                                                                                                                                                                                                                                                                                                                                                                                                                  |
| VOLUME_DEVICE               | VARCHAR2 (256)  | OSD path for the volume device                                                                                                                                                                                                                                                                                                                                                                                                                                                        |
| MOUNTPATH                   | VARCHAR2 (1024) | Optional mount path string for the volume                                                                                                                                                                                                                                                                                                                                                                                                                                             |
| PRIMARY_REGION <sup>1</sup> | VARCHAR2 (4)    | Region used for allocating primary extents: <ul style="list-style-type: none"> <li>HOT</li> <li>COLD</li> </ul>                                                                                                                                                                                                                                                                                                                                                                       |
| MIRROR_REGION <sup>1</sup>  | VARCHAR2 (4)    | Region used for allocating mirrored extents: <ul style="list-style-type: none"> <li>HOT</li> <li>COLD</li> </ul>                                                                                                                                                                                                                                                                                                                                                                      |
| CON_ID                      | NUMBER          | The ID of the container to which the data pertains. Possible values include: <ul style="list-style-type: none"> <li>0: This value is used for rows containing data that pertain to the entire CDB. This value is also used for rows in non-CDBs.</li> <li>1: This value is used for rows containing data that pertain to only the root</li> <li><i>n</i>: Where <i>n</i> is the applicable container ID for the rows containing data</li> </ul> For this view, the value is always 0. |

<sup>1</sup> Intelligent Data Placement is desupported starting with Oracle Database 21c. As a result, the PRIMARY\_REGION and MIRROR\_REGION columns are no longer meaningful.

## 8.75 V\$ASM\_VOLUME\_STAT

In an Oracle Automatic Storage Management (Oracle ASM) instance, V\$ASM\_VOLUME\_STAT displays information about statistics for each Oracle ADVM volume.

| Column         | Datatype      | Description                                                                                                                                                |
|----------------|---------------|------------------------------------------------------------------------------------------------------------------------------------------------------------|
| GROUP_NUMBER   | NUMBER        | Cluster-wide number assigned to the disk group (composite primary key)                                                                                     |
| VOLUME_NAME    | VARCHAR2 (30) | Name of the volume                                                                                                                                         |
| COMPOUND_INDEX | NUMBER        | A 32-bit number consisting of a disk group number in the high-order 8 bits and a volume number in the low-order 24 bits (for efficient access to the view) |
| VOLUME_NUMBER  | NUMBER        | Number of the Volume within the disk group (composite primary key)                                                                                         |
| READS          | NUMBER        | Total number of read requests for this volume                                                                                                              |
| WRITES         | NUMBER        | Total number of write requests for this volume                                                                                                             |

| Column        | Datatype | Description                                                                                                                                                                                                                                                                                                                                                                                                                                                                                         |
|---------------|----------|-----------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|
| READ_ERRS     | NUMBER   | Total number of failed read I/O operations for this volume                                                                                                                                                                                                                                                                                                                                                                                                                                          |
| WRITE_ERRS    | NUMBER   | Total number of failed write I/O operations for this volume                                                                                                                                                                                                                                                                                                                                                                                                                                         |
| READ_TIME     | NUMBER   | Total I/O time (in seconds) for read requests for this volume                                                                                                                                                                                                                                                                                                                                                                                                                                       |
| WRITE_TIME    | NUMBER   | Total I/O time (in seconds) for write requests for this volume                                                                                                                                                                                                                                                                                                                                                                                                                                      |
| BYTES_READ    | NUMBER   | Total number of bytes read for this volume                                                                                                                                                                                                                                                                                                                                                                                                                                                          |
| BYTES_WRITTEN | NUMBER   | Total number of bytes written for this volume                                                                                                                                                                                                                                                                                                                                                                                                                                                       |
| CON_ID        | NUMBER   | <p>The ID of the container to which the data pertains. Possible values include:</p> <ul style="list-style-type: none"> <li>0: This value is used for rows containing data that pertain to the entire CDB. This value is also used for rows in non-CDBs.</li> <li>1: This value is used for rows containing data that pertain to only the root</li> <li><i>n</i>: Where <i>n</i> is the applicable container ID for the rows containing data</li> </ul> <p>For this view, the value is always 0.</p> |

## 8.76 V\$AUTHPOOL\_STATS

V\$AUTHPOOL\_STATS displays statistics for the authentication pool. This pool authenticates user connections when client applications connect to Database Resident Connection Pooling (DRCP).

| Column      | Datatype | Description                                                                                                                                                                                                                                                                                                                                                                                                                                                                             |
|-------------|----------|-----------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|
| NUM_SRVS    | NUMBER   | Total number of servers in the authentication pool                                                                                                                                                                                                                                                                                                                                                                                                                                      |
| NUM_BUSY    | NUMBER   | Number of busy servers in the authentication pool                                                                                                                                                                                                                                                                                                                                                                                                                                       |
| NUM_FREE    | NUMBER   | Number of free servers in the authentication pool                                                                                                                                                                                                                                                                                                                                                                                                                                       |
| NUM_WAITERS | NUMBER   | Number of connections waiting for a server in the authentication pool to become available                                                                                                                                                                                                                                                                                                                                                                                               |
| CON_ID      | NUMBER   | <p>The ID of the container to which the data pertains. Possible values include:</p> <ul style="list-style-type: none"> <li>0: This value is used for rows containing data that pertain to the entire multitenant container database (CDB). This value is also used for rows in non-CDBs.</li> <li>1: This value is used for rows containing data that pertain to only the root</li> <li><i>n</i>: Where <i>n</i> is the applicable container ID for the rows containing data</li> </ul> |

## 8.77 V\$AUTO\_IM\_FEATURES

V\$AUTO\_IM\_FEATURES describes the In-Memory Column Store performance features that are optimized by Automatic In-Memory (AIM).

| Column      | Datatype      | Description                                                                                                                                                                                                                                                                                                                                                                                                                                 |
|-------------|---------------|---------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|
| FEATURE_ID  | NUMBER        | Unique feature ID                                                                                                                                                                                                                                                                                                                                                                                                                           |
| DESCRIPTION | VARCHAR2 (64) | Feature description. Possible values: <ul style="list-style-type: none"><li>Autonomous Bloom Filter Optimization</li><li>Autonomous Join Groups</li><li>Autonomous Optimized Arithmetic</li><li>Autonomous Vector Optimization</li></ul>                                                                                                                                                                                                    |
| CON_ID      | NUMBER        | The ID of the container to which the data pertains. Possible values include: <ul style="list-style-type: none"><li>0: This value is used for rows containing data that pertain to the entire CDB. This value is also used for rows in non-CDBs.</li><li>1: This value is used for rows containing data that pertain to only the root</li><li><i>n</i>: Where <i>n</i> is the applicable container ID for the rows containing data</li></ul> |

**Note:**

This view is available starting with Oracle Database 23ai.

## 8.78 V\$AWAggregate\_OP

V\$AWAggregate\_OP displays the aggregation operators available in analytic workspaces. You can use this view in an application to provide a list of choices.

| Column         | Datatype      | Description                                                                                                                                                                                                                                                                                                                                                                                                                                 |
|----------------|---------------|---------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|
| NAME           | VARCHAR2 (14) | Keyword for the aggregation operator                                                                                                                                                                                                                                                                                                                                                                                                        |
| LONGNAME       | VARCHAR2 (30) | Descriptive name for the operator                                                                                                                                                                                                                                                                                                                                                                                                           |
| DEFAULT_WEIGHT | NUMBER        | Default weight factor for weighted operators                                                                                                                                                                                                                                                                                                                                                                                                |
| CON_ID         | NUMBER        | The ID of the container to which the data pertains. Possible values include: <ul style="list-style-type: none"><li>0: This value is used for rows containing data that pertain to the entire CDB. This value is also used for rows in non-CDBs.</li><li>1: This value is used for rows containing data that pertain to only the root</li><li><i>n</i>: Where <i>n</i> is the applicable container ID for the rows containing data</li></ul> |

## 8.79 V\$AW\_ALLOCATE\_OP

V\$AW\_ALLOCATE\_OP displays the allocation operators available in analytic workspaces. You can use this view in an application to provide a list of choices.

| Column   | Datatype      | Description                                                                                                                                                                                                                                                                                                                                                                                                                                     |
|----------|---------------|-------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|
| NAME     | VARCHAR2 (14) | Keyword for the allocation operator                                                                                                                                                                                                                                                                                                                                                                                                             |
| LONGNAME | VARCHAR2 (30) | Descriptive name for the operator                                                                                                                                                                                                                                                                                                                                                                                                               |
| CON_ID   | NUMBER        | The ID of the container to which the data pertains. Possible values include: <ul style="list-style-type: none"> <li>0: This value is used for rows containing data that pertain to the entire CDB. This value is also used for rows in non-CDBs.</li> <li>1: This value is used for rows containing data that pertain to only the root</li> <li><i>n</i>: Where <i>n</i> is the applicable container ID for the rows containing data</li> </ul> |

## 8.80 V\$AW\_CALC

V\$AW\_CALC reports on the effectiveness of various caches used by Oracle OLAP during dynamic aggregation.

| Column                 | Datatype      | Description                                                                                                                                                                                 |
|------------------------|---------------|---------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|
| SESSION_ID             | NUMBER        | A unique numeric identifier for the session.                                                                                                                                                |
| AGGREGATE_CACHE_HITS   | NUMBER        | The number of times a dimension member is found in the aggregate cache (a hit).<br>The number of hits for run-time aggregation can be increased by fetching data across the dense dimension |
| AGGREGATE_CACHE_MISSES | NUMBER        | The number of times a dimension member is not found in the aggregate cache and must be read from disk (a miss).                                                                             |
| SESSION_CACHE_HITS     | NUMBER        | The number of times the data is found in the session cache (a hit).                                                                                                                         |
| SESSION_CACHE_MISSES   | NUMBER        | The number of times the data is not found in the session cache (a miss).                                                                                                                    |
| POOL_HITS              | NUMBER        | The number of times the data is found in a page in the OLAP page pool (a hit).                                                                                                              |
| POOL_MISSES            | NUMBER        | The number of times the data is not found in the OLAP page pool (a miss).                                                                                                                   |
| POOL_NEW_PAGES         | NUMBER        | The number of newly created pages in the OLAP page pool that have not yet been written to the workspace LOB.                                                                                |
| POOL_RECLAIMED_PAGES   | NUMBER        | The number of previously unused pages that have been recycled with new data.                                                                                                                |
| CACHE_WRITES           | NUMBER        | The number of times the data from the OLAP page pool has been written to the database cache.                                                                                                |
| POOL_SIZE              | NUMBER        | The number of kilobytes in the OLAP page pool.                                                                                                                                              |
| CURR_DML_COMMAND       | VARCHAR2 (64) | The command currently being executed.                                                                                                                                                       |
| PREV_DML_COMMAND       | VARCHAR2 (64) | The command most recently completed.                                                                                                                                                        |

| Column               | Datatype | Description                                                                                                                                                                                                                                                                                                                                                                                                                                     |
|----------------------|----------|-------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|
| AGGR_FUNC_LOGICAL_NA | NUMBER   | The number of times the aggregation engine returns a logical NA because the AGGINDEX option is on and the composite tuple does not exist.                                                                                                                                                                                                                                                                                                       |
| AGGR_FUNC_PRECOMPUTE | NUMBER   | The number of times the aggregation engine finds a value in a position that it was called to calculate.                                                                                                                                                                                                                                                                                                                                         |
| AGGR_FUNC_CALCS      | NUMBER   | The number of times the aggregation engine calculates a parent value based on the values of its children.                                                                                                                                                                                                                                                                                                                                       |
| CON_ID               | NUMBER   | The ID of the container to which the data pertains. Possible values include: <ul style="list-style-type: none"> <li>0: This value is used for rows containing data that pertain to the entire CDB. This value is also used for rows in non-CDBs.</li> <li>1: This value is used for rows containing data that pertain to only the root</li> <li><i>n</i>: Where <i>n</i> is the applicable container ID for the rows containing data</li> </ul> |

## 8.81 V\$AW\_LONGOPS

V\$AW\_LONGOPS displays status information about active SQL cursors initiated in an analytic workspace.

| Column         | Datatype      | Description                                                                                                                                                                                                                                                                                                                        |
|----------------|---------------|------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|
| SESSION_ID     | NUMBER        | Identifier for the session in which the fetch is executing. This table can be joined with V\$SESSION to obtain the user name.                                                                                                                                                                                                      |
| CURSOR_NAME    | VARCHAR2 (64) | Name assigned to the cursor                                                                                                                                                                                                                                                                                                        |
| COMMAND        | VARCHAR2 (17) | Command that is actively fetching data from relational tables: <ul style="list-style-type: none"> <li>QUERY</li> <li>FETCH</li> <li>IMPORT</li> <li>EXECUTE</li> <li>UPDATE</li> <li>SOLVE</li> <li>CLEAR</li> <li>LOAD CUBE</li> <li>LOAD DIMENSION</li> <li>DIMENSION COMPILE</li> </ul>                                         |
| STATUS         | VARCHAR2 (9)  | Status of the current operation: <ul style="list-style-type: none"> <li>EXECUTING - Command has begun executing</li> <li>FETCHING - Data is being fetched into the analytic workspace</li> <li>FINISHED - Command has finished executing. This status appears very briefly before the record disappears from the table.</li> </ul> |
| ROWS_PROCESSED | NUMBER        | Number of rows already inserted, updated, or deleted                                                                                                                                                                                                                                                                               |
| SEQ_NUMBER     | NUMBER        | Sequence number in the Cube Build log                                                                                                                                                                                                                                                                                              |
| SQL_ID         | VARCHAR2 (13) | SQL ID of the statement                                                                                                                                                                                                                                                                                                            |
| TARGET         | VARCHAR2 (64) | Operated object name                                                                                                                                                                                                                                                                                                               |
| TARGET_DESC    | VARCHAR2 (64) | A brief description of the operated object                                                                                                                                                                                                                                                                                         |
| START_TIME     | DATE          | Time the command started executing                                                                                                                                                                                                                                                                                                 |

| Column           | Datatype       | Description                                                                                                                                                                                                                                                                                                                                                                                                                                     |
|------------------|----------------|-------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|
| LAST_UPDATE_TIME | DATE           | Last updated time                                                                                                                                                                                                                                                                                                                                                                                                                               |
| ELAPSED_SECONDS  | NUMBER         | Number of seconds between START_TIME and LAST_UPDATE_TIME                                                                                                                                                                                                                                                                                                                                                                                       |
| SOFAR            | NUMBER         | Number of units so far                                                                                                                                                                                                                                                                                                                                                                                                                          |
| TOTALWORK        | NUMBER         | Total number of units                                                                                                                                                                                                                                                                                                                                                                                                                           |

| USERNAME         | VARCHAR2 (32)  | User name                                                                                                                                                                                                                                                                                                                                                                                                                                       |
| CON_ID           | NUMBER         | The ID of the container to which the data pertains. Possible values include: <ul style="list-style-type: none"> <li>0: This value is used for rows containing data that pertain to the entire CDB. This value is also used for rows in non-CDBs.</li> <li>1: This value is used for rows containing data that pertain to only the root</li> <li><i>n</i>: Where <i>n</i> is the applicable container ID for the rows containing data</li> </ul> |

## 8.82 V\$AW\_OLAP

V\$AW\_OLAP provides a record of active sessions and their use with analytic workspaces.

A row is generated whenever an analytic workspace is created or attached. The first row for a session is created when the first command is issued. It identifies the SYS.EXPRESS workspace, which is attached automatically to each session. Rows related to a particular analytic workspace are deleted when the workspace is detached from the session or the session ends.

| Column               | Datatype      | Description                                                                                                                                                                                                |
|----------------------|---------------|------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|
| SESSION_ID           | NUMBER        | A unique numeric identifier for a session                                                                                                                                                                  |
| AW_NUMBER            | NUMBER        | A unique numeric identifier for an analytic workspace. To get the name of the analytic workspace, join this column to the AW_NUMBER column of the USER_AWS view or to the AWSEQ# column of the AW\$ table. |
| ATTACH_MODE          | VARCHAR2 (10) | READ ONLY or READ WRITE                                                                                                                                                                                    |
| GENERATION           | NUMBER        | The generation of an analytic workspace. Each UPDATE creates a new generation. Sessions attaching the same workspace between UPDATE commands share the same generation.                                    |
| TEMP_SPACE_PAGES     | NUMBER        | The number of pages stored in temporary segments for the analytic workspace.                                                                                                                               |
| TEMP_SPACE_READS     | NUMBER        | The number of times data has been read from a temporary segment and not from the page pool.                                                                                                                |
| LOB_READS            | NUMBER        | The number of times data has been read from the table where the analytic workspace is stored (the permanent LOB).                                                                                          |
| POOL_CHANGED_PAGES   | NUMBER        | The number of pages in the page pool that have been modified in this analytic workspace.                                                                                                                   |
| POOL_UNCHANGED_PAGES | NUMBER        | The number of pages in the page pool that have not been modified in this analytic workspace.                                                                                                               |

| Column | Datatype | Description                                                                                                                                                                                                                                                                                                                                                                                                                                            |
|--------|----------|--------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|
| CON_ID | NUMBER   | <p>The ID of the container to which the data pertains. Possible values include:</p> <ul style="list-style-type: none"> <li>0: This value is used for rows containing data that pertain to the entire CDB. This value is also used for rows in non-CDBs.</li> <li>1: This value is used for rows containing data that pertain to only the root</li> <li><i>n</i>: Where <i>n</i> is the applicable container ID for the rows containing data</li> </ul> |

## 8.83 V\$AW\_SESSION\_INFO

V\$AW\_SESSION\_INFO provides information about each active session.

A transaction is a single exchange between a client session and Oracle OLAP. Multiple commands can execute within a single transaction.

| Column                       | Datatype      | Description                                                                                                                                                                                                                                                                                                                                                                                                                                            |
|------------------------------|---------------|--------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|
| SESSION_ID                   | NUMBER        | A unique numeric identifier for a session                                                                                                                                                                                                                                                                                                                                                                                                              |
| CLIENT_TYPE                  | VARCHAR2 (64) | OLAP                                                                                                                                                                                                                                                                                                                                                                                                                                                   |
| SESSION_STATE                | VARCHAR2 (64) | TRANSACTIONING, NOT_TRANSACTIONING, EXCEPTION_HANDLING, CONSTRUCTING, CONSTRUCTED, DECONSTRUCTING, or DECONSTRUCTED                                                                                                                                                                                                                                                                                                                                    |
| SESSION_HANDLE               | NUMBER        | The session identifier                                                                                                                                                                                                                                                                                                                                                                                                                                 |
| USERID                       | VARCHAR2 (64) | The database user name under which the session opened                                                                                                                                                                                                                                                                                                                                                                                                  |
| TOTAL_TRANSACTION            | NUMBER        | The total number of transactions executed within the session; this number provides a general indication of the level of activity in the session                                                                                                                                                                                                                                                                                                        |
| TRANSACTION_TIME             | NUMBER        | The elapsed time in milliseconds of the mostly recently completed transaction                                                                                                                                                                                                                                                                                                                                                                          |
| TOTAL_TRANSACTION_TIME       | NUMBER        | The total elapsed time in milliseconds in which transactions were being executed                                                                                                                                                                                                                                                                                                                                                                       |
| AVERAGE_TRANSACTION_TIME     | NUMBER        | The average elapsed time in milliseconds to complete a transaction                                                                                                                                                                                                                                                                                                                                                                                     |
| TRANSACTION_CPU_TIME         | NUMBER        | The total CPU time in milliseconds used to complete the most recent transaction                                                                                                                                                                                                                                                                                                                                                                        |
| TOTAL_TRANSACTION_CPU_TIME   | NUMBER        | The total CPU time used to execute all transactions in this session; this total does not include transactions that are currently in progress                                                                                                                                                                                                                                                                                                           |
| AVERAGE_TRANSACTION_CPU_TIME | NUMBER        | The average CPU time to complete a transaction; this average does not include transactions that are currently in progress                                                                                                                                                                                                                                                                                                                              |
| CON_ID                       | NUMBER        | <p>The ID of the container to which the data pertains. Possible values include:</p> <ul style="list-style-type: none"> <li>0: This value is used for rows containing data that pertain to the entire CDB. This value is also used for rows in non-CDBs.</li> <li>1: This value is used for rows containing data that pertain to only the root</li> <li><i>n</i>: Where <i>n</i> is the applicable container ID for the rows containing data</li> </ul> |

## 8.84 V\$BACKUP

V\$BACKUP displays the backup status of all online data files.

| Column  | Datatype      | Description                                                                                                                                                                                                                                                                                                                                                                                                                                     |
|---------|---------------|-------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|
| FILE#   | NUMBER        | File identifier                                                                                                                                                                                                                                                                                                                                                                                                                                 |
| STATUS  | VARCHAR2 (18) | File status: NOT ACTIVE, ACTIVE (backup in progress), OFFLINE NORMAL, or description of an error.<br><br>NOT ACTIVE indicates that the file is not currently in backup mode (that is, an ALTER TABLESPACE ... BEGIN BACKUP or ALTER DATABASE BEGIN BACKUP statement has not been issued), whereas ACTIVE indicates that the file is currently in backup mode.                                                                                   |
| CHANGE# | NUMBER        | System change number when backup started                                                                                                                                                                                                                                                                                                                                                                                                        |
| TIME    | DATE          | Time the backup started                                                                                                                                                                                                                                                                                                                                                                                                                         |
| CON_ID  | NUMBER        | The ID of the container to which the data pertains. Possible values include: <ul style="list-style-type: none"> <li>0: This value is used for rows containing data that pertain to the entire CDB. This value is also used for rows in non-CDBs.</li> <li>1: This value is used for rows containing data that pertain to only the root</li> <li><i>n</i>: Where <i>n</i> is the applicable container ID for the rows containing data</li> </ul> |

## 8.85 V\$BACKUP\_ARCHIVELOG\_DETAILS

V\$BACKUP\_ARCHIVELOG\_DETAILS contains information about all restorable archive logs.

It will include all archived logs backed up in a backup set or proxy copies.

| Column            | Datatype | Description                                                                            |
|-------------------|----------|----------------------------------------------------------------------------------------|
| BTYPE             | CHAR (9) | Backup type container, either BACKUPSET or PROXYCOPY                                   |
| BTYPE_KEY         | NUMBER   | Unique identifier for the backup type. For BACKUPSET, it is BS_KEY.                    |
| SESSION_KEY       | NUMBER   | Session identifier                                                                     |
| SESSION_RECID     | NUMBER   | Session recid                                                                          |
| SESSION_STAMP     | NUMBER   | Session stamp                                                                          |
| ID1               | NUMBER   | If BACKUPSET, it contains SET_STAMP<br>If PROXYCOPY, it is RECID from the control file |
| ID2               | NUMBER   | If BACKUPSET, it contains SET_COUNT<br>If PROXYCOPY, it is STAMP                       |
| THREAD#           | NUMBER   | Thread number                                                                          |
| SEQUENCE#         | NUMBER   | Sequence number                                                                        |
| RESETLOGS_CHANGE# | NUMBER   | Resetlogs change SCN                                                                   |
| RESETLOGS_TIME    | DATE     | Resetlogs change time                                                                  |
| FIRST_CHANGE#     | NUMBER   | First change SCN                                                                       |
| FIRST_TIME        | DATE     | First change time                                                                      |
| NEXT_CHANGE#      | NUMBER   | Next change SCN                                                                        |

| Column            | Datatype        | Description                                                                                                                                                                                                                                                                                                                                                                                                                                     |
|-------------------|-----------------|-------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|
| NEXT_TIME         | DATE            | Next change time                                                                                                                                                                                                                                                                                                                                                                                                                                |
| FILESIZE          | NUMBER          | File size                                                                                                                                                                                                                                                                                                                                                                                                                                       |
| COMPRESSION_RATIO | NUMBER          | The ratio between the total blocks in the archive log and the blocks that RMAN backed up. This is <i>not</i> the ratio from the <code>AS COMPRESSED BACKUPSET</code> clause of the <code>BACKUP</code> command.                                                                                                                                                                                                                                 |
| FILESIZE_DISPLAY  | VARCHAR2 (4000) | Same value as the <code>FILESIZE</code> column, but converted to a user-displayable format, for example <code>nM</code> , <code>nG</code> , <code>nT</code> , <code>nP</code> , and so on                                                                                                                                                                                                                                                       |
| CON_ID            | NUMBER          | The ID of the container to which the data pertains. Possible values include: <ul style="list-style-type: none"> <li>0: This value is used for rows containing data that pertain to the entire CDB. This value is also used for rows in non-CDBs.</li> <li>1: This value is used for rows containing data that pertain to only the root</li> <li><i>n</i>: Where <i>n</i> is the applicable container ID for the rows containing data</li> </ul> |

## 8.86 V\$BACKUP\_ARCHIVELOG\_SUMMARY

V\$BACKUP\_ARCHIVELOG\_SUMMARY provides archive log summary information based on archive logs in the backup set or on proxy copies.

| Column                    | Datatype        | Description                                                                                                                                                                                                                                                                                                                                                                                                                                     |
|---------------------------|-----------------|-------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|
| NUM_FILES_BACKED          | NUMBER          | Number of files backed up                                                                                                                                                                                                                                                                                                                                                                                                                       |
| NUM_DISTINCT_FILES_BACKED | NUMBER          | Number of distinct archive log files backed up                                                                                                                                                                                                                                                                                                                                                                                                  |
| MIN_FIRST_CHANGE#         | NUMBER          | Lowest SCN range value                                                                                                                                                                                                                                                                                                                                                                                                                          |
| MAX_NEXT_CHANGE#          | NUMBER          | Highest SCN range value                                                                                                                                                                                                                                                                                                                                                                                                                         |
| MIN_FIRST_TIME            | DATE            | Lowest SCN range time                                                                                                                                                                                                                                                                                                                                                                                                                           |

## 8.87 V\$BACKUP\_ASYNC\_IO

V\$BACKUP\_ASYNC\_IO displays performance information about ongoing and recently completed RMAN backups and restores.

For each backup, it contains one row for each input data file, one row for the aggregate total performance of all data files, and one row for the output backup piece. This data is not stored persistently, and is not preserved when the instance is re-started.

| Column                     | Datatype       | Description                                                                                                                                  |
|----------------------------|----------------|----------------------------------------------------------------------------------------------------------------------------------------------|
| SID                        | NUMBER         | Oracle SID of the session doing the backup or restore                                                                                        |
| SERIAL                     | NUMBER         | Use count for the SID doing the backup or restore                                                                                            |
| USE_COUNT                  | NUMBER         | A counter that can be used to identify rows from different backup sets                                                                       |
| RMAN_STATUS_RECID          | NUMBER         | Owning V\$RMAN_STATUS record ID                                                                                                              |
| RMAN_STATUS_STAMP          | NUMBER         | Owning V\$RMAN_STATUS record stamp                                                                                                           |
| DEVICE_TYPE                | VARCHAR2 (17)  | Device type where the file is located                                                                                                        |
| TYPE                       | VARCHAR2 (9)   | INPUT, OUTPUT, or AGGREGATE                                                                                                                  |
| STATUS                     | VARCHAR2 (11)  | NOT STARTED, IN PROGRESS, or FINISHED                                                                                                        |
| FILENAME                   | VARCHAR2 (513) | Name of the backup file being read or written                                                                                                |
| SET_COUNT                  | NUMBER         | Set count of the backup set being read or written                                                                                            |
| SET_STAMP                  | NUMBER         | Set stamp of the backup set being read or written                                                                                            |
| BUFFER_SIZE                | NUMBER         | Size of the buffers being used to read/write the file, in bytes                                                                              |
| BUFFER_COUNT               | NUMBER         | Number of buffers being used to read/write the file                                                                                          |
| TOTAL_BYTES                | NUMBER         | Total number of bytes that will be read or written for the file, if known. If not known, this column will be null                            |
| OPEN_TIME                  | DATE           | Time the file was opened. If TYPE='AGGREGATE', then this is the time that the first file in the aggregate was opened                         |
| CLOSE_TIME                 | DATE           | Time the file was closed. If TYPE='AGGREGATE', then this is the time that the last file in the aggregate was closed                          |
| ELAPSED_TIME               | NUMBER         | Time, in hundredths of a second, that the file was open                                                                                      |
| MAXOPENFILES               | NUMBER         | Number of concurrently open DISK files. This value is only present in rows where TYPE='AGGREGATE'.                                           |
| BYTES                      | NUMBER         | Number of bytes read or written so far                                                                                                       |
| EFFECTIVE_BYTES_PER_SECOND | NUMBER         | I/O rate that was achieved with this device during this backup                                                                               |
| IO_COUNT                   | NUMBER         | Number of I/Os that were performed to this file                                                                                              |
| READY                      | NUMBER         | Number of asynchronous requests for which a buffer was immediately ready for use                                                             |
| SHORT_WAITS                | NUMBER         | Number of times that a buffer was not immediately available, but a buffer became available after doing a nonblocking poll for I/O completion |
| SHORT_WAIT_TIME_TOTAL      | NUMBER         | Total time, in hundredths of a second, taken by nonblocking polls for I/O completion                                                         |
| SHORT_WAIT_TIME_MAX        | NUMBER         | Maximum time taken for a nonblocking poll for I/O completion, in hundredths of a second                                                      |

| Column               | Datatype | Description                                                                                                                                                                                                                                                                                                                                                                                                                                     |
|----------------------|----------|-------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|
| LONG_WAITS           | NUMBER   | The number of times that a buffer was not immediately available, and only became available after a blocking wait was issued                                                                                                                                                                                                                                                                                                                     |
| LONG_WAIT_TIME_TOTAL | NUMBER   | The total time, in hundredths of a second, taken by blocking waits for I/O completion                                                                                                                                                                                                                                                                                                                                                           |
| LONG_WAIT_TIME_MAX   | NUMBER   | The maximum time taken for a blocking wait for I/O completion, in hundredths of a second                                                                                                                                                                                                                                                                                                                                                        |
| CON_ID               | NUMBER   | The ID of the container to which the data pertains. Possible values include: <ul style="list-style-type: none"> <li>0: This value is used for rows containing data that pertain to the entire CDB. This value is also used for rows in non-CDBs.</li> <li>1: This value is used for rows containing data that pertain to only the root</li> <li><i>n</i>: Where <i>n</i> is the applicable container ID for the rows containing data</li> </ul> |

## 8.88 V\$BACKUP\_CONTROLFILE\_DETAILS

V\$BACKUP\_CONTROLFILE\_DETAILS contains information about restorable control files.

It will include all the control files backed up in the backup set, image copies, and proxy copies.

| Column             | Datatype       | Description                                                                                                                                                                        |
|--------------------|----------------|------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|
| BTYPE              | CHAR(9)        | Backup type container. Possible values are BACKUPSET, IMAGECOPY, PROXYCOPY.                                                                                                        |
| BTYPE_KEY          | NUMBER         | Unique identifier for the backup type, either BS_KEY or COPY_KEY.                                                                                                                  |
| SESSION_KEY        | NUMBER         | Session identifier                                                                                                                                                                 |
| SESSION_RECID      | NUMBER         | Session recid                                                                                                                                                                      |
| SESSION_STAMP      | NUMBER         | Session stamp                                                                                                                                                                      |
| ID1                | NUMBER         | If BACKUPSET, it contains SET_STAMP<br>If IMAGECOPY or PROXYCOPY, it is RECID from the control file                                                                                |
| ID2                | NUMBER         | If BACKUPSET, it contains SET_COUNT<br>If IMAGECOPY or PROXYCOPY, it is STAMP                                                                                                      |
| CREATION_TIME      | DATE           | File creation time                                                                                                                                                                 |
| RESETLOGS_CHANGE#  | NUMBER         | Resetlogs change SCN                                                                                                                                                               |
| RESETLOGS_TIME     | DATE           | Resetlogs change time                                                                                                                                                              |
| CHECKPOINT_CHANGE# | NUMBER         | Checkpoint change SCN                                                                                                                                                              |
| CHECKPOINT_TIME    | DATE           | Checkpoint change time                                                                                                                                                             |
| FILESIZE           | NUMBER         | File size, in bytes, for the output of backing up this control file                                                                                                                |
| COMPRESSION_RATIO  | NUMBER         | The ratio between the total blocks in the datafile and the blocks that RMAN backed up. This is <i>not</i> the ratio from the AS COMPRESSED BACKUPSET clause of the BACKUP command. |
| FILESIZE_DISPLAY   | VARCHAR2(4000) | Same value as the FILESIZE column, but converted to a user-displayable format, for example <i>nM</i> , <i>nG</i> , <i>nT</i> , <i>nP</i> , and so on                               |

| Column | Datatype | Description                                                                                                                                                                                                                                                                                                                                                                                                                                 |
|--------|----------|---------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|
| CON_ID | NUMBER   | The ID of the container to which the data pertains. Possible values include: <ul style="list-style-type: none"><li>0: This value is used for rows containing data that pertain to the entire CDB. This value is also used for rows in non-CDBs.</li><li>1: This value is used for rows containing data that pertain to only the root</li><li><i>n</i>: Where <i>n</i> is the applicable container ID for the rows containing data</li></ul> |

## 8.89 V\$BACKUP\_CONTROLFILE\_SUMMARY

V\$BACKUP\_CONTROLFILE\_SUMMARY provides control file summary information, based on either a backup set of files, image copies, or proxy copies.

| Column                    | Datatype       | Description                                                                                                                                                                                                                                                                                                                                                                                                                                 |
|---------------------------|----------------|---------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|
| NUM_FILES_BACKED          | NUMBER         | Number of files backed up for specific criteria                                                                                                                                                                                                                                                                                                                                                                                             |
| NUM_DISTINCT_FILES_BACKED | NUMBER         | Number of distinct files backed up                                                                                                                                                                                                                                                                                                                                                                                                          |
| MIN_CHECKPOINT_CHANGE#    | NUMBER         | Minimum checkpoint change number of the data file for specified criteria                                                                                                                                                                                                                                                                                                                                                                    |
| MAX_CHECKPOINT_CHANGE#    | NUMBER         | Maximum checkpoint change number of the data file for specified criteria                                                                                                                                                                                                                                                                                                                                                                    |
| MIN_CHECKPOINT_TIME       | DATE           | Minimum checkpoint time of the data file for specified criteria                                                                                                                                                                                                                                                                                                                                                                             |
| MAX_CHECKPOINT_TIME       | DATE           | Maximum checkpoint time of the data file for specified criteria                                                                                                                                                                                                                                                                                                                                                                             |
| INPUT_BYTES               | NUMBER         | Total input bytes of files read                                                                                                                                                                                                                                                                                                                                                                                                             |
| OUTPUT_BYTES              | NUMBER         | Total output bytes written                                                                                                                                                                                                                                                                                                                                                                                                                  |
| COMPRESSION_RATIO         | NUMBER         | The ratio between the total blocks in the datafile and the blocks that RMAN backed up. This is <i>not</i> the the ratio from the AS COMPRESSED BACKUPSET clause of the BACKUP command.                                                                                                                                                                                                                                                      |
| INPUT_BYTES_DISPLAY       | VARCHAR2(4000) | Displayable format for input bytes                                                                                                                                                                                                                                                                                                                                                                                                          |
| OUTPUT_BYTES_DISPLAY      | VARCHAR2(4000) | Displayable format for output bytes                                                                                                                                                                                                                                                                                                                                                                                                         |
| CON_ID                    | NUMBER         | The ID of the container to which the data pertains. Possible values include: <ul style="list-style-type: none"><li>0: This value is used for rows containing data that pertain to the entire CDB. This value is also used for rows in non-CDBs.</li><li>1: This value is used for rows containing data that pertain to only the root</li><li><i>n</i>: Where <i>n</i> is the applicable container ID for the rows containing data</li></ul> |

## 8.90 V\$BACKUP\_COPY\_DETAILS

V\$BACKUP\_COPY\_DETAILS contains information about all available control file and data file copies.

| Column      | Datatype | Description        |
|-------------|----------|--------------------|
| SESSION_KEY | NUMBER   | Session identifier |

| Column                | Datatype        | Description                                                                                                                                                                                                                                                                                                                                                                                                                                     |

| FILE#                 | NUMBER          | Absolute data file number                                                                                                                                                                                                                                                                                                                                                                                                                       |
| NAME                  | VARCHAR2 (513)  | File name of the data file copy. The maximum length of the name is dependent on your operating system.                                                                                                                                                                                                                                                                                                                                          |
| TAG                   | VARCHAR2 (32)   | Data file copy tag                                                                                                                                                                                                                                                                                                                                                                                                                              |
| CREATION_CHANGE#      | NUMBER          | Data file creation change number                                                                                                                                                                                                                                                                                                                                                                                                                |
| CREATION_TIME         | DATE            | Data file creation timestamp                                                                                                                                                                                                                                                                                                                                                                                                                    |
| CHECKPOINT_CHANGE#    | NUMBER          | Checkpoint change number of the data file when the copy was made                                                                                                                                                                                                                                                                                                                                                                                |
| CHECKPOINT_TIME       | DATE            | Checkpoint timestamp of the data file when the copy was made                                                                                                                                                                                                                                                                                                                                                                                    |
| MARKED_CORRUPT        | NUMBER          | Number of blocks marked corrupt by this copy operation. That is, blocks that were not marked corrupted in the source data file, but were detected and marked as corrupted during the copy operation.                                                                                                                                                                                                                                            |
| OUTPUT_BYTES          | NUMBER          | Total output bytes written                                                                                                                                                                                                                                                                                                                                                                                                                      |
| COMPLETION_TIME       | DATE            | Time when the copy was completed                                                                                                                                                                                                                                                                                                                                                                                                                |
| CONTROLFILE_TYPE      | VARCHAR2 (1)    | Type of control file. B indicates normal copies. S indicates standby copies.                                                                                                                                                                                                                                                                                                                                                                    |
| KEEP                  | VARCHAR2 (3)    | (YES NO) Indicates whether or not this backup set has a retention policy that is different than the value for the configure retention policy                                                                                                                                                                                                                                                                                                    |
| KEEP_UNTIL            | DATE            | If specified, this is the date after which the backup becomes obsolete. If this column is null, then the backup never expires.                                                                                                                                                                                                                                                                                                                  |
| KEEP_OPTIONS          | VARCHAR2 (11)   | Lists additional retention options for this backup set. Possible values are: <ul style="list-style-type: none"> <li>LOGS - The logs needed to recover this backup set are kept</li> <li>NOLOGS - The logs needed to recover this backup set are not kept</li> </ul>                                                                                                                                                                             |
| IS_RECOVERY_DEST_FILE | VARCHAR2 (3)    | Indicates whether the file was created in the fast recovery area (YES) or not (NO)                                                                                                                                                                                                                                                                                                                                                              |
| SPARSE_BACKUP         | VARCHAR2 (3)    | Indicates whether the file is sparse (YES) or not (NO)                                                                                                                                                                                                                                                                                                                                                                                          |
| OUTPUT_BYTES_DISPLAY  | VARCHAR2 (4000) | Size of backup set to display                                                                                                                                                                                                                                                                                                                                                                                                                   |
| CON_ID                | NUMBER          | The ID of the container to which the data pertains. Possible values include: <ul style="list-style-type: none"> <li>0: This value is used for rows containing data that pertain to the entire CDB. This value is also used for rows in non-CDBs.</li> <li>1: This value is used for rows containing data that pertain to only the root</li> <li><i>n</i>: Where <i>n</i> is the applicable container ID for the rows containing data</li> </ul> |

## 8.91 V\$BACKUP\_COPY\_SUMMARY

V\$BACKUP\_COPY\_SUMMARY provides summary information for the output data file and control file copy.

| Column                 | Datatype        | Description                                                                                                                                                                                                                                                                                                                                                                                                                                     |
|------------------------|-----------------|-------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|
| NUM_COPIES             | NUMBER          | Number of copies created                                                                                                                                                                                                                                                                                                                                                                                                                        |
| NUM_DISTINCT_COPIES    | NUMBER          | Number of distinct copies (that contain data files with different checkpoints)                                                                                                                                                                                                                                                                                                                                                                  |
| MIN_CHECKPOINT_CHANGE# | NUMBER          | Minimum checkpoint change SCN                                                                                                                                                                                                                                                                                                                                                                                                                   |

| OUTPUT_BYTES           | NUMBER          | Total number of output bytes                                                                                                                                                                                                                                                                                                                                                                                                                    |
| OUTPUT_BYTES_DISPLAY   | VARCHAR2 (4000) | Displayable format for output bytes                                                                                                                                                                                                                                                                                                                                                                                                             |
| CON_ID                 | NUMBER          | The ID of the container to which the data pertains. Possible values include: <ul style="list-style-type: none"> <li>0: This value is used for rows containing data that pertain to the entire CDB. This value is also used for rows in non-CDBs.</li> <li>1: This value is used for rows containing data that pertain to only the root</li> <li><i>n</i>: Where <i>n</i> is the applicable container ID for the rows containing data</li> </ul> |

## 8.92 V\$BACKUP\_CORRUPTION

V\$BACKUP\_CORRUPTION displays information about corrupt block ranges in data file backups from the control file.

Note that corruptions are not tolerated in the control file and archived redo log backups.

| Column             | Datatype     | Description                                                                                                                                                                                                                                                                                                                                                                                                                                                                          |

| FILE#              | NUMBER       | Absolute file number of the data file that contains the corrupt blocks                                                                                                                                                                                                                                                                                                                                                                                                               |
| BLOCK#             | NUMBER       | Block number of the first corrupt block in the range of corrupted blocks                                                                                                                                                                                                                                                                                                                                                                                                             |
| BLOCKS             | NUMBER       | Number of corrupted blocks found starting with BLOCK#                                                                                                                                                                                                                                                                                                                                                                                                                                |
| CORRUPTION_CHANGE# | NUMBER       | Change number at which the logical corruption was detected. Set to 0 to indicate media corruption.                                                                                                                                                                                                                                                                                                                                                                                   |
| MARKED_CORRUPT     | VARCHAR2 (3) | Indicates whether this corruption was not previously detected by the Oracle Database (YES) or the Oracle Database had already discovered this corrupt block and marked it as corrupt (NO). Note that when a corrupt block is encountered in a backup, and was not already marked corrupt by the Oracle Database, then the backup process does not mark the block as corrupt in the production data file. Thus, this field may be YES for the same block in more than one backup set. |

| Column          | Datatype     | Description                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                      |
|-----------------|--------------|--------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|
| CORRUPTION_TYPE | VARCHAR2 (9) | Type of block corruption in the data file: <ul style="list-style-type: none"> <li>• ALL_ZERO - Block header on disk contained only zeros. The block may be valid if it was never filled and if it is in an Oracle7 file. The buffer will be reformatted to the Oracle8 standard for an empty block.</li> <li>• FRACTURED - Block header looks reasonable, but the front and back of the block are different versions.</li> <li>• CHECKSUM - optional check value shows that the block is not self-consistent. It is impossible to determine exactly why the check value fails, but it probably fails because sectors in the middle of the block are from different versions.</li> <li>• CORRUPT - Block is wrongly identified or is not a data block (for example, the data block address is missing)</li> <li>• LOGICAL - Block is logically corrupt</li> <li>• NOLOGGING - Block does not have redo log entries (for example, NOLOGGING operations on primary database can introduce this type of corruption on a physical standby)</li> </ul> |
| CON_ID          | NUMBER       | The ID of the container to which the data pertains. Possible values include: <ul style="list-style-type: none"> <li>• 0: This value is used for rows containing data that pertain to the entire CDB. This value is also used for rows in non-CDBs.</li> <li>• 1: This value is used for rows containing data that pertain to only the root</li> <li>• <i>n</i>: Where <i>n</i> is the applicable container ID for the rows containing data</li> </ul>                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                            |

## 8.93 V\$BACKUP\_DATAFILE

V\$BACKUP\_DATAFILE displays information about control files and data files in backup sets from the control file.

| Column              | Datatype | Description                                                                                                                             |
|---------------------|----------|-----------------------------------------------------------------------------------------------------------------------------------------|
| RECID               | NUMBER   | Backup data file record ID                                                                                                              |
| STAMP               | NUMBER   | Backup data file record stamp                                                                                                           |
| SET_STAMP           | NUMBER   | Backup set stamp                                                                                                                        |
| SET_COUNT           | NUMBER   | Backup set count                                                                                                                        |
| FILE#               | NUMBER   | Data file number; set to 0 for control file                                                                                             |
| CREATION_CHANGE#    | NUMBER   | Creation system change number (SCN) of the data file                                                                                    |
| CREATION_TIME       | DATE     | Creation timestamp of the data file                                                                                                     |
| RESETLOGS_CHANGE#   | NUMBER   | Resetlogs system change number (SCN) of the data file when it was backed up                                                             |
| RESETLOGS_TIME      | DATE     | Resetlogs timestamp of the data file when it was backed up                                                                              |
| INCREMENTAL_LEVEL   | NUMBER   | Normal full backups have a NULL value, level 0 incremental backups have a value of 0, and level 1 incremental backups have a value of 1 |
| INCREMENTAL_CHANGE# | NUMBER   | All blocks changed after the incremental change number is included in this backup; set to 0 for a full backup                           |
| CHECKPOINT_CHANGE#  | NUMBER   | All changes up to the checkpoint change number are included in this backup                                                              |

| Column                   | Datatype     | Description                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                     |
|--------------------------|--------------|-----------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|
| CHECKPOINT_TIME          | DATE         | Timestamp of the checkpoint                                                                                                                                                                                                                                                                                                                                                                                                                                                                                     |
| ABSOLUTE_FUZZY_CHANGE#   | NUMBER       | Highest change number in this backup                                                                                                                                                                                                                                                                                                                                                                                                                                                                            |
| MARKED_CORRUPT           | NUMBER       | Number of blocks marked corrupt                                                                                                                                                                                                                                                                                                                                                                                                                                                                                 |
| MEDIA_CORRUPT            | NUMBER       | Number of blocks media corrupt                                                                                                                                                                                                                                                                                                                                                                                                                                                                                  |
| LOGICALLY_CORRUPT        | NUMBER       | Number of blocks logically corrupt                                                                                                                                                                                                                                                                                                                                                                                                                                                                              |
| DATAFILE_BLOCKS          | NUMBER       | Size of the data file in blocks at backup time. This value is also the number of blocks taken by the data file restarted from this backup.                                                                                                                                                                                                                                                                                                                                                                      |
| BLOCKS                   | NUMBER       | Size of the backup data file (in blocks). Unused blocks are not copied to the backup.                                                                                                                                                                                                                                                                                                                                                                                                                           |
| BLOCK_SIZE               | NUMBER       | Block size                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                      |
| OLDEST_OFFLINE_RANGE     | NUMBER       | RECID of the oldest offline range record in this backup control file. 0 for data file backups.                                                                                                                                                                                                                                                                                                                                                                                                                  |
| COMPLETION_TIME          | DATE         | Time completed                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                  |
| CONTROLFILE_TYPE         | VARCHAR2 (1) | B - Normal copies<br>S - Standby copies                                                                                                                                                                                                                                                                                                                                                                                                                                                                         |
| USED_CHANGE_TRACKING     | VARCHAR2 (3) | Indicates whether change tracking data was used to accelerate this incremental backup (YES) or whether change tracking data was not used (NO)                                                                                                                                                                                                                                                                                                                                                                   |
| BLOCKS_READ              | NUMBER       | Number of blocks that were scanned while taking this backup. If this was an incremental backup, and change tracking was used to optimize the backup, then the value of this column will be smaller than DATAFILE_BLOCKS. Otherwise, the value of this column will be the same as DATAFILE_BLOCKS. Even when change tracking data is used, the value of this column may be larger than BLOCKS, because the data read by change tracking is further refined during the process of creating an incremental backup. |
| USED_OPTIMIZATION        | VARCHAR2 (3) | Indicates whether backup optimization was applied (YES) or not (NO)                                                                                                                                                                                                                                                                                                                                                                                                                                             |
| FOREIGN_DBID             | NUMBER       | Foreign DBID of the database from which this data file was transported. The value is 0 if the file backed up is not a foreign database file.                                                                                                                                                                                                                                                                                                                                                                    |
| PLUGGED_READONLY         | VARCHAR2 (3) | YES if this is a backup of a transported read-only foreign file; otherwise NO.                                                                                                                                                                                                                                                                                                                                                                                                                                  |
| PLUGIN_CHANGE#           | NUMBER       | SCN at which the foreign data file was transported into the database. The value is 0 if this file is not a foreign database file.                                                                                                                                                                                                                                                                                                                                                                               |
| PLUGIN_RESETLOGS_CHANGE# | NUMBER       | The SCN of the RESETLOGS operation for the incarnation into which this foreign file was transported. The value is 0 if this file is not a foreign database file.                                                                                                                                                                                                                                                                                                                                                |
| PLUGIN_RESETLOGS_TIME    | DATE         | The time of the RESETLOGS operation for the incarnation into which this foreign file was transported. The value is 0 if this file is not a foreign database file.                                                                                                                                                                                                                                                                                                                                               |
| SECTION_SIZE             | NUMBER       | Specifies the number of blocks in each section of a multisection backup. Value is 0 for whole file backups.                                                                                                                                                                                                                                                                                                                                                                                                     |
| UNDO_OPTIMIZED           | VARCHAR2 (3) | Indicates whether undo blocks were ignored when creating the backup data file (YES) or not (NO)                                                                                                                                                                                                                                                                                                                                                                                                                 |
| BLOCKS_SKIPPED_IN_CELL   | NUMBER       | Number of blocks that were not backed up because they were skipped by the Exadata cell<br><b>See Also:</b> Oracle Exadata Storage Server Software documentation for more information                                                                                                                                                                                                                                                                                                                            |

| Column        | Datatype     | Description                                                                                                                                                                                                                                                                                                                                                                                                                                     |
|---------------|--------------|-------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|
| CON_ID        | NUMBER       | The ID of the container to which the data pertains. Possible values include: <ul style="list-style-type: none"> <li>0: This value is used for rows containing data that pertain to the entire CDB. This value is also used for rows in non-CDBs.</li> <li>1: This value is used for rows containing data that pertain to only the root</li> <li><i>n</i>: Where <i>n</i> is the applicable container ID for the rows containing data</li> </ul> |
| BACKED_BY_PDB | VARCHAR2 (3) | Recovery Manager (RMAN) allows a PDB to be backed up in two ways. The value in this column indicates how the PDB backup was taken: <ul style="list-style-type: none"> <li>YES: The backup was taken when connected to the PDB</li> <li>NO: The backup was taken when connected to the root container</li> </ul>                                                                                                                                 |
| SPARSE_BACKUP | VARCHAR2 (3) | Indicates whether the file is sparse (YES) or not (NO)                                                                                                                                                                                                                                                                                                                                                                                          |
| GUID          | RAW (16)     | The GUID of the PDB to which the backup belongs. This is useful after the PDB is dropped to identify which PDB the backup belongs to.                                                                                                                                                                                                                                                                                                           |

## 8.94 V\$BACKUP\_DATAFILE\_DETAILS

V\$BACKUP\_DATAFILE\_DETAILS contains information about restorable data files.

It will include all data files backed in the backup set, image copies, and proxy copies.

| Column              | Datatype | Description                                                                                                                             |
|---------------------|----------|-----------------------------------------------------------------------------------------------------------------------------------------|
| BTYPE               | CHAR (9) | Backup type container. Possible values are: BACKUPSET, IMAGECOPY, PROXYCOPY.                                                            |
| BTYPE_KEY           | NUMBER   | Unique identifier for the backup type. For BACKUPSET, it is BS_KEY.                                                                     |
| SESSION_KEY         | NUMBER   | Session identifier                                                                                                                      |
| SESSION_RECID       | NUMBER   | Session record ID                                                                                                                       |
| SESSION_STAMP       | NUMBER   | Session stamp                                                                                                                           |
| ID1                 | NUMBER   | If BACKUPSET, it contains SET_STAMP.<br>If IMAGECOPY or PROXYCOPY, it is RECID from the control file.                                   |
| ID2                 | NUMBER   | If BACKUPSET, it contains SET_COUNT.<br>If IMAGECOPY or PROXYCOPY, it is STAMP.                                                         |
| FILE#               | NUMBER   | File number                                                                                                                             |
| CREATION_CHANGE#    | NUMBER   | File creation change SCN                                                                                                                |
| CREATION_TIME       | DATE     | File creation time                                                                                                                      |
| RESETLOGS_CHANGE#   | NUMBER   | Resetlogs change SCN                                                                                                                    |
| RESETLOGS_TIME      | DATE     | Resetlogs change time                                                                                                                   |
| INCREMENTAL_LEVEL   | NUMBER   | Normal full backups have a NULL value, level 0 incremental backups have a value of 0, and level 1 incremental backups have a value of 1 |
| INCREMENTAL_CHANGE# | NUMBER   | Incremental change SCN                                                                                                                  |
| CHECKPOINT_CHANGE#  | NUMBER   | Checkpoint change SCN                                                                                                                   |
| CHECKPOINT_TIME     | DATE     | Checkpoint change time                                                                                                                  |
| MARKED_CORRUPT      | NUMBER   | Number of blocks marked corrupt                                                                                                         |
| FILESIZE            | NUMBER   | File size, in bytes                                                                                                                     |

| Column            | Datatype        | Description                                                                                                                                                                                                                                                                                                                                                                                                                                     |
|-------------------|-----------------|-------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|
| COMPRESSION_RATIO | NUMBER          | The ratio between the total blocks in the datafile and the blocks that RMAN backed up. This is <i>not</i> the the ratio from the <code>AS COMPRESSED BACKUPSET</code> clause of the <code>BACKUP</code> command.                                                                                                                                                                                                                                |
| SPARSE_BACKUP     | VARCHAR2 (3)    | Indicates whether the file is sparse (YES) or not (NO)                                                                                                                                                                                                                                                                                                                                                                                          |
| TS#               | NUMBER          | Tablespace number                                                                                                                                                                                                                                                                                                                                                                                                                               |
| TSNAME            | VARCHAR2 (30)   | Tablespace name                                                                                                                                                                                                                                                                                                                                                                                                                                 |
| FILESIZE_DISPLAY  | VARCHAR2 (4000) | Same value as the <code>FILESIZE</code> column, but converted to a user-displayable format, for example <i>nM</i> , <i>nG</i> , <i>nT</i> , <i>nP</i> , and so on                                                                                                                                                                                                                                                                               |
| CON_ID            | NUMBER          | The ID of the container to which the data pertains. Possible values include: <ul style="list-style-type: none"> <li>0: This value is used for rows containing data that pertain to the entire CDB. This value is also used for rows in non-CDBs.</li> <li>1: This value is used for rows containing data that pertain to only the root</li> <li><i>n</i>: Where <i>n</i> is the applicable container ID for the rows containing data</li> </ul> |

## 8.95 V\$BACKUP\_DATAFILE\_SUMMARY

V\$BACKUP\_DATAFILE\_SUMMARY provides summary information for a specific criteria set, based on a backup job, a time range applicable to jobs, or a specific data file).

| Column                    | Datatype        | Description                                                                                                                                                                                                      |
|---------------------------|-----------------|------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|
| NUM_FILES_BACKED          | NUMBER          | Number of files backed up for specified criteria                                                                                                                                                                 |
| NUM_DISTINCT_FILES_BACKED | NUMBER          | Number of distinct files backed up                                                                                                                                                                               |
| NUM_DISTINCT_TS_BACKED    | NUMBER          | Number of distinct tablespaces backed up                                                                                                                                                                         |
| MIN_CHECKPOINT_CHANGE#    | NUMBER          | Minimum checkpoint change number of the data file for specified criteria                                                                                                                                         |
| MAX_CHECKPOINT_CHANGE#    | NUMBER          | Maximum checkpoint change number of the data file for specified criteria                                                                                                                                         |
| MIN_CHECKPOINT_TIME       | DATE            | Minimum checkpoint time of the data file for specified criteria                                                                                                                                                  |
| MAX_CHECKPOINT_TIME       | DATE            | Maximum checkpoint time of the data file for specified criteria                                                                                                                                                  |
| INPUT_BYTES               | NUMBER          | Total input bytes of files read                                                                                                                                                                                  |
| OUTPUT_BYTES              | NUMBER          | Total output bytes written                                                                                                                                                                                       |
| COMPRESSION_RATIO         | NUMBER          | The ratio between the total blocks in the datafile and the blocks that RMAN backed up. This is <i>not</i> the the ratio from the <code>AS COMPRESSED BACKUPSET</code> clause of the <code>BACKUP</code> command. |
| INPUT_BYTES_DISPLAY       | VARCHAR2 (4000) | Displayable format for input bytes                                                                                                                                                                               |
| OUTPUT_BYTES_DISPLAY      | VARCHAR2 (4000) | Displayable format for output bytes                                                                                                                                                                              |

| Column | Datatype | Description                                                                                                                                                                                                                                                                                                                                                                                                                                       |
|--------|----------|---------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|
| CON_ID | NUMBER   | The ID of the container to which the data pertains. Possible values include: <ul style="list-style-type: none"><li>• 0: This value is used for rows containing data that pertain to the entire CDB. This value is also used for rows in non-CDBs.</li><li>• 1: This value is used for rows containing data that pertain to only the root</li><li>• <i>n</i>: Where <i>n</i> is the applicable container ID for the rows containing data</li></ul> |

## 8.96 V\$BACKUP\_DEVICE

V\$BACKUP\_DEVICE displays information about supported backup devices.

If a device type does not support named devices, then one row with the device type and a null device name is returned for that device type. If a device type supports named devices then one row is returned for each available device of that type. The special device type DISK is not returned by this view because it is always available.

| Column      | Datatype       | Description                                                                                                                                                                                                                                                                                                                                                                                                                                       |
|-------------|----------------|---------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|
| DEVICE_TYPE | VARCHAR2 (17)  | Type of the backup device                                                                                                                                                                                                                                                                                                                                                                                                                         |
| DEVICE_NAME | VARCHAR2 (513) | Name of the backup device                                                                                                                                                                                                                                                                                                                                                                                                                         |
| CON_ID      | NUMBER         | The ID of the container to which the data pertains. Possible values include: <ul style="list-style-type: none"><li>• 0: This value is used for rows containing data that pertain to the entire CDB. This value is also used for rows in non-CDBs.</li><li>• 1: This value is used for rows containing data that pertain to only the root</li><li>• <i>n</i>: Where <i>n</i> is the applicable container ID for the rows containing data</li></ul> |

## 8.97 V\$BACKUP\_FILES

V\$BACKUP\_FILES displays information about all RMAN backups (both image copies and backup sets) and archived logs.

This view simulates the LIST BACKUP and LIST COPY RMAN commands. This view requires that the database be set using the DBMS\_RCVMAN.SETDATABASE procedure.

| Column      | Datatype      | Description                                                                                                          |
|-------------|---------------|----------------------------------------------------------------------------------------------------------------------|
| PKEY        | NUMBER        | Primary key for the backup                                                                                           |
| BACKUP_TYPE | VARCHAR2 (32) | Type of the backup: <ul style="list-style-type: none"><li>• BACKUP SET</li><li>• COPY</li><li>• PROXY COPY</li></ul> |

| Column          | Datatype        | Description                                                                                                                                                                                                                                                                                                                                |
|-----------------|-----------------|--------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|
| FILE_TYPE       | VARCHAR2 (32)   | Type of the file: <ul style="list-style-type: none"> <li>• DATAFILE</li> <li>• CONTROLFILE</li> <li>• SPFILE</li> <li>• REDO LOG</li> <li>• ARCHIVED LOG</li> <li>• COPY (for an image copy backup)</li> <li>• PIECE (for a backup piece)</li> </ul>                                                                                       |
| KEEP            | VARCHAR2 (3)    | Indicates whether the backup has a retention policy different from the value for <code>CONFIGURE RETENTION POLICY (YES)</code> or not ( <code>NO</code> )                                                                                                                                                                                  |
| KEEP_UNTIL      | DATE            | If the <code>KEEP UNTIL TIME</code> clause of the <code>BACKUP</code> command was specified, then this column shows the date after which the backup becomes obsolete. If the column is null and <code>KEEP_OPTIONS</code> is not null, the backup never becomes obsolete.                                                                  |
| KEEP_OPTIONS    | VARCHAR2 (13)   | KEEP options for the backup: <ul style="list-style-type: none"> <li>• LOGS - RMAN keeps the logs needed to recover the backup</li> <li>• NOLOGS - RMAN does not keep the logs needed to recover the backup</li> </ul> If this column is null, then the backup has no KEEP options and will be made obsolete based on the retention policy. |
| STATUS          | VARCHAR2 (16)   | Status of the backup: <ul style="list-style-type: none"> <li>• AVAILABLE</li> <li>• UNAVAILABLE</li> <li>• EXPIRED</li> <li>• OTHER</li> </ul>                                                                                                                                                                                             |
| FNAME           | VARCHAR2 (1024) | Name of the file                                                                                                                                                                                                                                                                                                                           |
| TAG             | VARCHAR2 (32)   | Tag of the piece, copy, or proxy copy                                                                                                                                                                                                                                                                                                      |
| MEDIA           | VARCHAR2 (80)   | Media ID of the piece or proxy copy                                                                                                                                                                                                                                                                                                        |
| RECID           | NUMBER          | Recid of the record in the control file                                                                                                                                                                                                                                                                                                    |
| STAMP           | NUMBER          | Stamp of the record in the control file                                                                                                                                                                                                                                                                                                    |
| DEVICE_TYPE     | VARCHAR2 (255)  | Type of media device that stores the backup                                                                                                                                                                                                                                                                                                |
| BLOCK_SIZE      | NUMBER          | Block size for the backup (in bytes)                                                                                                                                                                                                                                                                                                       |
| COMPLETION_TIME | DATE            | Time when the backup completed                                                                                                                                                                                                                                                                                                             |
| COMPRESSED      | VARCHAR2 (3)    | Indicates whether the backup piece is compressed ( <code>YES</code> ) or not ( <code>NO</code> ); valid only if <code>FILE_TYPE</code> is <code>PIECE</code> . Image copies cannot be compressed.                                                                                                                                          |
| OBSOLETE        | VARCHAR2 (3)    | Indicates whether the backup piece or copy is obsolete ( <code>YES</code> ) or not ( <code>NO</code> ); valid only if <code>FILE_TYPE</code> is <code>PIECE</code> or <code>COPY</code>                                                                                                                                                    |
| BYTES           | NUMBER          | Size of the file (in bytes)                                                                                                                                                                                                                                                                                                                |

## 8.98 V\$BACKUP\_NONLOGGED

V\$BACKUP\_NONLOGGED displays information about nonlogged block ranges in data file backups, recorded in the control file.

| Column            | Datatype | Description                                                                                                    |
|-------------------|----------|----------------------------------------------------------------------------------------------------------------|
| RECID             | NUMBER   | Nologged backup record ID                                                                                      |
| STAMP             | NUMBER   | Nonlogged backup record stamp                                                                                  |
| SET_STAMP         | NUMBER   | Backup set stamp                                                                                               |
| SET_COUNT         | NUMBER   | Backup set count                                                                                               |
| PIECE#            | NUMBER   | Backup piece that contains the range of nonlogged blocks                                                       |
| FILE#             | NUMBER   | Absolute file number of the data file that contains this range of nonlogged blocks                             |
| BLOCK#            | NUMBER   | Block number of the first nonlogged block in the range of nologged blocks                                      |
| BLOCKS            | NUMBER   | Number of nonlogged blocks found starting with BLOCK#                                                          |
| NONLOGGED_CHANGE# | NUMBER   | The smallest SCN on which any block in this block range became nonlogged. NULL if unknown.                     |
| NONLOGGED_TIME    | VARCHAR2 | The time that corresponds to NONLOGGED_CHANGE#. NULL if unknown.                                               |
| RESETLOGS_CHANGE# | VARCHAR2 | The resetlogs SCN of the incarnation on which this block range was first marked as nonlogged. NULL if unknown. |
| RESETLOGS_TIME    | VARCHAR2 | The resetlogs time of the incarnation on which this block range was first marked as nologged. NULL if unknown. |

| Column  | Datatype | Description                                                                                                                                                                                                                                                                                                                                                                                                                                     |
|---------|----------|-------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|
| OBJECT# | VARCHAR2 | The object ID this range belongs to. If this field is NULL, the object number is unknown.                                                                                                                                                                                                                                                                                                                                                       |
| REASON  | CHAR (7) | The reason why this block range appears in this list, for example, primary file offline, could not talk to primary, non-standby recovery, and so on. For Oracle Database 12c and later releases, it is always UNKNOWN.                                                                                                                                                                                                                          |
| CON_ID  | NUMBER   | The ID of the container to which the data pertains. Possible values include: <ul style="list-style-type: none"> <li>0: This value is used for rows containing data that pertain to the entire CDB. This value is also used for rows in non-CDBs.</li> <li>1: This value is used for rows containing data that pertain to only the root</li> <li><i>n</i>: Where <i>n</i> is the applicable container ID for the rows containing data</li> </ul> |

## 8.99 V\$BACKUP\_PIECE

V\$BACKUP\_PIECE displays information about backup pieces from the control file. Each backup set consists of one or more backup pieces.

| Column          | Datatype       | Description                                                                                                                                                     |
|-----------------|----------------|-----------------------------------------------------------------------------------------------------------------------------------------------------------------|
| RECID           | NUMBER         | Backup piece record ID                                                                                                                                          |
| STAMP           | NUMBER         | Backup piece record stamp                                                                                                                                       |
| SET_STAMP       | NUMBER         | Backup set stamp                                                                                                                                                |
| SET_COUNT       | NUMBER         | Backup set count                                                                                                                                                |
| PIECE#          | NUMBER         | Backup piece number (1-N)                                                                                                                                       |
| COPY#           | NUMBER         | Indicates the copy number for backup pieces created with duplex enabled. 1 if the backup piece is not duplexed.                                                 |
| DEVICE_TYPE     | VARCHAR2 (17)  | Type of the device on which the backup piece resides. Set to DISK for backup sets on disk.<br><b>See Also:</b> V\$BACKUP_DEVICE                                 |
| HANDLE          | VARCHAR2 (513) | Backup piece handle identifies the backup piece on restore                                                                                                      |
| COMMENTS        | VARCHAR2 (64)  | Comment returned by the operating system or storage subsystem. Set to NULL for backup pieces on disk. This value is informational only; not needed for restore. |
| MEDIA           | VARCHAR2 (65)  | Name of the media on which the backup piece resides. This value is informational only; not needed for restore.                                                  |
| MEDIA_POOL      | NUMBER         | The media pool in which the copy resides. This is the same value that was entered in the POOL operand of the Recovery Manager BACKUP command.                   |
| CONCUR          | VARCHAR2 (3)   | (YES   NO) Indicates whether the piece on a media that can be accessed concurrently                                                                             |
| TAG             | VARCHAR2 (32)  | Backup piece tag. The tag is specified at backup set level, but stored at piece level.                                                                          |
| STATUS          | VARCHAR2 (1)   | Indicates the status of the piece: A (available), D (deleted), or X (expired)                                                                                   |
| START_TIME      | DATE           | Starting time                                                                                                                                                   |
| COMPLETION_TIME | DATE           | Completion time                                                                                                                                                 |

| Column                | Datatype     | Description                                                                                                                                                                                                                                                                                                                                                                                                                                     |
|-----------------------|--------------|-------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|
| ELAPSED_SECONDS       | NUMBER       | Number of elapsed seconds                                                                                                                                                                                                                                                                                                                                                                                                                       |
| DELETED               | VARCHAR2 (3) | (YES/NO) NO indicates that the file still exists. YES indicates the file no longer exists because it has been deleted.                                                                                                                                                                                                                                                                                                                          |
| BYTES                 | NUMBER       | Size of the backup piece (in bytes)                                                                                                                                                                                                                                                                                                                                                                                                             |
| IS_RECOVERY_DEST_FILE | VARCHAR2 (3) | Indicates whether the file was created in the fast recovery area (YES) or not (NO)                                                                                                                                                                                                                                                                                                                                                              |
| RMAN_STATUS_RECID     | NUMBER       | Owning V\$RMAN_STATUS record ID                                                                                                                                                                                                                                                                                                                                                                                                                 |
| RMAN_STATUS_STAMP     | NUMBER       | Owning V\$RMAN_STATUS record stamp                                                                                                                                                                                                                                                                                                                                                                                                              |
| COMPRESSED            | VARCHAR2 (3) | Indicates whether the backup piece is compressed (YES) or not (NO)                                                                                                                                                                                                                                                                                                                                                                              |
| BACKED_BY_VSS         | VARCHAR2 (3) | Whether or not the file has been backed up by Volume Shadow Copy Service (VSS). This column is reserved for internal use.                                                                                                                                                                                                                                                                                                                       |
| ENCRYPTED             | VARCHAR2 (3) | A value of YES means an encrypted backup, otherwise not an encrypted backup.                                                                                                                                                                                                                                                                                                                                                                    |
| BACKED_BY_OSB         | VARCHAR2 (3) | A value of YES means the backup was done to Oracle Secure Backup. Otherwise, backed up by other third party tape library.                                                                                                                                                                                                                                                                                                                       |
| FOR_XTTS              | VARCHAR2 (3) | Indicates whether this is a cross platform backup piece: <ul style="list-style-type: none"> <li>YES: This is a cross platform backup piece.</li> <li>NO: This is not a cross platform backup piece.</li> </ul>                                                                                                                                                                                                                                  |
| SAME_ENDIAN           | VARCHAR2 (3) | If the value of FOR_XTTS is YES, then this column indicates whether the backup piece has the same endianness as the current database (YES) or not (NO); otherwise NULL.                                                                                                                                                                                                                                                                         |
| CON_ID                | NUMBER       | The ID of the container to which the data pertains. Possible values include: <ul style="list-style-type: none"> <li>0: This value is used for rows containing data that pertain to the entire CDB. This value is also used for rows in non-CDBs.</li> <li>1: This value is used for rows containing data that pertain to only the root</li> <li><i>n</i>: Where <i>n</i> is the applicable container ID for the rows containing data</li> </ul> |
| GUID                  | RAW (16)     | The GUID of the PDB to which the backup belongs. This is useful after the PDB is dropped to identify which PDB the backup belongs to.                                                                                                                                                                                                                                                                                                           |

## 8.100 V\$BACKUP\_PIECE\_DETAILS

V\$BACKUP\_PIECE\_DETAILS displays information about all available backup pieces.

| Column        | Datatype | Description               |
|---------------|----------|---------------------------|
| SESSION_KEY   | NUMBER   | Session identifier        |
| SESSION_RECID | NUMBER   | Session recid             |
| SESSION_STAMP | NUMBER   | Session stamp             |
| BS_KEY        | NUMBER   | Backup set identifier     |
| BP_KEY        | NUMBER   | Backup piece key          |
| RECID         | NUMBER   | Backup piece record ID    |
| STAMP         | NUMBER   | Backup piece record stamp |
| SET_STAMP     | NUMBER   | Backup set stamp          |

| Column                | Datatype       | Description                                                                                                                                                                                                    |
|-----------------------|----------------|----------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|
| SET_COUNT             | NUMBER         | Backup set count                                                                                                                                                                                               |
| PIECE#                | NUMBER         | Backup piece number (1-N)                                                                                                                                                                                      |
| COPY#                 | NUMBER         | Indicates the copy number for backup pieces created with duplex enabled. The value is 1 if the backup piece is not duplexed.                                                                                   |
| DEVICE_TYPE           | VARCHAR2 (17)  | Type of device on which the backup piece resides. Set to DISK for backup sets on disk.                                                                                                                         |
| HANDLE                | VARCHAR2 (513) | Backup piece handle identifies the backup piece on restore                                                                                                                                                     |
| COMMENTS              | VARCHAR2 (64)  | Comments returned by the operating system or storage subsystem. Set to NULL for backup pieces on disk. This value is informational only. It is not needed for restore.                                         |
| MEDIA                 | VARCHAR2 (65)  | Name of the media on which the backup piece resides. This value is informational only. It is not needed for restore.                                                                                           |
| MEDIA_POOL            | NUMBER         | The media pool in which the copy resides. This is the same value that was entered in the <code>POOL</code> operand of the Recovery Manager <code>BACKUP</code> command.                                        |
| CONCUR                | VARCHAR2 (3)   | (YES NO) indicates whether or not the piece is on a media that can be accessed concurrently                                                                                                                    |
| TAG                   | VARCHAR2 (32)  | Backup piece tag. The tag is specified at backup set level, but stored at piece level.                                                                                                                         |
| STATUS                | VARCHAR2 (1)   | Indicates the status of the piece: A (available), D (deleted), or X (expired)                                                                                                                                  |
| START_TIME            | DATE           | Starting time                                                                                                                                                                                                  |
| COMPLETION_TIME       | DATE           | Completion time                                                                                                                                                                                                |
| ELAPSED_SECONDS       | NUMBER         | Number of elapsed seconds                                                                                                                                                                                      |
| DELETED               | VARCHAR2 (3)   | NO indicates that the file still exists. YES indicates that the file no longer exists because it has been deleted.                                                                                             |
| BYTES                 | NUMBER         | Size of the backup piece, in bytes                                                                                                                                                                             |
| IS_RECOVERY_DEST_FILE | VARCHAR2 (3)   | Indicates whether or not the file was created in the fast recovery area (YES) or not (NO)                                                                                                                      |
| RMAN_STATUS_RECID     | NUMBER         | Owning V\$RMAN_STATUS record ID                                                                                                                                                                                |
| RMAN_STATUS_STAMP     | NUMBER         | Owning V\$RMAN_STATUS record stamp                                                                                                                                                                             |
| COMPRESSED            | VARCHAR2 (3)   | Indicates whether the backup piece is compressed (YES) or not (NO)                                                                                                                                             |
| BACKED_BY_VSS         | VARCHAR2 (3)   | Whether or not the file has been backed up by Volume Shadow Copy Service (VSS). This column is reserved for internal use.                                                                                      |
| ENCRYPTED             | VARCHAR2 (3)   | A value of YES means an encrypted backup, otherwise not an encrypted backup.                                                                                                                                   |
| BACKED_BY_OSB         | VARCHAR2 (3)   | A value of YES means the backup was done to Oracle Secure Backup. Otherwise, backed up by other third party tape library.                                                                                      |
| FOR_XTTS              | VARCHAR2 (3)   | Indicates whether this is a cross platform backup piece: <ul style="list-style-type: none"> <li>YES: This is a cross platform backup piece.</li> <li>NO: This is not a cross platform backup piece.</li> </ul> |
| SAME_ENDIAN           | VARCHAR2 (3)   | If the value of FOR_XTTS is YES, then this column indicates whether the backup piece has the same endianness as the current database (YES) or not (NO); otherwise NULL.                                        |

| Column             | Datatype        | Description                                                                                                                                                                                                                                                                                                                                                                                                                                     |
|--------------------|-----------------|-------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|
| CON_ID             | NUMBER          | The ID of the container to which the data pertains. Possible values include: <ul style="list-style-type: none"> <li>0: This value is used for rows containing data that pertain to the entire CDB. This value is also used for rows in non-CDBs.</li> <li>1: This value is used for rows containing data that pertain to only the root</li> <li><i>n</i>: Where <i>n</i> is the applicable container ID for the rows containing data</li> </ul> |
| PIECES_PER_SET     | NUMBER          | Number of backup pieces per set                                                                                                                                                                                                                                                                                                                                                                                                                 |
| SIZE_BYTES_DISPLAY | VARCHAR2 (4000) | Size (in bytes) of the backup piece to display                                                                                                                                                                                                                                                                                                                                                                                                  |

## 8.101 V\$BACKUP\_REDOLOG

V\$BACKUP\_REDOLOG displays information about archived logs in backup sets from the control file.

Note that online redo logs cannot be backed up directly; they must be archived first to disk and then backed up. An archive log backup set can contain one or more archived logs.

| Column            | Datatype     | Description                                                                                                                |
|-------------------|--------------|----------------------------------------------------------------------------------------------------------------------------|
| RECID             | NUMBER       | Record ID for this row; it is an integer that identifies this row                                                          |
| STAMP             | NUMBER       | Timestamp used with RECID to uniquely identify this row                                                                    |
| SET_STAMP         | NUMBER       | One of the foreign keys for the row of the V\$BACKUP_SET table that identifies this backup set                             |
| SET_COUNT         | NUMBER       | One of the foreign keys for the row of the V\$BACKUP_SET table that identifies this backup set                             |
| THREAD#           | NUMBER       | Thread number for the log                                                                                                  |
| SEQUENCE#         | NUMBER       | Log sequence number                                                                                                        |
| RESETLOGS_CHANGE# | NUMBER       | Change number of the last resetlogs before the log was written                                                             |
| RESETLOGS_TIME    | DATE         | Change time of the last resetlogs before the log was written. These will be the same for all logs in a backup set.         |
| FIRST_CHANGE#     | NUMBER       | SCN when the log was switched into. The redo in the log is at this SCN and greater.                                        |
| FIRST_TIME        | DATE         | Time allocated when the log was switched into                                                                              |
| NEXT_CHANGE#      | NUMBER       | SCN when the next log in this thread was switched into. The redo in the log is below this SCN.                             |
| NEXT_TIME         | DATE         | Time when the next log in this thread was switched into                                                                    |
| BLOCKS            | NUMBER       | Size of the log in logical blocks including the header block                                                               |
| BLOCK_SIZE        | NUMBER       | Size of the log blocks in bytes                                                                                            |
| TERMINAL          | VARCHAR2 (3) | Indicates whether this record corresponds to a terminal archived redo log, as defined in V\$ARCHIVED_LOG (YES) or not (NO) |
| SECTION_SIZE      | NUMBER       | Number of blocks in each section of a multisection log. The value is 0 for whole file logs.                                |

| Column | Datatype | Description                                                                                                                                                                                                                                                                                                                                                                                                                                            |
|--------|----------|--------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|
| CON_ID | NUMBER   | <p>The ID of the container to which the data pertains. Possible values include:</p> <ul style="list-style-type: none"> <li>0: This value is used for rows containing data that pertain to the entire CDB. This value is also used for rows in non-CDBs.</li> <li>1: This value is used for rows containing data that pertain to only the root</li> <li><i>n</i>: Where <i>n</i> is the applicable container ID for the rows containing data</li> </ul> |

## 8.102 V\$BACKUP\_SET

V\$BACKUP\_SET displays information about backup sets from the control file.

A backup set record is inserted after the backup set is successfully completed.

| Column               | Datatype     | Description                                                                                                                                                                                                                                                                                                                                                                                                                                                                                           |
|----------------------|--------------|-------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|
| RECID                | NUMBER       | Backup set record ID                                                                                                                                                                                                                                                                                                                                                                                                                                                                                  |
| STAMP                | NUMBER       | Backup set record stamp                                                                                                                                                                                                                                                                                                                                                                                                                                                                               |
| SET_STAMP            | NUMBER       | <p>Backup set stamp. The backup set stamp and count uniquely identify the backup set.</p> <p>Primary key for the V\$BACKUP_SET table, and the foreign key for the following tables: V\$BACKUP_PIECE, V\$BACKUP_DATAFILE, V\$BACKUP_REDOLOG, V\$BACKUP_CORRUPTION.</p>                                                                                                                                                                                                                                 |
| SET_COUNT            | NUMBER       | <p>Backup set count. The backup set count is incremented by one every time a new backup set is started (if the backup set is never completed the number is "lost"). If the control file is re-created then the count is reset to 1. Therefore the count must be used with the stamp to uniquely identify a backup set.</p> <p>Primary key for the V\$BACKUP_SET table, and the foreign key for the following tables: V\$BACKUP_PIECE, V\$BACKUP_DATAFILE, V\$BACKUP_REDOLOG, V\$BACKUP_CORRUPTION</p> |
| BACKUP_TYPE          | VARCHAR2 (1) | Type of files that are in this backup. If the backup contains archived redo logs, the value is L. If this is a data file full backup, the value is D. If this is an incremental backup, the value is I.                                                                                                                                                                                                                                                                                               |
| CONTROLFILE_INCLUDED | VARCHAR2 (3) | <p>Provides information about the control file in the backup set:</p> <ul style="list-style-type: none"> <li>YES: The control file included is a primary control file.</li> <li>SBY: The control file included is a standby control file.</li> <li>NO: A control file is not included.</li> </ul>                                                                                                                                                                                                     |
| INCREMENTAL_LEVEL    | NUMBER       | Location where this backup set fits into the database's backup strategy. Set to NULL for full datafile, archivelog, controlfile, and spfile backups, set to 0 for incremental level 0 datafile backups, and set to 1 for incremental level 1 datafile backups.                                                                                                                                                                                                                                        |
| PIECES               | NUMBER       | Number of distinct backup pieces in the backup set                                                                                                                                                                                                                                                                                                                                                                                                                                                    |
| START_TIME           | DATE         | Starting time                                                                                                                                                                                                                                                                                                                                                                                                                                                                                         |
| COMPLETION_TIME      | DATE         | Time that this backup set completed                                                                                                                                                                                                                                                                                                                                                                                                                                                                   |
| ELAPSED_SECONDS      | NUMBER       | The number of elapsed seconds                                                                                                                                                                                                                                                                                                                                                                                                                                                                         |
| BLOCK_SIZE           | NUMBER       | Block size of the backup set                                                                                                                                                                                                                                                                                                                                                                                                                                                                          |

| Column               | Datatype      | Description                                                                                                                                                                                                                                                                                                                                                                                                                          |
|----------------------|---------------|--------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|
| INPUT_FILE_SCAN_ONLY | VARCHAR2 (3)  | YES indicates no actual backup is performed, but the data files are read.<br>NO indicates a normal backup is performed.                                                                                                                                                                                                                                                                                                              |
| KEEP                 | VARCHAR2 (3)  | (YES/NO) Indicates whether or not this backup set has a retention policy that is different than the value for the configure retention policy                                                                                                                                                                                                                                                                                         |
| KEEP_UNTIL           | DATE          | If KEEP_UNTIL_TIME is specified, this is the date after which the backup becomes obsolete. If this column is null, then the backup never expires.                                                                                                                                                                                                                                                                                    |
| KEEP_OPTIONS         | VARCHAR2 (11) | Lists additional retention options for this backup set. Possible values are:<br>LOGS - The logs need to recover this backup are kept<br>NOLOGS - The logs needed to recover this backup will not be kept<br>BACKUP_LOGS - An archive log backup exists to support this backup set                                                                                                                                                    |
| MULTI_SECTION        | VARCHAR2 (3)  | Indicates whether or not this backup set is a multi-section backup. Valid values are YES and NO. A multi-section backup is a backup in which multiple backup pieces are produced independently in parallel by multiple channels.                                                                                                                                                                                                     |
| FOR_XTTS             | VARCHAR2 (3)  | Indicates whether this is a cross platform backup set:<br><ul style="list-style-type: none"> <li>YES: This is a cross platform backup set.</li> <li>NO: This is not a cross platform backup set.</li> </ul>                                                                                                                                                                                                                          |
| SAME_ENDIAN          | VARCHAR2 (3)  | If the value of FOR_XTTS is YES, then this column indicates whether the backup set has the same endianness as the current database (YES) or not (NO); otherwise NULL.                                                                                                                                                                                                                                                                |
| INC_DMPFILE          | VARCHAR2 (3)  | If the value of FOR_XTTS is YES, then this column indicates whether the backup set includes a Data Pump export file of the backed up data files (YES) or not (NO), otherwise NULL.                                                                                                                                                                                                                                                   |
| CON_ID               | NUMBER        | The ID of the container to which the data pertains. Possible values include:<br><ul style="list-style-type: none"> <li>0: This value is used for rows containing data that pertain to the entire CDB. This value is also used for rows in non-CDBs.</li> <li>1: This value is used for rows containing data that pertain to only the root</li> <li>n: Where n is the applicable container ID for the rows containing data</li> </ul> |
| GUID                 | RAW (16)      | The GUID of the PDB to which the backup belongs. This is useful after the PDB is dropped to identify which PDB the backup belongs to.                                                                                                                                                                                                                                                                                                |

## 8.103 V\$BACKUP\_SET\_DETAILS

V\$BACKUP\_SET\_DETAILS provides detailed information about the backup set.

This view will contain an extra row for each backup session that invokes BACKUP BACKUPSET (that is, creates new copies for the same backup set or copies backup set information from disk to tape). However, the remaining values of other columns belong to the complete backup set.

| Column        | Datatype | Description                                      |
|---------------|----------|--------------------------------------------------|
| SESSION_KEY   | NUMBER   | Session identifier                               |
| SESSION_RECID | NUMBER   | Identifies the job, together with SESSION_STAMP. |
| SESSION_STAMP | NUMBER   | Identifies the job, together with SESSION_RECID  |

| Column                         | Datatype        | Description                                                                                                                                                                            |
|--------------------------------|-----------------|----------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|
| BS_KEY                         | NUMBER          | Backup set identifier                                                                                                                                                                  |
| RECID                          | NUMBER          | RECID from V\$BACKUP_SET record                                                                                                                                                        |
| STAMP                          | NUMBER          | Stamp from V\$BACKUP_SET record                                                                                                                                                        |
| SET_STAMP                      | NUMBER          | Backup set stamp                                                                                                                                                                       |
| SET_COUNT                      | NUMBER          | Backup count number                                                                                                                                                                    |
| BACKUP_TYPE                    | VARCHAR2 (1)    | Type of backup (same as in V\$BACKUP_SET)                                                                                                                                              |
| CONTROLFILE_INCLUDED           | VARCHAR2 (3)    | Control file included in backup set (same as in V\$BACKUP_SET)                                                                                                                         |
| INCREMENTAL_LEVEL              | NUMBER          | Incremental level (same as in V\$BACKUP_SET)                                                                                                                                           |
| PIECES                         | NUMBER          | Number of pieces (same as in V\$BACKUP_SET)                                                                                                                                            |
| START_TIME                     | DATE            | Start time of the backup set (same as in V\$BACKUP_SET)                                                                                                                                |
| COMPLETION_TIME                | DATE            | Completion time of the backup set (same as in V\$BACKUP_SET)                                                                                                                           |
| ELAPSED_SECONDS                | NUMBER          | Time taken for backup set creation (same as in V\$BACKUP_SET)                                                                                                                          |
| BLOCK_SIZE                     | NUMBER          | Block size (same as in V\$BACKUP_SET)                                                                                                                                                  |
| KEEP                           | VARCHAR2 (3)    | Keep value (same as in V\$BACKUP_SET)                                                                                                                                                  |
| KEEP_UNTIL                     | DATE            | Keep Until time (same as in V\$BACKUP_SET)                                                                                                                                             |
| KEEP_OPTIONS                   | VARCHAR2 (11)   | Keep options (same as in V\$BACKUP_SET)                                                                                                                                                |
| DEVICE_TYPE                    | VARCHAR2 (17)   | Type of device. If the backup set exists on more than one device type, an * is indicated here.                                                                                         |
| COMPRESSED                     | VARCHAR2 (3)    | YES, if backup is compressed                                                                                                                                                           |
| NUM_COPIES                     | NUMBER          | Number of identical copies                                                                                                                                                             |
| OUTPUT_BYTES                   | NUMBER          | Size of the backup set                                                                                                                                                                 |
| ORIGINAL_INPUT_BYTES           | NUMBER          | Amount of data backed up when the backup set was created                                                                                                                               |
| COMPRESSION_RATIO              | NUMBER          | The ratio between the total blocks in the datafile and the blocks that RMAN backed up. This is <i>not</i> the the ratio from the AS COMPRESSED BACKUPSET clause of the BACKUP command. |
| STATUS                         | CHAR (1)        | The status of the backup set. It is always A (all backup pieces available), because this view only reflects available backup sets.                                                     |
| ORIGINAL_INPRATE_BYTES         | NUMBER          | Number of bytes read per second when backup set was initially created                                                                                                                  |
| OUTPUT_RATE_BYTES              | NUMBER          | Number of bytes written per second when the backup set was initially created                                                                                                           |
| ORIGINAL_INPUT_BYTES_DISPLAY   | VARCHAR2 (4000) | Input rate to display                                                                                                                                                                  |
| OUTPUT_BYTES_DISPLAY           | VARCHAR2 (4000) | Size of backup set to display                                                                                                                                                          |
| ORIGINAL_INPRATE_BYTES_DISPLAY | VARCHAR2 (4000) | Input rate per second for display                                                                                                                                                      |
| OUTPUT_RATE_BYTES_DISPLAY      | VARCHAR2 (4000) | Output rate per second for display                                                                                                                                                     |
| TIME_TAKEN_DISPLAY             | VARCHAR2 (4000) | Elapsed time in hh:mm:ss format                                                                                                                                                        |
| ENCRYPTED                      | VARCHAR2 (3)    | A value of YES means an encrypted backup, otherwise not an encrypted backup.                                                                                                           |
| BACKED_BY_OSB                  | VARCHAR2 (3)    | A value of YES means the backup was done to Oracle Secure Backup. Otherwise, backed up by other third party tape library.                                                              |

| Column | Datatype | Description                                                                                                                                                                                                                                                                                                                                                                                                                                            |
|--------|----------|--------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|
| CON_ID | NUMBER   | <p>The ID of the container to which the data pertains. Possible values include:</p> <ul style="list-style-type: none"> <li>0: This value is used for rows containing data that pertain to the entire CDB. This value is also used for rows in non-CDBs.</li> <li>1: This value is used for rows containing data that pertain to only the root</li> <li><i>n</i>: Where <i>n</i> is the applicable container ID for the rows containing data</li> </ul> |

## 8.104 V\$BACKUP\_SET\_SUMMARY

V\$BACKUP\_SET\_SUMMARY provides summary information for a backup set.

| Column                         | Datatype       | Description                                                                                                                                                                                                                                                                                                                                                                                                                                            |
|--------------------------------|----------------|--------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|
| NUM_BACKUPSETS                 | NUMBER         | Total number of backup sets created                                                                                                                                                                                                                                                                                                                                                                                                                    |
| OLDEST_BACKUP_TIME             | DATE           | Oldest backup start time                                                                                                                                                                                                                                                                                                                                                                                                                               |
| NEWEST_BACKUP_TIME             | DATE           | Newest backup start time                                                                                                                                                                                                                                                                                                                                                                                                                               |
| OUTPUT_BYTES                   | NUMBER         | Number of output bytes (not including multiple copies)                                                                                                                                                                                                                                                                                                                                                                                                 |
| ORIGINAL_INPUT_BYTES           | NUMBER         | Number of input bytes when backup sets were created                                                                                                                                                                                                                                                                                                                                                                                                    |
| ORIGINAL_INPRATE_BYTES         | NUMBER         | Average input rate                                                                                                                                                                                                                                                                                                                                                                                                                                     |
| OUTPUT_RATE_BYTES              | NUMBER         | Average output rate                                                                                                                                                                                                                                                                                                                                                                                                                                    |
| COMPRESSION_RATIO              | NUMBER         | The ratio between the total blocks in the datafile and the blocks that RMAN backed up. This is <i>not</i> the ratio from the AS COMPRESSED BACKUPSET clause of the BACKUP command.                                                                                                                                                                                                                                                                     |
| ORIGINAL_INPUT_BYTES_DISPLAY   | VARCHAR2(4000) | Displayable format for input bytes                                                                                                                                                                                                                                                                                                                                                                                                                     |
| OUTPUT_BYTES_DISPLAY           | VARCHAR2(4000) | Displayable format for output bytes                                                                                                                                                                                                                                                                                                                                                                                                                    |
| ORIGINAL_INPRATE_BYTES_DISPLAY | VARCHAR2(4000) | Displayable format for input rate                                                                                                                                                                                                                                                                                                                                                                                                                      |
| OUTPUT_RATE_BYTES_DISPLAY      | VARCHAR2(4000) | Displayable format for output rate                                                                                                                                                                                                                                                                                                                                                                                                                     |
| CON_ID                         | NUMBER         | <p>The ID of the container to which the data pertains. Possible values include:</p> <ul style="list-style-type: none"> <li>0: This value is used for rows containing data that pertain to the entire CDB. This value is also used for rows in non-CDBs.</li> <li>1: This value is used for rows containing data that pertain to only the root</li> <li><i>n</i>: Where <i>n</i> is the applicable container ID for the rows containing data</li> </ul> |

## 8.105 V\$BACKUP\_SPFILE

V\$BACKUP\_SPFILE displays information about server parameter files in backup sets from the control file.

| Column            | Datatype      | Description                                                                                                                                                                                                                                                                                                                                                                                                                                     |

| BYTES             | NUMBER        | Size of the SPFILE (in bytes)                                                                                                                                                                                                                                                                                                                                                                                                                   |
| COMPLETION_TIME   | DATE          | Time when the backup of the SPFILE completed                                                                                                                                                                                                                                                                                                                                                                                                    |
| DB_UNIQUE_NAME    | VARCHAR2 (30) | Unique database name                                                                                                                                                                                                                                                                                                                                                                                                                            |
| CON_ID            | NUMBER        | The ID of the container to which the data pertains. Possible values include: <ul style="list-style-type: none"> <li>0: This value is used for rows containing data that pertain to the entire CDB. This value is also used for rows in non-CDBs.</li> <li>1: This value is used for rows containing data that pertain to only the root</li> <li><i>n</i>: Where <i>n</i> is the applicable container ID for the rows containing data</li> </ul> |
| GUID              | RAW (16)      | The GUID of the PDB to which the backup belongs. This is useful after the PDB is dropped to identify which PDB the backup belongs to.                                                                                                                                                                                                                                                                                                           |

## 8.106 V\$BACKUP\_SPFILE\_DETAILS

V\$BACKUP\_SPFILE\_DETAILS displays information about all restorable SP files backed up in the backup set.

| Column            | Datatype        | Description                                                                                                                                          |
|-------------------|-----------------|------------------------------------------------------------------------------------------------------------------------------------------------------|
| SESSION_KEY       | NUMBER          | Session identifier                                                                                                                                   |
| SESSION_RECID     | NUMBER          | Session recid                                                                                                                                        |
| SESSION_STAMP     | NUMBER          | Session stamp                                                                                                                                        |
| BS_KEY            | NUMBER          | Unique backup set identifier                                                                                                                         |
| SET_STAMP         | NUMBER          | Backup set stamp                                                                                                                                     |
| SET_COUNT         | NUMBER          | Backup set count                                                                                                                                     |
| MODIFICATION_TIME | DATE            | Time the backup set was modified                                                                                                                     |
| FILESIZE          | NUMBER          | Size, in bytes, of the SPFILE that was backed up                                                                                                     |
| FILESIZE_DISPLAY  | VARCHAR2 (4000) | Same value as the FILESIZE column, but converted to a user-displayable format, for example <i>nM</i> , <i>nG</i> , <i>nT</i> , <i>nP</i> , and so on |

| Column | Datatype | Description                                                                                                                                                                                                                                                                                                                                                                                                                                     |
|--------|----------|-------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|
| CON_ID | NUMBER   | The ID of the container to which the data pertains. Possible values include: <ul style="list-style-type: none"> <li>0: This value is used for rows containing data that pertain to the entire CDB. This value is also used for rows in non-CDBs.</li> <li>1: This value is used for rows containing data that pertain to only the root</li> <li><i>n</i>: Where <i>n</i> is the applicable container ID for the rows containing data</li> </ul> |

## 8.107 V\$BACKUP\_SPFILE\_SUMMARY

V\$BACKUP\_SPFILE\_SUMMARY provides summary information for input SP file, based on either a backup job or time range applicable to jobs.

| Column                    | Datatype        | Description                                                                                                                                                                                                                                                                                                                                                                                                                                     |
|---------------------------|-----------------|-------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|
| NUM_FILES_BACKED          | NUMBER          | Number of files backed up                                                                                                                                                                                                                                                                                                                                                                                                                       |
| NUM_DISTINCT_FILES_BACKED | NUMBER          | Number of distinct SP files backed up (with modification timestamp)                                                                                                                                                                                                                                                                                                                                                                             |
| MIN_MODIFICATION_TIME     | DATE            | Minimum modification time                                                                                                                                                                                                                                                                                                                                                                                                                       |
| MAX_MODIFICATION_TIME     | DATE            | Maximum modification time                                                                                                                                                                                                                                                                                                                                                                                                                       |
| INPUT_BYTES               | NUMBER          | Total input bytes for all SP files backed up                                                                                                                                                                                                                                                                                                                                                                                                    |
| INPUT_BYTES_DISPLAY       | VARCHAR2 (4000) | Displayable format for all input bytes                                                                                                                                                                                                                                                                                                                                                                                                          |
| CON_ID                    | NUMBER          | The ID of the container to which the data pertains. Possible values include: <ul style="list-style-type: none"> <li>0: This value is used for rows containing data that pertain to the entire CDB. This value is also used for rows in non-CDBs.</li> <li>1: This value is used for rows containing data that pertain to only the root</li> <li><i>n</i>: Where <i>n</i> is the applicable container ID for the rows containing data</li> </ul> |

## 8.108 V\$BACKUP\_SYNC\_IO

V\$BACKUP\_SYNC\_IO displays performance information about ongoing and recently completed RMAN backups and restores.

For each backup, it contains one row for each input data file, one row for the aggregate total performance of all data files, and one row for the output backup piece. This data is not stored persistently, and is not preserved when the instance is re-started.

| Column            | Datatype | Description                                                            |
|-------------------|----------|------------------------------------------------------------------------|
| SID               | NUMBER   | The Oracle SID of the session doing the backup or restore              |
| SERIAL            | NUMBER   | The use count for the SID doing the backup or restore                  |
| USE_COUNT         | NUMBER   | A counter that can be used to identify rows from different backup sets |
| RMAN_STATUS_RECID | NUMBER   | Owning V\$RMAN_STATUS record ID                                        |
| RMAN_STATUS_STAMP | NUMBER   | Owning V\$RMAN_STATUS record stamp                                     |

| Column                     | Datatype       | Description                                                                                                                                                                                                                                                                                                                                                                                                                                     |
|----------------------------|----------------|-------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|
| DEVICE_TYPE                | VARCHAR2 (17)  | The device type where the file is located                                                                                                                                                                                                                                                                                                                                                                                                       |
| TYPE                       | VARCHAR2 (9)   | INPUT, OUTPUT, or AGGREGATE                                                                                                                                                                                                                                                                                                                                                                                                                     |
| STATUS                     | VARCHAR2 (11)  | NOT STARTED, IN PROGRESS, or FINISHED                                                                                                                                                                                                                                                                                                                                                                                                           |
| FILENAME                   | VARCHAR2 (513) | The name of the backup file being read or written                                                                                                                                                                                                                                                                                                                                                                                               |
| SET_COUNT                  | NUMBER         | The set count of the backup set being read or written                                                                                                                                                                                                                                                                                                                                                                                           |
| SET_STAMP                  | NUMBER         | The set stamp of the backup set being read or written                                                                                                                                                                                                                                                                                                                                                                                           |
| BUFFER_SIZE                | NUMBER         | The size of the buffers being used to read/write this file, in bytes                                                                                                                                                                                                                                                                                                                                                                            |
| BUFFER_COUNT               | NUMBER         | The number of buffers being used to read/write this file                                                                                                                                                                                                                                                                                                                                                                                        |
| TOTAL_BYTES                | NUMBER         | The total number of bytes that will be read or written for this file, if known. If not known, this column will be null.                                                                                                                                                                                                                                                                                                                         |
| OPEN_TIME                  | DATE           | The time this file was opened. If TYPE='AGGREGATE', then this is the time that the first file in the aggregate was opened.                                                                                                                                                                                                                                                                                                                      |
| CLOSE_TIME                 | DATE           | The time this file was closed. If TYPE='AGGREGATE', then this is the time that the last file in the aggregate was closed.                                                                                                                                                                                                                                                                                                                       |
| ELAPSED_TIME               | NUMBER         | The time, in hundredths of a second, that the file was open                                                                                                                                                                                                                                                                                                                                                                                     |
| MAXOPENFILES               | NUMBER         | The number of concurrently open DISK files. This value is only present in rows where TYPE='AGGREGATE'.                                                                                                                                                                                                                                                                                                                                          |
| BYTES                      | NUMBER         | The number of bytes read or written so far                                                                                                                                                                                                                                                                                                                                                                                                      |
| EFFECTIVE_BYTES_PER_SECOND | NUMBER         | The I/O rate that was achieved with this device during this backup                                                                                                                                                                                                                                                                                                                                                                              |
| IO_COUNT                   | NUMBER         | The number of I/Os that were performed to this file                                                                                                                                                                                                                                                                                                                                                                                             |
| IO_TIME_TOTAL              | NUMBER         | The total time, in hundredths of a second, taken to do I/O for this file                                                                                                                                                                                                                                                                                                                                                                        |
| IO_TIME_MAX                | NUMBER         | The maximum time taken for a single I/O request                                                                                                                                                                                                                                                                                                                                                                                                 |
| DISCRETE_BYTES_PER_SECOND  | NUMBER         | The average transfer rate for this file                                                                                                                                                                                                                                                                                                                                                                                                         |
| CON_ID                     | NUMBER         | The ID of the container to which the data pertains. Possible values include: <ul style="list-style-type: none"> <li>0: This value is used for rows containing data that pertain to the entire CDB. This value is also used for rows in non-CDBs.</li> <li>1: This value is used for rows containing data that pertain to only the root</li> <li><i>n</i>: Where <i>n</i> is the applicable container ID for the rows containing data</li> </ul> |

## 8.109 V\$BGPROCESS

V\$BGPROCESS displays information about the background processes.

| Column      | Datatype      | Description                           |
|-------------|---------------|---------------------------------------|
| PADDR       | RAW (4   8)   | Address of the process state object   |
| PSERIAL#    | NUMBER        | Process state object serial number    |
| NAME        | VARCHAR2 (5)  | Name of this background process       |
| DESCRIPTION | VARCHAR2 (64) | Description of the background process |
| ERROR       | NUMBER        | Error encountered                     |

| Column     | Datatype       | Description                                                                                                                                                                                                                                                                                                                                                                                                                                                                           |
|------------|----------------|---------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|
| ATTRIBUTES | VARCHAR2 (512) | Attributes of the background process, in JSON format                                                                                                                                                                                                                                                                                                                                                                                                                                  |
| TYPE       | VARCHAR2 (5)   | This column has a value of <code>SLAVE</code> for all background worker processes, otherwise it is null.                                                                                                                                                                                                                                                                                                                                                                              |
| PRIORITY   | VARCHAR2 (8)   | Lists the current priority with which the process is running. This column has string values based on the operating system. On Linux, the values that can appear in this column are: <ul style="list-style-type: none"> <li>• <code>TS</code>: Time sharing</li> <li>• <code>RT</code>: Real time priority</li> </ul>                                                                                                                                                                  |
| CON_ID     | NUMBER         | The ID of the container to which the data pertains. Possible values include: <ul style="list-style-type: none"> <li>• <code>0</code>: This value is used for rows containing data that pertain to the entire CDB. This value is also used for rows in non-CDBs.</li> <li>• <code>1</code>: This value is used for rows containing data that pertain to only the root</li> <li>• <code>n</code>: Where <i>n</i> is the applicable container ID for the rows containing data</li> </ul> |

## 8.110 V\$BH

V\$BH displays the status and number of pings for every buffer in the SGA. This is an Oracle Real Application Clusters view.

| Column        | Datatype      | Description                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                       |
|---------------|---------------|---------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|
| FILE#         | NUMBER        | Data file identifier number (to find the file name, query <code>DBA_DATA_FILES</code> or <code>V\$DBFILE</code> )                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                 |
| BLOCK#        | NUMBER        | Block number                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                      |
| CLASS#        | NUMBER        | Class number                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                      |

See the descriptions and possible values for the FLASH_CACHE and CELL_FLASH_CACHE columns in this view.                                                                                                                                                                                                                                           |
| FLASH_CACHE        | VARCHAR2 (7) | Database Smart Flash Cache hint to be used for segment blocks: <ul style="list-style-type: none"> <li>• DEFAULT</li> <li>• KEEP</li> <li>• NONE</li> </ul> Solaris and Oracle Linux functionality only.                                                                                                                                                                                                                                 |
| CELL_FLASH_CACHE   | VARCHAR2 (7) | Cell flash cache hint to be used for segment blocks: <ul style="list-style-type: none"> <li>• DEFAULT</li> <li>• KEEP</li> <li>• NONE</li> </ul> <b>See Also:</b> Oracle Exadata Storage Server Software documentation for more information                                                                                                                                                                                             |
| XCUR_PIN HOLDER    | NUMBER       | ID of the Oracle process that holds the exclusive pin<br>You can join this column with the PID column of the V\$PROCESS and V\$WAIT_CHAINS views to obtain details about the process.                                                                                                                                                                                                                                                   |
| CON_ID             | NUMBER       | The ID of the container to which the data pertains. Possible values include: <ul style="list-style-type: none"> <li>• 0: This value is used for rows containing data that pertain to the entire CDB. This value is also used for rows in non-CDBs.</li> <li>• 1: This value is used for rows containing data that pertain to only the root</li> <li>• n: Where n is the applicable container ID for the rows containing data</li> </ul> |

## 8.111 V\$BLOCK\_CHANGE\_TRACKING

V\$BLOCK\_CHANGE\_TRACKING displays the status of block change tracking for the database.

| Column   | Datatype       | Description                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                   |
|----------|----------------|---------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|
| STATUS   | VARCHAR2 (10)  | Status of block change tracking in the database: <ul style="list-style-type: none"><li>DISABLED - Block change tracking is disabled</li><li>TRANSITION - Block change tracking is in the process of transitioning between the enabled and disabled states. The TRANSITION state should usually never be observed, because it only exists while enabling or disabling block change tracking. This state might be observed if the instance crashed while enabling or disabling block change tracking, in which case it will be cleaned up automatically the next time that the database is opened.</li><li>ENABLED - Block change tracking is enabled</li></ul> |
| FILENAME | VARCHAR2 (513) | Name of the block change tracking file for the database                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                       |
| BYTES    | NUMBER         | Size of the block change tracking file (in bytes)                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                             |
| CON_ID   | NUMBER         | The ID of the container to which the data pertains. Possible values include: <ul style="list-style-type: none"><li>0: This value is used for rows containing data that pertain to the entire CDB. This value is also used for rows in non-CDBs.</li><li>1: This value is used for rows containing data that pertain to only the root</li><li><i>n</i>: Where <i>n</i> is the applicable container ID for the rows containing data</li></ul>                                                                                                                                                                                                                   |

## 8.112 V\$BLOCKING\_QUIESCE

V\$BLOCKING\_QUIESCE indicates if a session is blocking, or would block, a quiesce operation.

| Column | Datatype | Description                                                                                                                                                                                                                                                                                                                                                                                                                                 |
|--------|----------|---------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|
| SID    | NUMBER   | Session identifier                                                                                                                                                                                                                                                                                                                                                                                                                          |
| CON_ID | NUMBER   | The ID of the container to which the data pertains. Possible values include: <ul style="list-style-type: none"><li>0: This value is used for rows containing data that pertain to the entire CDB. This value is also used for rows in non-CDBs.</li><li>1: This value is used for rows containing data that pertain to only the root</li><li><i>n</i>: Where <i>n</i> is the applicable container ID for the rows containing data</li></ul> |

## 8.113 V\$BT\_SCAN\_CACHE

V\$BT\_SCAN\_CACHE shows the parameters and status of the big table cache section.

| Column           | Datatype | Description                                                                                                                                                                                                                                                                                                                                                                                                                                     |
|------------------|----------|-------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|
| BT_CACHE_ALLOC   | NUMBER   | Current ratio of the big table cache section to the buffer cache                                                                                                                                                                                                                                                                                                                                                                                |
| BT_CACHE_TARGET  | NUMBER   | Target ratio of the big table cache section to the buffer cache                                                                                                                                                                                                                                                                                                                                                                                 |
| OBJECT_COUNT     | NUMBER   | Number of objects tracked by the big table cache section                                                                                                                                                                                                                                                                                                                                                                                        |
| MEMORY_BUF_ALLOC | NUMBER   | Number of memory buffers allocated by the big table cache section to objects                                                                                                                                                                                                                                                                                                                                                                    |
| MIN_CACHED_TEMP  | NUMBER   | Minimum temperature of any object that is allowed to be cached by the big table cache section                                                                                                                                                                                                                                                                                                                                                   |
| CON_ID           | NUMBER   | The ID of the container to which the data pertains. Possible values include: <ul style="list-style-type: none"> <li>0: This value is used for rows containing data that pertain to the entire CDB. This value is also used for rows in non-CDBs.</li> <li>1: This value is used for rows containing data that pertain to only the root</li> <li><i>n</i>: Where <i>n</i> is the applicable container ID for the rows containing data</li> </ul> |

## 8.114 V\$BT\_SCAN\_OBJ\_TEMPS

V\$BT\_SCAN\_OBJ\_TEMPS shows the active objects currently tracked by the big table cache.

| Column        | Datatype     | Description                                                                                                                                                                                                                                                                                                                                                                                                                     |
|---------------|--------------|---------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|
| TS#           | NUMBER       | Tablespace number                                                                                                                                                                                                                                                                                                                                                                                                               |
| DATAOBJ#      | NUMBER       | Data object number (objd)                                                                                                                                                                                                                                                                                                                                                                                                       |
| SIZE_IN_BLKs  | NUMBER       | Size of the object being scanned on this instance, in blocks                                                                                                                                                                                                                                                                                                                                                                    |
| TEMPERATURE   | NUMBER       | Temperature of this object                                                                                                                                                                                                                                                                                                                                                                                                      |
| POLICY        | VARCHAR2(10) | Caching policy of this object. Possible values: <ul style="list-style-type: none"> <li>MEM_ONLY: This object will be fully cached in memory.</li> <li>MEM_PART: This object will be partially cached in memory and some portion will remain on disk and will not be cached.</li> <li>DISK: this object will not be cached in memory or flash for the scan at all.</li> <li>INVALID: The caching policy is not valid.</li> </ul> |
| CACHED_IN_MEM | NUMBER       | The number of blocks that are cached/allocated in memory for this object                                                                                                                                                                                                                                                                                                                                                        |

| Column | Datatype | Description                                                                                                                                                                                                                                                                                                                                                                                                                                     |
|--------|----------|-------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|
| CON_ID | NUMBER   | The ID of the container to which the data pertains. Possible values include: <ul style="list-style-type: none"> <li>0: This value is used for rows containing data that pertain to the entire CDB. This value is also used for rows in non-CDBs.</li> <li>1: This value is used for rows containing data that pertain to only the root</li> <li><i>n</i>: Where <i>n</i> is the applicable container ID for the rows containing data</li> </ul> |

## 8.115 V\$BUFFER\_POOL

V\$BUFFER\_POOL displays information about all buffer pools available for the instance.

| Column         | Datatype      | Description                                                                                                                                                                                                                                                                                            |
|----------------|---------------|--------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|
| ID             | NUMBER        | Buffer pool identifier number                                                                                                                                                                                                                                                                          |
| NAME           | VARCHAR2 (20) | Name of the buffer pool: <ul style="list-style-type: none"> <li>DEFAULT</li> <li>KEEP</li> <li>RECYCLE</li> </ul> <p><b>Note:</b> Currently, <b>KEEP</b> and <b>RECYCLE</b> pools only exist for the standard block size. All nonstandard block size pools are <b>DEFAULT</b>.</p>                     |
| BLOCK_SIZE     | NUMBER        | Block size (in bytes) for buffers in this pool. Possible values: the standard block size, the power of 2 nonstandard block sizes, 2048, 4096, 8192, 16384, 32768.                                                                                                                                      |
| RESIZE_STATE   | VARCHAR2 (10) | Current state of the resize operation: <p>STATIC - Not being resized</p> <p>ALLOCATING - Memory is being allocated (can be canceled by the user)</p> <p>ACTIVATING - New buffers are being created (user cannot cancel)</p> <p>SHRINKING - Buffers are being deleted (can be canceled by the user)</p> |
| CURRENT_SIZE   | NUMBER        | Present size of the sub-cache (in megabytes)                                                                                                                                                                                                                                                           |
| BUFFERS        | NUMBER        | Current instantaneous number of buffers                                                                                                                                                                                                                                                                |
| TARGET_SIZE    | NUMBER        | If a resize is in progress (state is not <b>STATIC</b> ), records new target size (in megabytes). If the pool is <b>STATIC</b> , the value in this column is the same as the current size of the pool.                                                                                                 |
| TARGET_BUFFERS | NUMBER        | If a resize is in progress, records new target size in terms of buffers. Otherwise, the value in this column is the same as the current number of buffers.                                                                                                                                             |
| PREV_SIZE      | NUMBER        | Previous buffer pool size. If the buffer pool has never been resized, the previous size is zero.                                                                                                                                                                                                       |

| Column       | Datatype | Description                                                                                                                                                                                                                                                                                                                                                                                                                                     |
|--------------|----------|-------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|
| PREV_BUFFERS | NUMBER   | Previous number of buffers in the buffer pool. Value is zero if the buffer pool has never been resized.                                                                                                                                                                                                                                                                                                                                         |
| LO_BNUM      | NUMBER   | Obsolete column                                                                                                                                                                                                                                                                                                                                                                                                                                 |

## 8.116 V\$BUFFER\_POOL\_STATISTICS

V\$BUFFER\_POOL\_STATISTICS displays statistics about all buffer pools available for the instance.

| Column                  | Datatype      | Description                                                                                                                                                       |
|-------------------------|---------------|-------------------------------------------------------------------------------------------------------------------------------------------------------------------|
| ID                      | NUMBER        | Buffer pool identifier number                                                                                                                                     |
| NAME                    | VARCHAR2 (20) | Name of the buffer pool                                                                                                                                           |
| BLOCK_SIZE              | NUMBER        | Block size (in bytes) for buffers in this pool. Possible values: the standard block size, the power of 2 nonstandard block sizes, 2048, 4096, 8192, 16384, 32768. |
| SET_MSIZE               | NUMBER        | Buffer pool maximum set size                                                                                                                                      |
| CNUM_REPL               | NUMBER        | Number of buffers on replacement list                                                                                                                             |
| CNUM_WRITE              | NUMBER        | Number of buffers on write list                                                                                                                                   |
| CNUM_SET                | NUMBER        | Number of buffers in set                                                                                                                                          |
| BUF_GOT                 | NUMBER        | Number of buffers gotten by the set                                                                                                                               |
| SUM_WRITE               | NUMBER        | Number of buffers written by the set                                                                                                                              |
| SUM_SCAN                | NUMBER        | Number of buffers scanned in the set                                                                                                                              |
| FREE_BUFFER_WAIT        | NUMBER        | Free buffer wait statistic                                                                                                                                        |
| WRITE_COMPLETE_WAIT     | NUMBER        | Write complete wait statistic                                                                                                                                     |
| BUFFER_BUSY_WAIT        | NUMBER        | Buffer busy wait statistic                                                                                                                                        |
| FREE_BUFFER_INSPECTED   | NUMBER        | Free buffer inspected statistic                                                                                                                                   |
| DIRTY_BUFFERS_INSPECTED | NUMBER        | Dirty buffers inspected statistic                                                                                                                                 |

| Column          | Datatype | Description                                                                                                                                                                                                                                                                                                                                                                                                                                     |

## 8.117 V\$BUFFERED\_PUBLISHERS

V\$BUFFERED\_PUBLISHERS displays information about all buffered publishers in the instance.

There is one row per queue per sender. The values are reset to zero when the database (or instance in an Oracle RAC environment) restarts.

| Column            | Datatype        | Description                                                                                                                                      |
|-------------------|-----------------|--------------------------------------------------------------------------------------------------------------------------------------------------|
| QUEUE_ID          | NUMBER          | Identifier for the queue                                                                                                                         |
| QUEUE_SCHEMA      | VARCHAR2 (128)  | Owner of the queue                                                                                                                               |
| QUEUE_NAME        | VARCHAR2 (128)  | Name of the queue                                                                                                                                |
| SENDER_NAME       | VARCHAR2 (128)  | Name of the agent enqueueing the message (the Streams name assigned for a capture process)                                                       |
| SENDER_ADDRESS    | VARCHAR2 (1024) | Queue name and database name of the source (last propagating) queue; database name is not specified if the source queue is in the local database |
| SENDER_PROTOCOL   | NUMBER          | Protocol used by the sender's address                                                                                                            |
| NUM_MSGS          | NUMBER          | Current number of messages that have yet to be dequeued from the buffer queue                                                                    |
| CNUM_MSGS         | NUMBER          | Cumulative total number of messages enqueued into the buffered queue since the database last started                                             |
| LAST_ENQUEUED_MSG | NUMBER          | Most recently enqueued message identifier                                                                                                        |
| UNBROWSED_MSGS    | NUMBER          | Number of messages that have been enqueued but not browsed                                                                                       |
| OVERSPILLED_MSGS  | NUMBER          | Number of messages that have been spilled but not browsed                                                                                        |
| MEMORY_USAGE      | NUMBER          | Percentage of the Streams pool that is being used (or 0 if there is no Streams pool)                                                             |

| Column               | Datatype                    | Description                                                                                                                                                                                                                                                                                                                                                                                                                                     |

| ELAPSED_ENQUEUE_TIME | NUMBER                      | Total time spent in enqueue (in hundredths of a second)                                                                                                                                                                                                                                                                                                                                                                                         |
| ENQUEUE_CPU_TIME     | NUMBER                      | Total CPU time for enqueue (in hundredths of a second)                                                                                                                                                                                                                                                                                                                                                                                          |
| LAST_ENQUEUE_TIME    | TIMESTAMP(3) WITH TIME ZONE | Last message enqueue time                                                                                                                                                                                                                                                                                                                                                                                                                       |
| PUBLISHER_STATE      | VARCHAR2(59)                | State of the publisher: <ul style="list-style-type: none"> <li>IN FLOW CONTROL: TOO MANY UNBROWSED MESSAGES</li> <li>IN FLOW CONTROL: OVERSPILLED MESSAGES</li> <li>IN FLOW CONTROL: INSUFFICIENT MEMORY AND UNBROWSED MESSAGES</li> <li>PUBLISHING MESSAGES - Normal</li> </ul>                                                                                                                                                                |
| CON_ID               | NUMBER                      | The ID of the container to which the data pertains. Possible values include: <ul style="list-style-type: none"> <li>0: This value is used for rows containing data that pertain to the entire CDB. This value is also used for rows in non-CDBs.</li> <li>1: This value is used for rows containing data that pertain to only the root</li> <li><i>n</i>: Where <i>n</i> is the applicable container ID for the rows containing data</li> </ul> |

## 8.118 V\$BUFFERED\_QUEUES

V\$BUFFERED\_QUEUES displays information about all buffered queues in the instance. There is one row per queue.

| Column                      | Datatype      | Description                                                                                                          |
|-----------------------------|---------------|----------------------------------------------------------------------------------------------------------------------|
| QUEUE_ID                    | NUMBER        | Identifier for the queue                                                                                             |
| QUEUE_SCHEMA                | VARCHAR2(128) | Owner of the queue                                                                                                   |
| QUEUE_NAME                  | VARCHAR2(128) | Name of the queue                                                                                                    |
| STARTUP_TIME                | DATE          | Startup time                                                                                                         |
| NUM_MSGS                    | NUMBER        | Total number of messages currently in the buffered queue                                                             |
| SPILL_MSGS                  | NUMBER        | Current number of overflow messages spilled to disk from the buffered queue                                          |
| CNUM_MSGS                   | NUMBER        | Cumulative total number of messages enqueued into the buffered queue since the database last started                 |
| CSPILL_MSGS                 | NUMBER        | Cumulative total number of overflow messages spilled to disk from the buffered queue since the database last started |
| EXPIRED_MSGS                | NUMBER        | Number of expired messages                                                                                           |
| OLDEST_MSGID                | RAW(16)       | Message ID of the oldest message                                                                                     |
| OLDEST_MSG_ENQTM            | TIMESTAMP(3)  | Enqueue time of the oldest message                                                                                   |
| QUEUE_STATE                 | VARCHAR2(25)  | Indicates whether the queue is in recovery mode (QUEUE IS IN RECOVERY MODE) or not (NORMAL)                          |
| ELAPSED_ENQUEUE_TIME        | NUMBER        | Total time spent in enqueue (in hundredths of a second)                                                              |

| LAST_DEQUEUE_TIME            | TIMESTAMP(3) WITH TIME ZONE | Last message dequeue time                                                                                                                                                                                                                                                                                                                                                                                                                       |
| QUEUE_SIZE                   | NUMBER                      | Size of queue, which is the total number of bytes allocated for all messages and metadata                                                                                                                                                                                                                                                                                                                                                       |
| CON_ID                       | NUMBER                      | The ID of the container to which the data pertains. Possible values include: <ul style="list-style-type: none"> <li>0: This value is used for rows containing data that pertain to the entire CDB. This value is also used for rows in non-CDBs.</li> <li>1: This value is used for rows containing data that pertain to only the root</li> <li><i>n</i>: Where <i>n</i> is the applicable container ID for the rows containing data</li> </ul> |

## 8.119 V\$BUFFERED\_SUBSCRIBERS

V\$BUFFERED\_SUBSCRIBERS displays information about the subscribers for all buffered queues in the instance. There is one row per subscriber per queue.

| Column             | Datatype       | Description                                                                                                                                              |
|--------------------|----------------|----------------------------------------------------------------------------------------------------------------------------------------------------------|
| QUEUE_ID           | NUMBER         | Identifier for the queue                                                                                                                                 |
| QUEUE_SCHEMA       | VARCHAR2(128)  | Owner of the queue                                                                                                                                       |
| QUEUE_NAME         | VARCHAR2(128)  | Name of the queue                                                                                                                                        |
| SUBSCRIBER_ID      | NUMBER         | Internal subscriber number (for identification)                                                                                                          |
| SUBSCRIBER_NAME    | VARCHAR2(512)  | Name of the subscriber                                                                                                                                   |
| SUBSCRIBER_ADDRESS | VARCHAR2(1024) | Address of the subscribing agent                                                                                                                         |
| PROTOCOL           | NUMBER         | Protocol of the subscribing agent                                                                                                                        |
| SUBSCRIBER_TYPE    | VARCHAR2(128)  | Type of the subscriber: <ul style="list-style-type: none"> <li>PROXY - Proxy subscriber</li> <li>SUBSCRIBER</li> </ul>                                   |

| ELAPSED_DEQUEUE_TIME | NUMBER                       | Total time spent in dequeue (in hundredths of a second)                                                                                                                                                                                                                                                                                                                                                                                         |
| DEQUEUE_CPU_TIME     | NUMBER                       | Total CPU time for dequeue (in hundredths of a second)                                                                                                                                                                                                                                                                                                                                                                                          |
| AVG_MSG_AGE          | NUMBER                       | Average age of messages currently enqueued in the buffered queue for the subscriber                                                                                                                                                                                                                                                                                                                                                             |
| LAST_DEQUEUE_TIME    | TIMESTAMP (3) WITH TIME ZONE | Last message dequeue time                                                                                                                                                                                                                                                                                                                                                                                                                       |
| OLDEST_MSGID         | RAW (16)                     | Message ID of the oldest message                                                                                                                                                                                                                                                                                                                                                                                                                |
| OLDEST_MSG_ENQTM     | TIMESTAMP (3)                | Enqueue time of the oldest message                                                                                                                                                                                                                                                                                                                                                                                                              |
| CON_ID               | NUMBER                       | The ID of the container to which the data pertains. Possible values include: <ul style="list-style-type: none"> <li>0: This value is used for rows containing data that pertain to the entire CDB. This value is also used for rows in non-CDBs.</li> <li>1: This value is used for rows containing data that pertain to only the root</li> <li><i>n</i>: Where <i>n</i> is the applicable container ID for the rows containing data</li> </ul> |

## 8.120 V\$CACHE

V\$CACHE displays information from the block header of each block in the SGA of the current instance as related to particular database objects. This is an Oracle Real Application Clusters view.

| Column | Datatype | Description                                                                            |
|--------|----------|----------------------------------------------------------------------------------------|
| FILE#  | NUMBER   | Data file identifier number (to find the file name, query DBA_DATA_FILES or V\$DBFILE) |
| BLOCK# | NUMBER   | Block number                                                                           |
| CLASS# | NUMBER   | Class number                                                                           |

| Column            | Datatype       | Description                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                              |
|-------------------|----------------|----------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|
| STATUS            | VARCHAR2 (10)  | Status of the block: <ul style="list-style-type: none"> <li>• free - Not currently in use</li> <li>• xcur - Exclusive</li> <li>• scur - Shared current</li> <li>• cr - Consistent read</li> <li>• read - Being read from disk</li> <li>• mrec - In media recovery mode</li> <li>• irec - In instance recovery mode</li> </ul>                                                                                                                                                                                                                            |
| XNC               | NUMBER         | Number of PCM x to null lock conversions due to contention with another instance. This column is obsolete and maintained for backward compatibility.                                                                                                                                                                                                                                                                                                                                                                                                     |
| FORCED_READS      | NUMBER         | Number of times the block had to be reread from the cache because another instance has forced it out of this instance's cache by requesting the lock on the block in exclusive mode                                                                                                                                                                                                                                                                                                                                                                      |
| FORCED_WRITES     | NUMBER         | Number of times GCS had to write this block to cache because this instance had used the block and another instance had requested the lock on the block in a conflicting mode                                                                                                                                                                                                                                                                                                                                                                             |
| NAME              | VARCHAR2 (128) | Name of the database object containing the block                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                         |
| PARTITION_NAME    | VARCHAR2 (128) | Name of the partition (null for nonpartitioned objects)                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                  |

## 8.122 V\$CACHE\_TRANSFER

V\$CACHE\_TRANSFER is identical to the V\$CACHE view but only displays blocks that have been pinged at least once.

This view contains information from the block header of each block in the SGA of the current instance as related to particular database objects. This is an Oracle Real Application Clusters view.

| Column            | Datatype       | Description                                                                                                                                                                                                                                                                                                                                                                                                                                           |

## 8.123 V\$CHUNK\_METRIC

V\$CHUNK\_METRIC displays the metric values captured for the most recent 30-second intervals for the workload against each chunk available on the database.

| Column       | Datatype | Description                                                                                                                                                                                                                                                                                                                                                                                                                                     |
|--------------|----------|-------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|
| BEGIN_TIME   | DATE     | Begin time of the interval                                                                                                                                                                                                                                                                                                                                                                                                                      |
| END_TIME     | DATE     | End time of the interval                                                                                                                                                                                                                                                                                                                                                                                                                        |
| INTSIZE_CSEC | NUMBER   | Interval size (in hundredths of a second)                                                                                                                                                                                                                                                                                                                                                                                                       |
| CHUNK_ID     | NUMBER   | Chunk number (internal)                                                                                                                                                                                                                                                                                                                                                                                                                         |
| CALLSPERSEC  | NUMBER   | Number of user calls per second to the chunks                                                                                                                                                                                                                                                                                                                                                                                                   |

## 8.128 V\$CLIENT\_STATS

V\$CLIENT\_STATS displays measures for all sessions that are active for the client identifier per instance.

The statistics available in this view are a subset of those available in V\$SESSTAT and V\$SESS\_TIME\_MODEL.

| Column            | Datatype      | Description                                                                                                                                                                                                                                                                                                                                                                                                                                 |

## 8.129 V\$CLONEDFILE

V\$CLONEDFILE provides CloneDB file information.

| Column           | Datatype       | Description                                                                                                                                                                                                                                                                                                                                                                                                                                 |
|------------------|----------------|---------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|
| SNAPSHOTFILENAME | VARCHAR2 (513) | Snapshot file name. This file is the snapshot file from the snapshot database. The snapshot file is also sometimes referred to as the srcfile.                                                                                                                                                                                                                                                                                              |
| CLONEFILENAME    | VARCHAR2 (513) | CloneDB file name. This file is the cloned file (of the snapshot file) which resides in the current (cloned database). The cloned file is sometimes referred to as the destfile.                                                                                                                                                                                                                                                            |
| SNAPSHOTBLKREAD  | NUMBER         | Number of blocks reads to the snapshot file                                                                                                                                                                                                                                                                                                                                                                                                 |
| SNAPSHOTREQUEST  | NUMBER         | Number of read requests to the snapshot file                                                                                                                                                                                                                                                                                                                                                                                                |
| FILENUMBER       | NUMBER         | File number of the cloned file                                                                                                                                                                                                                                                                                                                                                                                                              |
| CON_ID           | NUMBER         | The ID of the container to which the data pertains. Possible values include: <ul style="list-style-type: none"><li>0: This value is used for rows containing data that pertain to the entire CDB. This value is also used for rows in non-CDBs.</li><li>1: This value is used for rows containing data that pertain to only the root</li><li><i>n</i>: Where <i>n</i> is the applicable container ID for the rows containing data</li></ul> |
| BLOCKS_ALLOCATED | NUMBER         | Amount of space allocated in blocks in the file system. This is less than or equal to the actual file size.                                                                                                                                                                                                                                                                                                                                 |

### Note:

When this view is queried in an Oracle Database environment, rows are returned for every opened file, even those without a parent file backing them (in those cases the column is empty/NULL).

In an Oracle ASM environment, rows are returned for files that an Oracle ASM instance has mounted in disk groups only if those files are children (a clonefile) of a parent snapshot file.

## 8.130 V\$CLUSTER\_INTERCONNECTS

V\$CLUSTER\_INTERCONNECTS displays one or more interconnects that are being used for cluster communication.

| Column     | Datatype      | Description                             |
|------------|---------------|-----------------------------------------|
| NAME       | VARCHAR2 (15) | Name of the interconnect (such as eth0) |
| IP_ADDRESS | VARCHAR2 (46) | IP address of the interconnect          |

| Column    | Datatype      | Description                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                           |
|-----------|---------------|-------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|
| IS_PUBLIC | VARCHAR2 (3)  | <p>If the value is YES, the interface is known to the public.</p> <p>If the value is NO, the interface is known to be private. Note that if the CLUSTER_INTERCONNECTS initialization parameter is also specified, then it is expected that the interconnect is private. Oracle expects cluster traffic to be run on private interconnects only.</p> <p>If the value is empty, it is unknown whether the interface is public or private.</p> <p>Oracle recommends that you set the interface for Oracle Real Application Clusters (Oracle RAC) communication in the Oracle Cluster Registry (OCR).</p> |
| SOURCE    | VARCHAR2 (31) | <p>Indicates where this interface was picked up from:</p> <ul style="list-style-type: none"> <li>• Oracle Cluster Registry - Interface was configured in the OCR and Oracle Database found the interface in the OCR</li> <li>• Operating-system dependent software - Oracle Database automatically detects this</li> <li>• CLUSTER_INTERCONNECTS parameter - This initialization parameter was set</li> </ul>                                                                                                                                                                                         |
| PNAME     | VARCHAR2 (15) | <p>Name of the physical interface of the interconnect</p> <p>This value may differ from the NAME value if the IP address is bound to a device alias. For example, if NAME is eth0:1, then PNAME is eth0.</p>                                                                                                                                                                                                                                                                                                                                                                                          |
| CON_ID    | NUMBER        | <p>The ID of the container to which the data pertains. Possible values include:</p> <ul style="list-style-type: none"> <li>• 0: This value is used for rows containing data that pertain to the entire CDB. This value is also used for rows in non-CDBs.</li> <li>• 1: This value is used for rows containing data that pertain to only the root</li> <li>• n: Where n is the applicable container ID for the rows containing data</li> </ul>                                                                                                                                                        |

## 8.131 V\$CODE Clause

V\$CODE Clause contains the supported clause names and parameter names for the Oracle Data Vault ALTER SYSTEM and ALTER SESSION commands.

| Column         | Datatype       | Description                                                                                                                                    |
|----------------|----------------|------------------------------------------------------------------------------------------------------------------------------------------------|
| CODE_ID#       | NUMBER         | <p>The OCT code ID:</p> <ul style="list-style-type: none"> <li>• 42: For ALTER SESSION</li> <li>• 49: For ALTER SYSTEM</li> </ul>              |
| CLAUSE_ID#     | NUMBER         | Clause ID                                                                                                                                      |
| CLAUSE_NAME    | VARCHAR2 (100) | The clause name that is supported by the Oracle Data Vault command rule (for example, SET or ADVICE)                                           |
| PARAMETER_NAME | VARCHAR2 (100) | The parameter name that is supported by the Oracle Data Vault command rule. For example, for ALTER SYSTEM SET EVENTS, EVENTS is the parameter. |

| Column | Datatype | Description                                                                                                                                                                                                                                                                                                                                                                                                                                                        |
|--------|----------|--------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|
| CON_ID | NUMBER   | <p>The ID of the container to which the data pertains. Possible values include:</p> <ul style="list-style-type: none"> <li>0: This value is used for rows containing data that pertain to the entire CDB. This value is also used for rows in non-CDBs.</li> <li>1: This value is used for rows containing data that pertain to only the root</li> <li><math>n</math>: Where <math>n</math> is the applicable container ID for the rows containing data</li> </ul> |

## 8.132 V\$CON\_EVENT\_HISTOGRAM\_MICRO

V\$CON\_EVENT\_HISTOGRAM\_MICRO displays a histogram of the number of waits, the maximum wait, and total wait time on an event basis for a container, in microseconds. The histogram has buckets of time intervals from < 1 us, < 2 us, < 4 us, < 8 us, ... <  $2^{31}$  us, <  $2^{32}$  us, and  $\geq 2^{32}$  us.

The histogram will not be filled unless the TIMED\_STATISTICS initialization parameter is set to true.

| Column           | Datatype      | Description                                                                                                                                                                                                                                                                                                                                                                                                                          |
|------------------|---------------|--------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|
| EVENT#           | NUMBER        | Event number                                                                                                                                                                                                                                                                                                                                                                                                                         |
| EVENT            | VARCHAR2 (64) | Name of the event                                                                                                                                                                                                                                                                                                                                                                                                                    |
| WAIT_TIME_FORMAT | VARCHAR2 (30) | A human readable time string which is converted from WAIT_TIME_MICRO. When WAIT_TIME_MICRO < 1 millisecond, WAIT_TIME_FORMAT is shown in microseconds. When WAIT_TIME_MICRO < 1 second, WAIT_TIME_FORMAT is shown in milliseconds. When WAIT_TIME_MICRO < 1 minute, WAIT_TIME_FORMAT is shown in seconds. When WAIT_TIME_MICRO > 1 minute, WAIT_TIME_FORMAT is shown in minutes and seconds.                                         |
| WAIT_TIME_MICRO  | NUMBER        | Amount of time the bucket represents (in microseconds). If the duration = num, then this column represents waits of duration < num that are not included in any smaller bucket.                                                                                                                                                                                                                                                      |
| WAIT_COUNT       | NUMBER        | Number of waits of the duration belonging to the bucket of the histogram                                                                                                                                                                                                                                                                                                                                                             |
| LAST_UPDATE_TIME | VARCHAR2 (73) | Indicates the last time the bucket was updated (the ending timestamp of the last wait falling into the bucket's duration)                                                                                                                                                                                                                                                                                                            |
| CON_ID           | NUMBER        | <p>When queried from a non-CDB, the wait event data in that instance are returned, and the CON_ID value is 0.</p> <p>When queried from the root of a CDB, the wait event data in every container is returned, and the CON_ID value indicates the container to which the wait event data belong.</p> <p>When queried from a PDB, wait event data in that PDB are returned, and the CON_ID value is the container ID for that PDB.</p> |

## 8.133 V\$CON\_SYS\_TIME\_MODEL

V\$CON\_SYS\_TIME\_MODEL displays the systemwide accumulated times for various operations for the container from which it is queried.

The time reported is the total elapsed or CPU time (in microseconds). Any timed operation will buffer at most 5 seconds of time data. Specifically, this means that if a timed operation (such as SQL execution) takes a long period of time to perform, the data published to this view is at most missing 5 seconds of the time accumulated for the operation.

The time values are 8-byte integers and can therefore hold approximately 580,000 years worth of time before wrapping. Background process time is not included in a statistic value unless the statistic is specifically for background processes.

| Column    | Datatype      | Description                                                                                                                                                                                                                                                                                                                                                                                                                                                                |
|-----------|---------------|----------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|
| STAT_ID   | NUMBER        | Statistic identifier for the time statistic                                                                                                                                                                                                                                                                                                                                                                                                                                |
| STAT_NAME | VARCHAR2 (64) | Name of the statistic (see <a href="#">Table 10-1</a> )                                                                                                                                                                                                                                                                                                                                                                                                                    |
| VALUE     | NUMBER        | Amount of time (in microseconds) that the system has spent in this operation                                                                                                                                                                                                                                                                                                                                                                                               |
| CON_ID    | NUMBER        | <p>When queried from a non-CDB, the accumulated times for operations in that instance are returned, and the CON_ID value is 0.</p> <p>When queried from the root of a CDB, accumulated times for operations in every container are returned, and the CON_ID value indicates the container to which the times belong.</p> <p>When queried from a PDB, accumulated times for operations in that PDB are returned, and the CON_ID value is the container ID for that PDB.</p> |

## 8.134 V\$CON\_SYSMETRIC

V\$CON\_SYSMETRIC displays the system metric values captured for the most current time interval for the PDB long duration (60-second) system metrics.

| Column       | Datatype      | Description                               |
|--------------|---------------|-------------------------------------------|
| BEGIN_TIME   | DATE          | Begin time of the interval                |
| END_TIME     | DATE          | End time of the interval                  |
| INTSIZE_CSEC | NUMBER        | Interval size (in hundredths of a second) |
| GROUP_ID     | NUMBER        | Metric group ID                           |
| METRIC_ID    | NUMBER        | Metric ID                                 |
| METRIC_NAME  | VARCHAR2 (64) | Metric name                               |
| VALUE        | NUMBER        | Metric value                              |
| METRIC_UNIT  | VARCHAR2 (64) | Metric unit description                   |

| Column | Datatype | Description                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                    |
|--------|----------|----------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|
| CON_ID | NUMBER   | <p>The ID of the container to which the data pertains. Possible values include:</p> <ul style="list-style-type: none"> <li>• When queried from a non-CDB, the statistics for that instance are returned, and the CON_ID value is 0.</li> <li>• When queried from the root of a CDB, the statistics for every container are returned, and the CON_ID value indicates the container to which the statistics belong.</li> <li>• When queried from a PDB, statistics from that PDB are returned, and the CON_ID value is the container ID for that PDB.</li> </ul> |
